This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

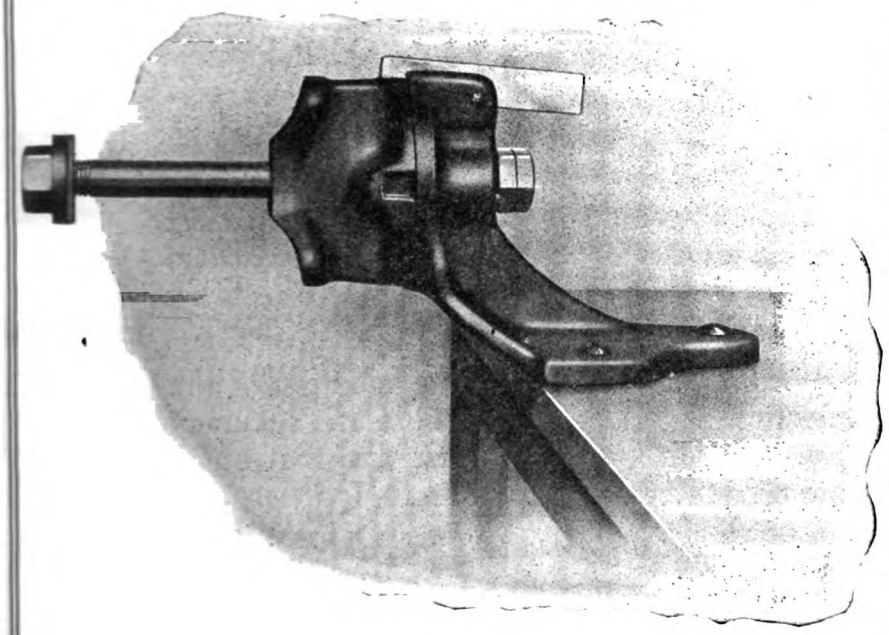
"It's Simple and Easy to Handle Ford Blocks"

—WITH—

THE A. B. MOTOR REPAIR STAND



A complete Ford motor can be placed on the A. B. stand, taken apart, worked on in the four positions and re-assembled, more easily and quickly than by any device or method ever used.

The block is breast high at all times, the top, bottom and both sides are clear and all the bench space available for tools and parts.

Important Points

1. Tested to 1,000 lbs.—Ford motor assembly weighs 330 lbs., block 80 lbs.
2. Bolt cast in revolving member eliminating trouble in placing block in position.
3. Block held securely and moved to new position by knocking lock-piece out of slot, turning as desired and locking.
4. Requires little room, weighs 22½ lbs.
5. Price very attractive.

SATISFY Your Customers by using ORO Connecting Rods

Put Oro Connecting Rods into the Fords you repair. Your customers will come back and send their friends. Hundreds of thousands of Oro Rods are being used with entire satisfaction.

STEEL used in the Oro Connecting Rod is the highest grade open hearth product with a carbon content of 30 to 40 points. There is no connecting rod made stronger than Oro. It will last thousands of miles longer than others.

BABBITT for Oro Rods is scientifically compounded and years of experience have proved it to be the best for this purpose.

WORKMANSHIP on Oro Connecting Rods is the best. The men are the most skillful and experienced in the business. Every tool that has been designed to make the work more accurate is employed.

PROFIT comes in a steadily increasing stream to the garageman who uses this high-grade rod. He builds a bigger and bigger business. He holds his customers. He builds for next year as well as this.

Get Oro Rods from your jobber. Nearly all jobbers have them. If yours has not, write us direct. Be sure to get Oro. Let it build your business as it is building ours.

DU PONT AMERICAN INDUSTRIES

THESE SAMPLES SELL PONTOKLENE

The merits of Pontoklene—the tar remover and cleaner ***that sells itself*** are so conclusively demonstrated by a try-out that the most profitable way to sell it is through sampling.

Therefore we furnish you with your initial order for Pontoklene a case of samples for free distribution to your customers. We will also supply you, from time to time, with additional samples in reasonable quantities upon request.

As a result of this liberal sample and our big nation-wide advertising campaign Pontoklene ***literally sells itself.*** All inquiries from our advertising are referred to our nearest dealer. If you act quickly ***you*** can be the dealer in your locality to get this new, profitable business.

There will be more fresh road tar and consequently more demand for Pontoklene in 1919 than ever before. If you are to take advantage of this exceptional opportunity there is no time for delay. The height of the tar season will soon be here. Order today from our nearest office.

Attractive counter display cards, hangers, road signs, circulars imprinted with your name, envelope enclosures and booklets furnished free on request.

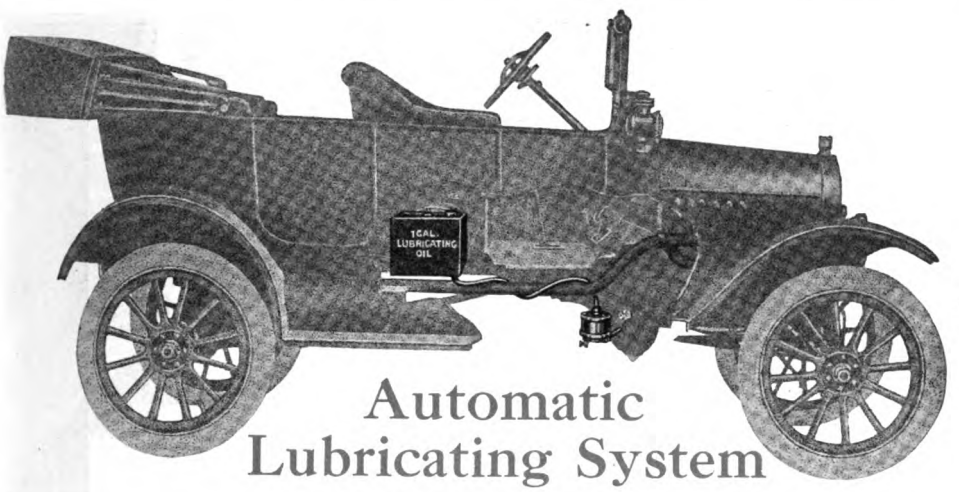
STANDEX



Automatic Lubricating System

FOR **FORD** CARS

The greatest seller—because the greatest success of all devices for Ford cars

A Standex equipped Ford stops all your oil level worries. Oil level never varies—at one mile, a hundred or a thousand.

Gives you approximately 1000-mile range with each filling.

No more getting down to look at pet-cocks or other so-called gauges. It automatically feeds an ounce to crank case—only when motor has consumed such ounce.

Gives you about four times the oil mileage.

Stops for all time spark plug, carbonizing and heating troubles.

Weighs about three pounds; can be installed in fifteen minutes by anyone with a pair of pliers.

Sold Only on a Money-Back Basis (see coupon)

Over 2600 Ford dealers now stock Standex Systems. At your dealer; otherwise direct.

$10.00 complete; oil economy soon refunds that.

EQUIPMENT FOR EVERY CAR, GARAGE AND REPAIR SHOP

Atlantic Pneumatic Grease Gun

When the vehicle is well lubricated it operates easier, lasts longer and costs less to maintain.

Owners demand that their cars be properly greased, they are not now satisfied with the old hit or miss method.

You must use a GREASE GUN or they will take their car to a shop where one is used. Like free air, it will bring business.

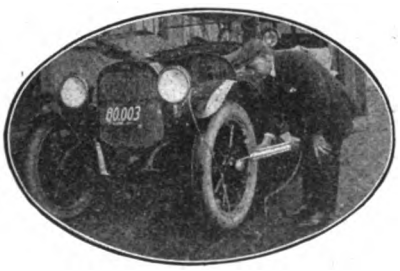
The Grease Gun is operated with air from a power pump, foot pump, spare tire, or compressed air system.

It will force the old grease and dirt out of joints, and fill with new grease. Anyone can operate the Gun.

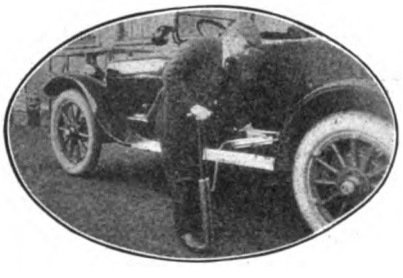
It will permit the use of heavy grease—which is the lubricant to use, as it absorbs the dirt and grit, and when ejected, takes the dirt with it.

It is clean in use, saves 90% in time and labor and never fails to carry the lubricant where needed.

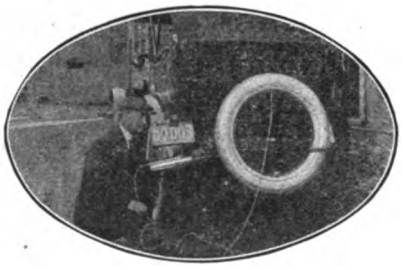
Any grade of grease can be used. It is the only grease gun that can be operated with one hand.



Operated With Power Pump.



Using With Hand Pump.



Power Supplied from Spare Tire.

The ATLANTIC is made to last—Capacity 16 ounces.

Jobbers and Dealers—There is no other Grease Gun just like it. It sells in a big way, it is 100% efficient, and filler goes with it.

List Price—$6.00, in Wooden Box for Carrying When Filled.

Atlantic Motor & Supply Co.

1045 TREMONT BUILDING, BOSTON, MASS.

FACTORY, 63 GORHAM STREEET, SOMERVILLE, MASS.

Are a Standard Line

Jobbers and Dealers stock the full Blue Ribbon line as they do all other tried, proven and constantly selling goods.

Blue Ribbon products are made by specialists who depend wholly on the quality and service giving satisfaction afforded by lines bearing their trade mark.

There can be no experimentation at the expense of the consumer, dealer or jobber. All Blue Ribbon Specialties must be as good as they are practical in every day use as it is possible to make them.

A nation wide trade, enormous expenditures devoted to development and promotion work as well as the maintenance and operation of the largest plant of the kind in America is too great a stake to gamble against quality.

Blue Ribbon Products today stand supreme. They are passed over the counters backed by an unqualified guarantee on the part of the trade that can leave no doubt as to their merits.

That is why Blue Ribbon Products are a standard line and will always continue to be so.

That is why all jobbers and dealers sell and list them in their catalogues.

Above all else that is why the consumer buys Blue Ribbon trade marked products. Blue Ribbon Products cost no more than others, yet represent the most profitable line that can be placed by the jobber or dealer.

If the **BLUE RIBBON** trade mark is to be seen on your shelves or counter you have a silent salesman in your store that is always working, always earning.

All Blue Ribbon Specialties are sold in quantities to meet any requirement.

The full line affords a complete line and it pays to specialize in known quality goods.

Blue Ribbon Specialties Include:

Blue Ribbon Cold Cream Hand Soap — Contains no pumice or sand.

Blue Ribbon Leak Proof Cement — A permanent radiator cement.

Blue Ribbon Nickel Polish — For nickel parts and trimmings.

Blue Ribbon Auto Body Gloss — For automobile or furniture.

Blue Ribbon Lightning Carbon Remover — Quick and positive in action.

Blue Ribbon Black Enamel — For lamps, hoods, radiators and metal parts

Blue Ribbon Auto Top and Seat Dressing — A waterproof dressing that restores tops and seats.

Blue Ribbon Hand-On Patch — A self-vulcanizing patch for shoes and tubes that never fails.

Blue Ribbon Cream Metal Polish — For any metal. An easy, quick working, satisfactory polish.

Blue Ribbon Oil Soap — A pure vegetable oil soap for any purpose. All quality and efficient.

This is the time to consider your winter and spring requirements

Jobbers and Dealers: Prices and discounts at request.

International Metal Polish Co.

INDIANAPOLIS, INDIANA.

"We Motorized The Screw Driver"

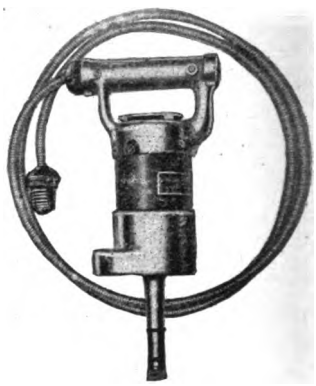
FACTS

The Salesmanager and the Buyer

—AND—

The Inside and Outside Salesman

SHOULD KNOW ABOUT ELECTRIC VALVE GRINDERS



No. 1. An Electric Valve Grinder is intended to supercede the old fashioned slow method of grinding valves by hand.

No. 2. The motion of the old style hand method—viz: forward and back, known as oscillation, must be retained. Complete revolution or rotation of the grinding tool would damage, if not spoil, the valve.

No. 3. The speed or the number of oscillations (forward and back movements) per minute made by the grinder is a vital thing that should be understood thoroughly.

No. 4. Our first model, brought out two years ago, had 1200 oscillations per minute. Our second had 900 per minute, while our present model has between 600 and 700. Tests and experiments made by us in the past two years have proven that a moderate speed will do a smoother and better job.

No. 5. Manufacturers without any knowledge of what is required in a tool of this kind are offering what they term valve grinders to the trade which show a speed of from 1500 to 2500 per minute. Such a speed as this would damage, if not absolutely spoil, any valve upon which it was used. That speed might be right for a drill, but it is entirely too much for a valve grinder.

No. 6. Most anyone could, by using an electric drill for a model, install an oscillating gear and call it a valve grinder, but in this case it only has the movement of the valve grinder, while retaining the speed of the drill. It is neither one thing or the other—just a hybrid—a mongrel. So much about speed.

No. 7. Now about weight: There is a limit here also. The grinder when working, rests on top of the valve. If too heavy, it may score the valve seat, if allowed to rest full weight on the valve. Or else the operator will have to hold some of the weight off of the valve with his arm.

No. 8. To do this will tire the strongest arm in 10 minutes, with the result that the operator will usually allow the grinder to rest full weight on the valve, to the great damage of the valve. It's human nature to do things the easiest way and most repairmen run true to form.

No. 9. So called valve grinders, weighing from twelve to twenty pounds, are appearing on the market. These tools will not give satisfaction for the reasons already given. You invite trouble in selling or using them.

No. 10. A valve grinder can also be too light. But in this case the chances of damaging the valve is slight. The objection is that the operator will be required to exert pressure (bear down) on the grinder and may apply too much.

No. 11. After over two years experimenting and the building of over twenty experimental models, we found that a grinder weighing about seven pounds overcame all the objections mentioned and was practically fool proof —requiring nothing from the operator in the way of thought or attention as to weight or pressure.

No. 12. About the transmission—the gears: After trying fibre, hard rubber compounds, compositions of brass and bronze, common steel, etc., we found that none of these materials would stand up for long under the severe strain that a grinder is subjected to in grinding heavy valves. We increased the size of every gear from ¼ to ⅜" face and make them ourselves from high carbon forged steel—the best we can buy—cut and harden them ourselves. So we know what we are using. These gears that we now use are heavy enough for a small lathe.

No. 13. About the motor: We started with the idea that our motor should be a self-contained individual unit, entirely independent of and separate from the tool. We tried out and experimented with electrical units, assembling the same in casings of our own design. While this would be much cheaper for us than buying a standard make of motor complete, as we do, our experiments but confirmed our original view, that motor making was a trade in itself. Another point was that we had the experience, the reputation and the guarantee of the motor makers back of us.

No. 14. So while we could save money by assembling motor parts bought here and there, when completed we would have at the best only a mongrel power plant. We looked the field of portable electrical devices over carefully—such as washing machines, vacuum cleaners, dairy, ice cream and adding machines, and found without exception that the machine of each type that was regarded as the best in its class was made with the motor as a separate unit.

No. 15. That was good enough for us. We knew we were right and this fact has been further proven when we say that in all the electric tools that we have sold in the past two years we have never had a comeback, where the fault could rightfully be placed on the motor. In a two-year test, in over two thousand service stations, garages and repair shops, in the hands of all kinds and classes of workmen, in use and abuse, our motors have shown practically 100% efficiency.

No. 16. We are, we believe, the only concern making portable electric machine shop tools of our type, such as drills and valve grinders, where the motor is a self-contained, detachable, individual unit. Bear this in mind.

No. 17. The handle: The construction and design of our handle is original with us. The switch is in the handle, where it should be, under the thumb and forefinger. Both switch and handle are doubly insulated, an extra caution that we take. This makes a short circuit in the handle almost impossible. A small thing you may think, to mention, but a single loose strand of wire coming in touch with the handle direct would charge the handle and give the operator more or less of a shock. This can't occur in our tools.

No. 18. We designed a device in the way of a two-piece separable plug, fitting one end of the plug in the handle and the other on the attachment cable. We did this to eliminate the tendency of the workman to juggle the tool around by the cord, where it was permanently attached. It costs us dollars extra to do this, but we save all kinds of future trouble for our customers caused from broken inside connections, the result of the workman handling the grinder by the cord. He can't do this with our tool, if he does the plug will separate and the grinder will drop on the floor. Another original feature of ours.

No. 19. All parts of the Stenman Portable Electric Valve Grinders are made with jigs and dies of our own design. All parts are carefully inspected. Working parts are gauged to .0001. All parts are interchangeable.

No. 20. There is no other Valve Grinder on the market that will compare with the Stenman for efficiency and service. More Stenmans are in use than all other makes combined. While the lowest in price, it should sell for more than any other make—because—it is made by the only concern in the world today that has had sufficient experience to enable it to truthfully say that it "KNOWS HOW" to build a valve grinder.

Order through your Jobber or Direct.

The Detroit Tire-Pump will operate on a — Dodge — Briscoe — Chandler — Hudson — Overland — Reo — or Studebaker. In ordering specify model number and year in which car was made

DETROIT
CRANK-SHAFT
TIRE-PUMP
Guaranteed for Life

This is the latest development in mechanically-driven tire-pumps—it means that you may now obtain a well-built, solid, substantial, powerful tire-pump that attaches at the right place, to the most powerful shaft on any car, the Crankshaft, with no possible opportunity for oil-contamination of the air pumped.

The pump is built like a miniature engine—heavy and strong—and will give unlimited service—in fact, this pump will outlast any car built.

The price is low, so low no man can afford to be without one— or take the chances of tire troubles far from free air, and so get rim cut casings—tube cuts or distorted rims—when a few dollars puts this air plant in your tool-box ready for any emergency anywhere.

This tire-pump takes all the worry out of country driving—makes you master of your tire situation at all times. It's Satisfaction Insurance for motor car driving—don't be satisfied until you own one.

To Accessory Dealers

Just a word—this pump is going to sell big—our advertising campaign is going to make it known to car owners in every nook and corner of the country. We've kept a substantial profit for you, and have built the pump just as good as we knew how. The pump and its price are right—Why not be first in your territory to display and sell it? Get in touch with your jobber immediately.

To Manufacturers

We are one of the largest builders of all styles of power-driven tire-pumps in the country, including transmission-pumps for many of the best-known high-powered, touring cars and trucks. Samples for Standard equipment, blue prints and quotations gladly supplied upon request.

ARE YOU GOING INTO THE CYLINDER GRINDING BUSINESS?

Here Are Two Opportunities You Should Not Miss

FIRST—There is no business today which has been so neglected and where there is such a bright future as that of regrinding worn or scored automobile cylinders. Cylinders wear oval shape from the constant pressure of the ring against the wall, or are scored by broken rings and loose wrist pin bushings. Unless these are ground round again, the result will be loss of power, excessive smoke, and often a piston slap or knock. Also there will be an increased consumption of gasoline and oil.

All of these troubles are taken care of by regrinding on a Heald Style No. 60 Cylinder Grinding Machine. It was especially designed and built to take care of this class of work.

SECOND—There are a number of practically new second hand Heald No. 60 Cylinder Grinders now on the market. These machines have been released by the Government from factories doing air-craft war work. These second hand machines are ideal for automobile repair shops or garages and the Heald Company will be glad to furnish information to prospective buyers where they can get full details regarding these machines.

Write for Bulletins, Series No. 6 and other information in regard to cylinder grinding.

-and so we let every dealer sell them-

Everybody wants to buy Hassler Shock Absorbers

—that is, when they know about them—so we decided that more dealers ought to be selling them and telling the good news. Therefore, we now let *every dealer sell Hasslers!*

Nearly a million in use—actual figures—cold cash figures—a dealer's profit in every set! That's what Hasslers have already done—and they've just started!

WHAT HASSLERS DO

Hasslers actually decrease tire and repair expense, and depreciation loss, at least 30%! Gasoline mileage is considerably increased. Then, there is the added comfort—worth far more than Hasslers cost. No other shock absorbers are so satisfactory—so sensible. When Hasslers are once on—they stay on.

If you are in any sort of business—garage, supply, hardware, etc.—where you can offer accessories, then you can sell Hasslers—and reap some of this great harvest.

Hasslers are doing a mighty lot of talking for themselves. Then, in addition, we are spending many thousands of dollars in the leading trade and national publications ripening your prospects for you. Ad Helps of all kinds for your local use, too!

You can stock Hasslers—one or more sets at a time! You don't have to make a big investment. And every set you sell will make other sales for you. Soon you'll have a splendid business in Hasslers alone.

Read our large effective page advertisements now appearing in The Saturday Evening Post and in all of the leading National Publications, Agricultural Papers, etc.

Write us for Dealer's Wholesale Price and name of our nearest local contract distributor.

RECONSTRUCTED TIRES

Good for 2,500 to 5,000 Miles

Every motorist who sees his tire wearing away is in constant danger of a puncture or blow-out—will enthuse over our guarantee. Particularly so when it saves half the price of a new tire, this is a fact, and we guarantee it.

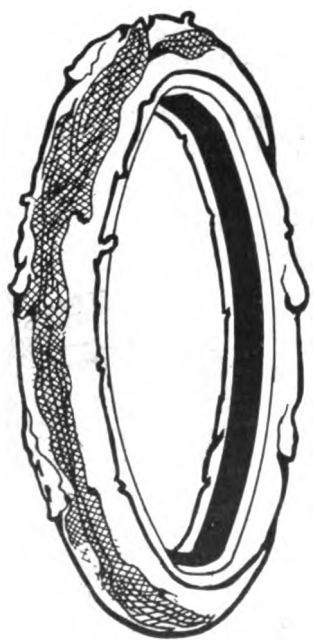
This is a new process, not the ordinary retreading method, but a process that builds a new tire on to the old carcass.—This is what we do:

1.—Turn out an old, worn-out, and useless tire into a new one.

2.—Prevent tread worn, rut worn tires from being utterly ruined.

3.—Cover all weak or worn spots, cuts or bruises in the old tire, of which our Reconstructed Tread actually becomes a part, thus doubling the strength of the casing, and making blow-outs almost impossible.

Let Us Prove the Value of This Work



Here Are Our Prices For Rebuilding Your Used Tires

Size	Plain	Non-Skid
30x3	$9.00	$10.20

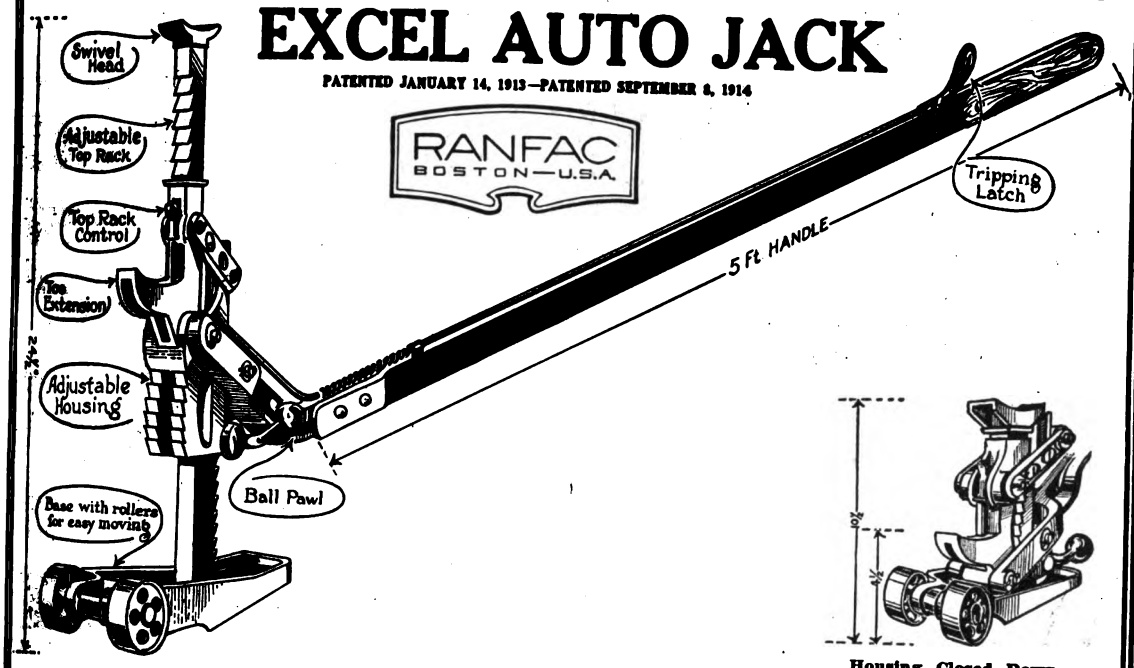
EXCEL AUTO JACK

PATENTED JANUARY 14, 1913—PATENTED SEPTEMBER 8, 1914

RANFAC
BOSTON—U.S.A.



Housing Closed Down

A heavy tool made to stand up under the continuous hard knocks of the Garage and Service Station and to meet the demand for a powerful, substantially built, quick acting device capable of doing heavy work efficiently and well. WIDE HEAVY BASE, fitted with rollers for easy handling. Capacity of Jack, 2000-3000 pounds. Leverage of handle, 60 inches. Weight of Jack, 48 pounds.

Lifting Range MAIN JACK: Lowest Lift 10½ inches; highest lift 24½ inches on any car without blocking, thus permitting the removal of the shackle bolts, springs and front suspensions, and the adjustment of steering rods. TOE EXTENSION: Lowest lift, 4½ inches; highest lift, 15 inches. Permits of getting under a broken axle to lift the car high enough to place truck or skids in position for towing.

POSITION

Jack goes into position immediately, under any part of frame or chassis. No stooping nor crawling. No lame back.

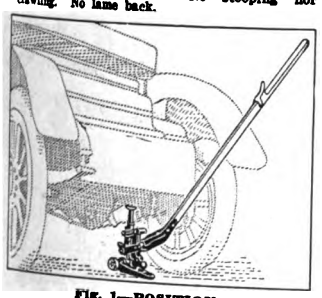


Fig. 1—POSITION

Will reach under bumpers, low gasoline tanks and otherwise inaccessible points without difficulty.

ADJUSTMENT

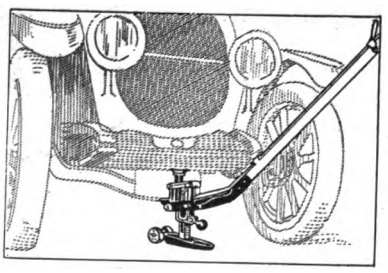

Fig. 2—ADJUSTMENT

One upward motion lifts the swivel head or entire housing into proper adjustment.

LIFTING THE CAR

One downward sweep of the sixty-inch handle lifts the car—instantly.

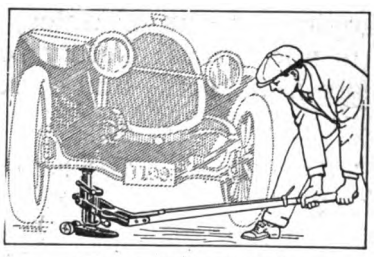

Fig. 3—LIFTING CAR

Then you are ready to work. No loss of time.

Releasing the tripping latch permits lowering of load. Upward kick on ball pawl drops housing and the jack can be withdrawn at once.

Ready To Ship --- In Any Quantity --- List Price $25.00

Make More Money

Hundreds of men are making $200 to $500 a month clear profit, repairing tires with the Shaler Automatic Steam Vulcanizer. Many make $60 a week. One man made $45 the first day he received his outfit. No experience is necessary. We teach you how to make repairs. A boy can learn to do expert work with a little practice on old tires. High tire prices and scarcity of rubber make it necessary for motorists to keep their tires in good repair. They are willing to pay liberal prices for good repairs that prolong the life of their tires and give them more mileage. It only takes a little money to start—expenses are small—a corner in a garage is ample floor space, and there is plenty of work to do. We furnish Complete Outfit, tools, materials and everything needed for tire repairing, with plain, simple instructions.

SHALER Steam Vulcanizers *For Repair Shops*

are the simplest in construction—easiest to operate, and will do as much and as perfect work as the large, expensive vulcanizing outfits that cost $250 to $500. The price of the Complete Steam Vulcanizing Plant—illustrated above, Model No. 41—Type N. P. R.—heated with either gas or gasoline, is only $70—subject to trade discounts.

The Shaler N. P. R. is a portable outfit—easily moved to any part of the shop—occupies but little floor space, and so easy to operate that any boy can make perfect repairs with it.

The Shaler Patented System of Automatic Heat Control regulates it automatically. Can't overcure or undercure, requires no watching or regulating.

It has large capacity—repairs 12 casings and 200 tubes a day. Handles any size or style of tube or casing.

The Shaler Wrapped Tread Method of tire repairing is used by all tire manufacturers. It mends casings and tubes quicker, better and at less cost. So simple that anyone can do perfect work.

Ask Your Jobber—or Write for Catalog

of the Complete Line of Shaler Vulcanizers
for Repair Shops, Garages and motorists' use.

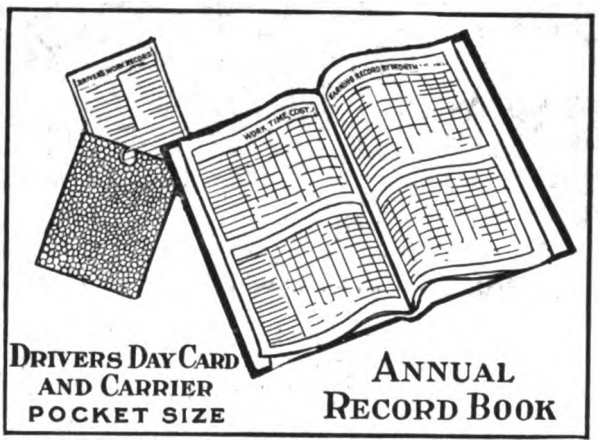
UNIVERSAL MOTOR TRUCK ACCOUNTING SYSTEM



The system includes an annual record book, 350 drivers' day cards, a day card carrier and full instructions.

Any owner can start this system at any time with an old or new truck of any make or type.

Any boy or girl clerk can maintain all records for one or a hundred trucks.

Each system is good for one year, nothing more is needed or necessary.

The records show at a glance any and all items entering into the earnings and cost of operation.

It is extremely simple. 100% complete and full working instructions are supplied with each system.

It is almost self-operating.

more money for garages

How often are you called on to locate and correct trouble in Electrical Starting and Lighting Equipment? You are bound to have more and more of such calls, especially if you earn a reputation for knowing the electrical side of an automobile and handling it right.

There is big money in Electrical Installations, Repairs, Adjustments, Renewals, etc. Some of the most wide-awake Garage Men have found it out. This year more money than ever before will be made that way, because there will be more electrical work than ever for the man who knows how.

Guess-work won't do. Every time you guess wrong you are likely to make yourself a peck of trouble and lose a customer in the bargain. What you need, and need right now before you find yourself losing opportunities to make money, is a

Weston

Model 280

Garage Testing Instrument

This complete Electrical Testing Equipment is made by the world's foremost Electrical Instrument designers and makers. It meets every requirement for making electrical tests in the garage. With this WESTON MODEL 280 you can handle anything that comes your way in electrical work. And it doesn't cost a small fortune, either—mighty little for what it will help you to make.

With the Instrument, we furnish full information showing you how to use it. And we have a staff of electrical experts whose advice is yours for the asking any time you think you need it.

We can make prompt deliveries if you send your order in early. Write us today for full particulars.

WESTON ELECTRICAL EQUIPMENT CO.
103 Weston Avenue, Newark, N. J.

New York	Detroit	Pittsburgh	Miami, Fla.	Winnipeg
Chicago	St. Louis	Richmond	Seattle	Vancouver
Philadelphia	San Francisco	Buffalo	Toronto	Calgary, Alta.
Boston	Denver	Minneapolis	Montreal	Havana
Cleveland	Cincinnati	New Orleans	Halifax	Mexico City

Do you want to be able to make quick, accurate tests to locate any defect in the electrical system? Or do you want to consume unlimited time taking apart every device and running a chance that you will discover the trouble sooner or later?

There are scores of places where trouble may occur. Unless you test electrically, you cannot eliminate any possible source of trouble without taking each device apart.

A poorly made, inaccurate electrical instrument merely adds to the uncertainty. What you need is reliable, positive knowledge. This Model 280 really is the equivalent of six separate Measuring Instruments of different ranges. It is extremely accurate, durable and serviceable. With it, you can do the work quickly and intelligently, putting yourself a long way ahead of any competitor who has not Weston Equipment.

Haul bigger loads
using

ADVANCE CORK INSERT

Transmission Brake Lining for Fords

Advance Cork Insert means more pull to start and stop your loads. Here's an example of what it does for a Ford Truck: "We found it impossible to haul more than 1500 pound loads with our Ford and trailer. The engine would go dead in trying to start the load in low gear. But *since* using Advance Cork Insert, loads as high as 2500 pounds are being hauled without any difficulty in stopping or starting. *They produce a smooth friction action without jerk or chatter.*"

"We use nothing but Cork Insert" says a large New York trucking concern, "because loads can be started and backed by our Ford trucks that cannot be budged with ordinary lining in the transmission."

Advance Cork insert also means a *sure* brake. It brings the heaviest load to a smooth, easy stop. Saves the car. Saves accidents. Saves worry.

The use of Advance Cork Insert is economy. Its performance over the past 24 months proves that it outlasts several sets of ordinary linings. It wears so well that it is cheapest in the long run.

Be sure you get the genuine Advance Cork Insert. It is easy to identify, by the red and black package, and the name in big letters, "Advance Cork Insert."

Sunbeam Team Eliminated From Sweepstakes

Engines Found to be Oversize—Resta and Chassagne May Take Other Mounts

DISAPPOINTMENT has resulted from the announcement that the team of Sunbeam cars, brought from England for the Indianapolis Sweepstakes, May 31, would be unable to compete and that the famous drivers, Resta and Chassagne, would not appear at the wheels of these cars, which were looked upon as most formidable contenders, although they may take other mounts.

The Sunbeams were ruled out because the engines were oversize, making them ineligible. In making known this fact Louis Coatalen, chief engineer of the Sunbeam works, who came with the cars, said he could not explain it. Joseph Christiaens, the Belgian racer, who was killed while testing one of the cars in England, had charge of their construction, and he must have made a miscalculation, or forgot the piston displacement limitation on cars for the Indianapolis race.

Resta and Chassagne have received numerous offers to drive other cars.

The elimination of the Sunbeam team removes much of the international aspect of the race, for the only strictly foreign entrants that remain are the French Ballot drivers and cars, all the others being American drivers, though there are several Peugeot cars that originally came from France, but have been so much built over that they cannot be considered fully representative of French industry.

FACTS REGARDING RACE.

Distance	500 miles
Total prize money	$50,000
Price for winner	$20,000
Prize for second	$10,000
Prize for third	$5,000
Remainder to be divided among those who finish from 4th to 10th.	
Referee	Eddie Rickenbacher
Starter	E. C. Patterson

It is believed that the race will produce very high speed, time trials having been made at better than 97 miles an hour for a single lap.

Among the American entries there is great interest in the Packard, with a 12-cylinder aviation engine that has been entered by the Packard Co., which this year for the first time is taking part in speedway racing. Ralph DePalma will be the driver. He won the Indianapolis race in 1915.

The Hudson is strongly represented, with six special cars and with such drivers as Eddie Pullen and Ira Vail among the pilots. The Duesenberg racers, of which there are four, present novelties of design, particularly in regard to valve arrangement. The drivers include O'Donnell, Milton, Lewis and D'Alene. Another large team is the Frontenac, with Louis and Gaston Chevrolet, Joseph Boyer and Ralph Mulford as pilots.

Clifford Durant has a Chevrolet Special and Eddie Hearne a Durant Special. Earl Cooper will drive a Stutz. Roscoe Sarles has Barney Oldfield's old racing car. There are also two Roamers, two Premiers and a number of other special cars.

Capt. Eddie Rickenbacher will act as referee. E. C. Patterson, Chicago, holder of the cross-country motor car record between New York and Chicago, will be the starter, and will be assisted by W. S. Gilbreath, manager of the Detroit Automobile Club.

Rickenbacher will also be pacemaker, as Jesse G. Vincent, who was originally selected to set the pace, has been called to Europe.

ENTRIES FOR INDIANAPOLIS SWEEPSTAKES.

DEALERS' NATIONAL ASSOCIATION MAKES PROTEST AGAINST 5% TRUCK REVENUE TAX

INTERPRETATION of the law imposing excise taxes on power vehicles, made by the Internal Revenue Bureau of the Treasury Department, unless modified, will classify a truck chassis as a "part" and subject to a five per cent. tax, and a chassis and body as a "complete vehicle," the duty on which shall be three per cent.

The incongruity of this ruling is obvious. No matter what the basis for the ruling the fact remains that as the law is applied the tax on the "incomplete" unit will be more than on the complete machine. There can be no doubt that this result was not intended by Congress.

What may happen under this ruling, and there appears to be no other result if the minimum tax is to be paid, is to have all truck bodies built and installed by chassis manufacturers.

Assuming a specific instance where a truck chassis is sold by a manufacturer with a body, the tax would then be as follows:

Chassis, list price	$5000	
Body, list price	500	
Total	$5500	$5500
Tax at 3%		165
Complete truck, plus tax		$5665

Were the truck chassis sold and a body built by a local builder the tax would then be:

Chassis, list price	$5000	
Body, list price	500	
Total	$5500	$5500
Tax at 5%		275
Complete truck, plus tax		$5775

But, strangely enough, a tractor chassis is not taxed. There is reason to believe that the purpose of the bill was to exempt farm tractors, but as the application of the term is not specific the bureau interprets it to mean a highway tractor, such as is used with either semi-trailer or trailer.

According to the same interpretation the parts necessary for repair, aside from bolts, nuts, washers, screws, etc., are taxable at the rate of five per cent.

There are many phases that might eventuate and the application might vary, but these are pointed out to show the inconsistency of the ruling. For instance, if a truck dealer were to sell a truck chassis to a customer and supply a body for it from his own shop he becomes a producer and the truck as completed is subject to a three per cent. tax., and the chassis, having been a part, would be taxed five per cent. One clause of the general ruling states that "A usable, substantially completed automobile truck produced by assembling new parts of trucks or cars, is subject to tax." Another specifies that "Automobiles which have been sold by the manufacturer are not taxable when sold again." But one definition of a manufacturer is a "person who produces the preparation of the article for purposes of resale."

Another ambiguous clause of the ruling is that which provides that "rear portions of automobile trucks, automobile wagons and other automobiles, not properly called trailers, are taxable as a part of the automobile. This is evidently applied to conversion units for car chassis.

There is no question that the condition that arises is serious in that the manufacturers, dealers and buyers have been misled, primarily from the fact that the 1918 decisions of the revenue bill classified truck chassis as the unit of sale.

According to the Internal Revenue Bureau the taxes are retroactive to Feb. 25, so that all chassis sold on and after that date should have carried a tax of five per cent. instead of three, and the three per cent. tax was passed on from the manufacturers.

The National Automobile Dealers' Association has taken this matter up vigorously and has urged its members and affiliated associations to wire and write to Internal Revenue Collector Daniel G. Roper at Washington, protesting against the ruling. The local and state associations are advised to meet and take action that may bring about a modification of the ruling.

The association points out that the loss from all sales made may be largely borne by the dealers, as the manufacturers may be able through their contracts to demand and recover this from their representatives, but the dealers cannot expect their customers will pay the additional two per cent.

The association wired George H. Graham, sales manager of the Pierce-Arrow Motor Car Co., and chairman of the motor truck division of the National Automobile Chamber of Commerce as follows:

Treasury Department decision, article 15, regulation 47, that a truck chassis is a part and taxable at five per cent. will cost dealers thousands of dollars and cause increased difficulty in selling. We will make strong protest to Roper and send delegation to Washington if necessary. What have the manufacturers done and how can we assist further?

The following was also sent to Internal Revenue Collector Roper at Washington:

Treasury decision, article 15, regulation 47, classifying truck chassis as a part is contrary to all sales usage. Truck chassis is a sales unit and is the basis of all truck sales regardless of the type or kind of body used. Therefore, classification as a part is not only an injustice, but greatly impedes truck sales and is a penalty on business. Revision of decision, therefore, should be made so that truck chassis when sold complete as a unit takes three per cent. tax, which we believe was intended when the 1918 revenue bill was framed.

There is no question whatever that as much pressure as is possible will be exerted by the dealers through their association and individually to obtain a modification of the ruling.

NEW RULINGS AFFECTING ASSESSMENTS ON AUTOMOBILE PARTS AND ACCESSORIES

Rulings affecting automobile parts and accessories are as follows:

(3) Tires, inner tubes, parts or accessories, for any of the articles enumerated in subdivision (1) or (2), sold to any person other than a manufacturer or producer of any of the articles enumerated in subdivision (1) or (2), five per centum. * * *

ARTICLE 14.

Tires, inner tubes, parts and accessories sold to manufacturer.—Subdivision (3) of section 900 of the act provides that tires, inner tubes, parts or accessories shall be exempt from the tax if sold to a manufacturer or producer of automobile trucks, automobile wagons, other automobiles or motorcycles. To come within this exemption the sale must be to such a manufacturer for use by him in the manufacture or production of new cars or for free replacement under contract of guaranty. If sold to such a manufacturer for any other purpose, such as resale to a dealer or for the rebuilding of used cars, the sale is taxable. In order for the sale to come within the exemption of the statute, the manufacturer must at the time the goods are shipped or sold (whichever is prior) have in his possession an order or contract of sale, with certificate of the purchaser in writing printed thereon or permanently attached thereto, showing that the tires, inner tubes, parts or accessories so purchased are to be used in the manufacture or production of new cars or for free replacement under contract or guaranty. If in any case such an order and certificate cannot be produced on demand of any authorized agent of the department the tax in respect to the sale will be considered in default.

ARTICLE 15.

Definition of parts.—A "part" for an automobile truck, automobile wagon, other automobile or motorcycle is any article designed or manufactured for the special purpose of being used as or to replace a component part of any such vehicle, and which by reason of some peculiar characteristic is not such a commercial commodity as would ordinarily be sold for general use, and which is primarily adaptable only for use as a component part of such vehicle. Mere stock or commercial commodities such as bolts, nuts, washers, screws, though used as components for such vehicles, are not "parts" within the meaning of subsection (3) of section 900. Articles however, which ordinarily would be classed as commercial commodities become parts when, because of their design or construction, they are primarily adaptable for use as component parts of such vehicles. Component parts of articles taxable under this definition are taxable when sold separately, if they have reached such stage of manufacture that they are primarily adaptable for use as such a component part. Thus plates, jars and separators for automobile storage batteries are taxable when sold separately. A chassis is a part of an automobile and taxable at the rate of five per cent. when sold separately regardless of whether it is a chassis for an automobile truck or wagon, or for any other kind of automobile. An automobile body is also a part of an automobile.

ARTICLE 16.

Definition of accessories.—An "accessory" for an automobile truck, automobile wagon, other automobile or motorcycle is any article designed to be attached to or used in connection with such vehicle, to add to its utility and which is primarily adaptable for use in connection with such vehicle, whether or not essential to its operation. The term "accessories" includes, for example, horns, speedometers, self-starters, spotlights, shock absorbers, tire pumps, pressure gauges and hydrometers. All such articles primarily adapted for use in connection with an automobile are subject to the tax even though they may sometimes be used otherwise, as, for example, with motor boats. If any doubt, reasonable and bona fide, exists as to the special adaptability of an article the fact of its sale by the manufacturer to be used with an automobile or to an automobile accessories dealer will determine its taxability. A wrench or other tool of a kind sold in hardware stores for general purposes is not subject to the tax, but a wrench or other tool of special design or construction primarily adapted to be used in connection with automobiles will be subject to the tax. Robes, goggles and lunch kits are not subject to the tax. Automobile trailers, regardless of the number of wheels which they may have, are not parts of or accessories for automobiles; but rear portions of automobile trucks, automobile wagons or other automobiles, not properly called trailers, are taxable as a part of the automobile. Where a manufacturer sells automobile accessories or parts to a jobber who in turn sells them to a manufacturer of completed cars the tax upon the accessories or parts is payable by the manufacturer who sells them to the jobber. Where a manufacturer sells material to an accessories manufacturer who in turn sells the accessories constructed from them to a manufacturer of completed automobile trucks, automobile wagons, other automobiles or motorcycles, except tractors, the manufacturer of the completed vehicle is liable for the tax upon his sales and no tax is due upon such previous sales.

Only a manufacturer who does both a wholesale and retail business may compute tax upon goods sold at retail on the price for which like articles are sold at wholesale.

Auto Makers Purchase British Aircraft Factory

The London Times states that considerable public interest has been taken in the purchase for £140,000 ($681,300) of the national aircraft engine factory at Edmonton (England) by the automobile manufacturers, Messrs. Straker, Squire (Ltd.), on the sale of which the government realized a profit of £7000 ($34,000). The factory stands on a site of 14 acres and comprises a splendid range of buildings of brick and glass.

The purchasers propose to transfer all their manufacturing industries to Edmonton and to concentrate on two standard models—a six-cylinder fast pleasure car and a four-cylinder commercial chassis suitable for transport work and motor omnibuses. The cars will be British built throughout and fitted with British magnetos. The entire factory will be organized on the lines of quantity production from standard jigs, and it is anticipated that 5000 workers will be continuously employed. It is claimed that this firm's experience in aircraft engine production during the war has taught it how to combine maximum efficiency with light weight, the deciding factor in future automobile construction. Two thousand complete motor vehicles are planned to be produced from the converted factory in the first year.

Incidentally, it is said that the disposal board has 14 other national factories available for private enterprise.

GARAGE MAN POSED FOR VICTORY LOAN POSTER.

A garage man was model for the Victory Loan's most effective poster, "Sure, We'll Finish the Job." He is Tony Avolar and lives in Provincetown, Mass., with his wife and four children. Born in Provincetown 40 years ago, he attended school there. His parents, who came from the Azores, sent him to work on a fishing smack. He quit the sea to run a garage. His wife was born in Alsace-Lorraine. The Avolar smile is famous throughout the country.

JOSEPH DIXON CRUCIBLE HAS ANNUAL MEETING.

Stockholders of the Joseph Dixon Crucible Co. at their annual and regular meetings elected the following directors and officers:

Directors—George T. Smith, William G. Bumsted, J. H. Schermerhorn, George E. Long, Edward L. Young, Harry Dailey, Robert E. Jennings.

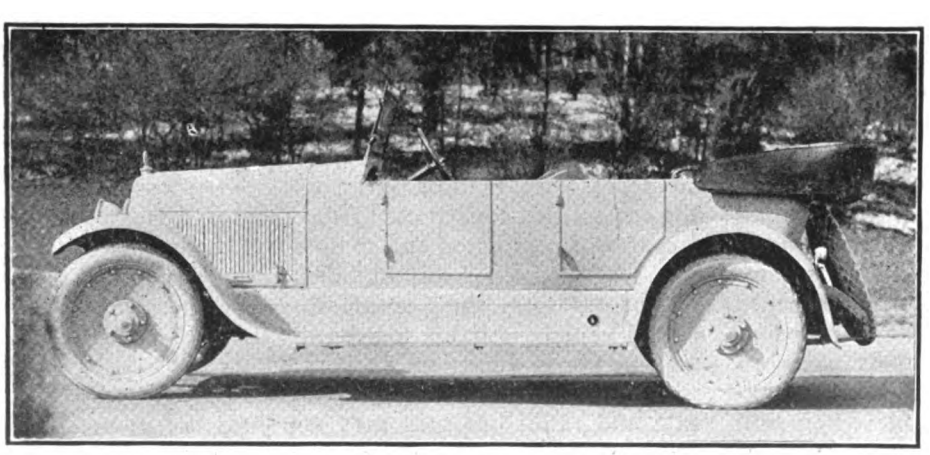
George T. Smith.

Officers—President, George T. Smith; vice presidents, George E. Long, J. H. Schermerhorn; secretary, Harry Dailey; treasurer, William Koester; assistant secretary and assistant treasurer, Albert Norris.

The American Graphite Co., incorporated under the laws of the State of New York, is a subsidiary of the Joseph Dixon Crucible Co., and its annual election was held on the same day as that of the Joseph Dixon Crucible Co. and resulted in the election of the following officers:

President, George T. Smith; vice president, George E. Long; treasurer, J. H. Schermerhorn; secretary, Harry Dailey; assistant secretary and assistant treasurer, William Koester.

The directorate is the same as that of the Joseph Dixon Crucible Co.



The Jordan Silhouette—The Jordan Motor Car Co. Announces That This Car Has Met with Instant Demand. The Silhouette Has a Solid Aluminum Body, and Is Long, Low and Graceful. It Has the Newest French Angle at the Dash, a Cocky Seat Cowl and Fenders Broad and Full Crowned.

TRAFFIC TRUCK DEALERS MEET IN CONVENTION.

The Traffic Motor Truck Corporation recently entertained hundreds of dealers from all parts of the United States and Canada at St. Louis. The convention was held as an opening for the new plant at 5200 North Broadway, which has a capacity of 50 trucks per day. The advantages of St. Louis as a location for the automotive industry were emphasized. Guy W. Wilson, president of the corporation, spoke on "The World's Greatest Business—That of Transportation." He explained how motor trucks and good roads go hand in hand. T. C. Brandle, vice president; H. H. Hawke, general sales manager; United States Senator Selden P. Spencer and Paul Hilken, president of the Traffic Truck Sales Co., Philadelphia, were among the speakers. A novel demonstration took place when a traffic truck, loaded with granite blocks to a weight of 6000 pounds, climbed up a 45-degree incline which is utilized for transporting cars from the first to the second floor in place of elevators.

EUROPEAN MAKERS PLANNING TO INVADE AMERICA.

European makers are preparing to invade America. Coupled with the announcement that the Sunbeam car, made in England, would be distributed in America, is a report that Rolls-Royce, Ltd., England, will locate at Syracuse, N. Y., where during the war, it had engineering headquarters.

GREAT RESOURCEFULNESS AND CONSTANT EFFORT NECESSARY TO GET PROSPECTS

Salesmen Proficient in Finding Them Usually Have Good Sales Records—Numerous Sources Where Information May Be Obtained—Expensive Habit of Sizing Up Possible Customers.

GETTING prospects is one of the most difficult problems connected with automobile salesmanship, and the salesman who is proficient at finding them usually has a good sales record. The only sure way to locate these prospective buyers is to "go out and get 'em." The salesman who waits for them to come to the sales room, without any effort on his part, is very likely to be "out of luck."

Great resourcefulness is necessary in getting a line on men and women who are in the market for cars. Many of the tips that result in sales come from acquaintances, but the salesman who gets out and hustles will be able to land considerable business without assistance. Constant effort is essential and this means that advantage must be taken of every hour of the working day.

Tips are liable to come from almost any source and the more a salesman circulates among people the greater is his chance. If he spends most of his time loafing indoors he cuts himself off from the opportunity of getting valuable information that would enhance his income.

Ferretting out prospects resembles detective work to an extent and progressive salesmen emulate detectives in some ways. For instance, a detective depends upon "stool pigeons" for a large part of his information. He has these men "planted" in places where they will be able to keep track of what is going on in the criminal world.

Rewards for Tips.

The salesman, following a somewhat similar plan, has acquaintances, engaged in different lines of endeavor, where they come into contact with all classes of people, to be on the alert for him and to inform him promptly of any person who is known to be thinking of buying a car. If this information results in the salesman making a sale, he usually "takes care" of the tipster by giving him $5 or $10, or some other gift to show his appreciation.

When a customer helps a dealer to make a sale he is very likely to get an unusually small repair bill the next time he brings his car to the service station for work to be done on it, or he may receive some tool, a shoe or a tube as a "present."

Some dealers may insist that this practise is not in accordance with business ethics, but there is no doubt that it is followed by many dealers who stand high in their business. This method is not to be confused with the practise of splitting commissions with prospects, for that is something that is entirely indefensible, as well as being decidedly bad business.

Many salesmen who believe in hard work are accustomed to make a canvass of some class of business or professional men. They get the names and addresses in a directory and then visit each one. A few minutes spent in the presence of each will give the salesman an idea whether the prospect is a "live one" or not. The "live ones" are then followed up systematically. Many sales are secured through this procedure.

On Alert for Prospects.

Salesmen driving their cars along the street are careful to watch for signs of interest on the part of pedestrians. If a salesman notices a man paying special attention to the car he stops and talks with him, as he realizes the man must be thinking of buying one of that make or have some other good reason for his interest.

In small cities salesmen are accustomed to drive their cars to a central part of the town and stop there. The hood is lifted and many persons gather around to watch the engine in operation. Some prospects may be secured among the spectators. All sorts of questions are asked of the salesman and it gives him opportunity to advertise his machine.

Drug stores are a good place to get tips on prospects. Friendly policemen and firemen are in a position to know who may be planning to buy cars. Chauffeurs also are especially apt to hear of prospective buyers. Newspaper men are another source of this information.

The newspapers should be checked up daily for stories that may indicate that certain persons concerned in the news of the day are in a position to invest in cars. Those who inherit money, sell property or are involved in business deals may be in a position to buy automobiles for their first time, or they may get enough money so that they will want to buy better cars than they have owned.

Cars for Newlyweds.

Newlyweds often start married life with a car. Frequently parents give their children automobiles as presents for graduation or some other important occasion. Some men who prefer high powered cars for themselves are in the market for lighter cars for their wives and daughters to drive.

A salesman should keep in touch with anyone who buys a car from his firm. The new owner is almost certain to come into contact with persons who will be interested in that make. On this account the new owner should be given the best of service by the dealer, who should see that the car is kept in good running condition.

One custom is to send a representative of the service department around to call on a buyer a couple of weeks after the sale is made. The service man gets the buyer to go out for a short spin in the car, to test it. While out together the service man discreetly inquires if the man knows of anyone else who might be interested in a machine of that make.

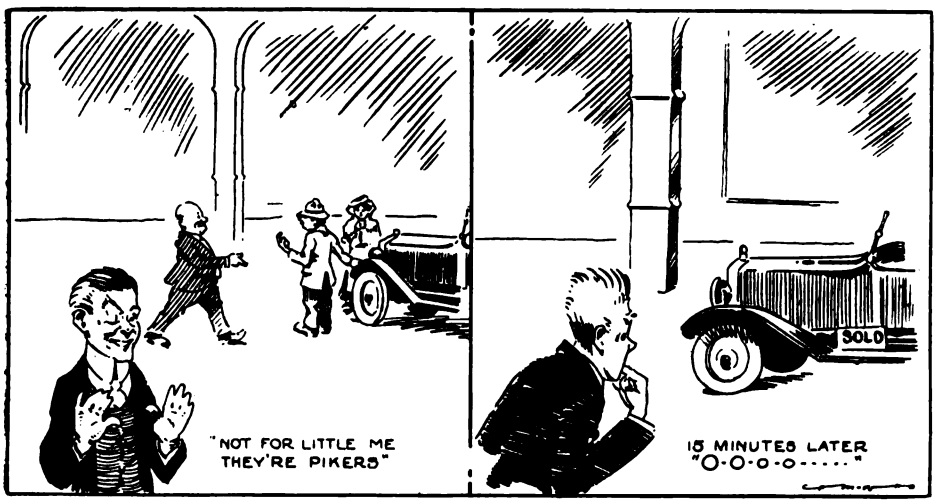
"Leads" on prospective buyers of automobiles and "leads" on prospects for insurance get around quickly, and the salesman must be right on the job if he is to get this information when it is fresh. Insurance men, by the way, get many tips about prospects for automobiles. It is a good plan to team up with some of the insurance men, swapping tips on insurance prospects for tips on automobile prospects.

Working Overtime.

As there are only 480 minutes in an eight-hour working day, the automobile salesman can spend very little time in

Constant Effort Is Necessary in Order to Get Prospects.

Digitized by Google



Sizing Up Prospects an Expensive Luxury for Salesmen.

the presence of prospects if he does not put in the entire eight hours at work. He should remember that some business men start to work before 8 o'clock in the morning and also work after 5 in the afternoon, and that these men can be interviewed at that time. There are also many business men who have their noon day luncheon late, and who may be seen at their offices at noon time.

The live wire automobile salesman will not permit himself to be buckled down to certain hours for work each day. If he can get in touch with a prospect at 5:30 in the afternoon he will take advantage of the opportunity, instead of assuming the position that he is not supposed to work after 5 o'clock. And if there is a chance to see a prospect at night the ambitious salesman will make the appointment.

It is possible to get a line on prospects at clubs and other places where men gather. Membership in good clubs and societies is sometimes very desirable from a salesman's standpoint. At women's clubs, especially, are automobiles discussed to a great extent, and the salesman should have some members of them to tell him the latest gossip regarding automobiles and give him the names of those who are talking of buying cars.

There is no reason why the salesman cannot get the opportunity of presenting the merits of the car he represents before many of these women's clubs. If he goes about it in the right way he can secure for himself an invitation to deliver before the club an address on some subject pertinent to automobiles, and he can then get the opportunity of telling the women how good is the car that he sells.

Tabs on Graduates.

Most of the graduates from colleges will probably buy cars at some time or other. If their folks are well off financially the graduates may be able to get machines when they start in their business or profession. If they have to save their own money before they get a car it will be only a question of a few years before they are ready. A follow-up system should be kept on these graduates, and an estimate made when they will probably be prepared to place their orders.

Advertising must be depended upon to attract many of the prospects. In addition to the newspaper advertising there should be carefully prepared form letters and a follow-up system. The mailing list should be prepared to include only those who are financially able to buy the cars offered. If the car is high priced it will be comparatively easy to eliminate "dead" names, but if the car is low priced the dealer must exercise special care, as a great number of workingmen who do not own their own homes are able to buy such machines.

A close watch should be kept on young business men, as it is only a question of time when many of them will be able to get cars. The banks, realizing that these young men will some day be among the biggest clients of their institutions, keep tabs on them and encourage them in every consistent way.

When a person comes to the sales room to look over cars he should be accorded great consideration. He should be met at the door and be given proper attention all the time he is in the room. The dealer or salesman should take it for granted that a person coming to the sales room is financially able to buy that make of car.

"Sizing Up" Prospects.

"Sizing up" prospects is an expensive luxury for salesmen, as the "Hudson Triangle," the house organ of the Hudson Motor Car Co., has cautioned in the following story:

"They were poorly dressed, obviously from the foreign quarter, and they stole into the great sales room like two frightened children in a forbidden land.

"The immaculate salesman on duty 'sized them up' and casually strolled to the spot where they had stopped to look at a stripped chassis. 'Dead ones!' was his mental comment.

"'Are you looking for a car?' he asked aloud.

"In broken English they indicated that they were.

"Something in a used car, perhaps," the salesman said in a patronizing manner.

"Both hands, tongues and heads were expressing a violent negative when the sales manager happened on the scene and took charge of the situation.

"A few friendly suggestions melted the ice, put the couple at their ease and quickly drew forth their story. For years they had dreamed of owning an automobile of their own. Suddenly fortune had smiled. Then had come weeks of anxious discussion which ended in decision to buy the Essex.

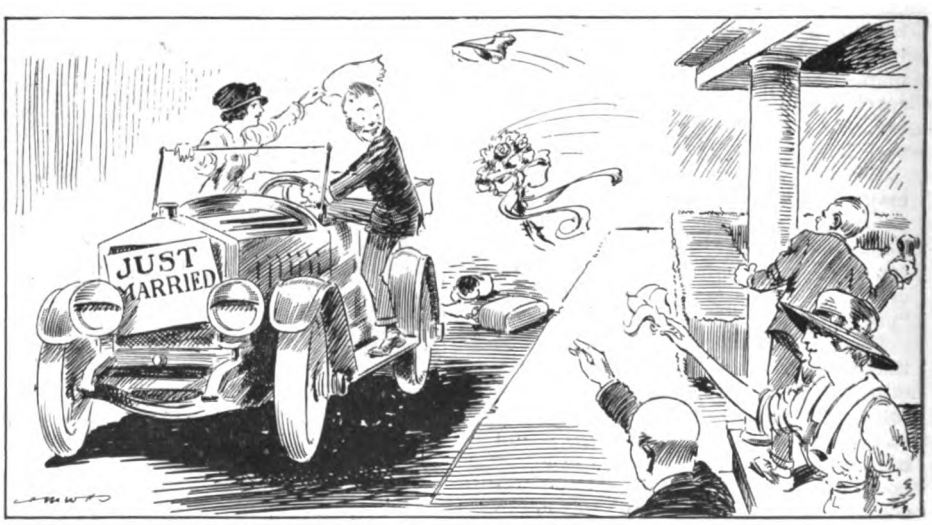
"They did not even ask a demonstration and in 10 minutes the sales manager had the man's signature on an order. The woman reached into her dress and brought forth a roll of bills from which she paid the full price of the car."

Expensive Habit.

The writer thus comments upon the moral of the incident:

"All of which only goes to prove that this 'sizing up' habit is one of the most expensive luxuries a salesman can indulge in today. And the peculiar thing about it is that the habit is especially chronic among the older salesmen who are just the ones who ought to know better.

"If we are going to get our share of the big money that is to be made by the salesmen during the next 10 years, we have got to quit this guessing. We have got to quit this 'sizing up' business. We have got to get back to first principles and locate every possible buyer by positive analysis, realizing that to judge by mere appearances, especially at this time, may be a costly experiment.



Newlyweds Often Start Married Life with a Car.

Digitized by Google

"As a result of several experiences with the most unlikely looking prospects, who turned out to be quick buyers, one successful Hudson and Essex distributor has taken particular pains to see that every person who enters his sales room is treated with particular courtesy.

"A salesman not only opens the door with a cheery welcome to everyone who enters, but also opens the door for them when they leave. Everybody either entering or leaving that salesroom is treated with the same courtesy he would receive in the distributor's own home.

"'To be courteous and agreeable,' he says, even when all tired out, is not only good judgment, but it is a natural stimulant that carries no reaction with it.

"'With rare exceptions, even the hardest prospect responds to courtesy and agreeableness.

"'Also it pays—and all things that pay have some place in salesmanship.'"

Only Safe Rule.

The only safe rule when selling automobiles, especially low-priced cars, is to assume that everyone is able to buy one. A. C. Chambers, in Russel Magazine, tells this story regarding so-called "impossible prospects"

"I heard a young salesman remark the other day:

"'I didn't get old So and So, and I didn't expect to. No use killing yourself trying to sell impossible prospects!'

"'How do you know he is impossible,' I asked.

"'Why, everybody says so!'

"'Who's everybody?'

"'Oh, the other salesmen.'

"'They haven't sold him yet, have they?'

"'No.'

"'If they had ever sold him he wouldn't be impossible, would he?'

"'No, of course not.'

"He admitted that some chap would make that sale some day. And then I told him my long felt wish that heaven hurry the time when folk forget about impossible prospects and remember that there are only—impossible salesmen."

Value of Note Book.

There are thousands of good prospects, and it is up to the salesman to get out and look for them. He will find it valuable to keep a note book so that he can jot down information that may come in handy in the future. No matter how good a memory he may have the salesman should not trust it. Put the data down in the note book and there is no chance of forgetting about it.

Each day the data that belongs in the card index file should be copied from the book and the notations made on the proper cards. The time when the prospect should next be called upon should be recorded and indexed so that the card will not be overlooked on that day. In setting the time for the next call the salesman should bear in mind that he should play on the safe side, and not set it too far distant, as some other salesman might stumble onto the prospect and make the sale in the meantime.

"Not Ready to Buy."

B. A. Gramm, in "The Gramm-Bernstein" magazine, said:

Good Luck Is Twisting Herself Out of Shape to Help You Out.

"We have received letters stating 'Prospects not ready to buy.'

"I am glad to have received these letters. It gives me a chance to get something off my chest.

"If you were to follow the annual reports of insurance companies you would discover they each average over $100,000,000 new business per year, or a grand total of over a half billion dollars.

"This tremendous volume of business, or the bulk of it, is sold by insurance salesmen to men who are 'not ready to buy.'

"The volume of business sold in this way can easily be verified by you. The fact that it was mostly sold to men 'not ready to buy' can also be easily demonstrated.

"Call on any 10 men you select, or any 10 at random, ask them if they are in the market for insurance—I guess you know the answer in advance—not one is 'ready to buy.'

"Now, if you will stop right here and carefully consider where all this leads to, you will surely come to the same conclusion at which I arrived some time ago. With most buyers, with nearly all—it is always too early or too late to buy.

Hard Work Necessary.

"Billions of life insurance and other commodities are sold every year and will continue to be sold to buyers who are not 'ready to buy.' You may well ask what makes this possible.

"Salesmanship—good salesmanship—enthusiasm—hard work and determination.

"If a man can sell a commodity which the buyer cannot see, taste, wear or resell, had to die to win, and always out of season—what possible excuse can a man have with a line like ours that is used every day.

"Just make up your mind, old man, that good luck is twisting herself all out of shape in an effort to help you out. Just let a warm glow of gratitude permeate your entire system because your man is 'not ready to buy.'

"Remember that when a man is ready to buy he goes ahead and buys—from the first man who offers what he wants—and by the time you get there he doesn't need a blessed thing. Be glad that he is 'not ready to buy,' and, therefore, has not already bought.

"If you fail to sell a man who is 'not ready to buy'—and who, therefore, has not bought—then you have fallen down on your selling. Admit this to yourself, try to study out how you have fallen down and tackle the next man with renewed determination."

Putting Over the Sale.

Live motor truck salesmen nowadays have hard propositions put up to them and they have to solve the riddles if they are to put over the sales. The manager of the Michigan branch of the Fulton Motor Truck Co. had placed before him one proposition which all but stumped him, yet he won out and landed the sale.

After calling upon a farmer and convincing him that he should have a motor truck, the farmer said:

"But I have no use for a truck now. I cannot get any manure for fertilizer and that is all that I would have to haul right now. If you can find me some manure I'll buy a truck, and that is an agreement."

Such a proposition had never been put up to the salesman before, but with faith in himself he went out to make that sale. After some search, and there are few horses used in and around Detroit that it meant some search, he found a carting company which was selling fertilizer to one man, but not on contract.

This company said that if the farmer would take all it had and give a bond of $150 it would make a contract with him. The truck salesman knew that to get the farmer to the city to make out the bond required would mean a lot of time wasted, so he took the matter in hand, got the bond all right, then went to the farmer with the contract in his hand from the cartage company and with the bond made out. The sale was made therewith for cash.

The Goodyear Tire and Rubber Co., Akron, O., and other tire companies have announced reductions in prices. The Goodyear reductions amount to approximately 15 per cent., and apply to both fabric and cord tires, including motor truck and motorcycle tires and tubes. Other companies made reductions of from 12 to 15 per cent. G. M. Stadelman, vice president and sales manager for Goodyear, says: "Our present action is entirely logical and is based on an ample supply of raw materials secured at medium cost, the largest tire production in the world, the facilities afforded by ownership of our own cotton plantation and fabric mill, our world wide organization that gives us important advantages in purchasing crude rubber and a desire to pass on to the tire users the benefits that come from this combination.

The Yale Tire and Rubber Co., New Haven, Conn., is the title of a new incorporation, with authorized capital stock of $500,000, to begin business with $100,000 paid in, which will manufacture pneumatic automobile tires, occupying temporary quarters in a building on Dixwell avenue, pending the erection of a permanent factory structure. It is claimed that before the company begins manufacturing, practically all of the $500,000 stock will have been issued. The incorporators are: J. E. Hubinger, Charles W. Murdock and George P. Smith, all of New Haven.

The India Tire and Rubber Co., Akron, O., has declared a quarterly dividend at the rate of eight per cent. annually on its common stock and seven per cent. on preferred.

The Federal Rubber Co., because of the exceptional increase in its export business, has transferred its export department from the general offices of the company at Cudahy, Wis., to the company's eastern headquarters at 38-40 West Sixty-second street, New York City. G. H. Hamilton, for many years associated with Federal comauny as a special representative, is manager of the export department.

Charles Gomprecht, formerly treasurer and purchasing agent of the Times Square Auto Supply Co., has resigned his position with that firm to accept an executive position with the Keystone Tire and Rubber Co. He has been connected with the industry since the bicycle days.

TIRE PRICES REDUCED.

Various companies have announced reductions in the prices for tires, ranging from 12 to 15 per cent.

The Syracuse Rubber Co., Syracuse, N. Y., has filed articles of incorporation in New York state, with $3,000,000 capitalization and expects by fall to begin the manufacture of automobile tires in its own plant and eventually employ 800 to 1000 men. E. R. Caldwell is acting president and George Loggie acting treasurer. Albert E. Wing, Cleveland, O., vice president of the Ideal Rubber Co., is a director.

The Perfection Tire and Rubber Co. has arranged for the distribution of its tires throughout the East, having contracted with a group of well known tire men who have started an extensive sales campaign backed up by a national advertising campaign. This eastern contract is for a minimum of $1,000,000 per year for five years.

The Perfection Tire and Rubber Co., Manhattan, New York City, has been chartered with $100,000 capitalization by E. W. McCarthy, A. I. Farb and J. J. McLordan, 2 Rector street.

The Keystone Tire and Rubber Co. through the vice president, denies that Keystone has contracted for the Perfection factory output. The contract does not take any of the regular Perfection output which is handled by distributors and exported by the Nemours Trading Corporation. It is a "cost plus" agreement giving Keystone 3000 or more tires daily under its own name and design.

The Mason Brothers Co., Cleveland, and the Mason Tire and Rubber Co., Kent, O., have had plans prepared for a $3,000,000 cotton spinning and weaving mill, which will be known as the Mason Cotton Fabrics Co. The mill will contain approximately 125,000 square feet of floor space, with 10,000 spindles.

The Gibraltar Tire and Rubber Corporation, with $1,400,000 capitalization, has filed a charter in Delaware. The principles are Richard Krause, Clauson Point, N. Y.; M. A. Heyser, Brooklyn, N. Y., and Arthur Watson, Nyack, N. Y.

The Savoid Tire Corporation, through President W. J. Jeckers, has announced the sale of the exclusive rights on the Savoid process in a number of eastern states. The sale, he says, nets the corporation $3,750,000. One contract covers the New England states. A Boston financial group is reported as the buyer. Coincident with this announcement comes news that a charter has been filed in Delaware for the New England Savoid Tire Co., with $3,000,000 capitalization, the principals being T. L. Croteau, M. M. Clancy and B. B. Drew, Wilmington, Del. Another contract closed was New Jersey, which brought $1,000,000. Rights for Maryland, Virginia and the District of Columbia were reported sold to a southern financial group for $750,000. On all of the contracts the Savoid Tire Corporation will receive $1.25 royalty on every tire rebuilt in the territories mentioned. Contracts have been closed for a dozen states, with a gross amount of $6,000,000.

The Knight Tire and Rubber Co., Canton, O., has incorporated into its names two of the lines on which it is pushing, and has adopted the corporate style Canton-Blackstone Co. A new cord tire, the "Canton Cord," will be made. The "Blackstone" and "Knight" lines will be continued. The company is a subsidiary of the Republic Rubber Co., Youngstown, O.

The Kelly-Springfield Tire Co. has bought a plot, 100x175, on the southeast corner of 10th avenue and 54th street, New York, where it will erect a warehouse and service station, having outgrown the quarters now occupied by it for such purposes.

The Globe Rubber Tire Manufacturing Co., New York, has brought out a cord tire. This new tire has a gray tread and it is announced that the compound used in this tread has a zinc oxide base like the one used in the company's 6000-mile fabric tires.

The Erie Tire and Rubber Co., New York City, has changed its name to the Lake Shore Tire and Rubber Co.

The Carlisle Cord Tire Co., Manhattan, New York City, has increased its preferred stock from $500,000 (par value) to $1,000,000, and its common stock from 10,000 shares (no par value) to 25,000 shares, with an active capital of $1,125,000.

The Black & Decker Manufacturing Co., Baltimore, Md., has established a New York office, in room 2920, Equitable building, which is in charge of G. R. Lundane, who will supervise the distribution of Black & Decker products in New York City and surrounding territory, including the State of Connecticut.

Mr. Lundane was formerly connected with the Thos. B. Jeffery Co., Kenosha, Wis., and eventually became service manager at its Kansas City plant. He subsequently handled the Jeffery car for the State of Illinois, and has recently been connected with the Findeisen & Kropf Manufacturing Co., Chicago, manufacturer of the Rayfield carburetor, in the capacity of eastern district sales manager.

The Black & Decker Manufacturing Co. now has branches in New York, Philadelphia, Atlanta, San Francisco, Chicago, Detroit, Columbus, Buffalo and Boston, the general offices being at Baltimore. The company also has foreign connections in England, France, Norway, Sweden and Japan.

The Champion Ignition Co., manufacturer of AC spark plugs, will begin production of a new speedometer this month, according to announcement by Albert Champion. It is said that one automobile company will use 140,000 AC speedometers next season. Efforts will be made to get the production of the AC speedometers up into thousands per day by late fall. The speedometer development and manufacturing departments will be under the direct supervision of Jo. Berge, recognized throughout the industry as one of the real veterans and experts on speedometers. Extensive tests ranging over a period of two years have resulted in the perfection of the new speedometer, which is of the magnetic type.

The K-W Ignition Co., Cleveland, announces that a decree has been entered in the United States District Court for the eastern district of Pennsylvania, whereby the court has decreed letters patents No. 841,844, granted to Bernet, Jan 22, 1907; No. 1,015,300, granted to Cox Jan. 23, 1912, and No. 1,253,470, granted to Cox, Jan. 15, 1918, under which the K-W Ignition Co. Lock Switches are manufactured, to be good and valid in all respects, and whereby a competing company is adjudged to be an infringer and is enjoined from further manufacture, use or sale of the lock switches. The defendant is permitted to dispose of a comparatively small quantity of lock switches which it has on hand and for which it must account in a monthly statement to the plaintiff.

G. R. Lundane, in Charge of Black & Decker's New York Office.

The Red Head Spark Plug Corporation, a new organization, has taken over the patents, rights, machinery and good will of the spark plug department of the Emil Grossman Manufacturing Corporation, Brooklyn, N. Y., manufacturer of the Red Head Vitristone spark plugs for the last 11 years. None of those interested in the old organization are represented in the new company, which has sales offices at 261 Broadway, New York, and factories in Newtown, Pa., and New York. There is greatly increased capacity, devoted exclusively to the manufacture of the spark plugs. A. H. Hill is sales manager. A thorough advertising campaign, with an efficient sales force, is planned.

The M. & S. Corporation announces the removal of its factory and general offices from Detroit, Mich., to 1107 East 152nd street, Cleveland, O., and the change in name of its product to Powrlok; also the election of W. T. Walker, formerly of the Walker-Weiss Axle Co., Flint, Mich., as president and general manager, and the appointment of L. O. Haskins, formerly with the O. & S. Bearing Co., Detroit, Mich., as director of sales and advertising.

The Perfection Heater and Manufacturing Co., Cleveland, has acquired in their entirety the organization, the assets, manufacturing facilities, etc., of the Perfection Heater division of the Standard Parts Co. The new company has already increased its organization and its facilities, and is concentrating upon the manufacture of motor car heating equip-

C. S. Pelton, whose connection with the Perfection Spring and the Standard Parts company dates back seven years, and who for the last four years has been in charge of the development of the Perfection Heater business under the old regime, is vice president and general manager of the new company. E. L. Jones, for a number of years with the Remy Electric company and with the Standard Parts company in important sales capacities, is associated with the new organization as special factory representative. L. H. Peck, formerly machine tool designer for the Foote-Burt Co., and for 21 months a lieutenant in the Aviation Corps, has charge of engineering and production.

The new company is capitalized at $300,000 and lists among its stockholders a number of Cleveland's most prominent business men. The officers are: President, W. A. C. Smith; vice president and general manager, C. S. Pelton, and secretary and treasurer, F. D. Kellogg.

The Wayne Oil Tank and Pump Co., Wayne, Ind., has inaugurated a new consulting and advisory service for oil men. F. A. Bean, consulting engineer, will take charge of this work. He has a broad engineering experience, covering 23 years, 15 of which have been in an executive capacity. No charge will be connected with the service. All advice, plans, etc., are to be given gratis. This service should appeal to all oil men, especially the marketers and jobbers. The functions of service include standardization of equipment, economical operation and maintenance of equipment, designing and planning of buildings, ground layout, etc.

The American Bureau of Engineering, maker of the famous Ambu Electric Trouble Shooter and other devices and equipment for battery shops and garages, has moved its offices and stock rooms to 1601-1603 S. Michigan Ave., Chicago.

To meet requirements of the various manufactured in 10 different types. These as standard equipment on 24 makes of are adaptable to every type of car.

Personal News of the Industry in Brief

Frank S. Corlew is now manager of the New England branch of the Jenkins Vulcan Spring Co., Richmond, Ind. The branch is at 819 Boylston street, Boston, where ample facilities to handle the con-

FRANK S. CORLEW.

stantly increasing volume of business will be maintained. Mr. Corlew's experience dates back to the time that the bicycle business was in the heyday of success. When about 15 years old he became sales manager of the New England branch of the Fowler Bicycle Co., Chicago. When the motor car became a commercial success Mr. Corlew became sales manager of the Adams Sutton Co., pioneer distributor of Oldsmobile cars in New England. In 1909 he was prominently identified with the introduction of Velie cars into the New England territory, as well as the distribution of several other well known makes of automobiles. Eight years later he became manager of the Washington office of the Motor Products Corporation, Detroit, and was in charge of the company's operations during its co-operation with the government in the world war. He is a member of the Bay State Automobile Association and other motor organizations, and is an enthusiastic yachtsman.

H. A. Flogaus, an automotive engineer, has been appointed to the engineering staff of the Maibohm Motors Co., Sandusky, O. For four years he was automotive engineer with the Willys-Overland Co., Toledo, and later was with the Curtiss Aeroplane and Motor Corporation, Buffalo. As assistant chief draftsman of the Motor Transport Corps he was in charge of the chassis design of the class B truck, being stationed at Washington last year for this work. Since leaving government service he has been chief tool engineer with the Matthews Engineering Co., Sandusky.

M. M. Whorley, who held the position of branch manager of the Firestone Tire and Rubber Co., Syracuse, N. Y., has resigned to become secretary and general manager of Wilson & Greene Motor Co., Ford distributor, Syracuse, N. Y.

J. L. Steele is now connected with the sales force of the Neskov-Mumperow Motor Car Co., Anderson distributor and Dort retailer in St. Louis. He was formerly with the Pennsylvania Rubber Co., Philadelphia. W. C. Pfeiffer has also been added to the sales force.

Alfred Faber and James McGarity have joined the service staff of the Automotive Electrical Service Co., Inc., Delco, Remy, Northwest and Klaxon service distributor in St. Louis. Mr. Faber was formerly of the Automobile Ignition Co. and Mr. McGarity was formerly of the Chandler Motor Car Co. and the Packard-Missouri Motor Car Co.

J. E. Weber succeeds W. Milton Koenig as advertising manager of Weber Implement and Automobile Co., distributor in St. Louis of Chalmers, Maxwell and Hupmobile cars.

F. H. Haack is now manager of service for the Moerschill Electric Co., St. Louis, representative for Connecticut ignition, Splitdorf magnetos, Webster oscillators and U. S. L. batteries.

J. H. Malone has become vice president and general manager of the William F. Hudson enterprises in Philadelphia. He was formerly with the Chilton organization.

Stephen M. Avery is now advertising manager with the Traffic Motor Truck Corporation, St Louis, Mo.

Claude Greenhoe has assumed the duties as chief engineer of the motor bearings division of the Hyatt Roller Bearing Co, Detroit, Mich. R. G. Wells, who formerly held the position, has been promoted to chief engineer of the Hyatt factory at Newark.

H. H. Lotz has joined the sales force of the Hilo Varnish Corporation. He will cover Southern Ohio, with headquarters at Dayton. He was for many years with Lowe Brothers Co.

Lon R. Smith has resigned as sales manager of the Buda Co., Harvey, Ill.,

LON R. SMITH.

and will assume general sales and advertising management of the Midwest Engine Co., Indianapolis.

George H. Hunt, long identified with the automotive parts industry, has joined the executive staff of the Detroit Pressed Steel Co., manufacturer of Disteel wheels. He has been appointed sales

GEORGE H. HUNT.

manager of the wheel division and will keep in touch with the manufacturers of motor cars and trucks. For several years he was manager of the Detroit branch of the Stromberg Carburetor Co. and for the past year the Detroit representative of both the Edward G. Budd Manufacturing Co., Philadelphia, manufacturer of steel bodies, and the Budd Wheel Corporation.

C. W. Jacoby has assumed the duties of manager of the Philadelphia office and warehouse of Peter A. Frasse & Co., Inc., succeeding W. F. Moore, who has resigned.

J. H. Weller is now assistant to B. W. Burtsell, president of the Herschell-Spillman Motor Co., North Tonawanda, N. Y. He will have charge of production. Mr. Weller was formerly assistant production manager of the Packard Motor Car Co.

W. R. Mason will cover the State of New York as sales representative of the O. Armleder Co., Cincinnati, O.

Ray Wice, who has been for several years a salesman with the Hudson-Phillips Motor Car Co., St. Louis, has become connected with the Hudson-Frampton Motor Car Co. E. C. Anderson has become wholesale territorial manager for the company.

Eugene W. Lewis has returned to Detroit from Washington, where he was with the chief production branch of the general staff of the army. He was former vice president of the Timken-Detroit Axle Co. Mr. Lewis will devote his time to private interests.

T. C. Stephens has become associated with the sales force of the South Bend Spring Wagon and Carriage Works, South Bend, Ind. He will devote his time to the selling of Gary trucks and the Trailmobile trailers.

Charles Clifton, president of the National Automobile Chamber of Commerce, has appointed the following as a show committee for the 1920 truck shows: M. L. Pulcher (Federal), chairman; A. J. Whipple (Diamond T) and David S. Ludlum.

CHARLES CLIFTON.

C. C. Hanch, who has been in Europe for the last three months, is now on his way home. He went on a tour of investigation for the National Automobile Chamber of Commerce and his report will be a leading feature of the Export Managers' Convention which is to be held in New York City, June 6. He was formerly head of the Automotive Products Section of the War Industries Board.

L. D. Rockwell has opened an office in the Book building, Detroit. He is manufacturers' representative for the Dahlstrom Metallic Door Co., Jamestown, N. Y., maker of seamless tubes, moldings, windshield tubing and specialties; Fiske Brothers Refining Co., New York, manufacturer of lubricating oils and greases; American Tube and Stamping Co., Bridgeport, Conn., producer of alloy steel, hot and cold rolled strip, and the Nagel Electric Co., Toledo, maker of ammeters, gasoline gauges and automobile specialties. Mr. Rockwell was for 14 years eastern district manager and also special sales representative in the Middle West for the Standard Welding Co., and its successor the Standard Parts Co. of Cleveland, O.

Charles Weed has become manager of the local branch of the Times Square Supply Co. of New York in Providence, R. I. He succeeds L. L. MacGuire, who has gone into other work.

Wakeman Hackett has become associated with the Oshkosh Motor Truck Co., Oshkosh, Wis. He was for 20 months in service in France with the 121st Field Artillery, 32nd Division, where he reached the rank of captain. In his new position he will act as factory representative covering the Middle West states.

I. H. Holthusen has become associated with the sales force of the Manley-Thompson Co., Tacoma, Wash., Ford distributor. Mr. Holthusen has had wide experience in the Ford trade, having worked for the Universal Motor Co. for two years and also for the Ford Motor Co.

Walter C. Irvin has become associated with Tom Cooper's Garage, Arkmore, Okla., which is widely known throughout the southwest. During the war he was commissioned a first lieutenant in the Motor Transport Corps. Previous to this connection he was with the Fort Motor Co., Oklahoma City branch, as superintendent.

G. E. Bovis has resigned as manager of the Fisk Rubber Co.'s office in Sioux Falls, S. D., to join the forces of the McGraw Rubber Co. at Des Moines, Ia.

L. R. Harris is now manager of the local branch at Providence, R. I., for the B. F. Goodrich Rubber Co. He was formerly manager of the branch at Boston. Mr. Harris has been connected with the organization for the last seven years.

F. Bradley Peyton is now connected with the Motor Sales Co., local sales agent of the Fordson tractor in Charlottesville, Va. For the past 12 years he has been connected with banking interests.

L. H. Shepherd is now connected with the Boston branch of the B. F. Goodrich Rubber Co., having been succeeded by L. R. Harris as manager of the Providence branch.

Milton W. Franklin is now with the Remy Electric Co., located at the factory at Anderson, Ind. Mr. Franklin has made valuable contributions to technical publications, especially on the subject of ozone, which are regarded as authoritative and constitute the accepted views at the present time. For two years he was professor of radiology at the Polyclinic in New York and director of the Department of Radiology in the New York Health Department. He has been connected with various electrical railway companies, with the General Electric Co., and was president and general manager of the C. & C. Electric and Manufacturing Co. of Garwood, N. J. He is a member of most of the leading technical societies of this country.

MILTON W. FRANKLIN.

John N. Willys has been appointed chairman of the National Automobile Chamber of Commerce in charge of next year's national passenger car shows. He is president of the Willys-Overland Co.

JOHN N. WILLYS.

Mr. H. M. Jewett, president of the Paige-Detroit Motor Car Co., and Mr. H. G. Root, general manager of the Westcott Motor Car Co., will be associated with Mr. Willys on the committee.

Claude C. Ostrom has severed his connection with the Parish Manufacturing Co. as general manager at Reading, Pa. He was formerly its Detroit manager. Mr. Ostrom has been identified with the automobile industry for some time, having been with the Locomobile Co. of America for six years, and previous to that having spent seven years with the Midvale Steel Co. His future plans are as yet unknown.

F. H. Bogart, formerly production engineer for the E. F. Houghton Co., Philadelphia, Pa., has become associated with the Oneida Motor Truck Co., Green Bay, Wis., as production and factory manager. He has had 20 years of practical experience in automotive manufacturing.

Verne Seger has resigned from the service department of the Republic Motor Truck Co., Inc., Alma, Mich.

Sherman W. Dorman, who for the past three years has handled the purchasing of accessories for the Biddle Purchasing Co., has joined the Overseas Motor Service Corporation. He will be manager and will handle a selected number of high grade accessories in foreign fields exclusively, the most prominent of which are controlled by the United Motors Corporation.

D. McCall White has resigned as vice president in charge of engineering of the Cadillac Motor Car Co. Mr. White came to this country some time ago and was then widely known as a British engineer. His knowledge of high speed engine design commended him to the attention of the Lelands, then at the head of the business, and he became the originator of the Cadillac Eight.

Willys Export Firm

John N. Willys, president of Willys-Overland, Inc., has announced the organization of the John N. Willys Export Corporation, with offices in the City Investing building, 165 Broadway, New York. This organization will direct export sales activities for a number of Mr. Willys's various interests, chief of which are the Willys-Knight and the Overland motor cars. A campaign of trade development and expansion, world wide in its scope, already has been outlined and will be inaugurated immediately. The export corporation will serve clients in 80 or more countries; in fact, wherever there is a market for its products. Associated with Mr. Willys in the new corporation are E. C. Morse and John Macfadyean, both of whom are and have been for a number of years prominent in the automobile and export fields.

TO DESIGN FRENCH CAR.

Benjamin Briscoe of the Briscoe Motor Corporation, has been elected a director of Bellanger Freres, one of the largest manufacturing companies of Paris, France. He is under a commission from that company to design a moderate priced automobile for French manufacture along French lines, but of American parts to a large extent. He has opened offices at 820-821 Book building, Detroit. Mr. Briscoe has associated with him in his work Rodolphe Stahl, an engineer who has been connected with him in his companies for the last nine years. Mr. Briscoe was a lieutenant commander in marine aviation.

This connection does not mean that Mr. Briscoe has severed his connections with the Briscoe Motor Corporation, of which he is one of the principal stockholders, a director and member of the executive committee.

FORD TO INVADE SPAIN.

The Ford Motor Co. has decided to launch an immediate invasion in Spain and the Scandinavian countries. The company will erect assembling plants at Cadiz, Spain, and at Copenhagen, Denmark. The Ford interests will be able to assemble more than 500,000 cars annually for the demands of the two countries. A more intensive campaign will be waged in France. Offices of the company at Bordeaux and Paris will be reopened.

The proposed plants will cost $300,000. Copenhagen, besides being an ideal point of distribution for the Scandinavian countries, is accessible to Poland and it is not difficult to send products into Russia through the northern ports. Henry Ford, his son, Edsel, and other big stockholders believe that Russia will be the most fertile of the foreign markets as soon as the wave of Bolshevism subsides and law and order gain the upper hand.

When the rights for the Belgian Congo were recently assigned, the Ford interests thereby obtained representation in every country in the world. There are only two manufacturing plants, one being situated at Detroit and the other at Manchester, England. Recently an assembling plant has been constructed at Buenos Aires, Argentine, and sales offices have been opened at Sao Paulo, Brazil. There is an assembling plant at Bordeaux, France.

Italy Needs Cars

Many requests have recently been made to his office, reports Trade Commissioner M. J. Chiesa of Rome, for agencies, exclusive or limited, representing automobile manufacturers. There is a great demand for a lightweight low priced car. He says that the war has lessened the buying power of the people in the large cities of Italy, but the smaller towns and cities, whose population is of the rural and land owning type, have increased their resources. It is from these rural districts throughout the provinces that the demand is greatest. For instance, in Macerata, whose population is about 20,000, there are now 500 cars in use.

Mr. Chiesa believes that American manufacturers of the lower priced cars would do well to survey the field and prepare for future possibilities.

FOREIGN TRADE OPPORTUNITIES

(Reserved Addresses May Be Obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from District and Co-Operative Offices.)

29,313—Catalogues with price lists are desired for the purchase of medium and high grade automobiles. Correspondence may be in English.

29,316—A Spanish firm having had many years of commercial experience wishes to form connections with American export and import houses. Correspondence should be in Spanish. References.

29,317—A member of the French Commission in the United States desires to secure connections with a large manufacturing corporation planning to organize export business in Europe. He has a thorough knowledge of English, French and German. References.

29,331—A limited liability company is being formed in a city of Spain to do a general importing business. The associates wish to establish connections with firms exporting construction materials, machinery, chemicals, textile products, office supplies and automobiles. They are also in a position to handle shipments of grain and flour. References.

29,238—A firm in Colombia wishes to purchase a gasoline motor car for passenger use of a capacity of 20 passengers. This car should be equipped for use in a tropical country and have provision for proper ventilation and protection against heavy rains. Plans and specifications for this car should be forwarded to the purchasing agent of this firm who is in this country and whose name and address may be secured upon application to the bureau or its district offices.

29,263—Exclusive representation is desired by a company in India for the sale of hardware, mill and railway stores, machinery, electrical goods, stationery, provisions, perfumery, wines and spirits, bicycles, motorcycles, motors, dynamos, electrical lighting sets, pumps, oil engines, lathes, bleaching, dyeing and finishing machines, weaving and spinning machines, rice hullers, flour mills, elevators, etc. It is requested that triplicate sets of catalogues, price lists and samples where necessary, be forwarded. References.

29,266—A manufacturing firm in Norway wishes to purchase machinery to be used in an automobile factory. Drilling machines, milling machines, lathes, motors, frames, axles and starter equipment are required. Quotations should be given f. o. b. New York. Payment, cash against documents. References.

29,268—A company in India desires to purchase and secure an agency for the sale of steel and iron in bars, sheets, tubes, plates, etc.; builders' and engineers' hardware; caustic soda and petroleum and lubricating oils. References.

29,272—Three different firms in Belgium make urgent request that they be placed in communication with exporters for the sale of automobile trucks with trailers, 1½ to three tons, small agricultural machinery, tires, solid and pneumatic; unbleached and bleached cotton cloth, linen, flannels, etc.; and foodstuffs and general products.

29,274—Belgian firms have forwarded a request for agencies and consignments of the following goods: Small motor cars, tourist cars, trailers, trucks and motorcycles; cold storage and salted meats; cotton, leather and balata belting; hemp twine for binding and leather belting of good quality.

29,280—An agency is desired by a man in Switzerland for the sale of motors, auto

Digitized by Google

trucks, agricultural machinery, farm tractors, animal fats for industrial purposes and meat extracts. Correspondence may be in English. Reference.

29,337—Well recommended firms in Belgium desire to secure agencies and consignments of the following goods: Enamel ware, agricultural machinery, carriage and cart axles and machines to manufacture same, medium priced automobiles, automobile accessories, food products, sanitary articles, silk hosiery, railway materials, machines, machine tools, tools and elevating equipment.

29,346—A firm in Spain desires to secure agencies on a commission basis for the sale of industrial and agricultural machinery, vehicles, automobiles, motorcycles and bicycles; electrical material and apparatus, such as lamps, motors, fans, plates, stoves and water heating apparatus; office furniture and supplies, such as new, second hand and rebuilt typewriters, ribbons, dating and numbering stamps, paper, wax, ink, metal and rubber stamps and calculating machines, pianolas, billiard tables, gramophones and disks, films, printing materials and construction materials including cement, lime, pressed bricks and tiles, glassware, builders' hardware, elevators and plumbing supplies. Correspondence should be in Spanish. References.

29,342—The representative of an American firm who is now in Denmark desires to secure agencies for the sale in the Scandinavian and Balkan countries from manufacturers of agricultural implements and machinery, especially caterpillar tractors and steam plows, technical specialties, building supplies, machinery for oil wells and medium priced automobiles and accessories. References.

29,364—The purchase of wood working machinery, motor and general engineering machinery and tools is desired by a firm in New Zealand. Quotations should be given f. o. b. port of shipment. Payment to be made against documents in New York. References.

29,365—An American firm is about to send a representative to South America via Cuba and desires to secure agencies for the sale of dyes and chemicals, hardware, tools, house furniture, shoes, machinery and motors, typewriters, cotton and woolen goods, automobiles and automobile accessories.

29,368—An importing and exporting house in India desires to secure the representation of several lines of American made goods. References are furnished.

29,352—An American firm will soon send its agent to Europe and desires to represent manufacturers throughout Holland, Belgium and France in the sale of general merchandise, dry goods, automobiles, automobile accessories, hardware, chemicals, dyestuffs, machinery, groceries, foodstuffs, raw materials, etc. References.

29,353—A Spanish import house which has established a force of traveling agents desires to represent American firms interested in foreign trade, on its own account or on commission. It states that it is in a position to furnish satisfactory commercial and banking references.

29,355—A mechanical engineer in Australia wishes to secure agencies for the sale of gas power motor engines. References.

29,375—A merchant in France desires to secure an agency for the sale of motors of all kinds, gas engines, combing, spinning and weaving machinery and accessories. Correspondence should be in French. Reference.

29,390—The purchase of tractors, plows and thrashers to be used in northern Mexico is desired by a man in that country. Correspondence may be in English. Reference.

29,406—A representative of a firm in Spain is at present in this country and desires to purchase and secure agenies for the sale of camping outfits, tents, thermos bottles, automobiles, bicycles, motorcycles, motor tubes, automobile accessories and all kinds of sporting goods. References.

Survey of Motor Trade Conditions in Argentina

The Guaranty Trust Co., New York, has issued an interesting survey of motor trade conditions in the Argentine, of which part follows:

For the American exporter of passenger and commercial automobiles Argentina is already an established market of first rate importance. The possibilities for developing the demand for these vehicles and for tractors are enormous. There is much to be said for the widespread belief that Argentina offers the American exporter of these lines greater opportunities in the future than any other country in South America.

General Conditions.

There are also certain general conditions affecting the use of automotive apparatus throughout Argentina of which a knowledge is of the utmost importance, whether the exporter be interested in one or all of the lines enumerated. These include such subjects as the following:

(1) Roads: (a) Existing facilities; (b) possible and probable extension and development; (c) the value of intelligent and persistent good roads propaganda.

(2) The present and probable future distribution of the population and the probable growth through immigration and otherwise; the purchasing power of the country as a whole, of particular areas, and of the various classes of the population.

(3) The conditions in particular industries, such as ranching, mining, agriculture, manufacturing, etc., which most affect purchasing power from year to year.

(4) The cost and distribution of fuel.

(5) The existence or non-existence of repair facilities, the number of trained mechanics available and the question of accessories.

(6) The influence of expert demonstration, prompt delivery, large packing, etc.

(7) Competition from foreign and domestic sources before, during and after the war; local requirements and prejudices which may be overcome or modified.

(8) The value of expert co-operation in two or more non-competitive lines.

Intensive Study.

The American exporter who would achieve the maximum of success in one or all of these markets in Argentina will profit by an intensive study of the entire subject.

In common with most of the world outside of North America and parts of Europe, good roads in Argentina are practically confined to the principal cities. Heavy, expensive cars cannot yet be operated to advantage over the immense level pampas, nor even on the unimproved black dirt roads of the country districts. Their use in quantity is therefore restricted to definite areas, such as those surrounding cities like Buenos Aires, Rosario, Bahia Blanca, Mendoza, Cordoba, La Plata, Santa Fe and Tucuman.

Buenos Aires, a city of 1,500,000, and the financial, industrial and social center of the country, is served by several hundred miles of good roads and is so connected with La Plata, an important seaport of 136,000 inhabitants 30 miles distant. The lack of suitable roads linking up even the most important cities is accentuated by the absence of trained native mechanics and repair facilities in the intervening districts. The majority of the great land owners of the country maintain houses in one city or another, notably Buenos Aires, where excellent garage service, trained help and good roads simplify the problems of upkeep in the use of expensive cars.

Need More Good Roads.

The areas of good road service about each of the main cities must gradually expand and they are, therefore, destined to become constantly more important consuming centers and points of distribution for outlying districts.

It is in the sale of expensive cars, which is as yet practically limited to the cities, that the American exporter may well prepare for the keenest competition from Europe as well as from rival American makes. Briefly, it may be said that Europe supplied Argentina with automobiles prior to 1912; that European exports, largely of the best makes and expensive types, have gone almost exclusively to the cities; that such importations were a very important factor until very recently, and that without doubt strenuous efforts will be made, particularly by Italy and France, to regain an important trade temporarily interrupted by the war.

American exporters of expensive models have encountered a marked prejudice in favor of European workmanship and finished product. This is scarcely strange in view of the fact that many of the wealthiest Argentinians have long been in the habit of wintering in European capitals. The foreign exporter, who took pains to develop the new market before the serious entry of the American car, fostered this preference.

Heavy Overstocking.

Only patient effort and expert demonstration will serve to overcome such prejudice. The splendid opportunity afforded during the war period has been tempered somewhat by heavy overstocking with expensive foreign cars in 1911 and 1912. Many such cars remained unsold until the models were obsolete, tying up important resources of the dealers involved.

The greatest opportunity in Argentina so far as the manufacturer of passenger cars is concerned apparently belongs to the quantity producer of good, light and inexpensive machines.

The great market for such vehicles lies away from the cities in the vast outlying districts. The field is one particularly suited to the American product, which dominates this market as it exists today and should continue to do so in the future. Almost no European cars have been sold outside of the good road centers, while it is said that more than 80 per cent. of the imports from the United States are now going to wealthy farmers and others in the country regions.

Research Association Formed by British Auto Men

Trade Commissioner Herman G. Brock, London, has made the following report to the United States Bureau of Foreign and Domestic Commerce:

"The various exhibitions of British manufactured goods, such as the Scientific Products Exhibition and the British Industries Fair, have all served to give a more general realization of the importance of the scientist and his work to industrial development.

"The government long ago announced its desire to encourage research in industry. The first tangible evidence that the value of scientific research is recognized by British engineering trades is the announcement recently made of the formation of the Research Association of British Motor and Allied Manufacturers. According to the Imperial and Foreign Table Supplement of the London Times of April 5, this association is about to be registered and will apparently start work with an income in excess of $50,000 a year, guaranteed for at least five years, of which almost half will be contributed by the government. A considerable number of the largest motor manufacturers have already guaranteed their support of this association. Their subscriptions will range from $250 minimum to $2500 maximum, and the willingness of the bigger firms to pay this latter figure indicates how fully they appreciate the importance of applying research and investigation to outstanding problems in motor vehicle design.

"The association will be governed by a council, partly commercial and partly technical, and this council will be advised as to its program of work by a purely technical committee of scientific motor engineers. The work will be divided into two main branches. First, in order of time, will come the collection of information from all quarters, which is necessary in order to assess the knowledge already available in regard to any particular problem, and so avoid going over old ground. Even without any actual research at all, the proper compilation of a complete library of scientific information in connection with the industry would in itself be a great asset to manufacturers.

"As soon as this collection of information is sufficiently advanced the actual work of research can begin. It is too early to say definitely what steps will be taken first. They will no doubt include the study of the efficient use of inferior fuels and the examination of the principles of suspension and of the materials used in springs. It is anticipated that this research work under proper control will greatly accelerate improvement in the design and construction of British motor vehicles, and the energy of the industry in forming this new association should, it is believed, serve to give confidence to buyers in all parts of the world in the activities of the manufacturers concerned and their desire to keep in the forefront and, if possible, to outdistance all competitors."

AUTOMOTIVE ENGINEERS PLAN FOR SUMMER MEETING.

The Society of Automotive Engineers will hold its summer meeting at Ottawa Beach, Mich., June 23-27. Ottawa Beach was chosen because of the ideal facilities it affords for a meeting combining professional sessions with social features and recreation. All professional sessions will be held in the morning with afternoons free for recreation and diversion. During the evenings there will be lectures or informal talks on scientific, but semi-popular topics. One subject to be discussed at length is the passenger car of the future. Many prominent engineers, including one or more British engineers, will contribute to this discussion. There will be a paper dealing with the relation of farm tractors to their implements. Aeronautic subjects will be treated.

LYDDON & HANFORD ADDS TRADE PAPER DEPARTMENT.

The Lyddon & Hanford Co., Rochester, N. Y., advertising, has added a trade paper to its well organized agency. Granger C. Lederer, formerly of the Moss-Chase Co., Buffalo, and more recently of the staff of Walter B. Snow, Boston, publicity engineer, will direct and develop the department. Mr. Lederer is an experienced advertising man, young, enthusiastic, energetic and a creator of selling advertisements. He has handled the advertising for many well known manufacturers of machinery, tools, automobile accessories, farm implements, etc.

VAN DORN OPENS NEW BRANCH IN CHICAGO.

The new Chicago office of the Van Dorn Electric Tool Co., Cleveland, O., manufacturer of portable electric drills, reamers and grinders, is located at 527 South Dearborn street and extends through to 528 Plymouth street. William Cottrell, sales manager at the Chicago branch, says that the phenomenal increase in business enjoyed by the company is the result of the insistent demand for mechanical devices of proved efficiency and economy. He emphasized the imperative need of his increased accommodations. The new offices are near the South Dearborn "L" station, where all elevated trains stop and which is only a step from the heart of the city.

CHARTERS AUTO SERVICE.

W. C. Holden, Inc., Ossining, N. Y., auto service, has been incorporated with $5000 capitalization by J. A. Greene, E. H. and W. C. Holden, Ossining.

LISTED ON EXCHANGE.

The New York Stock Exchange has admitted to the list Keystone Tire and Rubber Co. common stock.

Metropolitan Boston Garage Men Have Banquet

Good roads, minimizing fire hazards and legislation were the topics at the first dinner of the recently organized Garage Association of Metropolitan Boston at the Brunswick Hotel, Boston. There were about 100 owners of big garages present. President J. N. Scully introduced J. F. Fleming of Brookline as toastmaster.

Col. W. D. Sohier, chairman of the Massachusetts Highway Commission, gave interesting facts and figures about the expenditures on the highways of money derived from motor fees. He showed how beneficial it was to take care of many of the roads in the small towns which are not on the main traveled routes. He also told of the possibilities of the future with the great increase in traffic, which means a big maintenance problem.

Frank Lewis, fire prevention commissioner, asked the members to report to him places where there are three and four cars in old barns or other buildings contrary to law, and said he would remedy these conditions. He said he was glad to be able to state that now fires in garages are getting to be few and far between in this district, because owners are willing to obey the law.

John R. Murphy, fire commissioner of Boston, told of the co-operation of his department with that of Mr. Lewis, and he urged the members to work together to minimize the danger, for in this way they would save money by the reduction of insurance premiums.

He said that Boston was spending money lavishly to protect the lives and property of its citizens, and with everyone using care there would be no conflagrations here, though the fire hazard was very big.

James T. Sullivan of the Bay State A. A. explained to the members the benefits of the organization and showed how necessary it was to keep in touch with legislative matters. By working with other motor organizations, he stated, inimical measures could be checked at the start. Harry Daniels entertained with songs.

Y. M. C. A. SPENDS $800,000 ON CARS SINCE ARMISTICE.

The Y. M. C. A. War Work Council has spent more than $800,000 for cars and accessories since the signing of the armistice. The motor transport material consists of 1700 cars, of which about 900 are trucks of 22 different makes. Four types of motorcycles are also used.

AUTO SUPPLY FIRM.

The Elm Tree Auto Supply Co., Inc., has been incorporated with $15,000 capitalization by E. L. Thomas, J. D. Van Stone and J. E. Foster, Medina, Orleans County, N. Y.

SIMPLE SYSTEM FOR STOCK ACCOUNTING

By Walter Engard.

KNOWLEDGE of stock is imperative in any business. This applies to all commercial activities that entail receipt, storage, handling and delivery of commodities. The stock represents capital invested, and the manager who buys wisely does not have on hand a surplus greater than is necessary to meet demands, replenishing it to maintain a standard that has been determined by experience. There may be exceptions to this general policy, but these should be justified by conditions, for working capital is always desirable and when available can always be utilized to good advantage.

The profit is not in the volume of stock, but in the turnover, and the smaller the volume and the more frequent the turnover the greater will be the percentage of profit to capital. The frequency of turnover depends very largely upon the character of buying—not buying because a commodity will afford a large margin if sold, but buying what is demanded and what will be sold readily, and specializing customers' service, obtaining what is required through knowledge of products and those producing them. The keen buyer of stock seeks information relative to new products, and selects those that are known to be salable, giving preference to those produced by concerns of known reputation, that are well advertised and can be guaranteed as having certain quality.

Goods that are recognized as standards, or staples, that are always in demand, can be bought in considerable volume with reasonable certainty that they can be sold, but products that are not as well known and which must be stimulated by "sales" and "price reductions" are not desirable because of the additional cost of selling as compared with other commodities. Stock that is kept on shelves or in cases and not turned over is from every angle unprofitable, no matter what the price paid or the profit expected, for the capital it represents cannot be used, and after all it is the use one makes of capital, not the percentage of profit that is expected, that justifies business.

But while buying is a very important factor in business success, buying must primarily be based on knowledge of the stock in hand and the demand for each of the different commodities dealt in, which in an average store will run into hundreds if itemized. As stocks are usually kept only an inventory will afford the definite detail, and these cannot be practically made up save at considerable intervals. Obviously stock accounting is a work that must be maintained constantly to be useful.

When one considers the advantages of stock knowledge both from the buying and selling aspects one must conclude that the form of record that will show whatever detail is desired is imperative. But the record cannot be of such character that the cost of maintenance will be excessive, yet if it is not complete a very large part of its value is lost. Without exception every business head has sought a system that will be adequate and simple. This statement applies with full force to the dealer in power vehicle equipment, accessories and supplies. He has innumerable articles in stock that must be accounted for as they are received, as they are stored, as they are displayed, and finally as they are delivered to customers, and each has a value that represents capital. Such a record will obviate unnecessary buying, stock shortage, and is necessary in determining assets and profits each month.

THE CAPITOL MOTOR CAR COMPANY No. 23621

REQUISITION ORDER

M _____

To Stock Clerk:- Deliver the Following

Charge Cash

Article		Price		Total	

Any business must have systematic arrangement of the stock, for this will minimize the time of the clerks, the customers will be better served and satisfied, and handling will be materially reduced. As a matter of fact much will depend upon the thought given a store arrangement, and this applies to the receiving department, the stock room or warehouse, the location of goods in the retail department, the shipping room and the sales displays, which may include the show cases, exhibition stands and the windows. Arrangement of a store has much to do with sales promotion, but while there ought to be every attention given to attracting and interesting customers, the cost of this is also a considerable factor.

Where a retail sales department is operated by a company that operates a car agency, a service station and a repair shop, and supplies, accessories and equipment are sold, this must be regarded as a separate enterprise, although its operation is interwoven with the operation of the other divisions. And the arrangement of each must be with reference to economy, efficiency and satisfaction of patrons.

What may be accepted as a very satisfactory departmentizing plan will comprehend a car sales room at the front of the building or area occupied, and this may be equipped with fixtures and decorations that are regarded as appropriate. At the rear should be the offices, the waiting room and the lavatories. Back

THE CAPITOL MOTOR CAR CO. Name of Part_____ Part No._____ Bin No._____

Digitized by Google

of this should be the service station, and still further back the repair shop. No cars should be taken into the sales room save those intended for display, and these should be moved in and out through a rear entrance into the service station.

Accounting for Parts.

The vehicles brought into the garage or into the repair shop should pass through a side entrance. If no garage is planned the repair shop must afford service and there must be an entrance to this from some public way.

The shop will afford service for the cars sold, at least, and this means that parts must be carried in stock, the volume depending upon the business done. There is every reason for accounting for the parts stock, and in addition to this there must be a stock of materials such as is usually used in making repairs. And if accessories, supplies and general equipment are handled the stock room will be to all intents and practise a store. It should be operated as such and the location should be with reference to serving customers, but, first of all, saving the time of the employees who have occasion to requisition stock and material for repair work, and who go to the stock room frequently during a day. One will understand that such a location will save a large amount in the time of employees, which has a cash value, in the course of a year.

The stock room must be planned so that each class of supplies, accessories, equipment, parts and material will be accessible when wanted. Shelving and bins must be provided, all bearing designations by name and number of what is kept on or in them, and tires should be arranged by makes and sizes, so that any one or number of articles in stock may be found quickly.

Definite Stock Record.

A definite stock record must be maintained and that which will best serve is the perpetual inventory. This necessitates a separate stock record sheet, such as is illustrated, which is maintained for every article in stock. That is, there is a separate form for "Whiz" tires 30 by three inches, for "Best-of-All" tires 30 by 3 inches, for "Aviator" tires 30 by three inches, for both plain and non-skid treads, and so on through the series in stock. No matter if the prices are identical and the tires are the same make, if they differ in any way there are separate records. One will note that on this form is entered the name of the part, the part number and the number of the bin or shelf in or on which they are kept in the stock room.

All invoices received should be sent to the stock room, and when the stock they cover is received by the stock clerk he should check the invoices and enter the different articles in the stock record. He should fill the number of the invoice, the cost price, the list price, the date of entry and the number received. On the invoice is then noted "Entered ————," specifying the date. The invoice should then be returned to the office where it passed through the channels required by the system of bookkeeping.

The stock clerk should be responsible for all stock and never issue anything without a requisition signed by the shop foreman or by an office authority. When a car is brought in for repair, for illustration, the driver explains to the shop foreman what is wanted and authorize the shop to furnish the necessary part and labor. The foreman makes out a r pair slip upon which is entered the n ture of the work, and one copy of thi order is retained by the shop forema and the other goes to the stock clerk. A parts and material are needed they ar drawn by requisition, the stock clerk er tering upon the repair shop record an the stock room record whatever has bee supplied. The stock record form mus include the requisition number (which i the case of repair work may be the jo number), the date of issue, the numbe of articles of any one classification, an then into the column "In Stock" is ca ried the balance of the articles remain ing in stock. This entry is obtained b deducting the number issued from th number in stock.

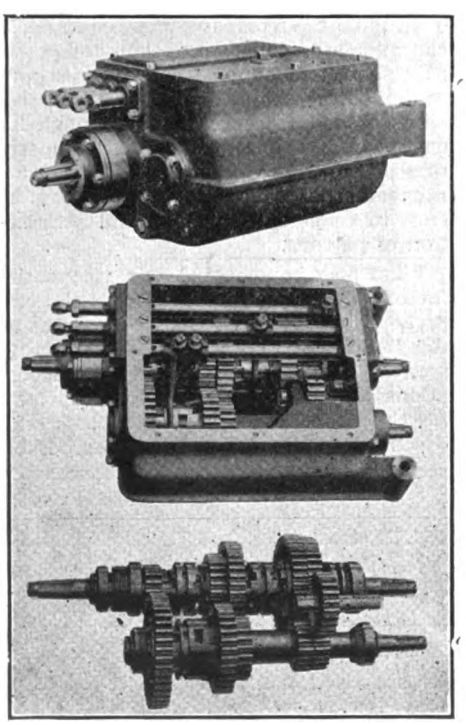
Requisition Slip.

The direct sale of accessories, sup plies, equipment or anything not required for repair work is entered in a requisi tion slip that is issued either by the foreman or the office, and which serves as a sales slip. This is made in tripli cate, one sheet going to the office, one to the stock clerk and the third to the customer. The slip is received by the stock clerk, who, after issuing the articles specified, enters the sales against the stock record, stamping the slip "Entered ————" in the same manner as the invoices. The amount of the sale is filled in the office, no prices being of record in the stock room, and all cash is received by the office.

With this record the stock can be checked at any time. Any part of the stock may be inventoried at a moment's notice to verify the record. If the record shows that a given number of articles should be in stock, these may be quickly counted, and if there is shortage or surplus investigation may be made immediately. The office can quickly check the stock because a record of all stock issues must finally reach it, and the requisition slips are filed according to the serial numbers. Each requisition is numbered serially and failure to receive them in the order of issue necessitates an explanation. Should an error be made the slip is marked "Void" and sent to the office to complete the record.

This system of issuing and recording stock follows the various transactions that involve stock and material, minimize routine and economize time and is productive of a much higher degree of efficiency, at the lowest practical cost of maintenance as well as insuring against losses through buying or handling.

NEW COTTA TRANSMISSION GEARSET



The New Cotta Four-Speed Ratio Transmission Gearset, Showing the Complete Unit, the Cover Removed, and the Shaft and Countershaft.

THE Cotta Transmission Co., Rockford, Ill., has recently developed a four-speed transmission gearset in which the gears are always in mesh and with which it is possible to change speed ratios without shifting gears. This is possible owing to the fact that the jaw clutches are shifted instead of the gears. Transmission gearsets of this type with two and three speed ratios for trucks and tractors have been used successfully for a number of years.

It is claimed that 20,000 trucks, fitted with three-speed Cotta transmission gearset unit, operating on the same principle as the four-speed ratio unit, have been used on the various battle fronts during the world war.

This four-speed transmission gearset possesses exceptional gear ratios, almost providing ideal gear reductions for different speeds. The gear ratios are as follows: Low or first speed, 5.2 to 1; second speed, 3.68 to 1; third speed, 1.86 to 1; direct or fourth speed, 1 to 1, and reverse, 4.666 to 1.

The gear reduction in the second ratio is low enough to start the vehicle under favorable conditions and the low ratio of 5.2 to 1 when conditions are exceptionally bad is the best to use for crawling or where very heavy loads are being moved over rough, sandy or soft surfaces.

STUDEBAKER MUSEUM NOW HOME FOR "GOLD CAR."

The famous "Gold Car," which was a feature at American automobile shows in 1917, recently arrived at South Bend, Ind., from San Francisco, after being brought from Australasia, where it was on exhibition. The car will henceforth repose in all its golden splendor in the museum maintained by the Studebaker Corporation in its administration building at South Bend.

SPACKE ROADSTER LOWEST PRICED CAR

New Automobile Now Being Made to Be Sold at $295—Production Plan Calls for 10,000 Each Month—Has Unusual Features.

THE Spacke roadster, which will be the lowest priced car on the market, probably will be on the market in July. It will sell at $295 f. o. b. Indianapolis. The manufacturer, the Spacke Machine and Tool Co., Indianapolis, is a well financed firm and has been in business for years. The company has had great success in making engines.

The roadster will be marketed exclusively through A. B. Norwalk & Co., Inc., Times building, New York. It is announced that the plan is to produce a minimum of 10,000 cars within the 12 months beginning July 1. The Norwalk company is appointing agents in various parts of the country, and its agents will have samples ready for the public this month.

The car will have the air cooled Spacke 9-13 horsepower De Luxe engine. There will be no differential. It will have a pressed steel racing type body, with two bucket seats, the wheelbase being 90 inches and the length over all 118. It is claimed that the car will travel from 40 to 50 miles on a gallon of gasoline, and will attain a speed of 35 miles an hour.

The principle back of each car, according to the manufacturer, is to provide a really inexpensive car, proved in every detail and capable of all requirements of ordinary service. "The Spacke motor car," states the announcement, "cuts the cost of transportation in half. Its first cost is far less than any other car, and the cost of operation and upkeep actually saves half usual cost of a small car.

"This saving is remarkable when you consider that it has attractive appearance and is modeled on the lines of speedsters costing over 10 times the Spacke price. In the great saving that this new type of car brings you do not sacrifice speed or ease of handling. It will give you all the speed the law allows and throttle down to slowest traffic with a quick pick-up to high speed.

"The secret of the Spacke car is light weight and simplicity. Its design eliminates half the weight of the usual light car and saves you fuel, tires and upkeep in proportion. Its simple, sturdy power plant and working parts make it easy to operate and care for, also adds thousands of miles of service."

The weight complete is 700 pounds. By the addition of the Spacke delivery case on the rear deck the passenger car is made into a serviceable delivery car, the added weight being 55 pounds and the cost $25. An outline of the specifications is as follows:

Length overall, 118 inches; wheelbase, 90 inches; engine, Spacke 9-13 DeLuxe; number of cylinders, two; bore and stroke, 3½ inches by 3⅝ inches; horsepower, 9-13; piston displacement, 10.62 cubic inches; camshaft drive, helical gears; cooling, air; lubrication, eccentric pump and splash; carburetor, Wheeler & Schebler; gasoline feed, gravity with foot accelerator; ignition, Atwater Kent, hand control on dash; gearset, (own make) planetary, two speeds forward and one reverse; final drive, bevel gear, six to one ratio; rear axle, bevel drive, 1⅛ inches shaft; frame, pressed steel channel; tires, 28 by 3 inches; wheels, wire, demountable, enameled black; motor bearings, annular ball; rear axle bearings annular ball; front axle bearing, cup a cone; bodies, racing type, steel bo bucket seats, steel carrier box; wei complete, 700 pounds; delivery box, pounds extra; miles per gallon gasoli 40 to 50; lights, electric; color, battles gray; speed, from 3 to 35 miles.

PLATE XXXV.

SALES, SERVICE AND STORAGE STRUCTURE

Unusual Features Are Incorporated in This European Type of Service Station, Which Has Sixteen Individual Compartments.

The accompanying type of service station is different from the ordinary; it is a type that is, perhaps, already known to many, yet seldom applied as in the plan shown.

The design is commonly called the community or neighborhood garage, having as a general rule nothing but individual compartments for storage, where no repairs or accessories may be obtained as in many garages or stations.

Having provision for both repairs and sales of accessories and supplies, as well as individual storage, this garage proposition is a worth while investment. This combination of service has been found very productive by the owners of a large automobile concern in a European country, and attractive to owners and drivers.

The company claims that in addition to selling cars it can repair and rebuild machines, as well as affording storage to a client of the private or individual garage scheme.

Many owners feel much more content when they know that their cars will be under lock and key, eliminating worry of garage hands "joy riding" with their cars when they put them up for the night.

The entire structure covers an area of 120 by 150 feet, having a large court yard flanked by the different members or units of which the building is composed. First there are 16 individual compartments, each in itself a complete garage. In size they are 12 by 25 feet, ample to house any type of passenger car and have plenty of working room as well. A truck of garage size could be accommodated in one of these compartments.

Individual Compartments.

A work bench has been shown, very handy to the man who desires to do a little repair work. Heat and electric lights are provided from a central plant. The floor is of concrete with drain, insuring at all times a dry floor. There is a large window area, providing ample light for ordinary purposes, and double doors.

In the forward end is located a large show room with a door for cars leading from the court —also two small doors for general purposes. Three large windows afford an abundance of light and these are flanked by an entrance door from the main street.

A drive separates the show room from the office, and this leads to the court yard. At the front end is located an ornamental iron gate, which enriches the design. It also affords protection from stragglers after certain hours who might endeavor to utilize the court for parking purposes.

Next are the offices, large and spacious, with a waiting area nailed off, as shown. Off the office are two toilets, one for men and the other for women. These are lighted and ventilated from overhead.

Large Repair Shop.

In the rear, at the end of the court yard, is situated a large repair shop, adequate for working on six cars at one time. This is lighted by the large doors opening to the court and a huge skylight covering nearly the entire roof. To the right is located a machine shop, as shown, and this should be so equipped that it can handle any nature of work, from small repairs to the making of new parts.

On the other side of the repair shop is the tool and stock room. In this room tools may be kept without loss and parts may be stored there, these being necessary if cars are sold by the garage operator. Adjoining the stock room will be found a toilet and wash room, and from this a stairway leads to the basement, where the boiler room is located. In connection with the boiler room provision should be made for coal storage.

Construction Details.

The general form of construction is brick, with concrete foundations and floors. Plank roofs are covered with tar and gravel. The doors are of wood, with wired glass, and the skylights are of galvanized metal.

The brick for the street front of the building should be first class and of a rough texture, used in connection with a ¾-inch white mortar joint, rough struck to harmonize with the brick. All trimmings are of terra cotta or concrete stone. A geometric design in wrought iron placed in a circular opening over the main entrance to the court has been introduced.

The heating is by steam, each compartment having a separate radiator or coil, while the shops may get the best results from wall radiation of the pipe system, or radiators, if owner cares to purchase them.

There are electric lights throughout the special lighting arrangements for show room and office, and wrought iron lamps on the sides of the entrance to the court.

Regarding the cost, $15,000 would about cover what is shown.

FAKE ARMY OFFICER WHO SPREAD RUMOR U. S. WAS TO SELL WAR CARS ESCAPES

Frank Edward Speicher, who is alleged to have spread stories throughout the country that he had been commissioned by the United States Army to sell war cars, is again at liberty. Speicher was an automobile mechanic when he was drafted into the Motor Transport Corps of the army from his home in Arlington, N. J., last June, and sent to Camp Humphries, Va., where he was assigned to the Fifth Engineer Training Battalion. All the officers liked him so well that within a few weeks they made him a sergeant, and he had no trouble in obtaining leave of 10 days when he asked for it soon afterward.

"I want to go to Washington," he said, "and see some friends about a commission."

It was Second Lieut. Speicher that came back to Camp Humphries. He explained to the camp commander that he had taken the oath of office while in Washington, and that he was now a commissioned officer. A few weeks later when a notice, ostensibly from the War Department, reached the camp promoting him to a first lieutenancy he was warmly congratulated.

In a few more weeks First Lieut. Speicher got another 10-day leave and when he came back he wore the silver bars of a captain.

Gets Into Syndicate.

In October of 1918, according to the information of the Military Intelligence Division of the army, the police of Newark, N. J., came down to Camp Humphries and arrested Speicher on a charge of embezzlement. Speicher was released from custody after several prominent Newark men got his bail reduced from $2500 to $1500, but he did not return to Camp Humphries. He had found something a great deal better in Newark.

During his stay there Speicher formed the acquaintance of a group of Newark men who contemplated forming a $2,000,000 syndicate to purchase from the government, after the war, the surplus automobiles and accessories. Speicher made a good impression upon the syndicate, particularly by being suddenly promoted to a majority, whereupon he doffed the silver bars of a captain. The syndicate members took Speicher into their confidence and let him in on the syndicate. Speicher repaid this kindness by taking one of the capitalists down to Camp Holabird, Maryland, and showing him about the place, where the government keeps several million dollars worth of automobiles and accessories.

When they got to the Maryland camp Speicher had what seemed to be an order from Gen. Drake of the Motor Transport Corps authorizing him to enter into negotiations for the sale of surplus equipment of the corps, calling specifically for a contract to sell 929 Dodge cars at $400 each and $2,250,000 worth of rubber tires.

Again Escapes.

When Speicher next appeared he wore the silver leaf of a lieutenant-colonel. He explained that his work of arranging the sale had gained him another promotion.

The syndicate arranged immediately with a motor car concern to handle its goods and received $15,000 with which to start business. Speicher explained that certain palms in Washington had to be greased in order that the sale might go through without any trouble, and the trusting members of the syndicate gave him $7500. That was the last they ever saw of Speicher.

Early in April the detectives struck Speicher's trail in New York and after a 36-hour chase they arrested him in Danbury, Conn. He was taken to Governor's Island, charged with being a deserter and with having impersonated a commissioned officer with intent to defraud.

This month, during a heavy rain storm and while a dance was going on at the island, Speicher, clad in the uniform of a captain which had been smuggled into him, walked calmly out of his room in the Casual Company guard house, presented an officer's pass at the ferry landing and came to New York. The police and the army have not seen him since.

NEW LINE OF HB MOTOR DRIVEN BENCH GRINDERS.

Hobart Brothers Co., Troy, O., have brought out a new line of sturdy motor driven bench grinders, as an addition to its well known line of electric motors and motor generator sets for recharging motor car storage batteries.

The new HB Bench Grinder is equipped with a ball bearing motor of ample capacity and is a useful and practical necessity for the garage or machine shop. This helpful bit of equipment can be used either on individual stand or on the bench. It is furnished with either the single or double extension shaft as required, providing either for a single or double grinder or polishing wheel. This sturdy, dependable outfit is sold for a small initial payment, the balance in small monthly payments, which allow the machine to pay for itself. The garage man has the advantage of using the machine while the grinder is earning its own payments.

New HB Bench Grinder.

The main feature of this new bench grinder is the motor, which is two horsepower capacity, ample to meet all requirements. This greatly increases the efficiency of the grinder for general garage uses. Sold complete for $18.50 cash and balance in eight monthly payments of $10 each. Manufactured by Hobart Bros. Co., Troy, O.

MAIBOHM MOTORS CO. ERECTING FACTORY AT SANDUSKY.

The Maibohm Motors Co. has moved its organization to Sandusky, O., where it is building a $175,000 plant. With its parent company the Maibohm Wagon Co., established in 1888, this organization has been building carriages, wagons and automobiles at Racine, Wis., for more than 30 years. Temporary quarters are now being occupied at Sandusky by the executive offices, the chassis assembly, painting, trimming and final assembly departments only. Steady and regular shipments are being made.

All departments in the new plant will be consolidated under one roof. The site comprises 17 acres adjoining the main line of the New York Central Railway and the Big Four and Lake Erie & Western lines. It is at the western edge of Sandusky, and a few hundred feet from Sandusky Bay.

The most modern and up-to-date factory in the industry is the promise for the plant. Chassis assembly will be accomplished on a power driven chain conveyor, 365 feet in length. Of this 50 feet will be occupied by a drying oven. The chassis is completed at the point where the finished body emerges from the dark room. The production capacity will be 50 cars per day.

ARROW GRIP MANUFACTURING CO. HAS ELECTION OF DIRECTORS.

Ground will be broken at once for the new home of the Arrow Grip Manufacturing Co. in Glens Falls, N. Y. The company is backed by industrial leaders and is prosperous. At the annual meeting these directors were elected:

George F. Underwood and William H. Gelshenen of New York, Mayor C. F. Burns and Wm. H. Denning of Troy, George Tait, G. F. Bayle, Sr., T. M. Avery and E. G. Mertens of Glens Falls.

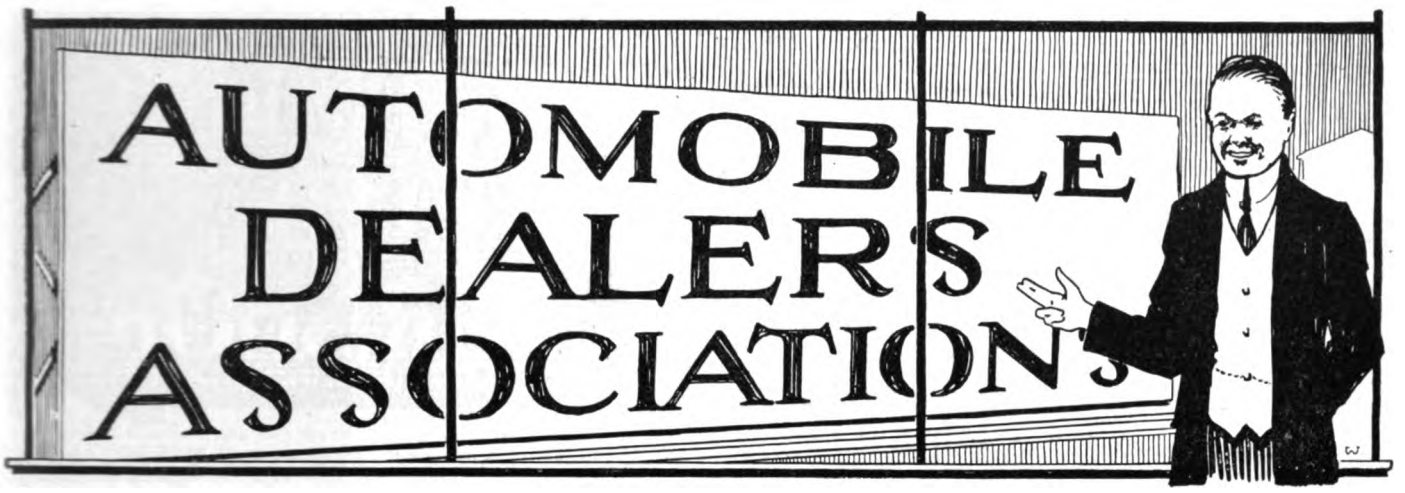
These officers are to be elected: President, George Tait; vice president, William H. Dennin; secretary and sales manager, E. G. Mertens; treasurer, William H. Gelshenen; assistant treasurer and general manager, T. M. Avery.

The company, which manufactures nonskid chains, has offices and distributing branches in New York and Chicago and is about to open offices in San Francisco, New Orleans and Montreal.

EASTON GETS PARTS PLANT.

The Board of Trade of Easton, Pa., announces that the Bard Manufacturing Co., Waltham, Mass., manufacturer of automobile parts, will locate in Easton.

Digitized by Google



New York

Orphans' Day, the annual event of the motor car tradesmen of New York City, will be held Thursday, June 19. This was decided upon by the directors of the Orphans' Automobile Day Association. The officers are: President, Frank Carrie; vice president, William S. Silver; treasurer, Horace De Lisser; secretary, A. L. Prindle. Headquarters for the association will be established at the new offices of the Automobile Dealers' Association, at 60th street and Broadway. Those who can loan their cars for one day should communicate with Secretary Prindle.

VEHICULAR TUNNELS.

In discussing the question of the vehicular tunnels under the Hudson river, T. D. Pratt, executive secretary of the Motor Truck Association of America, Inc., says:

"It is to be hoped the engineers who will be employed to design the new tunnel to New Jersey will bear in mind the serious effect which may be caused by having the two entrances to the tube, the east bound one and the west bound one, too close together. They should be sufficient distance apart so that great traffic congestion will not occur at these points. Assuming that the traffic through the tunnel will be as great as across the Manhattan bridge, which is a conservative estimate, it will only result in establishing another bad traffic 'spot' in the city such as the congestion at the Manhattan end of this bridge, which is very bad; but all our efforts should be to reduce and eliminate, where possible, such spots. The Motor Truck Association intends to watch this situation very closely."

ORGANIZE IN IOWA.

The Iowa Motor Trades Bureau of Des Moines, Ia., has been organized with these officers: President, John Rude, Rude Auto Co., Marshalltown; vice president, John Hanson, Overland-Hanson Co., Waterloo; secretary, A. J. Knapp, Iowa Motor Trades Bureau, Des Moines; treasurer, R. J. Clemens, Clemens Auto Co., Des Moines.

Horace De Lisser, Treasurer, New York Orphans' Day Committee.

CHAMBER OF COMMERCE.

Directors of the National Automobile Chamber of Commerce have declared their determined opposition to any state legislation designed to increase the license fees of car owners.

At the April meeting of the chamber, Col. Charles Clifton presided. It was announced that the car load shipments of cars and trucks for last month were 21,500, against 16,728 for March, 1918, showing that the industry is rapidly getting into its normal stride.

PLAN TRUCK WEEK.

Upon suggestion of Harry G. Moock, business manager of the N. A. D. A., the Truck Dealers' Bureau of the St. Louis Automobile Manufacturers' and Dealers' Association is planning a truck week, beginning June 2, when a train of more than 100 trucks will be sent on a five-day trip through Missouri.

The trucks will be loaded with alfalfa, wheat, drygoods, calves, pigs, cattle, milk cans, etc., and there will be speakers for good roads, trucks and other topics.

Detroit

New general offices of the Detroit Auto Dealers' Association have been opened on the second floor of the Garfield building, 870 Woodward avenue. All business of the association will be handled from this office.

A used car market report will be furnished by the association semi-monthly to its members, as a guide in appraising the value of used cars. New cars will also be listed in the report.

USED CAR REPORT.

The Chicago Automobile Trade Association has issued the 20th edition of the National Used Car Market Report. These cars are no longer listed: Hupp-Yeats, Stoddard-Dayton, Pope-Hartford, Rambler, Bergdoll, Garford, Luverne, Pan-American and Lyons-Knight. The report shows sales from Nov. 21, 1918, to March 21, 1919.

STEWART RESIGNS.

Charles A. Stewart has resigned as general manager of the New York Automobile Dealers' Association, Inc., to enter the selling end of the motor car business. He has been manager of the association for nine years. He was manager of the last automobile show held in New York. He has been prominent in legislative matters relating to the interests of motorists.

SHOW BUILDING.

The Denver Automobile Trades Association is planning to erect a $150,000 building for association headquarters and shows. The proposed structure will have from 80,000 to 100,000 square feet for exhibit purposes.

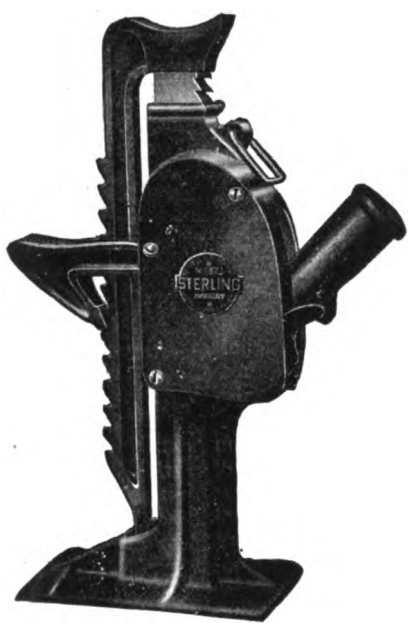
More than half of the money needed has already been tentatively subscribed.

ENDURANCE RUN.

The Los Angeles Motor Car Dealers' Association is planning an endurance run. It is intended to make the test one of driving rather than of car stability, as the usual endurance run always means a great strain on both cars and drivers.

Digitized by Google

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP



"Sterling" Single-acting Jacks. Sterling Jacks are designed for use with every size and type of passenger and commercial vehicle. They are designed for automatic lowering and operate on down stroke of handle regardless of whether the load is raised or lowered. The direction of movement is controlled by upward or downward position of the tripping lever. When handle is not operated the pawls automatically lock, preventing accidental dropping of the load, a quality that insures positive safety in raising any heavy vehicle.

The frames are made of highest grade malleable iron, having a guaranteed tensile strength of 50,000 pounds per square inch; are of liberal proportions and reinforced wherever subject to strains.

The operating mechanism is made of carbon steel and malleable iron, carefully designed to obtain efficiency, safety and ease of operation. All parts are carefully machined, fitted and rigidly inspected. Handles are supplied suitable for each type. The larger sizes are provided with carrying loops for convenience in handling.

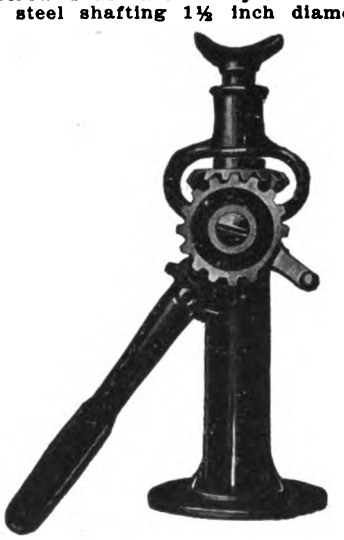
Sterling Jacks are guaranteed to give unqualified satisfaction and any jack or part found defective in material or workmanship or unsatisfactory in service will be replaced when returned to the factory for inspection.

Manufactured by the Republic Auto Parts Co., 81-83-85 10th St., Long Island City, N. Y. Prices on application.

Reliable Jacks. These jacks include all sizes from the smallest No. 00, weighing 4½ pounds, that will lift 4000 pounds, to the largest No. 4, weighing 25 pounds, with a lifting capacity of from three to 10 tons. They are suited for use with any machine, from the smallest automobile to the heaviest truck or tractor. They are built with side cranks for placing under axles and taking up slack before the jacks lift the loads.

There are five sizes similar to the illustration. The crank mechanism on the side gear obviates pumping except for actually raising or lowering the load. Turn the crank till the top of the screw is at the required height, slip the jack into place, give the handle a couple of strokes and the car is off the ground. To lower, let the car down by the handle and pull out the jack. This crank mechanism is fully covered by a patent.

The No. 4 jack is for tractor, trolley car, threshing engine use and for work requiring a high jack with great lifting power. It has the crank on the side gear for speedy adjustment. The foot extension and screw shaft are one piece of cold rolled steel shafting 1½ inch diameter.

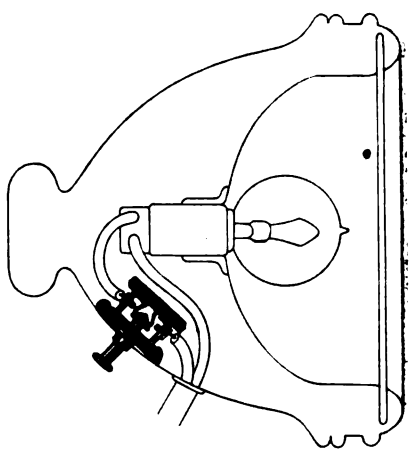


Unconditionally guaranteed. These are standard equipment with some tractors.

Manufactured and sold by the Elite Manufacturing Co., Ashland, O. Price and literature on application.

C-H Spotlight Switch. A new switch recently developed by the Cutler-Hammer Manufacturing Co., consists of the ordinary spotlight with a switch of the push and pull type made for mounting within the shell of the spotlight. Claim is made that many years experience making switches for automobile use have proven that a satisfactory lighting switch must have large "wiping" contact surfaces to prevent excessive contact resistance, and that the contactor must "float" on the operating shaft so that vibration and side strain on the button will not cause the lights to flicker. Both of these qualities are incorporated in this new switch.

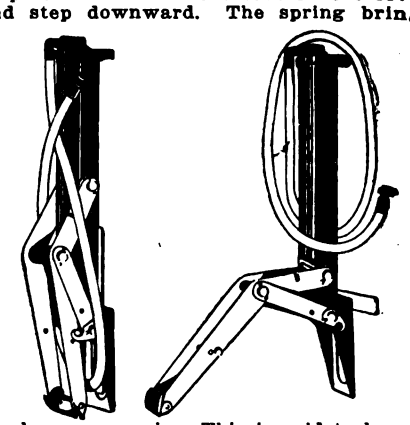
The insulating parts are fiber, the frame of stamped steel, the contacts of brass and the contactor of phosphor bronze. These parts are riveted together to form a solid unit which does not loosen or change alignment when subjected to vibration or strain. The mechanism is not enclosed because this switch is installed inside of



the spotlight shell with the button outside. Either rivets or machine screws can be used to fasten the switch to the shell. No plate is required. Drilling one hole the size of the button and two more for the rivets or screws permits mounting the switch as shown in the accompanying illustration.

Manufactured by the Cutler-Hammer Manufacturing Co., Milwaukee, Wis. Prices and literature on application.

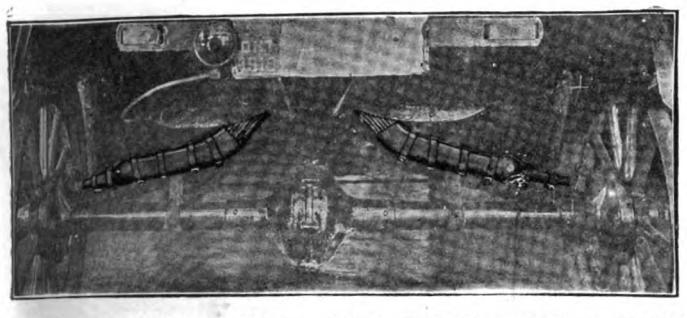
Twombly Tire Foot Pump. A new way of pumping tires is introduced by the Twombly Tire Foot Pump. As is indicated by the name, the pump is designed to be operated by foot pressure, or what amounts to the same thing, the weight of the body. To operate it is only necessary to place the ball of the foot on the lever and step downward. The spring brings



the lever up again. This is said to be essentially a high pressure pump, as the matter of pumping from 70 to 80 pounds pressure is as easy as raising the pressure to 40 pounds. One of the features claimed is its compactness, being only 17 inches long, three inches high and three inches wide.

Manufactured by Schlesinger-Redburn Corporation and marketed by Abbott Motor Equipment Co., Broadway and 59th St., New York City. Price quoted at request.

Digitized by Google



Spring Covers for Ford Cars. Woodworth Lubricating Spring Covers with strap-on fastening are now made for Ford cars. The covers are made of leather and imitation leather, oil and water proof. The straps that hold them to the springs take all wear, so the covers last indefinitely. Inside of the covers are felt linings of large size saturated with oil enough to last for a year, the maker claims. The covers can be re-oiled from an oil cup or may be removed and saturated with oil. It is claimed these covers lubricate the springs and keep out the dust and dirt.

Manufactured by the Woodworth Manufacturing Corporation, Niagara Falls, N. Y. Price, a complete set in a box, genuine leather, $3.50; imitation leather, $2.50.

The Jones Automobile Tachometer. The Tachometer is an instrument which shows how fast the crankshaft of the engine is revolving. It indicates continuously revolutions per minute. Tachometers differ from speedometers in that the latter, though much the same in principle, indicate the speed of the car over the ground in miles an hour.

The principal use of Tachometers is to detect engine trouble. They should be used in adjusting engines to speeds of greatest efficiency, in performance tests and operating cars at the most efficient engine speeds. For speed cars this instrument is particularly valuable, and where maximum efficiency is required it is more reliable than are the human senses.

Automobile Tachometers are much the same in principle and construction as automobile speedometers. The Jones Tachometer was originally designed for aircraft and because of the more severe conditions and requirements there are fewer satisfactory types of airplane Tachometers than automobile speedometers.

The centrifugal Tachometer is so constructed that the centrifugal force, or the tendency of a body to fly away from the axis of rotation, depending on the speed of rotation, acts against the elastic force of a spring. The amount of deformation of the spring determines the motion of the pointer and this indicates the speed. The deflection is continuous, but not strictly proportional to the speed. This disproportionality is compensated in the Jones instrument by a double adjustment device.

The Jones Automobile Tachometer is claimed to be extremely accurate in mechanism and the only centrifugal instrument yet produced embodying a perfectly uniform scale, and other manufacturers find it necessary to calibrate each individual dial, which makes for an unevenly spaced scale, the graduation being crowded on parts of the dial, causing confusion in reading. The dial on the Jones instrument is of greater length and openness than any other instrument of its type yet designed, insuring instantaneous and accurate reading of the smallest speed variation.

It is extremely light in weight, is not affected by temperature changes as is the magnetic type of instrument and has no magnets to lose their attraction in use. The governor system operates at high speed and being very light insures great accuracy. The entire mechanism is so simple that it requires absolutely no attention once it is installed.

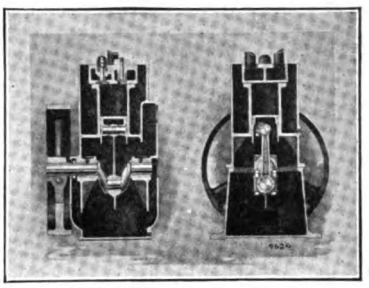
The frame and casing of the instrument are aluminum alloy, black enameled. All rotating parts operate on ball bearings. The dial is black with white indications or vice versa, reading from 500 to 2500 revolutions per minute or 1000 to 5000 revolutions per minute—luminous or plain figures as desired.

The instrument is a flush mount type and can be set in the dash board of any automobile. It is driven by a flexible shaft from the engine and is supplied complete with shafting and all necessary fittings.

Manufactured by the Jones-Motrola, Inc., 29-31-33 West 35th St., New York, N. Y. Prices and literature on application.

Imperial Fourteen Compressors. These machines were built in large numbers to meet a war demand and have been tested for long periods of service. They have now been placed in the market for commercial sale. They are built in four sizes and the capacity ranges from three to 45 cubic feet of air a minute at pressures to 100 pounds a square inch. The small compressors can, however, be used for pressure requirements up to 200 pounds a square inch, the horsepower needed being, of course, slightly increased. They are single acting machines of a vertical type built for belt drive. Where driven from a line shaft, tight and loose pulleys are supplied; where the use of an independent motor is planned they are ordinarily furnished as a unit complete with motor, endless belt and short drive attachment. In the latter case a hard wood base plate is included with the standard equipment.

The machines are so well balanced as to operate satisfactorily if bolted to any solid flooring, but where permanency of installation is desired the building of a concrete foundation is advocated. The smallest size is built with a ribbed cylinder for air cooling where the service is intermittent, and with a water cooled cylinder of the reservoir type for continuous operation. Larger machines are water cooled only, employing the reservoir jacket system

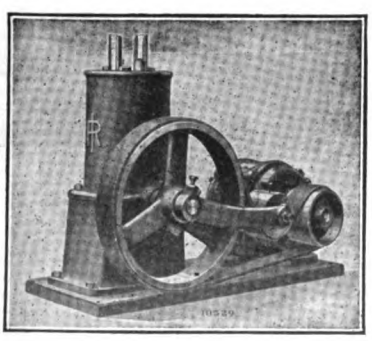


except that in the case of the largest size a closed jacket for connection to a pressure system is optional. In this connection it is worth noting that the reservoir cylinder design affords unusually ample water capacity and that both cylinder and head are cooled. The manufacturer states that a single filling of the water jacket will suffice for a 10-hour run of the compressor.

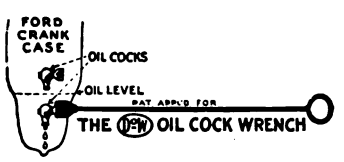
In general design the Imperial Fourteen Compressors remind one strongly of an automobile engine. There is the same drop forged crankshaft and connecting rod, the die cast removable bearings, the automatic splash lubricating system and general ruggedness and simplicity which has come to be recognized as guarantees of satisfactory service under all sorts of operating conditions.

It is pointed out, however, that these little machines were designed to meet exacting efficiency test and that while simplicity was sought, efficiency was the chief requirement.

Manufactured by the Ingersoll-Rand Co., 11 Broadway, New York, N. Y. Prices on application.



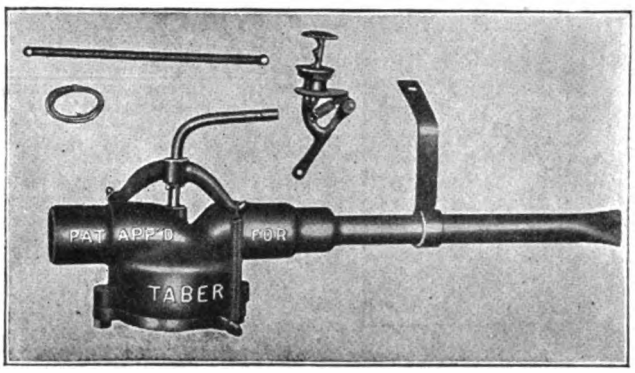
Oil Cock Wrench. Every Ford car owner who has been obliged to reach beneath his car to find out the level of oil in the crank case by opening the petcock in the transmission case, thereby getting his clothes soiled by dirt or oil, will appreciate the utility of the tool illustrated. It is called the Dow Crank Case Oil Cock



Wrench. As the handle is 25 inches long, with this tool the oil cocks may be opened and closed without reaching by hand underneath the car. It is well made and finished in black enamel. This tool is also useful for opening or closing the cock on the bottom of the radiator.

Manufactured by Dow Wire and Iron Works, Inc., Louisville, Ky. Price quoted at request.

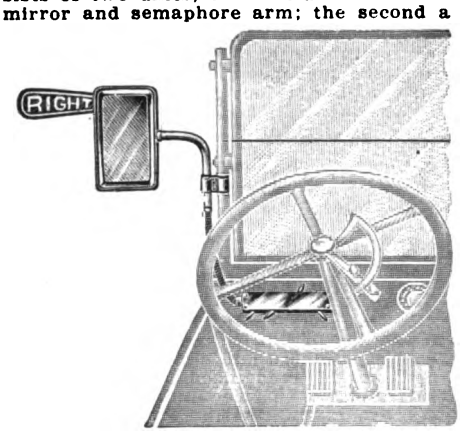
Digitized by Google



Combined Muffler and Cut-Out. The Taber Combined Muffler and Cut-Out for Ford cars consists of a casting that fits onto the exhaust pipe in place of the regular muffler. It is claimed by the manufacturer to reduce back pressure to a minimum and is guaranteed against blowouts for the life of the car. The cut-out is embodied in the main casting and is self-cleaning, there being but one working part. The casting is rigidly held in place by brackets that fasten to the frame, so that it cannot work loose or rattle. It has been tried in very severe conditions and has been adopted by a number of prominent concerns in the automotive industries.

Manufactured by the Emco Manufacturing Co., Inc., Binghamton, N. Y. Price, $4 85 retail; West of the Rockies, $5.

Semaphore Auto Signal. With the ever increasing number of automobiles on the streets and the consequent multiplication of the traffic problems the semaphore auto signal has been designed. This device consists of two units; the first a combination mirror and semaphore arm; the second a



dash control. By the control the semaphore may be set in either of three positions, right, left or stop. The color scheme of the semaphore arm is striking, the letters on all positions are black, but for the three positions are on different colored fields. For right the field is green; for left, white, and for stop, red.

Manufactured by Semaphore Auto Signal Co., Inc., 1780 Broadway, New York. Price, $12.50 complete.

"Duo-Cord" Tires. The extra flexibility of cord tires, their easy riding qualities, freedom from blowouts and saving of gasoline are points widely known. "Duo-Cord" tires follow the best practise of the finest cord tire construction. The easy riding qualities not only add to the pleasure of car use, but save repair bills. The extra strength to resist blowouts is due to each cord being surrounded by rubber, thus strengthening the cord (as a shoemaker waxes his thread) and preventing frictional heat. Gasoline saving results because the quick resilience does away with the drag of stiffer tires, making the car run much more easily.

"Duo-Cord" tires are priced somewhat lower on most sizes and materially lower in small sizes, only because they are sold closer to cost.

The Double Fabric Co. began in the early part of cord tire development to work out the clincher type of cord tires. For more than two years the company has been successfully building Ford sized cord tires.

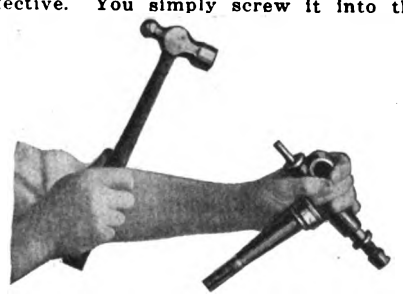
The "Duo-Cord" in Ford sizes is an all-cord tire without any intermediate plies of fabric and is made exactly like the same high quality of the largest sized cords.

Ford sized "Duo-Cord" tires have the advantage that they can be used right along with any fabric equipment the owner may have until such time as his fabric tires are no longer serviceable.

Not only is the Brazil Rubber Gray Inner Tube extra thick for a pure Para tube, but Brazilian rubber is used, which, while more expensive, is stronger and tougher than the plantation rubber generally used. The result is an inner tube which not only holds the air unusually well and is free from slow leaks, but also a tube which will not dry out and crack in years of use, and one that if torn or damaged can always be perfectly repaired. All "Brazil Rubber" tubes are laminated construction, being built of from four to six plies.

Manufactured by the Double Tire Co., Auburn, Ind. Distributed by Farley & MacNeill, 105-107 Federal St., Boston, Mass. Prices: "Duo-Cord" Tires, $24.70 to $83.40; "Brazil Rubber" Gray Inner Tubes, $3.45 to $11.05.

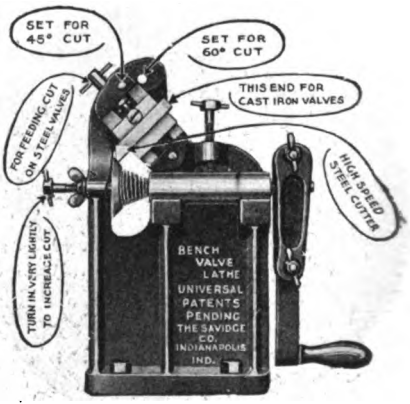
The "Sioux" Bushing Remover. The "Sioux" Bushing Remover is simple and effective. You simply screw it into the



bushing, in which it cuts its own threads. This gives a grip on the bushing, which can then be driven out from the back. The No. 20 "Sioux" Bushing Remover is for use on blind bushings—those which cannot be driven out from the back. The tool is screwed into the bushing and then a center piece is screwed through the No. 20 "Sioux" Bushing Remover with jack screw effect, until the bushing is removed. The "Sioux" Bushing Remover will do the work in a short time and with less labor.

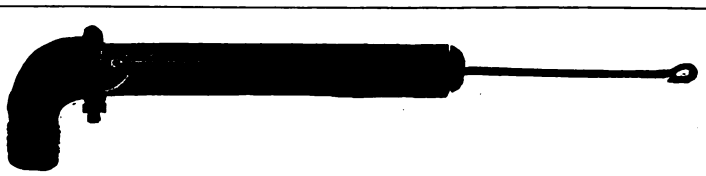
Manufactured by Albertson & Co., Sioux City, Ia. Prices: No. 51, Ford set, $10 complete; No. 50, for all cars, $18 complete; No. 20, for blind or pocket bushings, $5.

The Universal Valve Lathe is light, compact and cuts quickly and easily. It can be clamped in a vise or held in one hand and operated with the other. One does not have to be a machinist to operate this lathe. While it is made for any size valve the two steel sleeves furnished,



one for 5/16 valve stem and one for ⅜ sizes, will handle 90 per cent. of the valves on the market. Each lathe is fitted with a high speed steel cutter ground ready for use.

Manufactured by A. C. Savidge, 611 N. Capitol Ave., Indianapolis, Ind. Price, $10. Extra sleeves, 75 cents. Extra cutters, 75 cents.



Victory Siren. This is a new warning signal that has a range of two full octaves and innumerable tone combinations. Attached by anyone in a few minutes. The Victory Siren is a polished brass horn, so constructed that is cannot break or become inoperative. It will not cause back pressure in the exhaust manifold. The signal will serve as well for trucks as for passenger cars. It can be used as desired to make signals, either loud or modulated as conditions justify. It operates from the steering wheel by a cord. It may be attached to the exhaust manifold with a few minutes work.

Manufactured by the Inter-State Tool and Manufacturing Co., 3419 Rutger St., St. Louis, Mo. Price, $2.50 complete.

Digitized by Google

Tyler Safety Step Plate is a step plate for automobile running boards that combines a number of desired features. The ribs radiate, having a non-slip surface in every direction. These cannot be torn from the body of the mat by use. The wearing surface is much greater than in most mats of this type, because all of the rubber is above the stiffening plate.

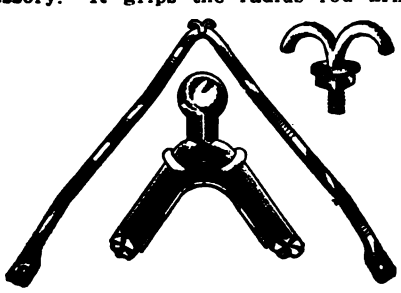
The construction of the plate is much stronger than commonly used. The rubberized cloth backing holds the plate and the rubber together and all are vulcanized as one. On account of this construction it

will retain its neat appearance longer and will be more durable. As door mats they are practical. They are themselves neat and clean and all dirt is readily removed from them by brushing or washing.

Manufactured by Tyler Manufacturing Co., 64 Pearl St., Boston, Mass. Prices, type C, all black rubber with steel inside, 8 by 11 inches, each, $1.50. Other sizes from $1 to $3.50.

Perfection Radius Rod Support. This support is made of steel angle iron 1 by 1 by ⅛ inch. It is very strong and will not bend. The eylets are made especially strong where the bolts attach to the axle and they will not break off.

Attention is called to the new twin hook bolts especially designed for this accessory. It grips the radius rod firmly



at the ball socket and the support cannot move forward or backward, and will not rattle. This article consists of only two parts. These are carried in stock and can be quickly shipped. A body brace is also manufactured for connecting the running boards for Ford cars.

Manufactured by the Dow Wire and Iron Works, Inc., Louisville, Ky. Prices on application.

The Woodworth Lubricating Spring Cover is an improved spring cover for leaf springs of automobiles and consists of a water and oil proof material having a felt pad inside, which is saturated with oil before the cover is put on. The cover is adapted to enclose the spring from the clamps at the thick part to the end of the tapered leaves. The cover is held in place with straps about two inches to 2½ inches apart.

These covers afford perfect lubrication throughout the full length of the spring and keep out all moisture and dirt and keep in the oil, so that one oiling lasts for a year or more. Springs perfectly lubricated make the car ride very easy, do not squeak and are not likely to be broken.

The New Woodworth Lubricating Spring Covers are made in special sets for Ford use, which sell at $2.50 a set, and seven

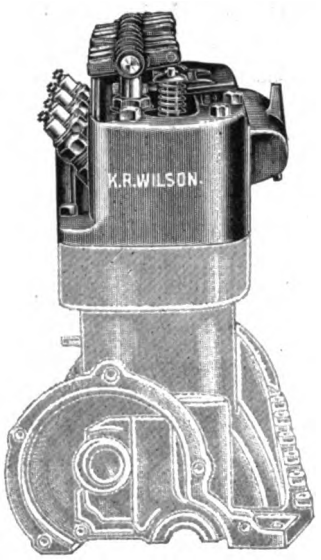
other sizes which fit all other makes of cars. A list of cars showing the sizes of covers required and the prices is published in pamphlet form and in a large two-colored wall hanger, which is furnished free to dealers. The covers are very convenient for dealers to handle, for with only eight sizes any pleasure car on the market can be fitted.

Woodworth Lubricating Spring Covers not only make cars ride easy, but save many times their cost by prolonging the life of tires and machinery. Liberal discounts are allowed jobbers and dealers and free advertising matter is furnished.

Manufactured by the Woodworth Manufacturing Corporation, Niagara Falls, N. Y. Prices and literature on application.

Wilson's Valve-in-Head Cylinder Head is a detachable overhead valve head for Ford engines that is claimed by the manufacturer to be far superior to other types of overhead cylinder heads and to be very economical in operation and to give more speed and power than the ordinary Ford head. The valve area is unusually large, having a port opening of 1⅝ inches and a valve of 1¾ inch. The gas turns just one complete right angle in entering the combustion chamber. The exhaust is on the left side of the engine. The outfit is complete with exhaust pipe and muffler, cylinder head bolts and water connections. The water inlet is in the center of the head, to equalize the cooling, instead of on the end as in the usual construction. The push rods and rocker arms are equipped with fiber tappets to silence the engine.

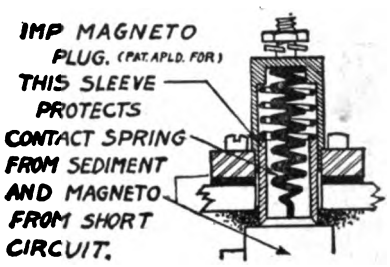
A line of reamers, arbor presses, motor stands, valve seating and facing tools and other tools too numerous to mention are manufactured by this concern for the use of mechanics in overhauling Ford cars.



Manufactured by K. R. Wilson, 10-16 Lock St., Buffalo, N. Y. Prices and literature on application.

Imp Magneto Plug for Ford Cars. Many Ford car owners have experienced difficulty in starting, a condition often caused by fibers worn from the transmission bands being carried by the oil circulation to accumulate around the magneto contact spring. A "short circuit" often results, since it is only necessary to bridge a 3/16 lap between the contact spring and the transmission cover to form an almost perfect electrical connection.

A partial short circuit will reduce the efficiency of the electrical system and loss of power, dim lights and hard cranking



result. It is usually necessary to have a repair man remove the lint, after which the car can be started.

The Imp Magneto Plug has a safety sleeve which protects the contact spring from all foreign substances, making it absolutely impossible for such a condition to develop. It is sold under a positive guarantee that it will insure against all magneto trouble and most all other ignition failures. Since all the current produced by the magneto is delivered to the coil box terminal a hotter spark results, which insures more power. It can be attached by anyone in five minutes.

Manufactured by the Improved Motor Accessories Co., Cleveland, O. Price, $1.50.

Save Your Spokes. Keeps spokes tight in the hub, stops the squeak and saves you money. The moisture which penetrates the dry wood swells it. Then the dry, hot

weather drives this moisture out and causes the wood to shrink. This shrinkage and swelling loosens the spokes and every strain makes them rub and squeak. The constant friction between the loose wood parts wears the spokes away eventually. This weakens the wheel until it finally breaks, perhaps on the road, or has to be replaced. Breaking is dangerous, replacement is expensive and using "Save your spokes" it is very easy to prevent both.

"Save Your Spokes" is for use on any patent or artillery type wheels.

Manufactured by the A-C Manufacturing Co., Inc., Chicago, Ill. Distributors' price, retail, 50 cents a can, enough for four wheels. Packed 12 boxes in a fancy show case display.

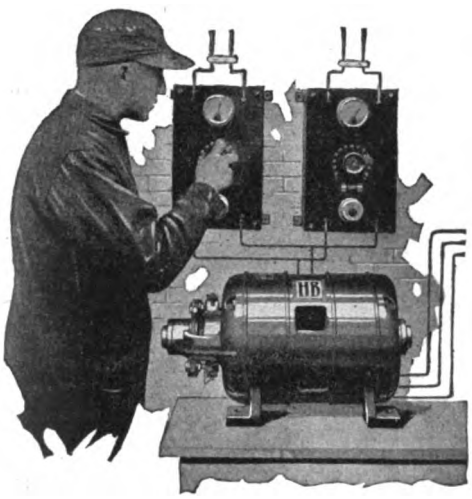
HB-16-Battery Capacity Charger. The HB-16-Battery charging set is a new outfit, designed for the average size garage, where the increased demands for battery charging necessitates larger capacity than is afforded by the smaller sizes.

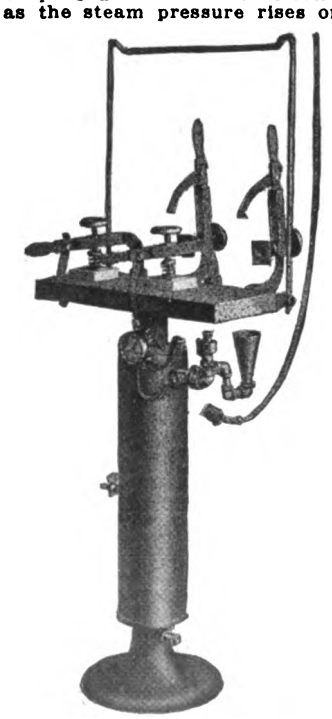
The charger is a sturdy, reliable machine of one KW capacity, with capacity for charging one to 16 six-volt batteries, or their equivalent in 12 or 24-volt batter-



ies at one time. It is built extra strong and of wear resisting materials. It operates on two or three phase city current, but not on single phase. Most garages have the current available, and, if not, the city plant can easily supply the necessary lines. There are two separate, independent charging panels, each built to carry up to eight six-volt batteries. Each panel is complete with its own ammeter, fuses, cutouts, rheostat, etc., and with resistance for balancing the line and varying the rate of charge. The panels are of clear black electrical slate, oiled and beveled. A special feature is the HB universal automatic voltage control, whch permits the charging of six, 12 or 24 volt batteries at the same time.

Manufactured and sold by Hobart Brothers Co., Troy, N. Y. Prices and payment terms on application.

Sepco Steam-Electric Vulcanizer. In this vulcanizer temperature variation in the plate is controlled within one or two degrees by an ingenious pressure gauge, which opens and closes the electric circuit as the steam pressure rises or falls



one pound. The steam generator is a seamless steel tube two inches diameter on which is wound an electric heating coil, imbedded in an insulating compound. The cable connection can be plugged into any electric light socket and the vulcanizer can be used anywhere without regard for fire ordinances.

Sixty pounds of steam can be obtained in 10 or 12 minutes after connection is made and after the necessary temperature is obtained the current draft is only half the time. In actual operation the current is closed and broken at one minute intervals, the circuit being regulated automatically.

These vulcanizers are built in two sizes, one with four pressure arms and a plate eight by 20 inches, and the other with six pressure arms and a plate eight by 30 inches. The heavier of the two weighs 125 pounds complete and one square yard of floor space is required for it.

Sepco Vulcanizers are constructed of steel throughout, insuring great strength and light weight. It is stated the tube plates have been tested to pressures of 600 pounds to the square inch without rupture. Because of the automatic control of temperature the machines are claimed to be safer than other vulcanizers, including those with thermostat control. The pressure gauge regulation is stated to be the simplest and most positive and is patented. Other devices made by this same concern are Sepco celluloid plates, Sepco glue pots, etc.

Manufactured by the Steam-Electric Products Co., Cleveland, O. Prices and literature on application.

Mormiles. This is a chemical compound that is manufactured in the form of a tablet that is put into the gasoline tank and dissolves in the fuel. It is claimed to energize low grade gasoline so that it is

wholly consumed and produces full power. The maker maintains that unlike a liquid it becomes a part of the gasoline, as it evenly dissolves, and the ingredients pass out of the engine with the exhaust. It is in convenient form and may be added to the gasoline in the ratio of one tablet for each gallon.

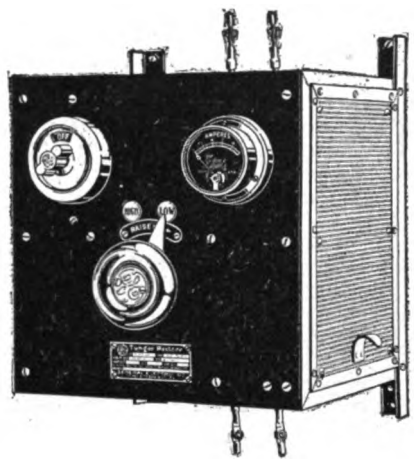
Is guaranteed by the manufacturer not to damage the engine, to increase the mileage, to increase the power and to keep the engine free from carbon, or the money will be refunded. In red cans only.

Manufactured by Mormiles Co., 226-8 S. La Salle St., Chicago, Ill. Price, $1.

Tungar is a battery charging rectifier for public garages and service stations. The six-ampere 75-volt type of Tungar rectifier is a simple, low priced, highly efficient charging set that will charge from one to 10 three-cell starting and lighting batteries at a six-ampere (or lower) rate from an alternating current supply.

Tungar rectifier superiority and efficiency may be attributed to the bulb transformer—the essential difference between the Tungar rectifier and other rectifiers dependent upon mechanical transformers. Because of this ingenious invention Tungar insures a low first cost, a low operating cost and absolutely elimin ates the possibility of the battery discharging through the rectifier. No. A 63,951.

A smaller size is sold by the same company, for the use of the private owner, and may be used in the car or in the garage. It is a six-ampere, 15-volt Tungar



rectifier developed by the Research Laboratory of the General Electric Co., and is a simple, economical rectifier for charging a three or a six-cell automobile starting and lighting battery. To charge a battery with the Tungar rectifier, simply connect the two leads to the battery, screw the plug into the nearest lamp socket and snap the switch. No. A 3411.

Sold by Pettingell-Andrews Co. (Automobile Division), 100 Brookline Ave., Boston, Mass. Prices and literature upon application.

Red Star Timer for Fords. The timer of Ford cars has always been more or less a source of trouble. In fact, this has developed to such proportions that the demand for a timer that would really wear has followed automatically, and this is the reason why the Red Star Timer for Fords has gained quick favor with Ford vehicle owners.

In building this timer special attention has been given to the parts that wear out the quickest, namely the race and roller. The Red Star Timer race is made of the best quality bone fiber. It is natural color and cured until it is very hard and durable. It is also made of one piece throughout and not built up in layers. Therefore, crumbling and coming apart are impossible.

The roller of the Red Star Timer is designed to roll under all conditions. The roller on a roller principle is applied, giving virtually a roller bearing roller. This reduces wear to a minimum and tends to give extremely long life and lots of service. Each Red Star Timer is stamped with a Red Star right on the timer shell.

Mauufactured by the Auto Components, Inc., 56 East Randolph St., Chicago, Ill. Price, $1.75.

Veedol Products. Veedol products include a full line of oils and greases for all purposes for automobiles, trucks and tractors, and also includes a potash soap for washing cars. The Veedol oils are claimed to be free from sediment after being used a few days. Sediment is caused by the terrific heat of the engine breaking down the ordinary oil, and as a result friction takes place, causing loss of power, increased cost of oil and worn parts. Veedol prevents this formation of sediment because it resists heat. The Faulkner process, used exclusively in the manufacture of Veedol, causes 80 per cent. less sediment. This has been repeatedly proven in scientific and practical tests. Veedol will reduce the upkeep of a car from $50 to $115 a year. Try it the next time you buy motor oil.

Manufactured by the Tide Water Oil Co., Veedol Department, 11 Broadway, New York City. Prices and literature on application.

"Ospeco" Centrifugal Water Pump. The Ospeco Centrifugal Water Pump for Ford cars reduces the heat of the engine by forcing the water from the radiator through the water jacket surrounding the cylinders. This also serves to reduce the oil consumption considerably.

In construction it is very simple and is very easily installed. A small belt pulley is clamped on the fan shaft. On the ends of the water pump are clamped the ends of inlet and outlet hose of the radiator. A coiled spring belt is passed around the pulley on the fan shaft and the adjustable pulley on the water pump propeller shaft which propels a fan-like motor that circulates the water rapidly.

There are no parts to clog or get out of order. A by-pass assures circulation when the engine is not running. It can be installed in a few minutes. This, like other Ospeco products, is fully guaranteed.

Manufactured by the Michigan Auto Products Co., Detroit, Mich., and Cincinnati, O. Descriptive pamphlets of other Ford necessities on application. Price, $5.

Simmons Taper Roller Thrust for Ford Cars. The Simmons Taper Roller Thrust for Ford cars is designed to replace the steel or bronze thrust plate used in Ford rear axles at each side of the differential gearset. Manufacturer claims it is superior to other types of thrust bearings and that because of the longer bearing surface of the rollers it has greater service than ball bearings.

It is not necessary to replace bearings when a pair of Simmons Taper Roller Thrusts have been put into a Ford rear axle.

The construction of these bearings is such that if the differential gearset sags or drops contact is maintained. It cannot be damaged in any position because of the extremely heavy structure of the retainer plate, which is claimed to be eight times as heavy as any used in other types.

Assume 500 pounds actual pressure a thrust plate must take from the gears and add to this when turning a corner, the weight of the car, the weight of the passengers, the side thrust of the car on a wheel, which is taken by the thrust plate on the opposite side of the differential gearset. This, of course, wears the brass and steel plates, causing a variable gear mesh. The necessity for thrust plates on both sides of the differential gearset is seen.

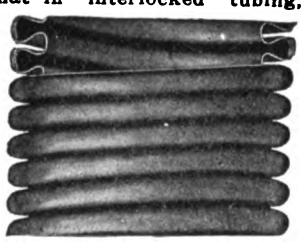
Simmons Taper Roller Thrusts are sold in pairs only. When installed the rear axle is entirely fitted with roller bearings. The bearings carry an unlimited guarantee.

Manufactured by the Simmons Manufacturing Co., 3405-11 Perkins Ave., Cleveland, O. Price, $3 a set.

Tite Flex All-Metal Hose. The Tite Flex Metal Hose Corporation makes gasoline and oil hose for unloading tank cars, filling barrels, garage tanks, etc., in storage and supply stations; gasoline and oil feed lines for gasoline engines; pressure tubes for tire inflation; speaking tubes, conduits for battery, ignition, lamp and electric horn wiring; tubing for hot air stoves, automobile heaters, speedometers and bulb horns, and flexible exhaust pipes.

All commercial flexible tubing is rolled from strip metal, and turned over in passing through the dies so as to make an interlocking joint. The flexibility in ordinary, full or semi-interlocked tubing is obtained from the sliding action of the joint parts, one on the other, within the joint, the coil remaining rigid.

All flexing in Tite Flex, as distinguished from that in "interlocked" tubing, takes

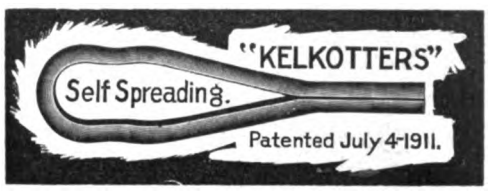


place within annular diaphragms which are substantially at right angles to the axis of the tube and formed by the sides of the U shaped convolutions that are characteristic of the Tite Flex section.

The interlocking portions comprising the seam are compressed under heavy pressure to make a continuous perfect and permanently tight cold welded structure. The seam is to all intents and purposes virtually solid metal. The flexibility is, therefore, entirely in the metal and the seam is primarily self-tight—not "semi-tight" or "near-tight" or depending in any way upon additional provision for tightness.

Manufactured by the Tite Flex Metal Hose Corporation, Newark, N. J. Prices quoted on request.

Kelkotter is the trade name of a new type cotter pin that is guaranteed can be driven into place with a hammer or other tool and the points of the pin will spread themselves. The Kelkotter cannot go into place without spreading equally, dividing the stress upon it. It is always uniform, is easily driven and easily removed by a quick pull and twist on the head. Kelkotters cannot work loose or rattle.



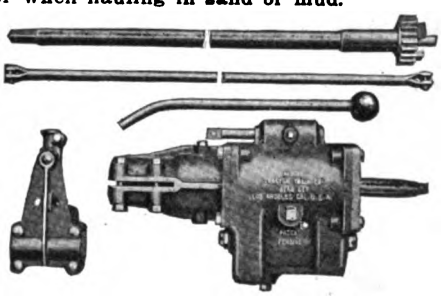
The time and labor saved by Kelkotters justifies their use for every purpose for which a cotter pin will serve. No sharp tools are required to spread and no possibility obtains for marring the work. A demonstration set of Kilkotter pins will be sent on request.

Manufactured by the American Cotter Pin Co., Pittsburgh, Pa.

Moore Transmission for Ford Cars. A Ford equipped with the Moore transmission has four separate and distinct speeds forward and two in reverse. A gearing for every load, road or speed condition that may be met with, economizing fuel, tires and oil.

In actual tests the maker claims the Moore transmission has delivered more power to the rear wheels than any similar devise constructed.

Is particularly well suited to Ford chassis hauling trailers or for Ford trucks and truck attachments. The low speed starts the machine easily, the intermediate will climb grades with heavy loads or when hauling in sand or mud.



The gears are constantly in mesh, much the same as the Ford transmission. With this construction it is impossible to strip gears. Changing of gear ratios is by means of a sliding jaw clutch. The gears are cut from solid steel billets, specially heat treated. The shafts are ground and hardened.

Hyatt roller bearings are used throughout. Lubrication is insured through a hollow shaft. All lower bearings are submerged in an oil bath and oil is carried by revolving gears to the upper bearings. A special oil retainer built into the transmission prevents the oil from getting into the differential housing.

Moore transmissions for Ford cars are in three models. No. 1 is for all Ford cars and chain drive attachments for trucks, rear end type. No. 3 is for all shaft drive truck attachments, such as internal gear rear axles, front end type. No. 4 is for installation on Ford one-ton worm drive trucks only, front end type.

Manufactured by the Tractor Train Co., 1346 Wall St., Los Angeles, Cal. Literature and prices on application.

The H. B. Belted Charger. An ideal capacity battery charging outfit for the service station and garage that does not have electric current, and use gas engine power, is manufactured by the Hobart Bros. Co. of Troy, O.

The H. B. Belted Charger will charge seven six volt batteries or their equivalent at one time. It operates from a line shaft or engine. Only one actual horsepower is required to operate. The switchboard is furnished complete ready for use with ammeter, pilot light, field rheostat, circuit breaker, necessary fuses and cutouts. This charger is sold on easy terms, which enables the garage man to buy a dependable ample capacity battery charger, letting the profits from each month's business pay for the outfit. The company also manufactures a line of battery chargers operating from city current.

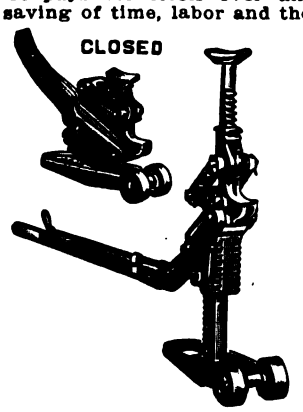
Manufactured by the Hobart Brothers Co., Troy, O. Price quoted at request.

Icy Hot Products is a complete series of Thermos bottles for all purposes and includes a number of innovations such as "carafes" for keeping drinking water three days without ice, for the home or hotel, khaki slings for carrying a hot water bottle on hunting and fishing trips, colored carafe's trays to match for hotel use of several colors and combinations of

carafe and stand with glasses. Icy hot pitcher for the dining room, bedroom or sick room keeps drinking water icy cold, or coffee, tea, etc., hot for days without fire or ice. A novel, convenient and attractive service for afternoon teas, small receptions, etc. Icy hot lunch and beverage cases are for use by automobilists, having carrying capacity of a jar, lunch box and one bottle, or a lunch box and two bottles, or for three bottles. Icy hot auto lunch consists of a complete luncheon outfit in a compact case for the auto. The case is the highest grade of leather craft work. The set includes enameled drinking cups, plates, napkins, knives, forks and spoons for six persons, salt and pepper shakers and two large nickel plated lunch boxes. Icy hot motor restaurant is a dust proof, serviceable auto equipment, made in four and six party sizes. Icy hot lunch boxes for the individual consist of a Thermos bottle and lunch box combined.

Manufactured by the Icy Hot Bottle Co., Cincinnati, O. Prices and circular on application.

Excel Auto Jack. A heavy tool constructed to endure the continuous hard usage of the garage and service station and meets the demand for a powerful, substantially built, quick acting jack. It is made of high grade malleable castings—drop forgings where necessary—with all wearing parts hardened. It will last for years under the most severe conditions. It pays for itself over and over by the saving of time, labor and the usual

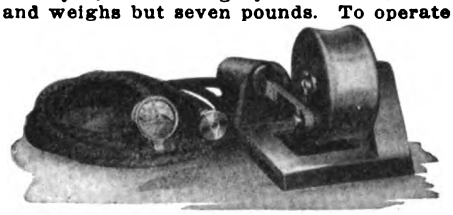


breakage of small jacks which have little value except for emergency road work.

The Excel Jack is too large to be misplaced, is positive in action; it can be placed under the hub, axle or frame very easily and it always works. Excel Jacks are indispensable in public garages, service stations, repair shops, tire agencies, race track pits, and are frequently used in private garages.

Manufactured by the Randall-Faichney Co., Inc., 76 Atherton St, Jamaica Plain, Boston, Mass. Price $25 (subject to change without notice).

The S-H Tire Pump. Designed with the intention of eliminating tire inflation trouble, the S-H Tire Pump should prove a boon to the motorist. This little pump is only 10 inches long by four inches wide and weighs but seven pounds. To operate



it is only necessary to jack up one of the rear wheels, place the friction wheel of the pump under the tire, start the engine and a steady flow of air for tire inflation is furnished. The equipment consists of the pump, a tire gauge and a long, flexible air hose.

Manufactured by the S-H Pump Co., Chicago, Ill. Price complete, $8.

Steven's Service Cabinets. Nothing leaves such a lasting and favorable impression upon the accessory buyer as quick service, in fact, service may well be said to be the key to success. To facilitate service, accessories and parts must be conveniently located and kept in order. Many sales are lost because the dealer has forgotten where the part in question was

located. To systematize the parts stock the Stevens service cabinets have been designed. Practically any combination of units may be assembled so that the dealer has a place for every part.

The cabinets illustrated show two possible and useful combinations of Stevens' units. The combination in the front is made up of three units and a top. The top units contain 172 small and medium sized drawers, which will hold small stock parts and bolts. The lower is fitted with 20 large sized drawers, which are suitable for larger and heavier parts, accessories or tools.

The combination in the rear is made up of three units, the two upper being the same as those in front. The lower section is fitted with doors and a shelf upon which may be stacked larger and heavier parts, such as cylinders, crankshafts or transmission parts.

All of the drawers are covered with heavy galvanized steel and may be fitted with compartments and cross divisions as desired.

Manufactured by Stevens & Co., 375 Broadway, New York. Price quoted at request.

Portable Grease Cabinet. A very convenient cabinet for use by garages, manufacturers, service stations and car owners is being marketed. The container has capacity for 20 pounds and delivers one-

quarter pound to each stroke of the pump and passes nothing but grease or fluid. The shipping weight, including pump and five feet of hose with nozzle attached is 14 pounds.

Made by the Townsan Auto Specialty Co., 822 Western Ave., Minneapolis, Minn. Price quoted at request.

Tu-Ford Valve Lifting Tool is a handy tool for removal of Ford valves by compressing the springs so the keys may be taken out. It is small enough to be carried in the car tool kit. As shown in the cut it is a small lever like tool having a cup that may be placed around the base of the spring, the foot or pedestal bearing against the crank case and the push rod housing. Pressing the lever toward the foot and down and inward lifts the spring clear of the locking key and locks the tool in position for the key's removal. To remove the tool after the valve and key have been replaced, simply pull out the handle.

This tool will be very useful to the Ford repair man as well as the private owner who does his own valve grinding. It will save its cost price many times over in time.

Manufactured by the Tu-Ford Valve Tool Co., 210 Boutell Place, Bay City, Mich. Price, retail, 75 cents each.

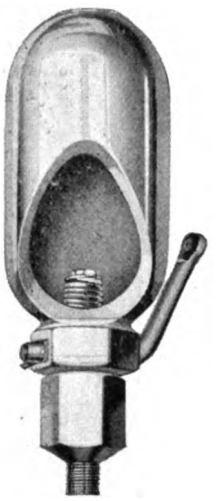
Exemplar Cleaning Polish. The polish for cleaning and washing your car. No matter how dirty or muddy it may be a single application of Exemplar Cleaning Polish will leave a bright, thoroughly clean polished surface and it will not collect dust. It is easy to use. No spraying is necessary. Simply rub over your car with a moistened cloth and then wipe dry. Exemplar Polish will positively re-

move tarvia or oil without scraping or otherwise damaging the finish. It is non-inflammable and will not deteriorate any finish.

Other articles handled by this company are Genolite, an electric starting motor for Ford cars; Speederator, an accelerator for Ford cars; Automatic Extension Reel for use with an inspection lamp in a garage; Eveready Madza Lamps for automobiles; the Eveready Starting and Lighting system for Ford cars, and the Eveready Storage Batteries.

Sold by Pettingell-Andrews Co. (Automobile Division), 100 Brookline Ave., Boston, Mass. Prices and literature upon application.

Interstate Autotomotive Whistles. These are operated by the compression of the engine and produce far reaching tones that really warn. They can be attached



by anyone in a few minutes on the engine in a priming cup opening. The explosion produces the warning sound. Costs nothing to operate, no battery is necessary, nothing can break or cause failure, requires no adjustment and is operated by a cord attached to the steering column or any convenient place.

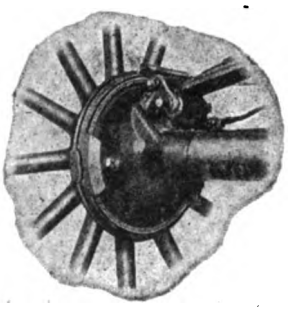
Inter-State Tri-Tone Whistles are constructed essentially the same as Inter-State Whistles, but these produce three distinct tones. They are designed for motorists and motor boat owners who desire a really Deluxe warning signal. Every quality of Inter-State Compression Whistles is afforded by Inter-State Tri-Tone Whistles. These signals can be used for Ford cars where there are no priming cups by installing special spark plugs. These spark plugs are made ⅛ inch for Ford cars; for Maxwell and Briscoe cars, ⅞ inch; for Chevrolet, Oakland and Buick cars, ⅞ inch extra special spark plug. When special spark plugs are wanted be sure to mention the make of car.

Manufactured and sold by the Inter-State Tool and Manufacturing Co., 3419-21 Rutger St., St. Louis, Mo. Prices, Inter-State Compression Whistle, $3.50 complete; Inter-State Tri-Tone Whistle, $5 complete; special attachments for engines not fitted with priming cups, $1.25.

Moore Rear Wheel Service Brake is a braking device for Ford cars and takes the place of the transmission brake. The Moore brake is a full wrap contracting type that acts on the original Ford brake drums and is operated by the service brake pedal. The transmission brake band is disconnected. The Moore brake is 100 per cent. efficient. It is positive in action, whether backing or going forward.

The Moore brake obviates chatter of the transmission and differential. The shoes are Thermoid lined and when necessary the shoes are quickly and easily relined. The brakes are operated by heavy cables, which will not stretch or rattle. The brake is perfectly equalized. This largely overcomes skidding and also insures equal wear of tires. The brake shoes are covered by protective housings. The brake can be easily and quickly attached with ordinary hand tools. Only one 5/16-inch hole to drill. Cars equipped with "W.-C.," "H. & D" or "Hassler" shock absorbers will require special extension spring perches at an extra cost of $2 a set.

Manufactured by the Tractor-Train Co., Los Angeles, Cal. Price, $16 f. o. b. Los Angeles, Cal. Installation extra.

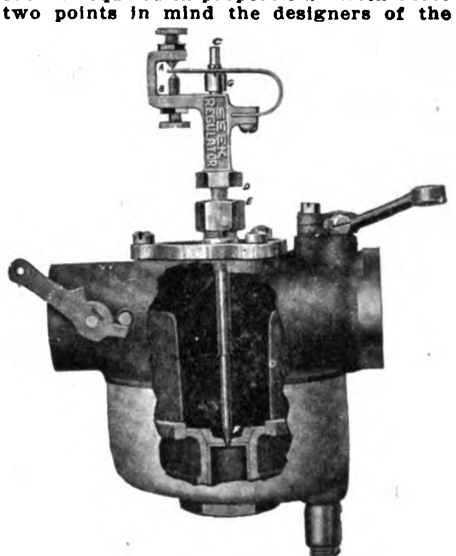


The Smith Auto Signal is a practical and efficient safety device. It is conspicuous from the front and rear. It is electrically operated from a switch on the steering wheel. It thus prevents the frequent accidents caused by removing a hand from the wheel at critical moments. The words, "left," "right" or "stop," appear at the will of the operator, and these words are clearly discernible day or night. It signals

only when you want it to, giving definite information and warning when needed in ample time to guide both those in front and those in back of you. It operates from a single-handed, three-way switch under the driver's hand. Very little current is used. It is simply constructed and easy to install.

Manufactured by the Smith Signal Corporation, 53-55 West 66th St., New York, N. Y. Retail price, complete, $20.

Seek Thermo Regulator. Every automobile owner has learned that though a rich mixture is necessary for starting, the gasoline may be partially turned off after the engine has "warmed up." Then again the faster the engine runs the greater the amount of heat generated and the less fuel is required in proportion. With these two points in mind the designers of the



thermo regulator have designed this device so that varying degrees of heat will raise or lower the needle valve, thereby admitting more or less gasoline into the mixture chamber. To apply the device it is only necessary to remove the needle valve of the carburetor and screw the device into place. After it is once adjusted the regulator automatically provides for a richer mixture for starting, and as the engine is warmed up the mixture is gradually made leaner.

Manufactured by Seek Manufacturing Co., 224 South 24th St., Philadelphia, Pa. Price, $5.

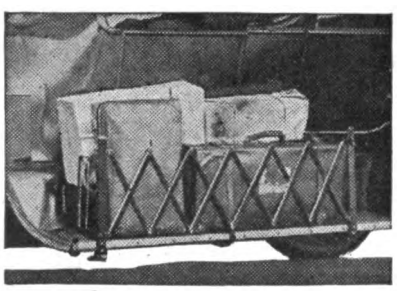
HB Lighting and Battery Charging Set. With the HB Lighting and Battery Charging set, the garage that does not have electric current available from any public plant can make its own electric light and at the same time have the power necessary to handle the profitable business of recharging automobile storage batteries. The generator is a specially wound machine, 110 volts, direct current, speed 1800 revolutions per minute, weight 300 pounds. It operates from line shaft or engine, requiring four horsepower at full load. It supplies ample capacity for brilliant lights at low cost, and it will recharge at one time from one to six six-volt auto storage batteries or their equivalent.

Since brilliant lights attract trade and improve service, and since battery charging is developing into such a profitable business, this outfit should be warmly received by the garage trade for which it is intended.

The HB Lighting and Battery Charging set is furnished complete in every respect, ready to belt to engine and operate. It includes generator, base tracks, field rheostats, charging panel and pulley with six-inch diameter and four-inch face. No switchboard is necessary.

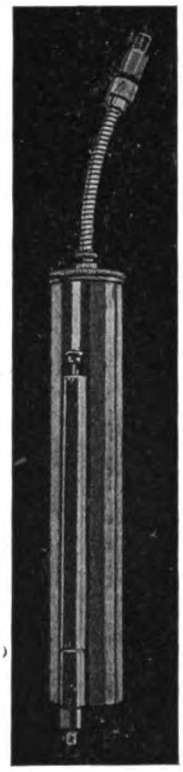
Made and sold by Hobart Brothers Co., Troy, O. Prices on application.

Standley Carrier. The "Standley Carrier" is a convenient and quick detachable luggage carrier that can be attached



to the edge of a running board by clamps, forming a basket for carrying luggage of all kinds. The clamps are provided with lock nuts that securely fasten them so that they cannot work loose. When not in use the carrier may be folded and stowed under the seat. It is provided with a strap to hold parcel and luggage away from the body. It is adjustable to any length from 10 to 44 inches. It is a very handy article for use by hunters, campers and fishing parties or traveling men. In construction it is simple, strong and efficient and takes only a moment to install.

Manufactured by the Standley Skid Chain Co., Boone, Ia. Price, $4.



Atlantic Pneumatic Grease Gun. This new grease gun is a brass cylinder one foot long and two inches diameter that will hold 16 ounces of grease. It is operated by air pressure through a tube connecting the gun with either a power or foot pump or with a spare tire or a compressed air system. The gun is operated by pressing a button on the gun with the thumb of the hand holding it. Some owners use oil in preference to grease as it is difficult to use hard grease, but oil has the disadvantage of collecting dust and dirt.

By using the power gun hard grease may be forced into joints with force that will expel the remaining lubricant and replenish the supplies.

The volume of air necessary to operate the gun to grease a car is small; if drawn from a spare tire would probably not reduce its pressure two pounds.

The gun can be held and operated with one hand and the other hand is free to open and close the grease cups. Other guns require both hands to operate them. All parts are well machined and the gun is nickel plated. A unique filler and one nozzle are furnished with each gun. Extra nozzles are supplied at additional cost.

Manufactured by the Atlantic Motor and Supply Co., 1045 Tremont Building, Boston, Mass. Price, $6.

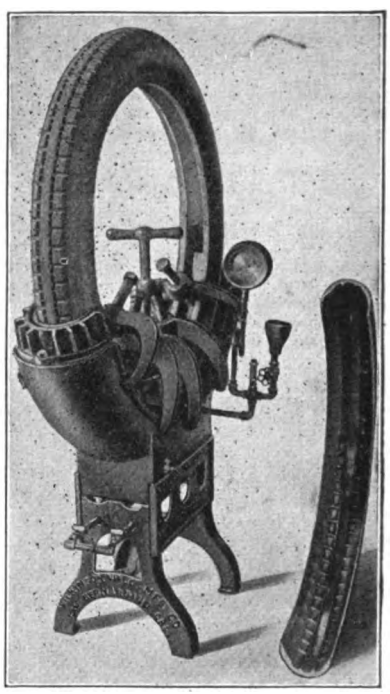
Rubrback and Khaki Back Patches. Two self-vulcanizing tube patches have been added to the Norwesco "Chemically Correct" series of automotive utilities. Rubrback Tube Patch is manufactured from highest grade materials and under a special process that insures a perfect repair. This patch is designed for repairing both punctures and blow outs and expands with the tire so that it will not pull loose when the tire is inflated. Khaki Back Tube Patch is made from the same quality of materials as Rubrback, except that it is reinforced by a covering of khaki cloth. This patch is especially effective where a non-stretching repair is necessary.

These patches are effective under extreme heat or cold, and can be applied either in the owner's garage or as an emergency on the road. They are as efficient for all articles made of soft rubber as for automobile tubes.

They are packed in screw top containers, two sizes. Each outfit containing sufficient cement and emery cloth for making numerous hasty and permanent repairs. No motorist's outfit is complete without the tire protection afforded by these Norwesco Patches.

Manufactured by the Northwestern Chemical Co., Marietta, O.

Wilkinson Perfected New Model Steam Vulcanizer. This machine represents the latest development in the Wilkinson dry cure process and has the new non-skid matrix, which, it is anticipated, will revolutionize the tire industry. With its use the tire man is able to rebuild an old casing into an apparently new tire, adding from 2000 to 5000 miles at a very nominal cost. This machine is equipped with all of the latest Wilkinson patented features, such as the aluminum non-skid or ribbed tread matrix and the radiating insulated flange to protect the tire from overcuring at the laps. The machine requires no separate boiler, as it has a boiler self contained and is also equipped with steam safety valve and gauge.



Tire experts all over the United States have passed upon the Wilkinson process and declare it to be as near perfect as can be made. Racing car drivers are using dry cure retreads with much success, while owners of passenger vehicles and small trucks are cutting down tire expense by restoring shoes that have not been structurally damaged though the original treads were worn to the breaker strip. Wilkinson equipment is now installed in many large repair shops in the East and Middle West and is very generally used on the Pacific coast, where automobile touring is at maximum. The Wilkinson organization is now negotiating with large concerns all over the country to handle this equipment in various zones and is tripling the capacity of its plant to care for the demand.

Manufactured by Wilkinson Vulcanizer Manufacturing Co., San Bernardino, Cal. Prices, models H, K and L sell for $159, $188 and $198 respectively.

RECORD OF BUILDING OPERATIONS FOR MAY

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Mobile, Ala.; Adams Machinery and Manufacturing Co.; three-story brick, glass and steel garage and machine shop, 113x168; $100,000.

Phoenix, Ariz.; Overland-Arizona Co.; one-story garage, 137x175; $30,000.

Fort Smith, Ark.; Leon Williams; one-story garage, 50x155.

Bakersville, Cal.; Taft Motor Co.; one-story garage; $20,000.

Fresno, Cal.; George R. Andrews; one-story garage; $12,000.

Keota, Cal.; Guy D. Vawter; one-story garage, 60x80.

Los Angeles, Cal.; G. P. Shroeder; one-story garage, 50x74.

Los Angeles, Cal.; Harriet Harvey; one-story garage, 60x140.

Los Angeles, Cal.; D. H. Hewitt; one-story garage, 50x150.

Riverside, Cal.; Central Garage; one-story garage; $1500.

Sacramento, Cal.; S. W. McKin and S. J. Lubin; one-story garage, 40x60; $7500.

Visalia, Cal.; F. H. Whipple; one-story garage and salesroom, 55x112.

Hartford, Conn.; Older & Rosenberg, 1026 Main street; four-story garage, 64x91x128; $80,000.

Stratford, Conn.; H. and H. Lepold, 1493 Main street, Bridgeport, Conn.; one-story garage; $5500.

Waterbury, Conn.; Frank Mulesky; one-story public garage, 44x71; $9000.

Waterbury, Conn.; D. E. Carroll; one-story garage, 66x90; $35,000.

Washington, D. C.; General Auto Truck Co., 217 Woodward building; two-story garage, 80x120; $75,000.

Washington, D. C.; E. S. Schimmer, care Randall Hagner, 1209 Connecticut avenue; one-story garage, 50x135; $25,000.

Gainesville, Fla.; J. H. Alderman; two-story brick garage, 60x110; glass front.

Tallapoosa, Ga.; R. H. Thornton; one-story showroom and repair shop, 80x100; tile roof, tile floor for showroom and cement floor for shop.

Ferdinand, Ida.; R. J. Alcord; one-story garage, 50x120.

Gooding, Ida.; Hume Brothers; one-story garage, 60x75.

Kamiah, Ida.; Fuqua & Frasier; one-story garage, 50x101.

Belleville, Ill.; Meyer Brothers Auto Co.; one-story garage, 75x120.

Chicago, Ill.; W. A. Gelbach, 7444 Malvern avenue; one-story garage, 48.4x88; $4500.

Chicago, Ill.; Jefferson Jackson, care Arthur Foster, 155 N. Clark street; one-story garage, 100x225; $25,000.

Chicago, Ill.; Weinstein & Wieberg, Kedzie and Grenshaw street; one-story public garage, 30x125; $15,000.

Danville, Ill.; Sheet-Ingersol, Daniel building; one-story public garage, 54x100; $10,000.

Eldorado, Ill.; C. C. Skelton; one-story garage and salesroom, 100x122½.

Galesburg, Ill.; P. & M. Garage; one-story garage; $45,000.

Hillsboro, Ill.; H. S. Butler; one-story garage, 45x120.

Matton, Ill.; Kizer & Reynolds; one-story garage, 68x140.

Milton, Ill.; Virgil Hoover; one-story garage, 40x70; $2000.

Newman, Ill.; Burgett & Baxter; one-story garage, 95x105.

Rockford, Ill.; Denel & O'Shap; one-story public garage, 79x100.

FINANCIAL NOTES OF AUTOMOTIVE INDUSTRY

General Motors Provides Cash Capital for Increasing Business—Refinancing of Jordan Motor—Gray & Davis Strong

GENERAL MOTORS.

To provide cash capital for its tremendously increasing business, General Motors has sold $50,000,000 six per cent. debentures, a portion of the already authorized issue of $150,000,000. The new debentures are offered at approximately the market price of those outstanding, or 90. The sale is designed to increase working capital to the point where the company can continue to handle comfortably the great volume of sales already booked and in sight.

General Motors in the past year or two has been passing through a period of immense physical expansion, having absorbed the Chevrolet, United Motors and the Canadian companies. All these, to be sure, brought liberal working funds, but their business since the signing of the armistice has been increased by leaps and bounds.

At the same time work has been launched all along the line on the $48,000,000 plant expansion program in this country and in Canada. Boiled down, the new financing of General Motors will just take care of all of these big projects. With the additional funds, General Motors will have a working capital of over $200,000,000, and net assets, exclusive of good will, of practically $300,000,000.

In a letter to division syndicate managers in connection with the sale of $50,000,000 six per cent. debenture stock, President W. C. Durant of General Motors Corporation states: "A meeting of stockholders of the corporation has been called for June 12, 1919, to vote upon recommendation of directors to increase authorized amounts of debenture and common stocks to $500,000,000 each.

"No further issues, however, are contemplated at this time as proceeds of present issue of debenture stock is expected to provide for corporation's financial requirements for the next 12 months or more.

"Net earnings for first quarter of 1919 before taxes were $21,626,594, against $10,146,000 for same quarter in 1918. This does not include any benefits to be derived from investment of proceeds of above issue. On Dec. 31, 1918 net quick assets amounted to $150,390,492; of quick assets $59,488,639 was in cash and Liberty bonds."

Manufacturing capacity of General Motors plants for season from July 1, 1919, to June 30, 1920, will be as follows: Buick, 140,000; Cadillac, 25,000; Oldsmobile, 40,000; Oakland 72,000; Scripps-Booth, 15,000; Chevrolet, 220,000; a total of 512,000 passenger cars; "G. M. C." and other trucks, 40,000; Samson tractors, 25,000; farm implements, 75,000; making a total of 652,000 vehicles and implements.

JORDAN MOTOR.

Refinancing of the Jordan Motor Car Co. recently approved by stockholders, calls for the incorporation of a company of similar name. The old company was capitalized at $300,000. To this $1,200,000 7 per cent. preferred is to be added and 12,000 shares of common with no par value.

New company is to issue to each holder of preferred stock in the old company a like amount in par value of the new preferred, also 50 per cent. of the number of preferred shares in new common stock. Each holder of common stock in the old company is to receive a like amount in par value of new preferred stock and 50 per cent. of the number of shares in the new common stock.

New capital is to provide for additions and development.

AMERICAN BOSCH MAGNETO.

American Bosch Magneto Co. has just gathered in a handsome windfall through the disposal of its holdings of Eisemann Magneto stock, confirmation of the sale of which has just been made by the alien property custodian.

Eisemann, like Bosch Magneto, originally was German owned to the extent of 1500 out of its 2000 share capital. Of the 1500 shares, which the government ordered sold, American Bosch owned 900 shares. These it carried on its books at the nominal figure of $100 a share.

For the 900 shares it actually realized a price of $605 a share, representing a profit of $505 a share or a total of $454,500. This is the equivalent of $7.57 a share on the 60,000 shares American Bosch Magneto stock sufficient to cover 15 months' dividends.

Not only that, but with the cash from the sale of its Eisemann stock and surplus funds now on hand in the treasury, the Springfield company will be able some time this summer to anticipate the first block of $600,000 notes maturing this year. Within a few months there will be only the $1,200,000 1921 and 1922 notes ahead of the common stock.

April earnings of Bosch were considerably the best for any month this year, running in excess of $70,000, or close to a $15 rate on the stock.

The gain in earnings has simply reflected the steady increase in output. April shipments of magnetos were 12,181, against 9335 in March. It is figured that by September production will be a full 100% larger than when the plant was German controlled.

American Bosch shares have been listed on the New York Exchange.

ALLIS-CHALMERS.

The balance sheet of the Allis-Chalmers Manufacturing Co. as of Dec. 31, 1918, reveals total assets of $63,791,930, compared with $54,893,595 at the close of 1917. The inventory account shows an increase from $12,410,127 to $17,436,478; cash holdings compare $1,951,139 with $947,767, and notes and accounts receivable amount to $7,150,491, against $7,673,276. Securities owned are valued at $4,733,138, against $1,600,282 in 1917. Notes payable disclose a falling of from $1,849,610 to $400,000, but this is offset by an increase in the accounts payable from $754,774 to $1,569,907. The profit and loss surplus of the company at the close of 1918 is reported at $8,470,048, in comparison with $5,463,604 at the end of 1917.

UNITED STATES RUBBER.

Recent buying in United States Rubber common which put the stock above 100, has been predicted on the earnings outlook rather than on the possibility of big dividends in the near future. Gross and net are running at a figure which if maintained all year may eclipse the wonderful showing in 1918 when the company earned nearly $31 a share on $36,000,000 common stock from sales of $215,000,000.

CANADA G. M. C.

The General Motors of Canada, Ltd., has been formed in Montreal with an authorized capital of $10,000,000. The new concern is related to the General Motors Corporation of the United States. R. S. McLaughlin, president of the McLaughlin Motor Car Co. and a vice president and director of the General Motors Corporation, has been elected president of the new concern.

GRAY & DAVIS.

The operating profits of Gray & Davis for 1918 calendar year were $569,460, from which there was deducted nearly $29,000 of 1917 taxes and from which there is to come about $240,000 in 1918 taxes, leaving a net income of $340,000. After preferred dividends of $82,000 the balance of $218,000 was equal to a little better than $4 a share on the 54,452 shares of common.

The balance sheet, better than anything else, shows the transformation that has occurred in Gray & Davis affairs in the past 12 months. At the opening of the year 1919 there was on hand in cash or government obligations a total of $565,000, as against $77,000 the year previous.

The net quick assets have mounted to the respectable total of $1,316,000. Applying the negligible total of $141,000 preferred against the plant account carried at $380,000, the net quick assets of raising $1,300,000 are equal to practically $25 a share for Gray & Davis common.

At both Cambridge and Amesbury business is swinging rapidly back to normal. The company is making parts for Ford self-starters and has all the self-starter business of Chandler, Paige Motor, Bethlehem Truck and the new Cleveland Automobile Co. It is making about 50 per cent. of the Ford lamps and has contracts for the entire lamp requirements of Cadillac, Franklin, Apperson and Kissel. Hudson is a recent lamp customer. Certain new lines now well out of the experimental stage are also expected to be good earners this year.

WESTINGHOUSE.

The Westinghouse Electric and Manufacturing Co., Pittsburgh, it is announced, will begin the manufacture of small motors and automobile electric equipment in the largest of the three factories in Springfield, Mass., that have been operated by the New England Westinghouse Co. About $1,000,000 will be spent in equipping the plant and between 2000 and 2500 persons will be employed under maximum operation. The New England Westinghouse plants have been virtually closed for several months.

FISHER BODY.

Fisher Body has made a new high record. While President Durant of General Motors stated recently that there was no basis for reports of merger involving General Motors and either Maxwell or Ford, he did not deny the most persistent of all reports which has been that General Motors interests were acquiring control of Fisher Body in the open market.

WHITE MOTOR.

The White Motor Co.'s stockholders of record June 14 will have the right to subscribe to one share of additional stock at par, $50, for each four shares then held. At a special meeting June 10 the stockholders will vote on increasing the capital stock from $16,000,000 to $20,000,000. The stock not taken by the stockholders will be underwritten.

MAY HANDLE FARM TRUCKS.

Minnesota—Hardware jobbing houses are contemplating taking on the farm automobile truck as an additional line. Some years ago the jobbing houses took on the automobile, but it failed to work in harmany with their other goods. It is the consensus of opinion that the farm truck is a more attractive proposition, as it runs closely to implements. The outlook for good roads is bright.

AUTOMOBILE STEEL MARKET.

The steel trade has been released from government alliances of all kinds and is now free to go ahead and do business as it was done before the war.

The demand for highly finished sheets for the automobile builders is very heavy and is increasing. Some mills that make a specialty of automobile sheets are sold up for the next 60 days.

The tractor and agricultural implement industries, which heretofore have been rather active, have suffered a slump.

AUTOMOBILE SHEET MARKET.

MOTOR MERGER.

Bankers are understood to be at work on plans for a merger of automobile companies, which would present a solid competitive front to the $1,000,000,000 General Motors Co.

New York Stock Market

The motor stocks are again setting the market pace. General Motors, the bellwether of the group; Chandler, Studebaker, Willys-Overland and Maxwell continue to break all speed records.

Rubber and tire stocks have been stimulated by the fresh wave of speculation in the motors and have generally moved up to the best prices of the year, more than recovering the ground lost at the time the 15 per cent. cut in prices was announced.

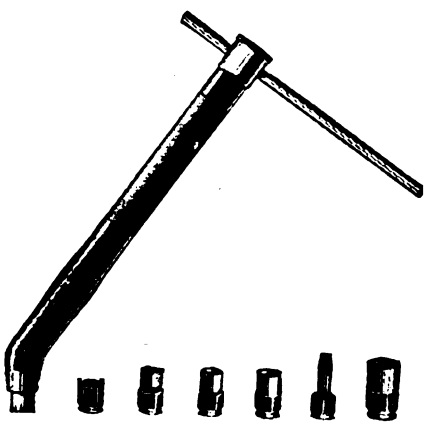
Billmont Master Wrench. The Billmont Master Wrench is a universal socket type, designed to do the work of a dozen or more wrenches.

The maker claims that with this wrench one can reach the nuts of the fourth connecting rod of a Ford engine without removing the unit from the frame. This alone would mean a considerable saving in time when adjusting the connecting rod bearings of a Ford car. The wrench should be placed firmly on the nut to be removed with one hand and turned with the other hand. After the nut is started a spinning motion of the hand will remove it.

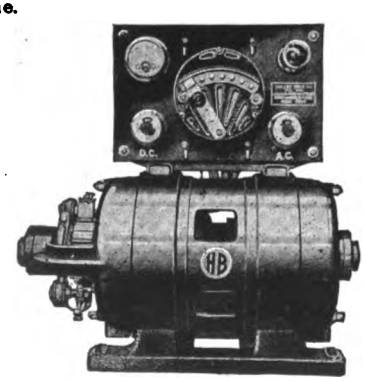


Such work as loosening or tightening nuts on radiator stud bolts, exhaust and intake manifolds, valves, rear motor supports, the clutch, starting motor—in fact, practically any part of the motor or body of a car, large or small, is reached with ease by the Billmont wrench.

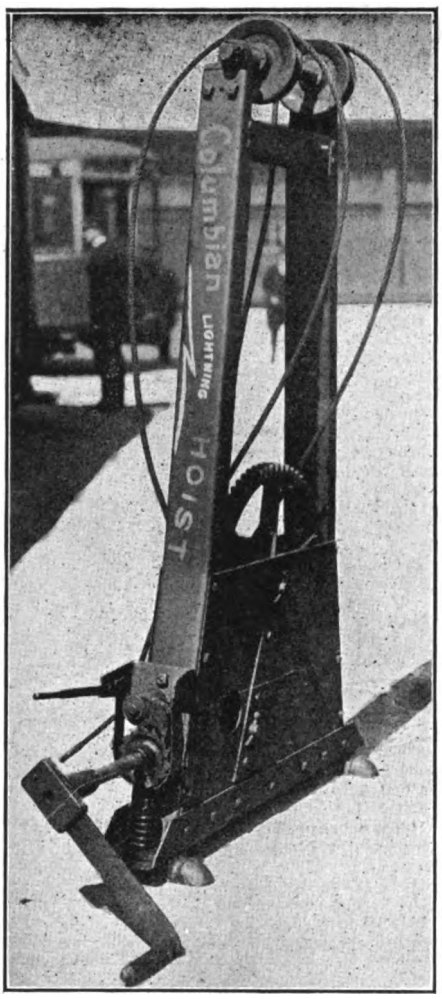
The Billmont wrench has a knurled handle so that it may be firmly held while in use, obviating the difficulty of keeping the jaws of the ordinary wrench squarely on the nut, and the nut can be spun instead of making ouly a quarter turn with each fitting of the wrench jaws.

Manufactured by the Edgar C. Guthard Co., 361 E. Ohio St., Chicago, Ill. Prices on application.

HB Motor Generator. This charger is a full 500-watt or ½-kilowatt equipment, with capacity and efficiency that guarantees quick, dependable charging and large profits. It is self-starting, using city power and from wires now installed. It will operate on either alternating or high voltage direct current. It has a special automatic universal voltage control, which makes it possible to recharge any automobile storage battery quickly and successfully. It will handle automatically six, 12 or 24-volt batteries at the same time.



Manufactured and sold by Hobart Brothers Co., Troy, N. Y. Prices on application.



The Columbian Lightning Hoist has an estimated test capacity of 30,000 pounds. It will handle with ease a five-ton load and elevate the load to a maximum height. It can be operated by one man with very little effort.

A dump body equipped with a Columbian can be raised to an inclined position of 30 to 50 degrees in less than two minutes. The hoist is designed on the principle of geared wheels. By a train of spurs and bevel gears the Columbian is so constructed that a load of five tons can easily be raised by one man at the crank.

The hoist occupies but eight inches of space back of the driver's seat. This is an important advantage, as it permits the body load to be set forward, relieving the rear tires, spring, frame and axle of an excessive share of the weight of the load.

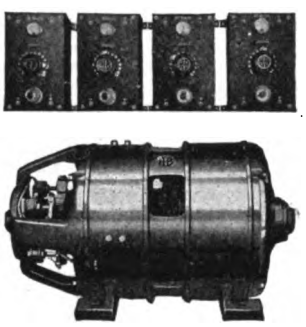
Another feature to be considered by the truck driver is the weight of his equipment. The Columbian is of the lightest weight consistent with the proper strength, thus allowing a dump body of a larger carrying capacity. It fits any chassis or frame, and can be easily and quickly attached. The appearance is attractive.

Manufactured by the Columbian Steel Tank Co., 1601-1621 West 12th St., Kansas City, Mo. Write for prices and further information.

HB Motor Generator Charging Sets. The HB two kilowatt generator set, or 32 battery charger, is designed for battery service stations, or garages that specialize battery charging, or wherever large capacity and economy of operation may be desired. It is equipped with an amply designed five horsepower motor and is built to give heavy service profitably.

It will develop at the generator end 60 to 70 volts and 30 amperes and has a charging capacity of 32 six-volt batteries or their equivalent at one time. The armature and rotor are mounted on one shaft supported by ball bearings, insuring absolute freedom from operating trouble and maximum economy in operation. This equipment is furnished in two or three-phase winding or for direct current, and by the addition of a starting box will operate on single phase 220 volts. A charging outfit of this large capacity cannot be used on single phase 110 volt lighting lines, but a public service company will put in the necessary power lines for this machine.

There are four separate charging lines, each with a maximum charging rate of 10 amperes, and capacity for carrying up to eight batteries. Individual panels make

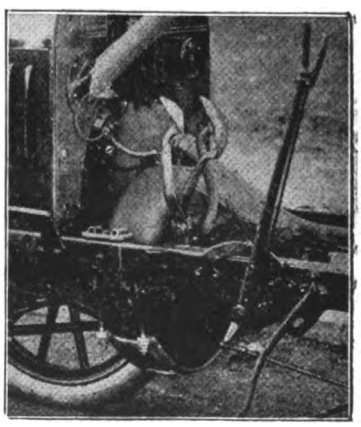


each charging line independent of the others, and provide the necessary balancing resistance in each line of batteries, and additional resistance on the line for varying the charging rate and for adjustment when less than eight batteries are charged on a single line. Each charging panel has its own ammeter, necessary fuses, cutouts, rheostat, with the resistance for balancing the line and varying the rate of charge. The panels are of clear black electrical slate, oil finished and beveled.

Manufactured by the Hobart Brothers Co., Troy, N. Y. Prices on application.

Liberty Motor Support. The Ford power plant is supported at the rear end by two brackets bolted to the flywheel bell housing. Should one bracket be broken the engine is supported by but one, which must take all the driving thrust upon the engine case. The Liberty motor support is attached beneath the flywheel case and fastened to the frame on each side. The maker claims that it will prevent the breakage of the brackets, will stop all vibration or shaking of the motor which crystalizes the forged brackets and causes them to break; that it will prevent slippage of the high speed and transmission bands, giving more pulling power.

This device not only prevents breakage of the crankcase brackets, but serves as a repair in case the brackets are broken until such a time as a repair can be made. The support can be installed in a very short time.



Manufactured by the Motors Support Co., 431 S. Dearborn St., Chicago, Ill. Sold through the dealer and jobbing trade. Price, $4.

Big Parking Garage To Be Erected In Boston

A five-story fireproof garage, which, with the land, will represent an investment of nearly $1,250,000, is to be built on Eliot street next to the Plymouth Theater, Boston, for the Eliot Street Garage Co. The structure will cover more than five-eighths of an acre of ground, and will have more than four acres of floor space, to accommodate 600 cars at a time. A double spiral ramp, one within the other, by which cars will be able to ascend or descend on their own power, is one of the unique features. The George W. Harvey Co. is the contractor, and Clinton J. Warren the architect.

Located in the heart of the theatrical and hotel district and within a few moment's walk of the shopping and financial centers, the garage will serve the various interests, which in rotation require parking space during the day for business men, in the afternoon for shoppers and in the evening for theater goers.

As an added convenience to theater goers it is intended by means of a tunnel to connect the garage with the passageway running through the Little building, which joins the Majestic and Plymouth theaters. In this way theater goers will be able to check their cars and proceed to the theater without going outdoors.

Advantages of Ramp.

The use of the ramp instead of elevators will have a two-fold advantage. It will enable any number of cars to stream in or out of the building on their own power, thus avoiding delays and congestion. During certain periods of the day, especially before and after theater, the movement of several hundred cars in or out, almost at one time, will be necessary. With eight or even 10 elevators long delays would be unavoidable.

Then an important reduction in the cost of maintenance is made possible by use of the ramps. The installation of elevators would add considerably to the annual cost of the building. It is estimated that the cost of operating and repairing these elevators would be in the vicinity of $40,000 a year.

Keeping Cars Moving.

Another interesting feature of the proposed construction is in the use of concrete guides in the spacing of cars. These guides will be shaped like huge flat irons raised 4½ inches over the floor level, four feet wide and 10 feet long. Over this guide the car backs into place. A small bumper will be provided for blocking the rear wheels. In this way a car can back into place only when it is correctly placed.

A scientific plan has also been devised for facilitating the moving of cars in and out of the garage. Near the entrance will be an attache of the garage, who will have in front of him a flashlight device, which will show which berths are vacant and which are occupied. On basis of a vacant space he will hand to the chauffeurs as they pass by a check showing the floor and berth number. On each floor other attaches will guide chauffeurs to their berths, help check robes, etc. Congestion near the entrance will thus be avoided.

VAN DORN & DUTTON OPENS NEW BRANCH OFFICES.

The Van Dorn & Dutton Co., Cleveland, O., manufacturer of gears, has opened branch offices in New York and Chicago. At both cities it is the purpose to specialize in gears and pinions for electrical work. Harry F. Keegan, formerly

Harry F. Keegan.

with the Chicago surface lines and well known in the electrical railway field, will manage the Chicago branch, with offices at 1241 First National Bank building. His brother, John, will manage the New York end, with office in room 317, 30 Church street. He comes from the Interboro railway, where a third brother is now engaged.

ADAMS-WILLIAMS AGAIN ELECTS SCHWAB AS PRESIDENT.

At a special meeting of the directors of the Adams-Williams Manufacturing Corporation, New York City, maker of the A-W Convertible Tops, F. C. Schwab, who resigned as president when entering the service, was elected president. S. O. Crittenden, who also returned from service recently, was elected vice president. Leo W. Schwab was re-elected secretary and treasurer. Plans have been completed to enlarge factory space and to greatly increase production during 1919-20.

PURITAN MACHINE TAKES OVER DETROIT AXLE CO.

The Puritan Machine Co. has purchased the entire stock of the Detroit Axle company, both concerns being located in Detroit.

News of this transaction will be of especial importance to owners of all cars having the Detroit axle equipment, because of the fact that the Puritan Machine Co. will be the only source hereafter where parts for that make of axle can be obtained.

Great Motor Merger Being Planned by Bankers

Bankers are understood to be at work on plans for a merger of automobile companies, which would take in several more prosperous organizations, and present a solid competitive front to the $1,000,000,000 General Motors Co.. Chandler, Chalmers, Maxwell and Studebaker are mentioned as being definitely in the plan, which probably will include others.

Through the merger, it is planned to form an automobile company which would be prepared to turn out cars to fit every purse, from small, inexpensive ones to high grade touring cars.

Tractors and other farm machinery propelled by gasoline will form one of the main items of output.

The tremendous demand which has sprung up since the close of the war for automobiles has, of course, made financial and physical expansion necessary. Some of the companies named in the present rumors are already far behind on new business and booked to capacity for several months.

Studebaker is the largest of the quartet. It has $40,965,000 of stock outstanding, of which $30,000,000 is common and $10,965,000 is preferred. Maxwell ranks second in size with $38,050,000 stock outstanding.

Chalmers has $4,400,000 preferred and 400,000 shares of no par value, and Chandler has issued $7,000,000 worth of the $10,000,000 authorized of its one class of stock.

TRUMP JOINS STAFF OF CAMPBELL-EWALD CO.

Hal G. Trump, for the last four years manager of the Chicago office of the Green-Fulton-Cunningham Co., has joined the staff of the Campbell-Ewald Co., Detroit, Chicago and New York. Mr. Trump will make his headquarters at the Detroit office. Mr. Trump's experience has embraced the positions of space buyer, copy chief, service sales. He was at one time advertising and assistant sales manager of the Van Dyke Motor Car Co. and later advertising manager of the American Boy. While he has directed practically every variety of advertising account, much of his training has been along automotive and farm implement lines.

DILL TRACTOR EXPANSION.

Owing to the great demand that the highly specialized Dill tractor has created for itself by its efficiency in the rice and wheat fields, it has been necessary for the G. I. Dill Tractor Manufacturing Co., Harrisburg, Ark., to increase production. A factory site of 10 acres has been acquired in Little Rock, Ark., and the capitalization of the company has been increased to $1,000,000. A modern, reinforced concrete fireproof building will be erected as a manufacturing plant. The Board of Commerce of Little Rock has given a substantial cash bonus.

TRADE OUTLET

THE SEASON'S OPEN!

It is time high prices are chased to the tall timbers. Glance over the following list—Note our prices—Remember we have been in business 18 years—We know how to buy so that we can sell right.

FOR YOUR FORD.

Bumpers, channel type	$5.00
New Era Accelerators	.65
Ever Ready Gasoline Gauge	.25
Valve Adjuster and Silencer	.35
Premo Fan Belt Adjusters	.15
Fan Belts for Fords	.18
New Era Pressure Gasoline Reserve Gauge	.25
Roller Bearings for front wheels, per set	7.50
Pistons—Standard and over-size—complete with piston rings, piston pins and bushings	1.50
Coil Points—K. W. Points for Ford Coil Units	.15
Lined Brake Shoes, per pair	.95
All Steel Cutouts	.25
Master Vibrators, Connecticut	1.98
Rubber Pedal Pads, set	.25
Ford Alarms. A horn button that attaches to the end of gasoline lever	.25
Wheel Pullers	.50
Waldren Transmission Band Wrench	.45
Bonnie Wrench Sets, set of end wrench fitting all Ford nuts	1.20
18-inch Steering Wheel	3.95
Crown Fenders, per set	18.00
Speedster Fenders; the long, sloping kind; complete set of four fenders	10.00
Tool Boxes, 22 inches long, will hold pump	1.35
Electric Tail Lamp	.55
Champion X Spark Plug; genuine; only four to a customer	.45
Muffler Cutouts	.50
Stewart Speedometers; not the instrument broad type	6.50
Timers	1.05
Spindle Arm Bolts	.21
Warner and Shaler Lens, per pair	1.75
Windshield Ventilators — makes the old type windshield a ventilator shield	1.05

SPARK PLUGS SPECIAL.

$1.00 ½ inch Sando Spark Plugs—each	35c
.90 ½ inch Champion X Plugs—only 4 to a customer	45c
1.00 Red Head Spark Plugs—all sizes	45c
1.00 A. C. ½ inch special plugs	19c
1.25 Marcy ⅞ plugs	19c
1.25 Marcy—Metric—Motorcycle size	19c
1.00 7.8" Spark Plugs	19c
1.00 Bethlehem ⅞" Extension A. L. A. M.	45c
1.00 Bethlehem ½" Extension	45c
1.25 Jumbo ¼" Extension	45c

Badger

TIRE COVERS

Made to **best** answer the purpose for which tire covers are intended—**service—protection.**

Toughest, most durable of fabrics. Hardiness—and wear that withstand rough usage and worst of weather. **Still** Badger Tire Covers have—and **retain** an appearance of class that harmonizes with the finish and equipment of the most costly cars. Dealers find tremendous demand. Exceedingly liberal profits. Write for particulars—and prices.

The best at the most reasonable price is always the greatest business bringer. Post up on the selling possibilities of the **entire** Badger line.

SEAT COVERS

The most comprehensive assortment on the market. Guaranteed perfect fit. For all makes of cars. Endless selection of beautiful fabrics and shades.

SLIP ROOFS

Newest thing in re-covers. Abolish all re-cover disadvantages. Simple in construction. Absolute fit. Cut by car manufacturers patterns. Come complete. Put on in few minutes time—by **unskilled** labor. Unlimited sales field.

BACK CURTAINS
With Plate Glass Windows

A welcome advancement. Most attractive back curtain that ever graced a car. "Pierce-Arrow" effect. For all cars. Crystal clear plate glass—instead of unsightly celluloid. Splendid profits. Keen demand.

Send now—for many money making facts on these four leaders in the accessory market.

TIP-TOP AKRON TI-RE-PAIR OUTFIT

The Best Equipment

It pays to buy the best equipment if starting in the tire repair business or adding to present equipment. Tip-Top Ti-Re-Pair Equipment is regarded by tire manufacturers, tire repair schools and repair shops as representing the highest standard of quality in tire repairing equipment that it is possible to produce.

TIRE RETREADING

The high price of tires has created a big interest in tire retreading. Motorists who have worn down their tires until no longer usable want new treads put on.

Every tire repair shop should have one of these recently developed Type E Cavity Retreading Outfits, which operates on the same principle as the regular cavity vulcanizer used for repairing casing punctures and blowouts.

Cost of outfit with self-contained steam boiler is much less than that of a vulcanizing kettle and separate steam boiler. (The use of large and expensive retreading kettle outfits is no longer necessary since the development of this type of retreading equipment—and the elaborate, difficult and time-consuming system of wrapping tire is not required with the cavity method). Outfit is very compact and takes up little room in the shop.

TIRE REPAIRING

Motorists who have never bothered with tire repairing are now having casing and inner tube punctures and blow-outs repaired by the vulcanizing process.

Now is the timely time to start in the tire repair business.

We make a complete line of Tire Repairing Equipment—cavity vulcanizers of both the self-contained boiler and separate boiler types—Tube plates—Steam Boilers—Bead Molds—Tire Repair Tools. No matter what you have need of we are in position to supply it to best advantage.

Write us today for literature describing our full line of tire repair equipment, and data regarding vulcanizing and the possibilities for profit in the tire repair business.

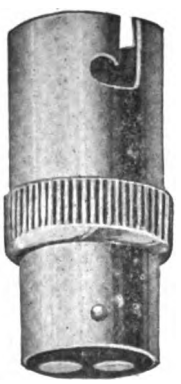
A New Device for Ford Cars

HEADLIGHT EQUALIZER



THIS little device is inserted in the lamp socket of the right hand headlight, is locked into place by the knurled locking nut, and the lamp plug is then inserted into the open end of the Equalizer.

The following results are obtained:

Much brighter lights.
Uniform light at all speeds.
Bright lights at low speed.
Protection for the bulbs.

If one bulb burns out, the other remains burning.

Ford owners have always been bothered with poor lights at low engine speeds. This device corrects all this. No electrical or mechanical knowledge required for attaching, and the cost is insignificant.

List Price 75 cents each, subject to our regular trade discounts.

GET A WATERHOUSE WELDING OUTFIT AND WATCH YOUR BUSINESS GROW

Boost your profits—Swing the big profitable welding business to your shop. Thousands of repairers are doing it and most of them use a Waterhouse outfit.

Time is money and a Waterhouse Welding Outfit saves the time as well as labor. It affords utility great enough to meet any shop requirement, yet no shop is too small to own one.

The great difference in welding outfits is all in favor of the Waterhouse. That means quality, utility, long service life, simplicity, dependability, low first cost and the best and most complete welding apparatus ever offered to the trade.

Write for descriptive catalogue, or better still, tell us your requirements. Do it today. We can supply the exact outfit for your needs.

All Waterhouse outfits are guaranteed.

WATERHOUSE WELDING COMPANY, 3 PELHAM STREET, BOSTON, - MASS.

FREE AIR COSTS MONEY

when the customers for whose convenience you provide an air station forget to turn off the flow after they have filled their tires.

Guard against this waste by attaching a

Schrader Universal Inflating Valve

to your air hose.

Thanks to this appliance your bottled air locks itself into the tank the minute it is taken off the tire-valve. You turn on the air by pressing the nozzle of the inflating valve against the tire-valve and you turn it off by removing the device from the tire-valve.

Made to fit any diameter of hose from ¼ in. to ⅝ in.

PRICE $1.50 in U. S. A.

Manufactured by **A. SCHRADER'S SON, Inc.**
800 Atlantic Avenue, Brooklyn, N. Y.

Schrader products were awarded a Grand Prize and two Gold Medals at the Panama Pacific International Exposition. "There's a Reason."

Automobile Journal Publishing Co.
Times Building, Pawtucket, R. I.

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUG. 24, 1912, OF

THE ACCESSORY AND GARAGE JOURNAL,

PUBLISHED MONTHLY AT PAWTUCKET, R. I.

For May 1, 1919.

State of Rhode Island, County of Providence.

Before me, a Notary Public, in and for the state and county aforesaid, personally appeared William H. Black, who, having been duly sworn according to law, deposes and says that he is one of the owners of the Accessory and Garage Journal, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the act of Aug. 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business manager are:

PUBLISHER, WM. H. & D. O. BLACK....Pawtucket, R. I.
EDITOR, W. W. SCOTT.....Pawtucket, R. I.
MANAGING EDITOR, E. B. NORTON...Providence, R. I.
BUSINESS MANAGER, WM. H. BLACK..Pawtucket, R. I.

2. That the owners are:

WM. H. BLACK.....Pawtucket, R. I.
D. O. BLACK.....Pawtucket, R. I.

3. That the known bondholders, mortgagees and other security holders owning or holding one per cent. or more of total amount of bonds, mortgages or other securities are:

M. J. BLACK, Mortgagee.....Pawtucket, R. I.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association or corporation has any interest direct or indirect in the said stock, bonds or other securities than as so stated by him.

(Signed) WILLIAM H. BLACK, Co-Partner.

Sworn to and subscribed before me this 7th day of April, 1919.

(Signed) CHARLES McALEVY, Notary Public.
[Seal] (My commission expires June 30, 1920.)

GENEROMETER

The new and practical generator testing instrument. It will locate shorts and grounds in generator armatures where most of the trouble is of a Lighting System. You will need this instrument if you want to be 100% efficient in your electrical repair work. Further particulars upon request.

PAUL G. NIEHOFF & CO., INC.
232 E. Ohio Street, Chicago, Ill.

Niehoff Laminated Magnetizer

This is the most scientific and practical Magnetizer ever constructed. It will magnetize any size magnet from a Ford to all the various other magnets used on the different cars today. Due to the fact that it generates an enormous amount of magnetism, with a pulling power of about 75 pounds, you can more quickly remagnetize a magnet, and, therefore save much current. All magnetizers are subject to considerable wear. The faces will wear down according to their use. The top pieces of our Magnetizer are especially hardened and also detachable so that when worn down they may be replaced at a very small expense. We have two types; one for 6 volt storage battery and another for 110 volt D. C. current. Write for further information.

UNILITE

A Tail Light Outfit for Ford Cars

UNILITE OUTFIT

Unilite Adapter

The Unilite Outfit is especially designed to provide an electric tail light for Ford Cars, operated from the magneto when running and from dry cells when the car is parked. It is the only reliable tail light outfit on the market for Ford cars not equipped with a storage battery. It is much cheaper to operate than a storage battery and its first cost is very much less. The unit feature makes it possible to install one or both electric side lamps in addition to tail lamp at any time desired.

Outfit can be installed by anyone in a few minutes with no tools, except a screw driver.

Complete outfit consists of one **Unilite Adapter**, with bulb, as shown in cut, one **Unilite Controller** and **Switch**, as shown, and all wire necessary for installing. Complete instructions are packed with each outfit.

PRICE COMPLETE, $4.00.

Extra Unilite Adapter with bulb and wire for attaching to switch terminal on Unilite Controller

$1.60 EACH.

Separate Controller and Switch,

$2.40 EACH.

Write for our circular fully describing the Unilite.

Briggs and Stratton Co.

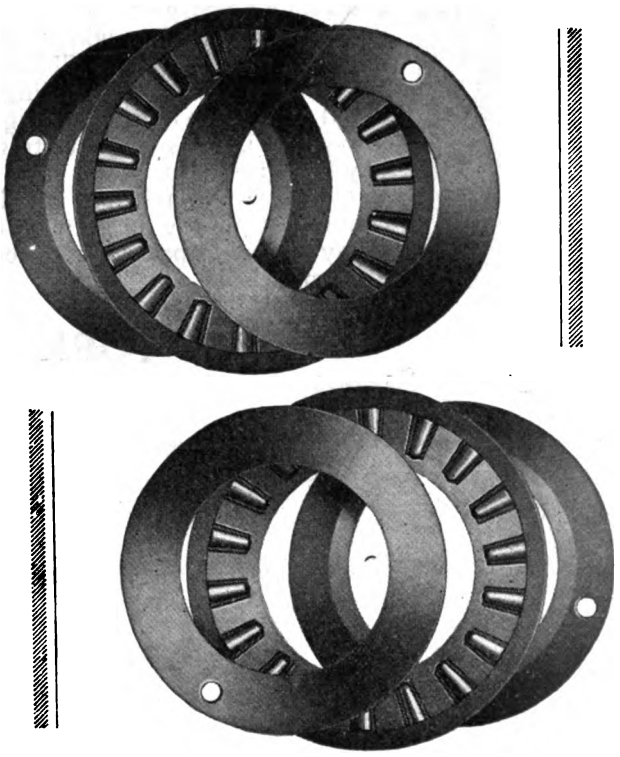
MILWAUKEE, WIS.

The Simmens Taper Roller Thrust for Ford and Chevrolet Cars

Prevents Rear Axle Troubles and Expense

A pair of Simmons Taper Roller Thrust plates makes the rear axle entirely roller bearing—roller thrusts on both sides of differential—thereby eliminating practically all rear axle trouble—a radical improvement over the regular Ford type of plain flat steel-to-brass bearing.

The present Ford type of brass-to-steel bearing wears rapidly, even under favorable conditions, causing "misalignment" and rapid wear of gears.



Complete Set

The Simmons Taper Roller Thrust has one hundred times more real bearing surface than any BALL thrust now on the market, and is used on both sides of the differential case. The entire differential is thereby protected from gear and end thrusts.

The construction of the Simmons Taper Roller Thrust is such that if the differential case sags or drops down, bearing contact is still maintained, because of the special construction of the retainer plate. Protection must be given to gears from sides of the differential case, which is subjected to extremely heavy strain when the car makes a sharp turn.

Your dealer or repair man recognizes this as the onl proper type of thrust bearing. If your dealer or jobbe cannot supply you, write us.

Price $3.50 Per Set of Two $5.00 in Canad

Sold in Complete Sets Only.

Mr. Jobber-Dealer-Repairman: Now is the time t place an order for a stock of Simmons Taper Rolle Thrusts.

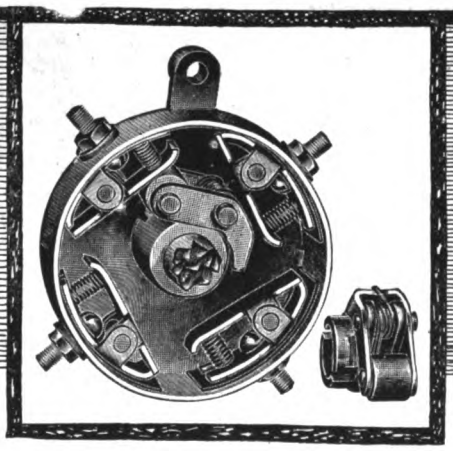
Out-wears Them All



THE BAY STATE TIMER FOR FORD CARS

POWER, EFFICIENCY AND ECONOMY DEPEND ON IGNITION

Ignition depends upon the timer—which must be positive in action and must be extremely enduring.
BAY STATE TIMERS are built to a design proven by experience to be far superior to all other types.
The parts are made from materials that especially resist wear—it is practically self-compensating.
In any period of service there can be no change of timing from timer wear. Breakage is the only possible cause of failure or variance.
BAY STATE TIMERS insure you car service, operating economy and repair expense, and fullest satisfaction.
Less important, but equally desirable, is quicker acceleration and absence of noise and
NO TIMER TROUBLE.
The BAY STATE is that dependable.

Garages, Large or Small Can Get a Share of the BIG PROFITS from BATTERY CHARGING

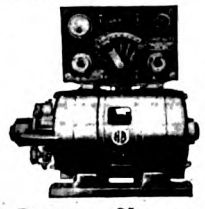
This big money-making business is open to every live garage man. Wherever cars are driven, there are batteries to be recharged and now, with all new Fords coming out with storage battery equipment, the opportunity is even greater. *Get in the game, get the big profits that battery charging pays.* No other part of your garage business pays anything like as big profits. With HB Equipment, it costs you only 12c to 15c to charge a battery, and the customer pays 75c to $1.50. Compare that profit with profits from other lines of your business. Battery charging can be made to pay from $100 to $400 a month. The business is at your door—go after it.

An HB Battery Charger for Every Size Business

You can get an HB Charger in any size you need. All HB Chargers are sturdy, dependable and absolutely reliable. Built of finest materials obtainable. Nothing to burn out, no expensive renewals or repairs. Plain, honest, profit-producing service 24 hours a day. No electrical or mechanical knowledge required to install or operate. No attention except occasional oiling. Uses power from any city lines. Big, quick, clean profits, easily made!

CHOOSE THE SIZE YOU NEED

HB 500 Watt Charger



Recharges 1 to 7 6-volt batteries or their equivalent at a time. Charger is 27 in. long, 26 in. high, weighs 280 lbs. Furnished complete with clear black electrical slate switchboard, with mountings of ammeter, field rheostat, voltage lamp, two controlling switches. A big money-maker for a small battery business.

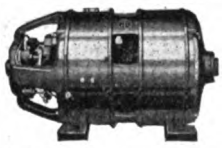
$15 cash.
9 Monthly Payments of $20 each.

HB 16-Battery Charger

Recharges 1 to 16 6-volt batteries or equivalent in 12 or 24-volt batteries at once. Motor 1 KW capacity. Operates on 2 or 3 phase current only. Furnished complete with 2 independent charging panels, each with capacity of 8 batteries. A splendid machine for every live, energetic garage owner wishing to get big profits.

$57 cash.
10 Monthly Payments of $23 each.

HB 32-Battery Charger



Recharges 1 to 32 6-volt batteries or equivalent at a time. Motor 2 KW capacity. Operates on any current. Four separate charging lines, each capable of charging up to 8 batteries. Permits individual attention to batteries on charge. Ideal equipment for big garage or battery service station. Will make as high as $250 to $450 a month *Clear Profit.*

$57 cash.
10 Monthly Payments of $30 each.

Sold on Trial Under HB Absolutely Money-Back Guarantee

All HB Equipment is sold under our absolute guarantee of complete satisfaction. If not satisfied after using any HB Equipment 10 days, you may return it and receive all you paid us. Monthly payment plan is an additional guarantee. Machines pay for themselves out of earnings.

Select the Charger You Need—Mail First Payment Check Today on Trial Order

HB Chargers Are the Motor Generator Type

There are many charging appliances on the market which on first impressions look good. Investigate the operating expense and the cost of parts that wear out or burn out, causing endless trouble, worry and needless expense. It should mean something to you that 75% of all HB Motor Generator Chargers sold replace other charging appliances. Remember, it is not first cost that is so important to you as the monthly bills for current, repairs, renewals, etc. Remember you are buying a battery charger for years of hard service. Get an HB Motor Generator Charger and be free from all expense and trouble. Motor Generator Chargers are sturdy, dependable and last for years under hardest usage. If in doubt, write us for full data on various types of battery charger. Buy *your* Charger for Long Service and Big, Steady Profits. You run no risk with HB Chargers.

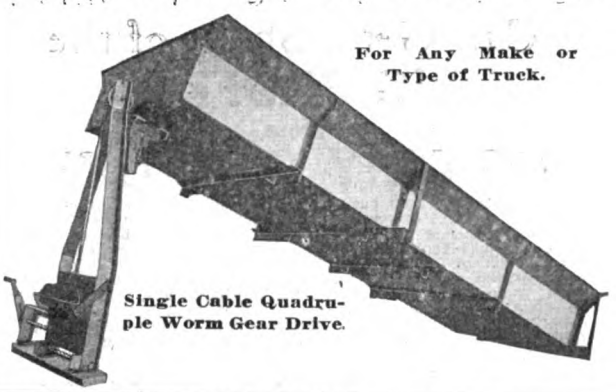
THE PEERLESS HAND HOIST



For Any Make or Type of Truck.

Single Cable Quadruple Worm Gear Drive.

A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

Write for complete information.

Saves Gasoline *Adds Mileage* *Easy to Use*

In Red Cans Only

Every Package Guaranteed

Makes Your Motor Self-Cleaning

Mormiles

—makes every drop of gasoline **clean the motor as it goes.**

—energizes weak, logy, low grade gasoline.

—makes every drop deliver full power to the rear wheels.

—completely dissolves in the gasoline. Unlike a liquid it becomes an integral, evenly distributed part of the fuel which passes through the motor out of the exhaust.

—comes in convenient tablet form only. No messy, ill-smelling liquid to measure out, spill or evaporate.

—can be carried in tool box or under the seat —at hand whenever the gas tank is filled. **Use one tablet for each gallon of gas.**

Guarantee:

Not to injure finest motor; to increase mileage; to increase power; to keep motor free from carbon—**or money refunded.**

The American "Junior" Combination Bearing Burning-in and Motor Test and Running-in Stand

WITHIN THE REACH OF EVERY FORD DEALER AND REPAIR MAN

The **American Junior** is constructed so that the bearings of the Ford Block are exposed to the view of the operator while being burnt-in. The burning-in Base is constructed with openings large enough so that the Pistons and Connecting Rods can be installed or fitted without removing the Block from the machine. The Block is held in position with quick acting clamps set in guides.

The **American Junior** is constructed along the solid unit principle, no bolts or rivets are used in the frame. This eliminates vibration and also the danger of the frame shaking loose from constant use.

The Motor Test part of the machine can be operated independently or at the same time that the bearings are burned in. This machine has the quick adjusting alignment device on right hand motor support for aligning the Universal Joint quickly and accurate. The clutch is also equipped with a tryout wheel so that the stiffness of the motor and bearings can be determined without removing either unit from the machine.

The **American Junior** comes completely equipped with gasoline tank inlet and outlet water connections, and coil support as shown in illustration.

Price $197.50

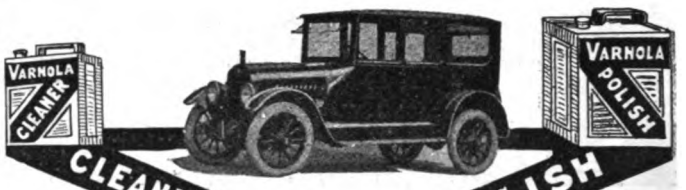
We manufacture a full line of equipment for Ford and Fordson Service Stations. Write for Catalogue.

All equipment manufactured by this company is approved by the equipment department of the Ford Motor Company before it is placed on the market.

SERVICE STATION EQUIPMENT COMPANY, Inc.

MANUFACTURERS

1201-1211 Cortland Street Chicago, Ill.



RENEW CAR FINISH PERFECTLY

THEY restore varnish and enamel, on wood and metal, to the original appearance. The Cleaner removes grease, dirt or corrosion from the surfaces and the Polish gives a high lustre that will endure from 30 to 60 days.

A pint can of the Cleaner and a quart can of the Polish will suffice for any size or type of car for six months. The price for the two, sold only in combination, is $1.50

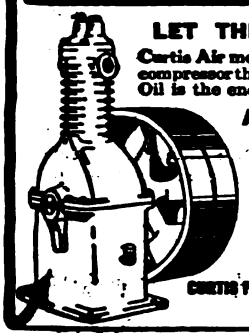
CURTIS AIR FREE FROM OIL

MOTORISTS Have CONFIDENCE IN THIS SIGN

LET THEM FIND IT AT *YOUR* DOOR.



Curtis Air means more mileage, because Curtis is the only air compressor that can't flood cylinder with more oil than it can use. Oil is the enemy of rubber. It rots tires, causing blow-outs.

A Curtis Compressor is Dependable

requires practically no attention, costs very little, quickly pays for itself, always delivers the kind of cool, clean air that makes tires last longer.

5 sizes and 125 combinations. Write for full particulars and let us tell you why the Curtis will prove to be your best investment. Ask your jobber for prices—but be sure and mention Curtis—the name is your protection against substitution

Lewis Combination Aligning Reamer For Ford Cars

A Connecting Rod and main bearing Reamer that does the work of a skilled mechanic. 100 per cent. Better and 500 per cent. Cheaper.

Reamer No. 2, Showing position on Connection Rods.
This Reamer will pay for itself on the first five motors over hauled in labor saved. It is absolutely perfect and fool proof. Will work equally well on full or under sized shaft.

Reamer No. 2, Showing Combination Reamer in position on main bearing.

It is the **only** reamer that will ream **connecting rods and main bearings** in **absolute alignment.**
It leaves a finished, perfect fitting, glass-smooth bearing. It is perfect in operation; **cannot chatter, dig or pull the babbitt. There is no end thrust.**
The Lewis Reamer **is not** of the ordinary type, but is a scientifically designed tool; positively the most accurate method ever devised for trueing or fitting bearings, and does away entirely with hand scraping or burning in.
It has been thoroughly tested by two years in actual garage work.

Operation: Place reamer in position and draw caps down.
For further information ask your jobber or write us.

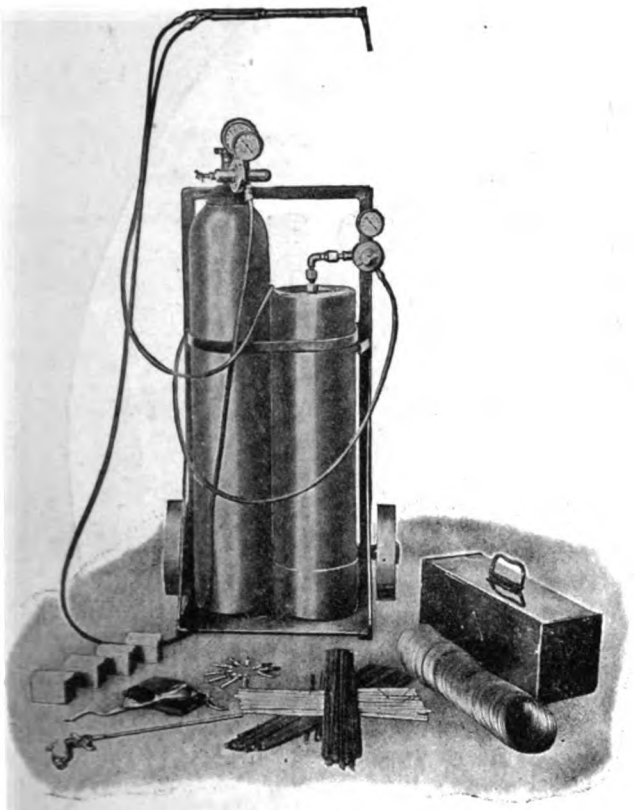
Dyer welding, cutting, carbon removing, lead burning and brazing-soldering apparatus has yearly increased 100% in popularity with garage and repair men because:—



Style A, Welding and Carbon Removing Outfit

The style A outfit which includes all the items shown in the cut except the cylinders, was especially designed for the garage or small repair shop. The welding torch is standard, covering a wide range of work. The regulators and gauges are the same as used on the large outfit. Carbon gun is of the popular pistol grip, trigger control type. The outfit is light and may be easily packed and used in emergency work.

Style B outfit includes all the items shown in the cut except the cylinders and will easily handle a wide range of welding and cutting. This outfit is complete in every detail, meeting most exact requirements.

Oxy-acetylene apparatus is very efficient for frame straightening, for heating and for brazing. Your jobber stocks, catalogues or can immediately get Dyer Apparatus.

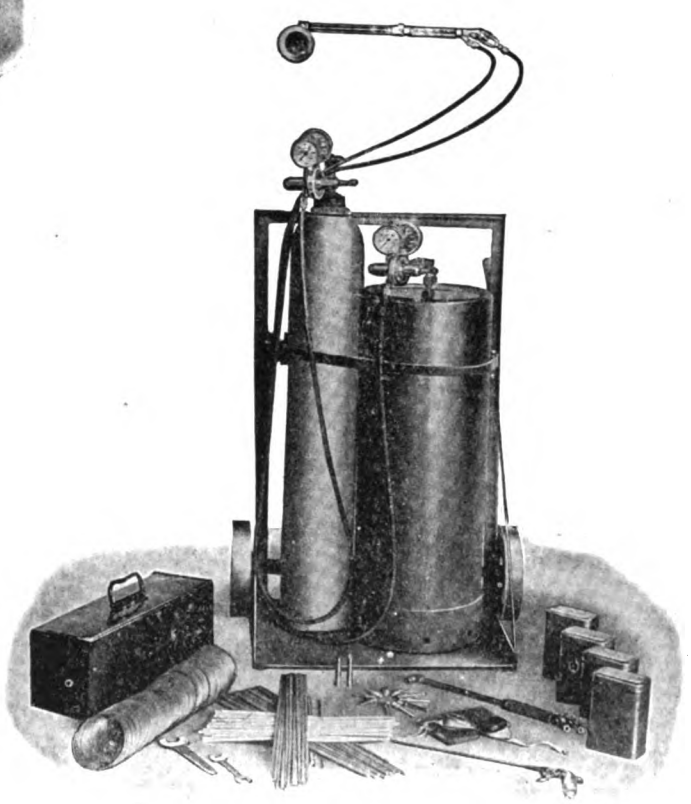
Prices Very Attractive

It is lightly and simply designed to give the highest efficiency during long hard service. We guarantee the best quality of materials and workmanship.

Dyer Apparatus is approved by the Factory Mutual Fire Insurance Company and expert knowledge is not required to operate it successfully.

Dyer torches are of the non-flashing, semi-injector type. They practically empty the cylinders and are economical in gas consumption.

Regulators are accurate at all pressures and strongly built. Best grades of gauges.



Style B, Welding, Cutting and Carbon Removing Outfit

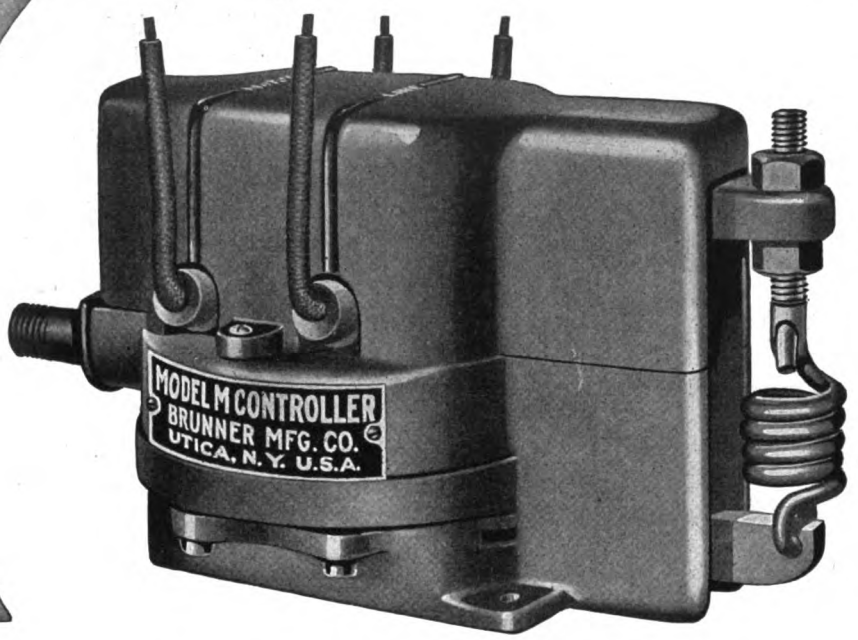
BRUNNER



Controlled Air Service

Your air compressor is in the back room---your profitable time is spent in the front. Suppose you start your compressor and are called away. What will happen if it is not automatically controlled ?

1st - you may have to leave important, profitable work to go back to shut it off -- several times a day this happens. A Brunner Controller will pay for itself in the loss of time and profit.

2nd - If your compressor has safety valves, these will open when the proper pressure is reached then you are just pumping into the atmosphere - burning up current and wearing out your machine. A Brunner controller will prevent this.

3rd - If your outfit does not have safety valves, the pressure may reach the danger point. A Brunner controller will avoid damage and personal injury.

Suppose on the other hand you forgot or neglected to turn the compressor on, you'll have disappointed customers. A Brunner controller automatically maintains a proper working pressure which means every customer served without delay.

Here again Brunner engineers have designed a special type of controller to meet the most exacting requirements.

A Brunner controller will work on other Compressors - write for details, name your jobber.

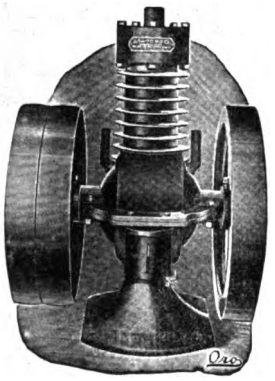
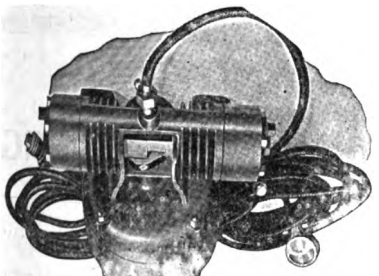
Oro
GOOD as GOLD

The Long-Lived Connecting Rod for Ford's



AU-TO AIR COMPRESSOR No. 0



Electric Driven AU-TO Air Compressor No 10

EVERY Ford that leaves your shop with one or more Oro Connecting Rods installed means that you have satisfied another customer—made another friend.

Hundreds of thousands of Oro Connecting Rods have made good because long service is built into them. There is no danger that they will let go and smash up a motor—and with it your reputation as a reliable repair man. The steel is the best obtainable—30 to 40 point carbon drop forged. The babbitt is a scientific combination requiring the minimum amount of lubrication and giving the maximum amount of wear.

You may be able to get a connecting rod a few cents cheaper—but does it pay? You make a reasonable profit on Oro and the replacement lasts for the life of the car—a constant reminder of your good work.

You build your business on a sound foundation when you use material like this. Your customers send their friends. Your business and your profits grow.

We are the manufacturers of the No. 0 AU-TO Air Compressor which is so well and favorably known. In ten years we have never made a charge for repairs on one of these machines. In common with our other types of AU-TO Air Compressors they work perfectly year in and year out.

Be sure to ask your jobber for Oro. He probably carries these rods, but if he does not, write us.

AU-TO COMPRESSOR CO.
WILMINGTON, OHIO

Houpert Machine Co., New York, where there are eight Heald Grinders working day and night regrinding automobile cylinders.

IN REGARDING THE BUSINESS OF REGRINDING CYLINDERS

If you have been contemplating going into any business in connection with automobiles consider that of regrinding cylinders. The automobile user now realizes that it is possible to have his engine put in shape as good, if not better than new, by having the worn and scored cylinders reground on a Heald Cylinder Grinder. He finds he gets better compression, developing more power with a smaller consumption of gas and oil.

There were 6,000,000 gas cars registered last year in the United States. With only a very few repair shops equipped to properly regrind cylinders. Not only is the business ideal at this time, but

HERE IS AN OPPORTUNITY THAT WILL NEVER HAPPEN AGAIN

There are a number of practically new second hand Heald No. 60 Cylinder Grinders now on the market These machines have been released by the Government from factories doing air-craft war work.

These second hand machines are ideal for automobile repair shops or garages and The Heald Machine Company will be glad to furnish information to prospective buyers where they can get full details in regard to these machines.

Write for Blue Border Bulletins, Series No. 6 on Cylinder Grinding.

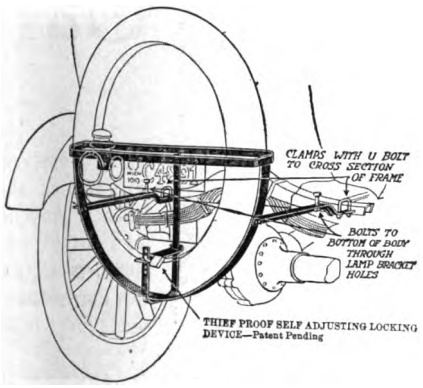
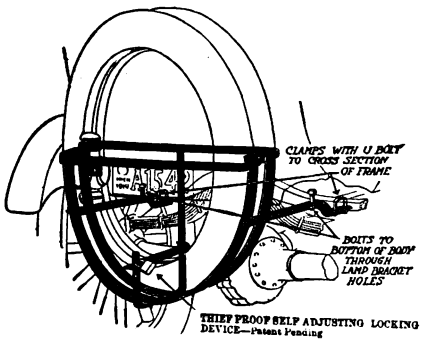
There will be a big demand for the

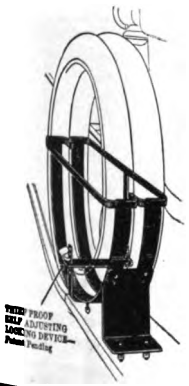
HASTINGS TIRE CARRIER



Rear Cradle type single for one 3 or 3½-inch demountable rim or demountable wheel—$4.50.



Rear Cradle type double for two (3 and 3½-inch) tires, two demountable rims or two demountable wheels, $6.00. This makes such a rigid carrier that two or three men could put their entire weight on it without bending mounting arms.



Side Carriers

For two tires (3 and 3½-inch) two demountable rims, or two wheels, $5.00. Also comes for single tire (3 or 3½-inch) demountable rim or demountable wheel. Price $3.50. These carriers fit close to the body and are absolutely rigid as fastened to the running board with four heavy bolts. Also additional support to the wind-shield.

Because it is

THIEF-PROOF---RIGID

and has a

Self Adjusting Locking Device

Fits the FORD

TOURING CAR—ROADSTER—SEDAN—COUPE

THERE will be a rush for the Hastings Tire Carrier this year. Ford owners have been waiting for a tire carrier that is absolutely rigid and thief-proof. The self adjusting locking device is a big step in advance. It will sell itself the moment a Ford owner sees it. These carriers are well made and easily attached.

Write for further particulars and discounts.

Ten Big Selling Arguments

1. A positive self adjusting locking device that makes this carrier thief-proof.
2. The adjustable feature of this Thief-proof locking device holds your tires, rims or wheels firmly in the carrier; thereby preventing tires from bouncing and chafing.
3. Its absolute rigidity and strength.
4. Parts are electrically welded.
5. The finish is high grade fired enamel.
6. Band is straight so does not accumulate mud and water to deteriorate your tires.
7. Holds your tire in vertical position at just the right height to add to the appearance of your car.
8. Fits Ford Touring Car, Roadster, Sedan or Coupe.
9. Single Carriers will carry 3 or 3½ inch tire, demountable rim, or demountable wheel.
10. Double Carrier will hold two tires (3 and 3½-inch), two demountable rims or two demountable wheels.

Masters

AUTOMOTIVE ACCESSORIES

To Dealers:—

The big sellers are those automobile accessories that are of real utility—and those that are made both for big volume on low-priced cars and of higher price for more expensive cars.

There's no more useful, more necesssry accessory than a **real** lock for a Ford—the most easily stolen car in America.

The Masters Steal-Proof Lock clamps the gears on the steering post. It cannot accidentally lock the car. It pays for itself out of the saved insurance. Price $6.50.

The most practical device for supplying moist air to the carburetor is the Masters Oxifier. It prevents carbon. Gives more miles per gallon of gas. Makes the motor run on a hot, dry day just the same as on a foggy evening. Made in three models for cars of different classes. Prices $8.50 $10.50, and $15.00.

This is a real accessory—not a crude collection of cumbersome parts.

Other high quality Masters Automotive Accessories are:

Gasoline Gage for the Dash
Boatmeters
Tachometers
Gasoline Meters
Marine Speed Recorders
Others in Process of development

Dealers—write for descriptive circulars, terms, etc.

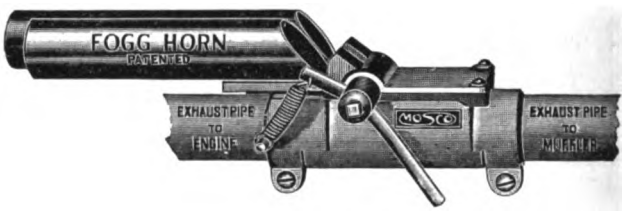
Jericho-Fogg Horn

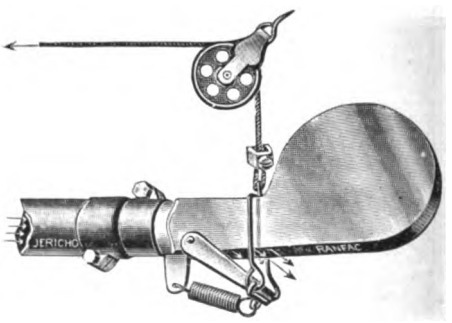
The BEST SIGNAL FOR FORD CARS



It does away with the Tail Pipe Problem because it is attached between the Engine and the Muffler. And so it makes no difference whether the FORD is of the Vintage of 1912 with **long tail pipe**—or a 1919 model with **no tail pipe.** The JERICHO-FOGG HORN blows loudly even when motor is running slowly. It throws the Sound **ahead of the car**—where its warning is most needed and where it can do the most good.

One size only—List Price $5.00—complete with all attaching accessories

Jerichos and Jubilees for Trucks



The Regulation JERICHO (Single Tone) and the JUBILEE Chime have the indorsement of careful drivers—because of dependability and performance.
Attached to Rear of Muffler. Operated by the Exhaust.

Mormiles

TRADE MARK

Makes Your Motor Self-Cleaning

Adds Mileage

Mr. J. Newton Roe, Prof. of Chemistry, Chicago, Ill., says: I take great pleasure in recommending "Mormiles Tablets" as in my personal experience with a high powered car, I increased my mileage 27% by using them.

I also find in analyzing these tablets, that there is nothing in them to injure the finest motor, or in any way interfere with the working of the carburetor.

In Red Cans Only

Increases Power

Garrett, Ind.,
March 31, 1919.

Mormiles Company,
226 So. La Salle St.,
Chicago.

Gentlemen:

Enclosed find check No. 3579 for $8.00. Forward us by mail 1 dozen dollar size boxes of Mormiles "Pills."

My fellows down here seem to think they cannot run without them.

Yours respectfully,
Rollins & Elson.

Here is a gasoline intensifier and carbon eliminator ***of real merit,*** guaranteed not to injure the mechanism of the finest motor, carburetor or vacuum-feed system.

Mormiles energizes weak, logy, low-grade gasoline; improves lubrication; gives uniform combustion, perfect ignition, easier starting, quicker "pick up;" diminishes wear and tear on motor and insures longer life.

Mormiles will add 20% to 50% more miles per gallon; insure 30% more power; will free engine from carbon accumulations and "keep it clean as a whistle;" readily dissolves and is equally effective in gasoline, kerosene or distillate and becomes an integral, evenly distributed part of the fuel which passes out of the exhaust.

The Most Effectively-Beneficial Intensifier on the Market

Enthusiastic, unsolicited letters are coming in every day. Write for them. Hear the really remarkable results obtained. *Mormiles* promises to be of universal service to automobile and tractor owners.

SOLD ON MONEY-BACK GUARANTEE. 100 tablets—enough for 100 gallons of gasoline—$1.

Jobbers and Dealers:
Mormiles is coming strong. Nothing can stop it. Get in early. Write us for attractive proposition.

This coupon worth $1. Use it today.

Mormiles Co., 226-8 S. La Salle St., Chicago. 99
Enclosed find $1 for two regular $1 cans of Mormiles, a special offer for introductory purposes only—where dealer cannot supply.

more money for garages

How often are you called on to locate and correct trouble in Electrical Starting and Lighting Equipment? You are bound to have more and more of such calls, especially if you earn a reputation for knowing the electrical side of an automobile and handling it right.

There is big money in Electrical Installations, Repairs, Adjustments, Renewals, etc. Some of the most wide-awake Garage Men have found it out. This year more money than ever before will be made that way, because there will be more electrical work than ever for the man who knows how.

Guess-work won't do. Every time you guess wrong you are likely to make yourself a peck of trouble and lose a customer in the bargain. What you need, and need right now before you find yourself losing opportunities to make money, is a

Weston

Model 280

Garage Testing Instrument

This complete Electrical Testing Equipment is made by the world's foremost Electrical Instrument designers and makers. It meets every requirement for making electrical tests in the garage. With this WESTON MODEL 280 you can handle anything that comes your way in electrical work. And it doesn't cost a small fortune, either—mighty little for what it will help you to make.

With the Instrument, we furnish full information showing you how to use it. And we have a staff of electrical experts whose advice is yours for the asking any time you think you need it.

We can make prompt deliveries if you send your order in early. Write us today for full particulars.

WESTON ELECTRICAL EQUIPMENT CO.
103 Weston Avenue, Newark, N. J.

New York	Detroit	Pittsburgh	Miami, Fla.	Winnipeg
Chicago	St. Louis	Richmond	Seattle	Vancouver
Philadelphia	San Francisco	Buffalo	Toronto	Calgary, Alta.
Boston	Denver	Minneapolis	Montreal	Havana
Cleveland	Cincinnati	New Orleans	Halifax	Mexico City

Do you want to be able to make quick, accurate tests to locate any defect in the electrical system? Or do you want to consume unlimited time taking apart every device and running a chance that you will discover the trouble sooner or later?

There are scores of places where trouble may occur. Unless you test electrically, you cannot eliminate any possible source of trouble without taking each device apart.

A poorly made, inaccurate electrical instrument merely adds to the uncertainty. What you need is reliable, positive knowledge. This Model 280 really is the equivalent of six separate Measuring Instruments of different ranges. It is extremely accurate, durable and serviceable. With it, you can do the work quickly and intelligently, putting yourself a long way ahead of any competitor who has not Weston Equipment.

15TH ANNUAL TOURING NUMBER

AUTOMOBILE JOURNAL

ISSUED JULY 15, 1919.

The Biggest and Most Lasting Buy of the Year

The AUTOMOBILE JOURNAL is an A B C certified quality publication. It is one of the oldest in its class. Its rates are based on a distribution much less than the present circulation. Its advertisers are now enjoying a decided bonus in circulation.

In past years the demand for copies of the Annual Touring Numbers has been far in excess of the editions. This year, owing to the heavy cost of production, we have concluded to republish all touring data in regular book form, which will be sold at a nominal price.

The distribution will be general and country wide, and the sales will be through all book selling channels. Copies will be used in our circulation campaigns and distributed through more than 60 circulation representatives.

The price will be 35 cents a copy and a conservative estimate, including the regular edition and general sales, is that more than 75,000 copies will be sold during 1919.

Only touring data, maps and state laws will be included in the reprinted sections of this edition. Advertising appearing in the regular July issue will be published in the book. All copy, aside from cover advertising, will be printed in one color only unless special arrangements are made.

There will be no increase in the rates. The extra service is a bonus to advertisers and will be paid for through the sales of the reprinted books.

This combination of service affords advertising buyers publicity value equal to $500 on the basis of page space at regular rates.

Its Publicity Value to the Advertiser

1—The same volume of touring data in any other form would cost $10.

2—It presents all the good and practical qualities of the best touring books, which cover but a small section of the country. The 15th Annual Touring Number will be a NATIONAL TOURING ROUTE AND GUIDE BOOK.

3—It affords the full publicity value of any touring book, with the added value to advertisers of positive circulation. The distribution of any standard book is dependent upon the demand, which is an unknown and wholly unreliable basis for any claim.

4—Its readers are all car owners and car dealers—all potential buyers.

5—It will be issued and circulated at the beginning of the touring season.

6—It will be read and studied at home. It will stimulate the desire for touring. It will be carried in the car. It will be referred to constantly on the road. It will be read by all the passengers in the car, for the contents will generally interest men and women tourists.

7—It will be preserved and referred to during the entire season and until the next issue is available. It will be loaned to and read by others. Its publicity value will never lessen.

8—It will supplement all other touring information, for the data is the latest compiled and for that reason the most valuable.

9—The touring data will be reprinted in book form and sold at a nominal price through dealers, news companies, hotels and news stands.

10—It is a recognized and established annual guide and touring book, and aside from the regular distribution to subscribers the sales will be many times the regular issue of any motoring journal.

Are a Standard Line

Jobbers and Dealers stock the full Blue Ribbon line as they do all other tried, proven and constantly selling goods.

Blue Ribbon products are made by specialists who depend wholly on the quality and service giving satisfaction afforded by lines bearing their trade mark.

There can be no experimentation at the expense of the consumer, dealer or jobber. All Blue Ribbon Specialties must be as good as they are practical in every day use as it is possible to make them.

A nation wide trade, enormous expenditures devoted to development and promotion work as well as the maintenance and operation of the largest plant of the kind in America is too great a stake to gamble against quality.

Blue Ribbon Products today stand supreme. They are passed over the counters backed by an unqualified guarantee on the part of the trade that can leave no doubt as to their merits.

That is why Blue Ribbon Products are a standard line and will always continue to be so.

That is why all jobbers and dealers sell and list them in their catalogues.

Above all else that is why the consumer buys Blue Ribbon trade marked products. Blue Ribbon Products cost no more than others, yet represent the most profitable line that can be placed by the jobber or dealer.

If the **BLUE RIBBON** trade mark is to be seen on your shelves or counter you have a silent salesman in your store that is always working, always earning.

All Blue Ribbon Specialties are sold in quantities to meet any requirement.

The full line affords a complete line and it pays to specialize in known quality goods.

Blue Ribbon Specialties Include:

Blue Ribbon Cold Cream Hand Soap
Contains no pumice or sand.

Blue Ribbon Leak Proof Cement
A permanent radiator cement.

Blue Ribbon Nickel Polish
For nickel parts and trimmings.

Blue Ribbon Auto Body Gloss
For automobile or furniture.

Blue Ribbon Lightning Carbon Remover
Quick and positive in action.

Blue Ribbon Black Enamel
For lamps, hoods, radiators and metal parts

Blue Ribbon Auto Top and Seat Dressing
A waterproof dressing that restores tops and seats.

Blue Ribbon Hand-On Patch
A self-vulcanizing patch for shoes and tubes that never fails.

Blue Ribbon Cream Metal Polish
For any metal. An easy, quick working, satisfactory polish

Blue Ribbon Oil Soap
A pure vegetable oil soap for any purpose. All quality and efficient

This is the time to consider your winter and spring requirements

The ACCESSORY and GARAGE JOURNAL

VOL. IX. PAWTUCKET, R. I., JUNE, 1919 No. 2

Peak of Production In Auto Plants During July

$45,000,000 Is Earned By General Motors In First Six Months of Year

AUTOMOBILE companies in the United States will probably reach the peak of production before the end of July. Nothing better illustrates the demand for automobiles than the case of Cleveland Motor, the new company financed early in the year. With the new factory yet to be completed, the company has on hand deposits for 28,000 cars, or more than it can turn out in the next 18 months. The new car, which will sell in the $1300-$1500 class, will probably be on the market about the middle of July. The output for the first year, from July 1, 1919, to July 1, 1920, it is estimated, will be approximately 15,000 cars. For the calendar year, 1920, however, 25,000 cars are planned.

It is announced that earnings of General Motors for the six months to end June 30 will approximate $45,000,000 before taxes, or at an annual rate of $90,000,000. Earnings in 1918 before taxes were slightly under $35,000,000. In other words, the company has earned $10,000,000 more in six months than was earned in the full year 1918.

Chandler Motor turned out 627 cars one week this month, a new high production record. This is at the rate of 2500 cars a month, or 30,000 per annum. Chandler has in the past been regarded as a 12,000 to 15,000 car proposition, but in 1920 plans call for a production of at least 25,000 cars.

PAIGE-DETROIT TO DOUBLE.

With new manufacturing facilities now being provided, it is expected that the Paige-Detroit plant will double production. The Paige-Detroit Motor Car Co. has elected Frederick L. Jewett first vice president. The following promotions are announced by President Harry M. Jewett: W. A. Wheeler, vice president, manufacturing division; Henry Krohn, vice president, sales, passenger car division; Charles S. Pike, vice president, sales, truck division; Thomas Bradley, vice president, purchasing division; Andrew Bachle, vice president, engineering division; G. C. Mathor, chief engineer; J. V. Quinlan, production manager; George Peterson, general superintendent; C. B. Gaunt, sales manager, passenger car division; Frank E. Caulk, sales manager, truck division.

American Car Makers Plan Big Campaign to Capture Foreign Trade

MOTOR companies of this country are making extensive plans for entering the foreign field. Several of the concerns have created subsidiaries which will engage in the sale of American made machines on the European continent and elsewhere.

European motor manufacturers are preparing to offer stiff competition, but the American car makers are optimistic as to the outcome. The Americans will make a more vigorous sales campaign in Europe than they have ever attempted.

There is great interest just now in the subject of foreign trade financing. It is understood that a committee of bankers has been appointed in New York, and similar committees will probably be formed to represent other Federal reserve districts. It is expected that it will be left to them to take initiative in organization of the proposed large financial corporation and cooperating corporations proposed in connection with the various lines of export business.

At a recent conference in Washington the amendment to the Federal reserve act, which will remove present limitation placed upon national banks in investing in stock in corporations engaged in international or foreign banking, was unanimously recommended.

COLUMBIA TO BUILD.

The Columbia Motors Co., Detroit, is planning to build a modern new plant, having outgrown its present quarters. A site has been purchased adjoining the Fisher Body Corporation, and a plant with 150,000 feet of floor space will be erected. The new plant will enable the company to double production.

Minority Holdings In Ford Company Will Be Sold

New England Trust Company In Negotiations For New York Interests

NEGOTIATIONS for the purchase of the minority holdings of the Ford Motor Co. have been under way for some days and are proceeding favorably. The purchasing party is a prominent New England trust company, which is supposed to be acting for powerful New York interests.

If the trade for the minority stock is successfully concluded it is probable that the Ford majority interests can then be acquired. That would mean the biggest shuffling of cars in the motor industry in years—the passing of the world's greatest automobile unit from the Ford control.

It has been almost a foregone conclusion since C. Harold Wills and John R. Lee, the chief executive personnel, left the Ford company this spring, following the defection of James Couzens a few years past, that all was not harmonious within the Ford official family. From that time there has been "angling" for the Ford company.

Wills and Lee Buy Land.

Messrs. Wills and Lee, together with associates yet to be announced, have purchased or optioned a large tract of property on the St. Clair river between St. Clair and Port Huron, and about 50 miles from Detroit. They plan to manufacture the motor car which Mr. Wills is now designing.

The tract comprises approximately 2000 acres. Mr. Wills, when asked how he and his associates planned to utilize such a large tract, said: "Well, we want to grow—that is about all. We have plans, development of which requires plenty of property."

Messrs. Wills and Lee have also acquired 250 acres of land near Sarnia, Canada, on which to put up one of the largest, if not the largest, automobile plants in the Dominion. Work will be started at once.

RALPH DE PALMA SMASHES WORLD'S RECORD

Other High Marks Are Also Shattered In Races At Sheepshead

SMASHING the world's record, Ralph De Palma won the 50-mile race in the $35,000 International Sweepstakes at the Sheepshead Bay Motor Speedway June 14. His time was 26 minutes, 23 1/5 seconds, as against the figure held by Louis Chevrolet, of 26 minutes, 57 3/10 seconds. De Palma averaged 114½ miles an hour.

Two other records were broken. Tommy Milton, driving an old Deusenberg Special, won the 10-mile race in five minutes. 20 1/5 seconds, as against the record previously held by De Palma of five minutes, 23 4/5 seconds. Ralph Mulford, in his Frontenac Special, drove at an average speed of about 113 miles an hour in the 30-mile heat, covering the distance in 16 minutes 20 3/5 seconds, shaving 10 3/5 seconds from De Palma's old record.

Not a single mishap marred the day. Thirty-five thousand persons attended. The races were held under the auspices of the Eastern States Motor Racing Association. In all the grilling races hardly half a dozen tires went flat. Three aviators, riding from the infield and flying close over the racers' heads, gave an occasional thrill to the spectators.

De Palma's Friends Worried.

It appeared as though De Palma had been "playing possum" or had found difficulty in getting his Liberty motor and space annihilating Packard tuned to the proper pitch as quickly as usual. In three of the four races he was shown to the finish line by one or more rivals, only to flash forth in the grand climax—the 50-mile heat—with a sustained speed burst that left all other drivers far in his wake and toppled over record after record.

He took the dust of Milton's Duesenberg and Mulford's Frontenac in the first 10-mile race: was led home by the Frontenacs of Mulford and Joseph Boyer, Jr., in the second 10-mile swoop of the course and saw Mulford's Frontenac again finish in front of him when he crossed the line in the 30-mile contest.

In the grandstand De Palma's partisans—no driver in the history of automobile racing has had such a large and enthusiastic following—sat gloomy and disconsolate. They had come to consider their Ralph invincible. His humbling by Milton and Mulford cut to the quick. But just when the friends of the great Italian-American driver slumped back in their seats and disconsolately acknowledged it was not De Palma's day, Ralph came into his own.

With his Packard responding to the urgings of his Liberty motor as a thoroughbred to the lashes of a jockey, Ralph burned his way around the big bowl track in the 50-mile race at a clip that threatened to shake the gearings out of the following machines and shook the nerve and courage of his rival drivers till they were willing to bow before his speed mastery and allow the cream colored Packard to disappear like a phantom in the distance.

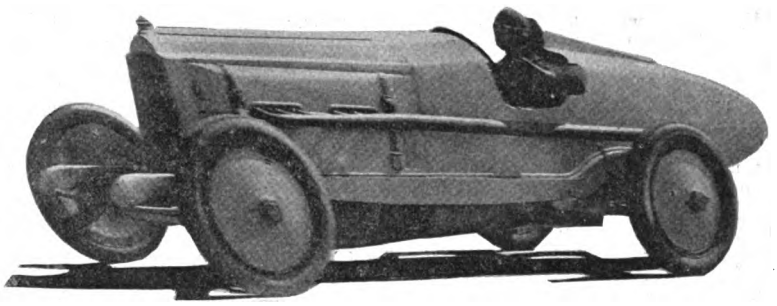
Three Heats and Special Race.

The sweepstakes was divided into three heats and one special race was held. Twelve cars were listed for the start in the first heat of 10 miles, but only eight got away—Dario Resta, in his Resta Special, or "Mystery," as it has been termed; Ralph Mulford, Frontenac; Joe Thomas, Mercer; Ralph De Palma, Packard; Tom Milton, Deusenberg; Denny Hickey, Stickel; J. M. Reynolds, Frontenac, and Ray Howard, Peugeot.

Louis Chevrolet, Frontenac; Dave Lewis, Meteor; Joseph Boyer, Jr., Frontenac, were scratched, and Ira Vail, Hudson, went out at the beginning. It was a flying start and at the first sound De Palma came leading well in front, with Milton, Mulford following close. On the next lap Milton took the lead, with Mulford right in back of him and Resta third. De Palma was in fourth place and Howard fifth. For the rest of the heat they trailed in this order, Milton leading at the last lap by a good margin.

The Thirty-Mile Heat.

The second heat was for 30 miles. The cars lined up: De Palma, Howard, Mulford and Lewis in his Meteor in the first line and Resta, Thomas, Hickey and Chevrolet in a Frontenac in back.



Ralph De Palma in His Winning Packard Car.

At the start Mulford forged ahead and led De Palma by three lengths. Lewis coming next, and then Resta, Howard, Hickey, Thomas and Chevrolet in that order. Chevrolet fell out on the second lap; Resta, with his "mystery," went out on the third, and Howard dropped on the seventh. Mulford, De Palma and Lewis consistently drilled along in this order to the eighth lap, when, with Howard out, they continued to the end, with Thomas and Hickey in fourth and fifth places respectively.

Blazing Ice Water Caused Fright.

On the fifth lap Mulford drove hard ahead of De Palma, leading in at the finish more than half a mile ahead of the Packard. Lewis pushed De Palma hard for second place, but Thomas and Hickey were well behind.

Suddenly just as the heat had been finished the cry of "Fire!" rose in the grandstand. Women began to scream, but not hysterically. The ice water stand on a top tier caught fire. Without giving the crowd below much warning the firemen played a hose on the fire, sending a stream squirting down on to the men and women below. There was a wild scampering, but in a few moments it was all over and six cars were lined up for a special race of 10 miles. They were driven by Mulford, Boyer, De Palma, Lewis, Thomas and Milton, winner of the first heat. After jockeying for half a lap Mulford took the lead well ahead of Boyer and De Palma. On the second lap Milton's Deusenberg went bad and fell out. The five cars, with Mulford in the lead, Boyer, De Palma, Lewis and Thomas following, roared around for the five laps, with Mulford winning from Boyer by about two lengths. Boyer was 200 yards ahead of De Palma, who was pushed hard for third place by Lewis.

Nine Cars in Last Heat.

Then came the 50-mile heat. Nine cars were lined up—De Palma, Vail, Thomas, Milton and Lewis in the first row, and Resta, Boyer, Hickey and Mulford in the back line. Chevrolet, Reynolds and Howard did not start.

Mulford led on the first lap, with De Palma, Boyer, Lewis, Thomas, Vail, Milton and Hickey following in that order. Resta had trouble again and went out on the first lap. Mulford led through the sixth lap, with De Palma, Boyer and Lewis see-sawing for second position.

In the seventh lap De Palma came out on the back stretch like a streak, his cream colored car jumping ahead of Mulford's dark maroon Frontenac, which he led into the 10th lap, when Boyer's greenish-blue Frontenac took Mulford's place, Mulford just leading the fourth car, Lewis' Meteor.

Vail's dark blue Hudson had given up the ghost in the third lap, Milton's old Deusenberg in the fifth, leaving only six cars from the fifth lap.

In the 12th and 13th De Palma put on a burst of speed that put him possibly 400 yards ahead of the next car, Boyer's. Mulford dropped back to fourth place and in the 17th lap went out of the race on a flat tire.

The 18th lap was run with De Palma far in the lead, then Boyer, Lewis, Thomas and Hickey in that order. They continued in that order until on the 25th and last lap, when Boyer shot his car ahead of Lewis for second place. De Palma was a mile ahead by this time and

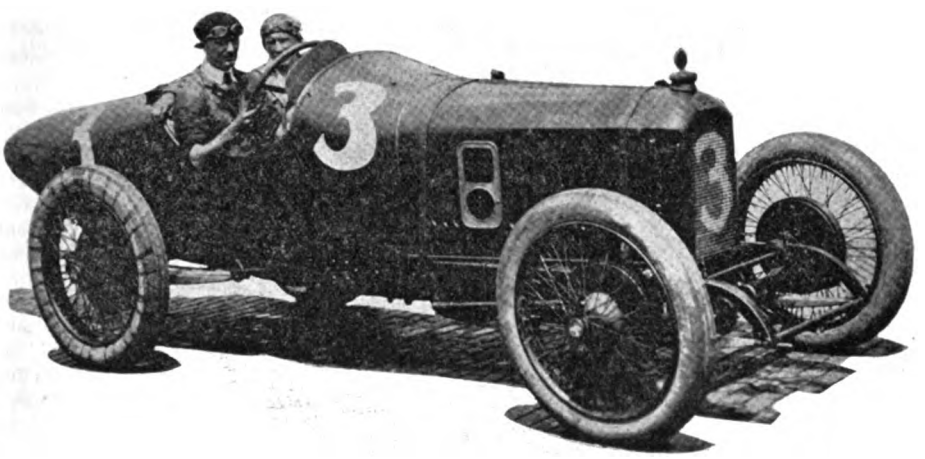
RICKENBACHER DEFENDS AUTOMOBILE RACING

By E. V. RICKENBACHER.

At Indianapolis Wilcox Is Winner—Three Meet Death

IT IS with a good deal of regret that I note the adverse sentiment current in some sections against automobile racing, as the result of the three fatalities that happened during the Indianapolis 500-mile Liberty Sweepstakes race at Indianapolis, at which I officiated as referee. The death of any man is a sad thing, with many pathetic consequences in its wake, and if it served no other purpose than to make a Roman holiday, as has been charged with reference to automobile racing, it would indeed be inexcusable.

Now it so happens that prior to entering the U. S. air service I was identified with automobile racing for a good many years and consequently am more familiar than is the average individual with the useful, and I may say right now, indispensable role played by the sport in the development of automotive design, engineering and metallurgical discovery, as applied both to the automobile and the airplane. Stop and consider that a contest such as an Indianapolis 500-mile race tests every part of a motor car's mechanism more severely than two years of ordinary usage, and you will get an idea of how racing has speeded up engineering progress.



Howard Wilcox, Winner at Indianapolis.

Defective Wheels.

In the last Liberty Sweepstakes race every accident but one was due to defective wheels, wheels that apparently were sound, but under the crucial strain of sustained high speed revealed themselves in their true light. The same wheels would have given good service under ordinary touring conditions for one or two years, perhaps, and then suddenly crashed, to the wiping out possibly of an entire family, as has often happened in touring accidents.

The discoveries of the last Indianapolis race will enable wheel manufacturers to improve their product so that occurrences such as those which produced fatalities during the contest will be impossible on the open road. Who shall say then, in view of this fact, that the Liberty Sweepstakes race did not serve a useful purpose?

Any one who drives an automobile has often reflected upon what would happen if his steering apparatus would break, leaving him helpless at the wheel of an uncontrollable car, and great has been the wonder that this delicate contrivance rarely gives any trouble. As a matter of fact the perfection of steering mechanism is one of the chief contributions of automobile racing to the safety of motoring. Designs that were thought good engineering practise were quickly shown to be most dangerous when subjected to the test of extreme speed and consequently discarded before they had opportunity to work mischief in the field of every day use.

The same thing applies to all other parts of an automobile with respect to safety. Frames, axles, wheel spindles, bearings, tires, the proper design and materials for these were arrived at much more quickly through racing and with much less loss of life than would have been possible had automotive progress not had the assistance of racing.

Also don't forget that racing calls into play the keenest engineering minds in a constant struggle to produce more horse power, more energy, with less weight—an endless reaching out into new fields for the purpose of increasing efficiency and economy in gasoline consumption. To increase engine efficiency new types of valve action have been invented, different cylinder arrangements have been tried, all kinds of manifolds built, every piece gone over with a view to possible improvement, while the endeavor to reduce weight has proved a stimulus to the metallurgical arts, resulting in the invention of steels of unheard of lightness, combined with surpassing strength.

Effect on Engineering.

The new, light weight car of the future, combining comfort and roominess with low operating cost, both as regards gasoline and tires, will owe its existence more to racing than any other factor.

And looking back for a moment to the recent days of war, what do you suppose would have been the position of allied aircraft manufacturers but for the experience of racing? Every engine that went into an allied airplane, from the English Sunbeam through the Hispano-Suiza and Fiat to the American Liberty, incorporated principles developed in the field of automobile racing, and which, without racing, could not have been developed in time to be of service. True, we are not supposed to have wars any more, but as long as the possibility is present, it will not do to ignore automobile racing as a factor in determining the safety of the nation.

Summing up the case of automobile racing, I would say that it is indispensable to modern progress, at least as far as events like the Indianapolis races and the French Grand Prix contests are concerned, where the new ideas and theories of the most prominent builders of both the new and old continents are tested in actual competition.

INDIANAPOLIS RESULTS:

First—Wilcox, time 5:44:21:75; average 87.12.

Second—Hearne, time 5:46:15:05; average, 86.64.

Third—Goux, time 5:50:49:90; average 85.51.

Fourth—Albert Guyot, time 5:53:33:50; average, 84.85.

Fifth—Tom Alley, time 6:06:04:35; average 81.26.

Sixth—De Palma, time 6:10:10:92; average 81.04.

Seventh—L. Chevrolet, time 6:11:46:33.

Eighth—Ira Vail, time 6:14:38:62.

Ninth—G. Chevrolet, time 6:15:14:88.

Tenth—Rene Thomas, time 6:25:27:19.

Cars driven by winners were: Wilcox, Peugeot; Hearne, Durant Special; Goux, Peugeot; Guyot, Ballot; Alley, Bender; De Palma, Packard; L. Chevrolet, Frontenac; Vail, Hudson Special; G. Chevrolet, Frontenac; Thomas, Ballot.

INDIANAPOLIS RACE.

Howard Wilcox of Indianapolis was the winner of the seventh International Sweepstakes at the Motor Speedway, Indianapolis, May 31, his time for the 500 miles being 5:44:21:75. Two drivers and a mechanician were killed and two others were injured.

The dead:

THURMAN, ARTHUR, of Newark, N. J., driver of the Thurman Special.

LECOCQ, LOUIS, of Los Angeles, Cal., driver of the Roamer Special.

BANDINI, R., of Los Angeles, mechanician for Lecocq.

Automotive Equipment Association Will Reorganize

COMPLETE reorganization of the Automotive Equipment Association was decided upon at the Spring convention of the association at Hot Springs, Va. This action was taken on advice of counsel, who pointed out that there should be a thorough revision of the old program of procedure in order to avoid future risk of the association becoming involved in litigation, such as it successfully passed through in the Sherman anti-trust law cases.

Enthusiasm and optimism reigned, and every indication is that the organization will emerge a more potent one than ever before. The great interest manifested in the convention was testified to by the presence of nearly 600 members, many of whom were accompanied by their wives. Social features, with golf, tennis and dancing made the affair decidedly enjoyable.

The committee formerly known as the Defense Committee was instructed to arrange for the reorganization. This committee will make its report at the next meeting, in November, and in the meantime the association, under authority of a resolution adopted at the convention, will proceed along the same line as in the past.

It was voted to rescind the constitution, by-laws and all resolutions adopted under the old regime. While vigorous opposition to the Sherman law as it now stands was voiced, it was the unanimous opinion that it was the duty of the association and individual members to live up not only to the letter, but also to the spirit of the law as long as it is in force.

Interest was shown in plans for the jobbers' show, to be held in the Medinah Temple in Chicago, Nov. 3 to 8, in connection with the next convention. The exhibits will be open only to manufacturers who are members.

Reports disclosed that receipts from December to May amounted to $36,470, with disbursements of $20,310, leaving a balance of cash and funds on deposit and in trust amounting to $16,160.

The semi-annual report of the credit and collection agency department showed that from December, 1918, to May, 1919, 1116 claims, aggregating $76,920.88, were filed, and that collections were made on 466 claims, aggregating $30,907.62. Of disputed claims, aggregating $9263.10, $5051.58 was collected.

The Martin-Evans Co., E. L. Taylor & Co. and the Terre Haute Auto Co., Inc., were admitted to the Jobbers' Section, and the following were admitted to the Manufacturers' Section: American Chain Co., Anderson Electric Specialties Co., Ashland Products Co., B. & W. Manufacturing Co., Black & Decker Manufacturing Co., Coe-Stapeley Manufacturing Co., Dole Valve Co., Edgar C. Guthard Co., K. D. Lamp Co., Monroe Equipment Co. and Sinclair Refining Co.

A. E. A. Overhauls the Old Vehicle.

Following a discussion as to policy with respect to prices the Jobbers' Section adopted a resolution calling upon the commissioner to gather statistics as to the members' cost of doing business.

At the meeting of the Manufacturers' Section there was a discussion of the labor question, and a committee was appointed to investigate the present situation.

President Phil H. Lyon, San Francisco, in his opening address, urged close co-operation between members of the association. Commissioner William M. Webster declared that the future good of the association depended upon the attraction to its ranks of membership of the right kind. He said he hoped that tire and battery manufacturers would soon see their way clear to absorb the war tax, instead of having the burden of it rest on the trade.

M. L. Heminway, general manager of the Motor and Accessory Manufacturers' Association, and Harry F. Atwood, an expert on membership corporations, such as the A. E. A., delivered addresses. Mr. Atwood bitterly assailed Bolshevism.

The attendance at the convention set a new record. Delegates from all parts of the United States and Canada attended. The action of the Board of Directors in appointing an advisory board to confer with the commissioner on important matters that arise from time to time was ratified. Selection of permanent counsel was left to the directors.

A feature was an address by W. J. Martland, secretary of of the California Dealers' Association, who vividly pointed out the great profit and advantages of co-operation between the manufacturer, the jobber and the dealer. Capt. W. K. Evans sounded warning against the activities of the I. W. W. and outlined briefly a method of prevention.

A resolution urging the encouragement of military training was adopted.

The show committee, it was announced, will meet soon to perfect preliminary arrangements and issue the necessary blanks for space subscriptions.

ALLIANCE BETWEEN AUTOMOBILE ASSOCIATIONS URGED.

Following the Spring convention of the Automotive Equipment Association, a movement was begun to bring about co-operation between the leading associations connected with the automobile industry. An alliance between the National Automobile Chamber of Commerce, the Motor and Accessory Manufacturers' Association, the National Automobile Dealers' Association and the A. E. A. was suggested. Other organizations, such as the Rubber Association of America, may be urged to consider the desirability of arranging some program that will bring about relationship.

LONG WEAR RUBBER CO. TAKES OVER QUALITY TIRE.

The Long Wear Rubber Co., Elyria, O., has taken over the entire production and sales of the Quality Tire and Rubber Co., Anderson, Ind., maker of "Quality" cord and fabric tires. This adds a daily capacity of 2000 casings and 2000 tubes to the Long Wear production, which is now several hundred per day in Elyria and will soon be increased through a substantial addition to the Elyria plant.

Both factories will be under the personal supervision of Frank W. O'Brien, general manager, with headquarters in Elyria.

Gasoline Producers Join with Auto Makers

The recent formation of the American Petroleum Institute in New York City furnished opportunity for the first definite attempt at cooperation between the manufacturers of automobiles and the producers of gasoline. Discussions between representatives of that organization and the National Automobile Chamber of Commerce, led to a meeting at the Manhattan Hotel, New York, at which there were present, representing the gasoline interests, T. A. O'Donnell, president of the American Petroleum Institute; R. L. Welch, secretary; C. C. Smith, assistant secretary; H. L. Doherty of the City Service Co., Dr. W. M. Burton, president of the Standard Oil Co. of Indiana; W. H. Isen, vice president of the Sinclair Oil Co.; W. C. Teagle, president of the Standard Oil Co. of New Jersey, and M. A. Robinson of the Riverside Oil Co.

Auto Salesmen Working on Commission Basis May Prove Too Costly to Dealer

Sales Manager, Favoring Straight Salary, Argues They Are Very Apt to Become Drifters and Failures—Unfair to Pay Young Salesman Same as Veteran Who is Big Asset to Firm

SALES managers disagree as to whether the automobile salesman should be paid a straight salary or be made to work on commission. The head of the sales department of a truck company in Boston favors the straight salary basis. He says:

"You hire a man to whom you are to pay commission. Now we shall assume that you take a young man, inexperienced, and you start him in with the same commission as you pay an older man—one who has been long in your employ. The young fellow starts out with a great deal of energy and hustles. He sees a good many persons and may be lucky enough to sell several machines. But the chances are that he will exhaust his resources in a short time. At the end of three or four or five months things slump for him. He doesn't make as much headway as he did before.

"He becomes desperate for business and knows he has got to get it if he is to earn any money. He goes out and hustles as hard as he can, but things no longer come his way. He gets discouraged and soon he decides to tie up with some other dealer.

New Men Cost Money.

"Going to a new place, he again starts off with his old pace. Having a little more experience than before, he is successful for a time, but another slump comes. Then he changes off to another dealer. He keeps going from one place to another. He manages to sell enough cars to eke out a living, but he cannot be called successful.

"Now this man draws just as much commission for each sale he makes as the successful salesman who sticks with one firm. He gets just as much as the good man who has worked for the firm for years, who has built up a good clientile and who is a good business worker and a good business getter.

"Every time a firm makes a change from one salesman to another it costs money. The new man must be broken in, he must become familiar with the routine, he must understand the machine and the policy of the company. He must know the 'dead ones,' the ones you would not do business with, and he must keep getting 'live' prospects.

Becomes Drifter.

"If he keeps hustling his expenses for demonstrations will be considerable. He quits after he has a slump and goes to another concern. He becomes a drifter, continually going from one firm to another. Working on commission he is doing more or less work by spurts. His success is only spasmodic. At the end of five years he has probably been with seven or eight concerns, each of which he has put under more or less expense. He hasn't been a steady producer and hasn't been what you could call a success.

"All the time he has been working he has been getting the same commission as the older, better grade man would get

—the same commission for a car of given value. Now that isn't fair to the man who is a plugger and who has developed his business, worked hard and is a dependable, a desirable asset, really one of the fundamentals of the business.

"Now if you will take the same man and put him on a salary and say to him, 'Here, we know that you are not going to be of very much value to us for a considerable period of time, and it is going to cost us money to educate you to do business our way. We will give you a salary and as your productiveness increases your earning capacity will keep pace with your productiveness.'

Firm Back of Him.

"We expect that man will have slumps, and we expect him to have times when he will sell more than others. We know, however, that he cannot produce a given number of sales every week, every month, every year. But we do expect that as his knowledge increases and his experience develops he is going to be a very much better and more satisfactory salesman, and each succeeding year his salary will increase, his worth to the concern will be greater and he will be paid proportionately.

"Instead of drifting from one concern to another, and being more or less of a failure, he has the knowledge that his concern is behind him, guiding him, advising him and is giving him every opportunity he would have in any other kind of business, either commercial or industrial. He realizes that his qualities are understood, that he has got a concern behind him that has faith in him and will benefit him so far as it is practical to do so by any reasonable investment that might increase his productiveness, such as sending him to automobile factories, giving him special facilities, increasing his expense allowance, etc. Remaining with this concern he would become substantially developed.

Faith in Concern.

"Now it wouldn't be fair to that man, after he has worked for that concern for several years, to put another man alongside of him, a man without experience, and pay this new man the same amount

Digitized by Google

of commission as he gets. It would be paying an inexperienced man the same as a highly experienced man.

"It has been the experience of automobile concerns that any concern that can continue the sale of one make of car is usually the most successful. The buyers of cars will be more likely to do business with people they know and can depend upon, rather than deal with people they have no knowledge of. One instance is a man I know who has bought three cars of the same make in three years and has not bought any one car from the same man because of changes.

"A man is more satisfied, is a better customer and he has more faith in a concern if he is able to do business with one man.

Gambler's Chance.

"The salesman who is drifting from one firm to another cannot develop a steady business. The proposition with the commission man is, from one angle, that the dealer is taking a gambler's chance with almost anyone who comes along. If the man doesn't produce the dealer will get some one else. If the man the dealer backs in that way, or takes on with that policy, fails to make a success with the firm, he goes around knocking the car and the concern, instead of blaming himself, and he hasn't any other reason to account for his failure than the general business conditions under which he worked.

"The salesman developed on a salary basis may perhaps make slower progress, but yet what he does develop he develops substantially, and when he builds up a business it is something from which he can get good returns for the time and the money which the concern has invested in him as a salesman.

"The average salesman, unless he produces, realizes that his stay with any concern is short. If he has that realization, it isn't a question of business development with him, but immediate results, no matter with what cost to the dealer.

Good Salesmanship.

"The dealer may feel that if the commission man fails he hasn't cost him anything, as he has not been paying him a salary. On the other hand, if he would consider the productiveness efficiency of the commission and the salaried man, he will conclude that the one who has developed substantially is the one he wants to associate with him in an organization, because eventually he will have a productiveness that must necessarily be far greater than would be practical or possible with the other man.

"When you consider that there are times when vehicles can be sold by a catalogue, salesmanship isn't wanted then, isn't necessary then, but the business as a rule depends on salesmanship —good salesmanship, good organization.

"The sales manager has got to have confidence in his men. He has got to know them; they have got to know him. The men that work together as a family are altogether different than those working at cross purposes. For instance, a man on commission wouldn't come to a sales manager and say, 'Mr. Jones, I can't sell this man; I got along so far with him, and I know he is interested; why can't Jack go out and see if he can close him, or let Bill see what he can do?'

Unity and Team Work.

"A man who would say this to the sales manager is one who is interested in making a sale for his firm, not simply for himself. With such men there is unity and team work. But a commission man realizes that he would get nothing for such information, and he would rather sacrifice a sale than let some one else get it, although by passing in the tip he would benefit the concern which is employing him.

"When it comes to selling trucks there are a great many propositions connected with truck salesmanship that must be dealt with by men who are experienced. A truck salesman is not selling only a truck, but he is selling transportation. He is not qualified to take a man's proposition, consider it and recommend what in his best judgment would be the best units for the man to buy and the best means of operating them, if he is being paid on a commission basis.

Reliance on Salesmen.

"Now the man who has been drifting from one concern to another doesn't care to develop business with a man he knows he cannot get for from six months to a year. He has got to do business right off the bat.

"The man buying trucks does not want to be misled. He wants advice and accepts it coming from a salesman as well based. That being so, he takes the suggestions of the commission man possibly as readily as he would those of the salaried man, simply because he has no means of differentiating between the two men and their policies, and he would expect the concern the salesman represented to stand back of him in whatever he might say. If the statements are misleading the salesman's concern might sacrifice business that would be large in the aggregate, as a man stung once doesn't propose to be stung again if he can avoid it.

"A good salesman should be paid good money. There is no doubt he is worth it. But the man who goes to a dealer as a cub salesman can't expect that he should be paid at the same rate or on the same basis as men who have had years' experience, and he can't expect to equal those men's salaries until he has had like experience.

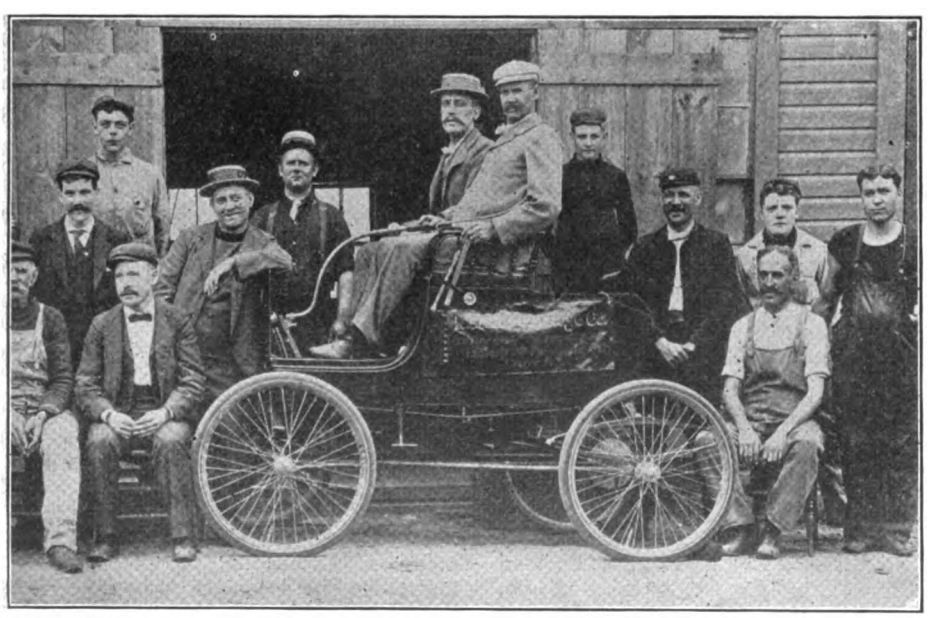
Productive Sales Force.

"If you have an organization made up of salaried and commission men, you have an organization that is in itself disrupting. If made up of salaried men, unified in their selling effort, and willing to share whatever they do for the benefit of the concern, you have got a strong productive sales force that you can stand on and that will increase the business every year.

"Another phase to be considered is that men connected with the sale of vehicles on time have more or less information relative to the reputation and responsibility of the prospect, and also when vehicles are taken in exchange, their information is supposed to be that on which the concern judges whether or not to make the deal. If their object is simply to make sales for the time being they will economize on the truth where it means a commission."

This sales manager suggested that dealers paying salesmen on the commission basis figure what their sales are actually costing them.

When the "Horseless Carriage" Was Popular



The Accompanying Illustration Is of a Photograph Taken 19 Years Ago, in Front of Rhode Island's First "Horseless Carriage" Factory in Providence and Operated by Hughes & Atkin. Now Known as the Wm. Hughes Co., the Oldest Exclusive Reo Car Dealers in New England, Having Taken on Reo Line Some 13 or 14 Years Ago. The "Horseless Carriage" as Shown Here Is One of the 18 Built by Mr. Hughes in 1899 and 1900, the First in New England, for Which He Made Nearly All Parts by Hand. As Late as 13 Months Ago One of These Cars Was Seen Operating on the Highways of Rhode Island.

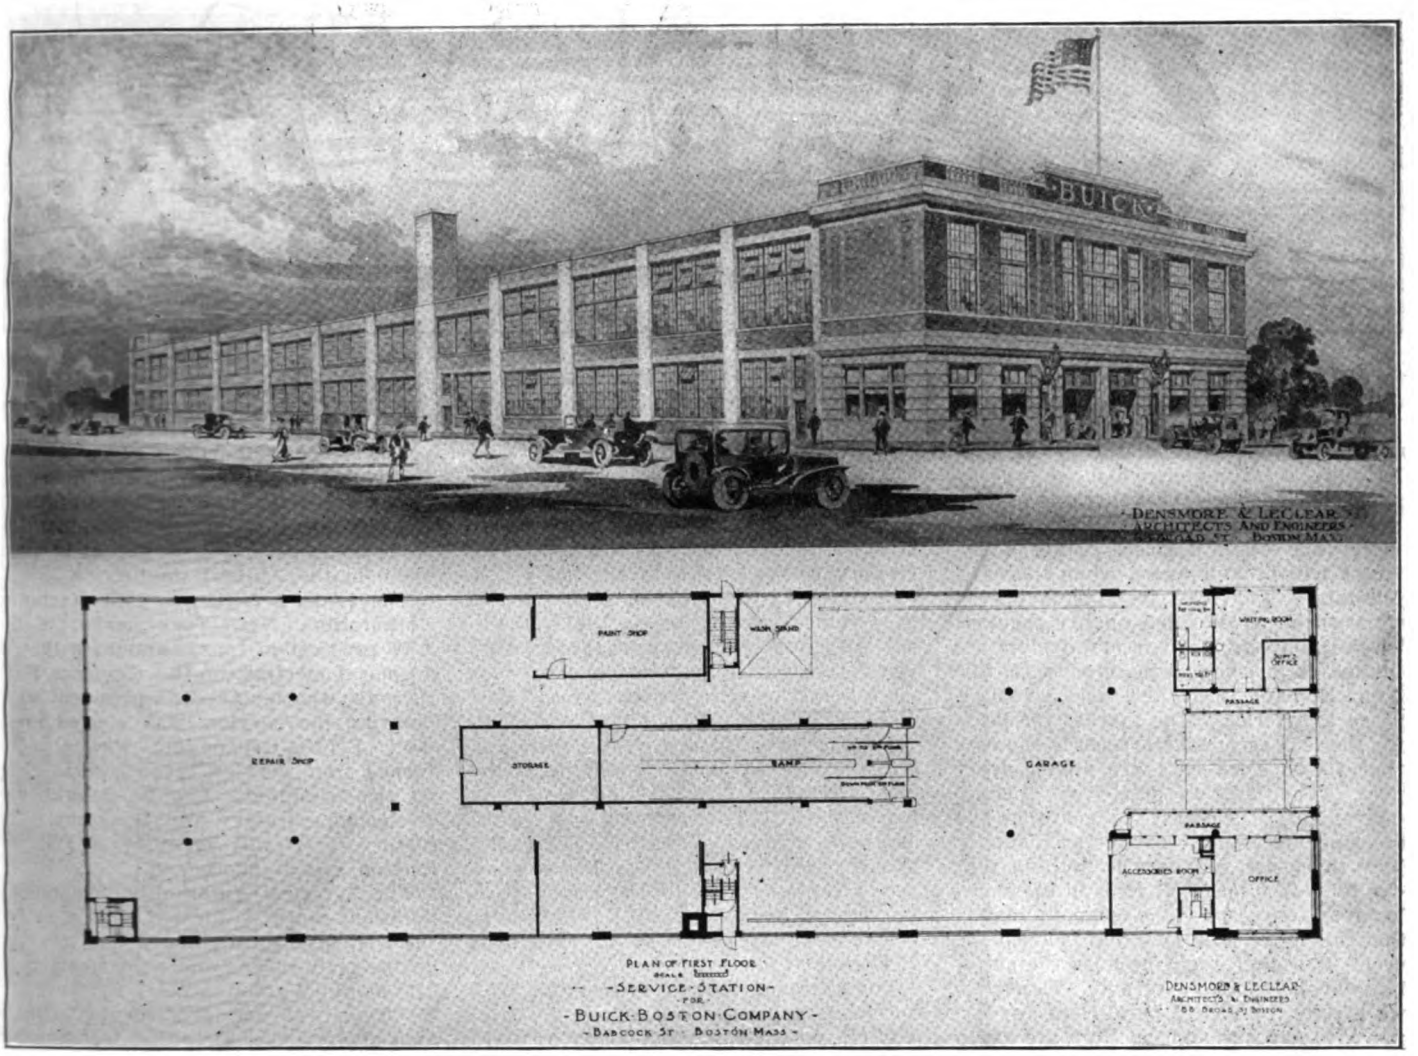
New Service Station for Boston Buick Company



Elevation and First Floor Plan of New Boston Buick Service Station.

Work has been started on a $200,000 service station for the Boston Buick Co., to be located on Babcock street, just off Commonwealth avenue, near Braves' Field. It is said that the structure will be the largest in the United States devoted exclusively to passenger service. The building will have 70,000 square feet of floor space, all of which will be used for service purposes, as the sales department and storage will remain in the present locations. It will have an 86-foot frontage on Babcock street and a depth of 300 feet on a proposed new street.

The Boston Buick Co. owns nine acres of land at the site of the new station and the plans for the building contemplate enlargement when that shall become necessary, without change in the original building.

There will be two stories. On the main floor will be a large testing department, machine shop and wash stand and paint shop. The main repair shop will be on the second floor. There will be no elevators, as the cars will ascend and descend by means of ramps, placed in the center of the building.

Directly to the right of the entrance driveway will be the manager's office and adjoining it a large waiting room for customers, with women's and men's dressing rooms opening from it. In the opposite corner of the front is to be the station office and an accessories room, with supplies of tires, oils, greases, Buick parts and specialties. All public rooms will have terrazo flooring, marble trim and plate glass windows.

Adjoining the receiving floor there is to be a large parking space within the building, where the cars are to be placed after they have been properly tagged with an indication of the trouble that is suspected. Then an export tester will be called and, if the work is merely an adjustment or other small task, the car will go to the testing room in the rear of the first floor, which alone will have 12,000 feet. Every car must be cleaned before being returned to the owner.

The main repair shop, with its stock room, will occupy the whole second floor, an area of 25,000 feet. All around are to be large windows. Beneath the windows are to be located the most modern type of benches and the machinery will be the best adapted for work on Buick cars. Running-in of motors, for instance, will be done on large steel racks, which will hold the entire automobile, doing away with pits and allowing the men to get beneath the cars without any difficulty. The burned gas and smoke will be taken away by a series of flexible tubes connected with blowers.

There will not be a single post or pillar in the repair shop, as steel trusses will carry the roof. The stock room will be in the front of the building, connected by dumb waiter and stairway, with the accessory room and offices below. The stock room will have a mezzanine floor. The superintendent's office in the repair shop will be on a raised platform in the center of the floor, and practically every bit of the floor space will be within his view. He will have telephonic communication direct with each department foreman.

An information clerk at the telephone switchboard will have chartered in front of him constantly the position of every car in the station. The basement will be occupied in part as a body department, and there all such heavy operations as frame, axle and body work will be done. There will be shower baths and other special facilities for the employees.

The building is to be erected by the Evatt Construction Co., Boston. Densmore & LeClear, Boston, are the architects.

The Masters Manufacturing Co., Jamaica Plain, Mass., has perfected a lock for Fords, an oxifier for conducting moist air from the radiator to the carburetor, a boatmeter which shows the speed of the boat through the water, a gasoline gauge for the dash, a tachometer and other devices. Other accessories will be announced when thorough laboratory and road tests have proved them to be of the high quality required by the company. Jobbers and dealers are invited to become acquainted with this New England firm and ask for literature and terms. The market for locks for Fords is tremendous, records showing that 30,000 Ford cars are stolen every year. The Masters steal-proof lock is convenient, it clamps the gears in the steering post, but it cannot accidentally lock the gears, as there is nothing that can fall. The lock bolt rises in the space between the gears. The company claims that this is the only lock that is accident-proof. It is theft-proof because the steering wheel cannot be turned. The front wheels can be locked parallel at any angle with the car and, as they are rigid, the car cannot be driven or towed. Another important feature is that the key cannot be removed until the car is locked. The lock itself is a Yale multiple-tumbler, cylinder lock, permitting countless variations in keys. This type does not permit making a master key. The Masters lock sells for $6.50. The Masters oxifier is neat, mechanically correct, and when installed forms an integral part of the power plant. It is not a collection of cumbersome parts. The company announces that dealers can assure their customers that with the oxifier they will get perfect combustion without any operating expense, as the oxifier has no moving part except the dash control. The company claims that it gives more miles per gallon of gas and prevents the formation of carbon, also making the motor more flexible and more powerful. and usually reduces repair bills. The Master oxifier is made in three models. Model A, for Fords, sells for $8.50; model B, for Buick, Dodge, Overland and other cars of this class, sells for $10.50, and model C, for high-priced cars, such as Packard, Pierce-Arrow, Winton, etc., sells for $15. Full directions for installing accompany each oxifier. Anyone can install it as easily as replacing a spark plug, the only mechanical work being required is the drilling of one small hole. The Masters boatmeter shows at a glance the speed through the water. Model B is for speeds up to 16 miles, and sells for $12. Model G, for speeds up to 24 miles, is priced at $15, and model C, for speeds up to 37 miles, at $20. The price includes everything necessary for installation. The Masters tachometer gives the number of revolutions per minute of any engine. It eliminates all guessing of engine speed. This indicator is built on the centrifugal principle. When used for marine work the centrifugal tachometer does not affect the compass, no matter how close it may be. This tachometer indicates the speed in either direction, and is made in four models, graduated to indicate 500, 1000, 2000 or 3000 revolutions per minute. The price complete with six feet of flexible shaft is $25. The Masters marine speed recorder is more extensively used on boats larger than the motor boat type. It is especially valuable for companies operating a fleet of boats.

The Fulton Motor Truck Co. has moved its sales and executive offices, including the office of the advertising manager, from the factory at Farmingdale to the Ford administration building, Broadway and 54th street, New York, where an entire floor has been taken. In addition to having the administrative offices there, the company will display the Fulton truck line.

The Dort Motor Car Co., Flint, will open a factory branch in the Ehret building, 58th street and Broadway, New York, with F. L. Sanford in charge.

The Kalamazoo Motors Corporation, Kalamazoo, Mich., has awarded contracts for additions that will double the capacity of its plant and permit of the assembling of from 125 to 150 trucks a month.

The Acme Motor Truck Co., Cadillac, Mich., has increased in list prices $100 each the model C 3½-ton and model E five-ton trucks, effective July 1. The 3½-ton truck of improved design is now in production. This truck is equipped with a pressed steel heat-treated frame instead of a channel section.

The Standard Oil Co. has let a contract for the construction of the largest gasoline distributing station in Ohio, on Spring Grove avenue, Cincinnati, at a cost of $400,000. A garage will be included in the station.

The American Bosch Magneto Corporation has closed the largest order for high-tension magnetos ever booked in the trade, the contract calling for 200,000 magnetos, aggregating in value $2,500,000.

The Ahlberg Bearing Co., Chicago, entered in the Indianapolis race the "Bender Special," which finished fifth. It was equipped entirely with Ahlberg remade bearings and new special bearings made in the Ahlberg factory.

The Adams-Williams Manufacturing Corporation, New York, maker of the A-W convertible tops, announces that at a special meeting of the directors F. C. Schwab, who resigned as president when entering the service, was elected president, S. H. Crittenden, who also returned from service recently, was elected vice president. Leo W. Schwab was re-elected secretary and treasurer. The factory space will be enlarged and production greatly increased.

The Syracuse Automobile Supply Corporation, recently formed, has absorbed the Syracuse Auto Supply Co., Inc., and has its main offices and sales quarters at 311 South Warren street, Syracuse, N. Y. Twenty-seven prominent business men of Syracuse, including leading manufacturers, bankers and others, joined with Lee W. Bennett in forming the new company. Steps have been taken to broaden the scope of the automobile accessory business in both the jobbing and retail departments. Salesmen will be put into the central New York territory and branches will be established. The new firm is incorporated for $60,000, with $50,000 in preferred seven per cent. cumulative and $10,000 in common stock. Mr. Bennett is president and general manager. C. C. Bradley, Jr., is vice president, and C. Hamilton Sanford is treasurer. The officers and H. W. Smith, H. G. Strong and S. Regar are directors. The company starts in business as of June 1.

The Orrell Manufacturing Co., 67 Hampden street, Boston, is prepared to make immediate delivery on all screw machine products for Ford, Dodge, Overland and Hudson cars; flexible shaft drives, swivel joints and fiber pinions. All of its products are sold under guarantee. Shipment is made on day of receipt of order.

The United Motors Service, Inc., Detroit, recently established a branch at Indianapolis to take care of the trade in that territory. This company gives service on starting, lighting and ignition system equipment manufactured by the Remy Electric Co. and the Dayton Laboratories Co., and also on Klaxon warning signals.

Digitized by Google

The Westinghouse Electric and Manufacturing Co. announces that L. B. Fijux has been appointed the Detroit district representative of its Automobile Equipment Department, to take the place of W. A. Haines, who died last February. Mr. Fijur is well known to automobile manufacturers, having been assistant manager of the Detroit office of the Willard Storage Battery for six years and manager of the Detroit office of the Bijur Motor Appliance Co. for five years. His office is in the Kresge building, Detroit, and he will be assisted by T. G. Haugh, formerly of East Pittsburgh.

The Bremer Manufacturing Co., Chicago, has permanently entered the Ford radiator replacement field during the last year and has developed a replacement radiator in both fin-tube (regular Ford type) and the honeycomb type. Sales Manager Ian E. Maltby reports that the war period left the company with no bad effects and that the Ford replacement department of the business will soon equal the company's special truck and tractor radiator business. The company has for many years been a heavy producer in the truck and tractor field.

The Lauraine Magneto Co., Inc., maker of the Lauraine magneto and the Lauraine generator, is building a factory at Ely avenue and 13th street, Long Island City, N. Y., on a plot of 100x150 feet, to take care of its increased production. The present factory is at Menominee, Mich. Equipment will be moved to Long Island City as soon as the new factory is completed, probably within a few weeks. The company is now producing the MS4 type magneto in aluminum with bronze inserts throughout.

The Borden Co., Warren O., manufacturer of Beaver Easy Working Die Stocks and Square-End Pipe Cutters, has bought an Oldsmobile roadster for its representative, George D. Clewell, who covers the New England states, Cleveland and Detroit. Mr. Clewell expects to work his entire territory with the car and will keep in closer contact with the small towns and also be in a position to render more thorough co-operation with jobbers. Charles A. Greene, Chicago representative for the company, has opened a down town office at room 501 549 West Washington boulevard, Chicago.

The Howard Auto Headlight Deflector Co., Detroit, announces that the Howard headlight deflector is the latest invention to eliminate the blinding glare from automobile headlights of approaching cars, with equal protection to drivers of road vehicles and pedestrians. The company is arranging for production of from 1,000,000 to 1,500,000 sets a year. Exclusive selling rights will be inaugurated for all territory and export trade. With quantity production the deflector will be marketed at an exceedingly low price

The Ahlberg Bearing Co., Chicago, has opened two new factory branches. One is at 511 Westminster street, Providence, R. I., in charge of Harold F. Woodworth, who, prior to his entry in the military service was in the Boston office of the company. The other office is in the City Bank building, 18th and Grand streets, Kansas City, Mo., in charge of Edward A. Hefferman, who has recently returned from the naval aviation service. Mr. Hefferman acted as mechanician for several well known race drivers.

L. B. FIJUX.
New Detroit Representative for Westinghouse.

The Briscoe Devices Co. announces that it is the successor to the Jackson Carburetor Co. The carburetor heretofore known as the "Dave Buick Carburetor" will be continued with important manufacturing refinements, and will be known as the "Scoe Carburetor." The company is under the presidency and active management of Frank Briscoe, who has been known to the motor car trade since its beginning in connection with several well known enterprises, both in motor car and accessory fields. A. W. McCalmont, formerly with the Jackson Automobile Co. and the Briscoe Motor Co., and recently returned from overseas, where he was an engineering officer in the air service, will be sales engineer. The new plant now under construction will embody all known facilities for the best possible product and service. Carburetors for application to Ford, Briscoe, Maxwell and Dort cars are now available for delivery and other models will be added as fast as possible.

The New Era Spring and Specialty Co., through Smalley Daniels, announces that in spite of the two fires at its plant within the last month production has not been interfered with materially. In the first fire one of the workman was so badly burned that he afterward died; in the second a considerable amount of damage was done in the spring department. Such a large demand is being made for "Better" springs, bumpers and tire carriers that the factory production capacity is overtaxed and the workmen have scarcely room to work. In view of this congested condition at the plant it is considered remarkable that no more persons were hurt.

The Jordan Motor Car Co. announces that work has been started on several new plant units at its factory in Cleveland, O. The additions will include a new assembly plant, an office building, a power plant, a japanning plant and a motor test building. The Jordan expansion is in line with the general optimistic attitude of the motor car industry.

The Service Motor Truck Co., Wabash, Ind., announces that the first deliveries of repair parts for Service trucks were made when two airplanes operated by the company made a flight to Akron, O. Repair parts were ordered by wire by the Firestone Tire and Rubber Co. for the Service trucks it operates. The wire was 12 minutes in transit, and 18 minutes after it was received by the Service company the first plane was on its way, and the part ordered was delivered in Akron two hours and 45 minutes later. The distance covered was approximately 250 miles. Stops were made at Defiance, O., and Chicago Junction, O.

Lane Brothers Co., Poughkeepsie, N. Y., is distributing to its dealers a selling help on H-C jacks that seems to be effective. Most persons have an innate desire to handle things and wiggle whatever is movable and this device satisfies that desire, incidentally acquainting the person with the handle control, which obviates the necessity of getting under the car. The self-demonstration is convincing and has resulted in many extra sales. The device is furnished gratis to all dealers handling H-C jacks.

The Armleder Motor Sales Co., 3223 Lorain avenue, Cleveland, O., has been incorporated by J. F. Gleichauf, president; John W. Reitz, vice president and manager, and Justin Gleichauf, secretary and treasurer. The company will distribute Armleder motor trucks in Cleveland and vicinity. T. E. Moore, factory representative of the O. Armleder Co., Cincinnati, maker of Armleder trucks, closed the deal, securing quarters for the sales company, selling it four trucks for immediate delivery for samples and also repair parts amounting to $2500, and assisted in closing order for two other trucks for quick delivery, giving the company a good start.

ORGANIZE IN GEORGIA.

Automobile dealers of Georgia have organized the Georgia State Automobile Dealers' Association, with a large membership. Harry G. Moock, business manager of the National Automobile Dealers' Association, was the principal speaker at the organization meeting. "There has never been a time in the history of the automobile dealer business in the United States," he said, "that so many serious problems have confronted the industry. Not even in the days when the Federal War Trade Board threatened the extermination of the business by an intended classification as a 'non-essential' has the situation been so acute. There certainly has never been a time in the history of the Georgia dealers when the condition was more menacing and the immediate future holds but one promise of betterment. That promise is unity of thought, purpose and action." He referred especially to the action of revenue agents in confiscating cars stolen by automobile thieves and used for the illicit transportation of liquor.

N. A. D. A. COMMERCIAL BRANCH.

A department especially devoted to the interests of commercial vehicles has been opened by the National Automobile Dealers' Association and will handle problems that arise solely in the truck sales trade. H. N. Cartinhour of the Cartinhour-Bowman Co., Indianapolis, distributor of Federal trucks, is commissioner of the Commercial Vehicle Division. The object of the division will be to help devise ways for the dealers to sell trucks and trailers.

BOSTON DEALERS.

The Boston Automobile Dealers' Association recently took 1700 little boys and girls in automobiles on an outing to Nantasket Beach. There were 370 cars and trucks, the dealers furnishing most of them. The outing was under the direction of Chester I. Campbell, secretary of the association. Dinner and many other features were provided for the children. Every summer the Hub dealers take the little ones out for a day's outing.

WARNS DEALERS NOT TO MISREPRESENT WAR TAX.

That automobile dealers must for their own protection know what their liability for war tax is, first in order to properly account to the government, and second to avoid criminal prosecution for improper accounting and for misrepresentation of the war tax, is brought out in a letter to the National Automobile Dealers' Association from George H. Moore, St. Louis, collector of the First District of Missouri.

He sends a letter complaining against the misrepresentation of the tax and a notice that he will proceed against dealers in his district who are misrepresenting the tax to their customers. He also encloses an Associated Press dispatch telling of the arrest of a Maryland confectioner for misrepresenting the tax. The Revenue Department proposes to make a test case of the Maryland arrest.

Dealers are warned by the N. A. D. A. that the action that Collector Moore announces he will take also will be followed by collectors throughout the United States.

INDIANA SHOW.

The Indianapolis automobile and accessory show will be held at the Indiana State Fair, Sept. 1-6. It will be conducted by the Indianapolis Automobile Trade Association, 338 North Delaware street, with John B. Orman manager. The new automobile exhibition building is now in course of construction and will be completed about the middle of August. It is expected to prove the largest and finest automobile show building of any fair association in the United States.

CINCINNATI SHOW.

The ninth annual automobile show of the Cincinnati Automobile Dealers' Association will be held in the Music Hall, Sept. 13-20, inclusive, with H. K. Shockley manager.

MESSAGE TO DEALERS.

The National Automobile Dealers' Association sends this message to dealers: "Now is the time to work for the repeal of the five per cent. tax on automobiles, accessories, tires and parts and for the elimination of the three per cent. tax on trucks.

"The President has paved the way. In his message to the 66th Congress, which convened May 19, he advocated the repeal of the excise levies. Congress itself is in a favorable attitude.

"What are you as dealers doing to help bring this about? Are you using your proper influence and are you looking to the tire men, accessory men, parts men and the like for assistance?

"Here is the plan of action you must pursue if these taxes are to be repealed:

Plan of Action.

"You must get your local associations together. You must send resolutions, letters and telegrams to Washington to your senators and to your representatives, asking for the repeal of these taxes.

"You must send these resolutions as an association.

"Each member of the association should send an individual protest to his senator and his congressman.

"Each association should call upon every line of business allied with the motor car industry to send a similar protest.

"Each man in the association should ask every other business man he knows to make a similar protest. Interest the car owners. Have them send protests, too.

"Flood Washington with telegrams and letters, resolutions and petitions.

"If you are not interested in this matter, who is?

"If you are not going to look after your own interests in your own business, who is?

"The prosperity of the motor car industry depends upon prompt action. Get busy. Get busy now."

The New York Automobile Dealers' Association held its first reception in the new club rooms, at 1845 Broadway. Music and dancing, with a buffet luncheon, were the features.

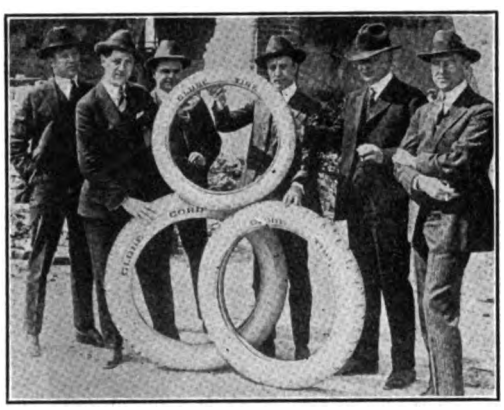
TIRE INDUSTRY AND TRADE

The Globe Rubber Tire Manufacturing Co. has appointed Hawley, King & Co., California distributor for Oakland automobiles, as distributor for Globe tires in California, Arizona and Nevada. Hawley, King & Co. has been established in Los Angeles for 32 years and is one of the oldest motor car dealers in the city. It is the first exclusive automobile distributor in southern California to enter the equipment field. Reeve Gartzmann, general manager, heads the tire department, with H. A. Anderson as sales manager. Dealers will be installed in every city and town in the territory. The Globe company has been producing pneumatic tires for eight years and is now turning out 1500 daily. J. B. Linard, said to be the youngest man in the country in a similar capacity, is president. Dr. H. W. Kugler, formerly chief chemist for the Firestone company, is general factory manager. H. L. McGregory, formerly efficiency expert for Firestone, is assistant factory manager, and R. E. Glass is auditor. One of the distinctions claimed for the Globe tire is that it is single cured.

The Tropical Tire and Rubber Co., 51 Leonard street, New York, has developed a splendid business in Tropical tires. The company announces that while Tropical



Globe Tire Sales Organization of Hawley, King & Co., Distributor for California, Nevada and Arizona. At Extreme Right Is Reeve Gartsmann, General Manager; Next to Him Is A. T. Smith, Globe Factory Representative in the West.

tires are guaranteed for 5000 miles they go far in excess of this guarantee. The company guarantees the best of materials and expert workmanship. "The Last Word in Quality Tires" is the firm's trade slogan. Tropical tires range in prices from $14.45 to $92.55 for the plain tread, $17.45 to $100.80 for the non-skid tread. The red tubes are priced from $3.55 to $11.60. The directors of the Tropical Rubber Co. on June 4 declared out of the surplus net earnings a semi-annual dividend of four per cent. on the outstanding capital stock, payable July 1 to stockholders of record at the close of business June 10.

The Pressman Tire and Rubber Co., a $3,000,000 concern, has purchased property at 250-252 North Broad stret, Philadelphia, a deal involving close to $500,000, for its headquarters. The property is at present under lease to the Chalmers and Maxwell Motor companies, the present lease having until Dec. 31 to run. The tire company, however, will take possession prior to that time, as the two automobile companies have announced their intention of opening new quarters. The Pressman company announces that it is one of the largest exclusive jobbers and distributors of tires and tubes in the world, controlling a chain of stores in all leading cities throughout the United States. It states that arrangements have been made for the establishment of distributing branches in all the principal countries of South America. Until the company can take possession of the new quarters the business will be conducted from the present quarters at 300-302 North Broad street.

The Braender Rubber and Tire Co., Rutherford, N. J., in announcing revision of prices, states: "During the revision of prices we have taken into consideration the position of the consumer when purchasing a first class piece of merchandise, the dealer who handles same and the jobber who in turn sells to the dealer. To both the jobber and the dealer we have arranged a far more satisfactory proposition than heretofore and to the consumer we are offering a high grade piece of merchandise the same as in the past at a slightly higher list with a longer mileage guarantee or basis of adjustment. We feel that a higher mileage adjustment basis will be more attractive when purchasing Braender tires."

The Savold Tire Co. originally contemplated operating its own plants in New York City and selling county rights in other parts of the state, but a plan has been devised whereby the company will operate its own tire reconstruction plants in principal centers throughout the state, thus giving the company a much larger earning power than if it sold the territory for cash plus a royalty.

The Polson Rubber Co., Cleveland, manufacturer of tire accessories, is preparing to build a large modern factory to take care of its increasing business.

The Fisk Rubber Co.'s offering of $15,000,000 seven per cent. first preferred stock has been sold through the Estabrook & Co. syndicate.

The B. F. Goodrich Rubber Co. has notified the New York Stock Exchange of the proposed increase in capital stock from $84,600,000 to $109,600,000 by the issuance of $25,000,000 preferred stock.

The B. F. Goodrich Rubber Co. announces that it has raised the mileage guarantee on its fabric tires to 6000 miles and to 8000 miles on its Silvertown cord tires.

The Fisk Rubber Co. newspaper, the Fisk Bulletin, pays a fine tribute to William T. Whitlock, who has left the company's plant at Chicopee Falls, Mass., after 15 years' service.

TRINIDAD CONDITIONS.

Consul Henry D. Baker, Trinidad, British West Indies, reports: "Occasionally American manufacturers show inappreciation of conditions in connection with this market, which, not only interferes with their securing orders, but also militates against American business prestige, generally speaking. Some manufacturers and commercial houses in the United States seem to think that because Trinidad, being just off the coast of Venezuela, and appearing on maps of South America, is a Spanish speaking country, not realizing that it is a British colony, and only a small proportion of the people speak Spanish, English being the language of commerce. Some American firms, however, persist in writing letters in Spanish to merchants here, even though, in some instances, they have been requested to write in English. American business firms should not expect firms here to make too broad guarantees as to the business they can do before consenting to give them agencies. Some times the local firm deems it necessary to demonstrate a particular article, and to introduce it as rapidly as possible, but, nevertheless, does not wish to be tied up with expensive articles, which it might not be able to sell readily."

TRACTORS.

Commercial Attache Alfred P. Dennis, Rome, reports that Italian demand for tractors in the immediate future will be slight, The country was heavily stocked during the war by government purchases. There are 6000 American tractors in Italy, and the Italian government has outstanding contracts with Italian firms for the manufacture of 1500 additional.

A large Canadian firm recently announced that the demand in Canada for farm machinery would be four times as great as last year, when the total number of farm tractors delivered in Canada by his firm was 64.

Jamaica should prove a good field for tractors for agricultural purposes, although the market would be a limited one. The area of land in Jamaica adapted for tractor cultivation is limited to about 500 square miles. The wheel tractor is the type best adapted to this country on account of the ground being thrown in high ridges between the cane rows.

W. D. Blood is president of W. D. Blood & Co., Inc., 44 Whitehall street, New York, one of the newest organizations to take its place among the representative export sales companies. The company is incorporated under the laws of New Jersey and has already made much progress toward establishing a large number of important connections. The principal lines the company will represent in the foreign field will be those of manufacturers of automotive and hardware products. The clients now include the Metz Corporation, Waltham, Mass.; the Corbin Screw Corporation, New Britain, Conn.; the Hawthorne Co., Bridgeport, Conn.; the Witherbee Igniter Co., Springfield, Mass.; the Witherbee Storage Battery Co., Inc., New York, and the L. F. Benton Co., Vergennes, Vt. John C. Gallagher is secretary and treasurer.

W. D. Blood, President of W. D. Blood & Co., Export Representative.

AT LYONS FAIR.

E. Leidich, foreign sales manager of the Columbia Motors Co., manufacturer of the Columbia Six, has received a letter from the company's Paris distributor, giving an enthusiastic account of the reception which was given the Columbia Six at the Lyons Fair. Exhibitors were allowed to take their show cars out of the exhibit and demonstrate them. Old timers will remember that at the first shows held at Madison Square Garden, New York, the exhibition cars were being continually taken out for street demonstration. The Paris distributor says he used two drivers and demonstrated the Columbia 18 hours a day during the fair. He not only made many sales, but placed dealers in the departments of Rhone, Alpes Maritimes and Gironde.

Foreign Trade Opportunities

(Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from District and Co-Operative Offices.)

29,524—An agency is desired by a man from Australia who is now in this country for the sale of metals, hardware, motor accessories, steel shafting, steel pulleys and pressed steel grease cups. Reference.

29,517—A firm in the Philippines having a branch office in this country desires to represent manufacturers for the sale of electrical appliances, small machinery, automobiles, tires, shoes and paper. References.

29,522—An agency is desired by a firm in Mexico for the sale of a high priced automobile and accessories. The firm has show rooms and facilities for demonstration.

29,504—The agency for high grade and medium priced automobiles, motor trucks and accessories is desired by an importing firm in Mexico.

29,495—The representation of American manufacturers of automobile or horse drawn fire engine is desired by a man in Egypt. He wishes to receive an engine on consignment for demonstration purposes under necessary guarantee. No references.

29,448—Tractors and other agricultural machines are required by a company in France. Terms, cash. Correspondence should be in French. Reference.

29,453—Hydraulic machinery, electrolytic copper bars, resistance wire, covered wire and cables, motors and general electrical material and machinery for developing electric power are required by a firm in Spain. Quotations should be given f. o. b. New York. Terms, payment in New York. Correspondence may be in English. References.

Digitized by Google

29,449—The agency for American publishers' supply houses and automobiles is desired by representative in Spain, who has had extensive experience in the publishing business. Correspondence should be in Spanish. References.

29,452—Electrical supplies of all kinds, transmission belting, axles, machine tools, electrical cables, etc., are desired by a firm in Norway. Quotations should be given f. o. b. American port of shipment. Terms, cash against documents. Reference.

29,454—An official of the government of Siberia wishes to purchase for the ministry of supplies, machinery, electrical supplies and implements, measuring devices, tools and accessories, machinery supplies, etc., a complete list of which together with further information may be had on application to the bureau or its district offices.

29,473—A Norwegian ship owner, who is at present in this country and will shortly return to Norway, desires to get in touch with manufacturers of automobiles, motorcycles, accessories, rubber goods, with a view to representing their interests in Scandinavian countries. References.

29,481—A man from Australia who is in this country desires to secure an agency from manufacturers for the sale in Australia and New Zealand of automobile accessories or hardware specialties. Reference.

29,475—The purchase and agency for the sale of automobiles, motorcycles, motors, tractors, trucks, tires and motor boats and supplies are desired by a company in Norway. Quotations should be given f. o. b. New York. Terms, cash against documents at destination. References.

29,443—Agencies are desired by a firm in Brazil for the sale of rubber tires, rubber goods, machine tools, plows and agricultural machinery. Correspondence may be in English. Reference.

29,440—An agency for the sale of trucks of a capacity of five to seven tons of heavy construction, adapted to the roads of Southern Italy, and high grade pleasure cars is desired by a man in that country. Correspondence should be in Italian or French.

29,403—The purchase and agency for the sale of automobiles and supplies, iron and steel, metals, heavy hardware, machinery, electrical supplies, light, heat and power service, rubber goods, insulating materials and steamboat supplies and kindred lines are desired by a firm in Norway. Quotations should be given f. o. b. New York. Terms, cash against documents at destination. References.

29,422—The agency for the sale of agricultural implements and low priced automobiles is desired by a firm in Italy. References.

29,423—The representation of firms dealing in automobiles and motorcycles is desired by a man in Uruguay. References.

29,429—Agencies are desired by the head of a firm in New Zealand who is now in this country for the sale of motor cars, automobile accessories, including tires; electric trucks, one-half to seven tons; gasoline trucks, electrical machinery and supplies, including motors, generators, batteries, wires and cables, agricultural tractors, machine tools, vulcanized fiber products, artificial leather, graphite products, steel products, building materials, fans and blowers and pipes. Reference.

29,435—A man in Switzerland wishes to purchase automobiles, bicycles and pneumatic tires. Correspondence may be in English. Reference.

29,436—The purchase of old trucks and automobiles is desired by a merchant in Italy. He also desires to secure an agency from manufacturers for the sale of leather substitutes, internal combustion motors for small boats, material and supplies for electric tram lines and railways, wood and woodworking machinery and all articles allied with the above. Terms, cash. Reference.

29,456—A firm in Italy desires to secure agencies for the sale of automobiles, chassis, wheels, tires, etc., accessories and supplies. References.

29,556—A trading firm in Esthonia desires to receive quotations on agricultural machinery and implements, electrical supplies, automobiles, steel and iron and oils. Catalogues and samples are requested. Reference.

29,567—The purchase and agency are desired by a man in Italy of dynamos, motors, transformers and all electrical equipment and accessories. Payment, cash. Correspondence may be in English. Reference.

29,577—An agency is desired by a man in Italy for the sale of metallurgical products, machinery, locomotives, motorcycles, tires and steel. Correspondence should be in Italian. Credit to be established in this country.

American Cars in British Colonies

A FRANK comment on the different manufacturing problems or methods confronting and utilized by the British and American motor car makers, which may be interesting to those engaged in developing the export field for American cars, appears in a recent issue of The Field, apropos of a letter which it publishes from a South African motorist. The letter is:

"Very large numbers of American cars are being sold, and will, I think, continue to be sold, in this country. We do not think that the British manufacturer has yet realized what he is up against. Americans have studied this market carefully; they have been sending out representatives for many years to find out exactly what is required, and are building their cars accordingly. It is not only a question of price. As far as one can understand, no manufacturer in Great Britain has yet realized that the car for this country is a 'high-power, light-weight car,' selling at a reasonable figure. Colonials do not want a car to last indefinitely. They are quite prepared to use it for a couple of years at the most, and then sell it for what they can get, and buy something that is newer and more up to date.

Want Reliable Cars.

"We quite believe that of the American cars sold in this country during the past six or seven years three parts of them are now on the scrap heap, while British cars sold during the same period are still on the road; this, however, does not appeal to the average colonial, whether of British birth or otherwise. With our rough and hilly roads the motorist wants a car that he knows will get him 'there,' and which does not require the changing of gears perhaps 50 times in a space of as many miles. I have seen a good deal of correspondence which has taken place between agents here and the British manufacturer, but have seen nothing in the latter people's letters to show that they really realize what is wanted in this country."

In defense of the British policy, the motor editor of The Field says that the South African motorist does not realize the dilemma of the British manufacturer. He cites two reasons for the different policies in the two countries. One that the British motorist desired a more substantial and comfortable vehicle, and second, that to enter into direct competition with the American car by producing a large-bolted, moderate-powered, light-weight design would be to submit to the handicap of higher productive costs.

U. S. Car More Suitable.

"It so happens," he explains, "that for the needs of many colonial motorists the American car is more suitable, as this correspondent points out, but it is not true that special models for South Africa are manufactured anywhere. The British manufacturer, in the past at least, had either to sell his standard chassis in the colonies or bring out a special design more on American lines. He elected to sell his standard product, for the ample reason that it would not pay him to produce a special light chassis for the colonial market because, being demanded in smaller quantities than even his standard model, it would carry a somewhat exaggerated price—in comparison with the American—and the small tariff preference given the British car would not serve to bring prices level.

"The problems of the South African and other markets are well known to the British industry, but unfortunately it is not in a position to do profitably what the colonial motorist desires, and, like many of us at home, the latter has just to put it to himself whether he is justified in running an American car in preference to a British one on the data given in the letter we quote. He decides that according to his lights, and if he elects to use an American well and good, but he ought not to saddle the responsibility for his choice on the British manufacturer."

Personal News of the Industry in Brief

S. R. Swiss is now advertising manager of the Republic Motor Truck Co., Alma, Mich. For 11 years he directed

S. R. Swiss, Advertising Manager, Republic Motor Truck Co., Alma, Mich.

the sales and advertising of Red Raven Splits.

Benjamin Briscoe and Rodolpe Stahl of Briscoe & Stahl have returned to New York with added honors conferred upon them at the Great Lakes Naval Training Station. Lieutenant-Commander Briscoe, ordered to report at the station, was again sworn into the service and then promoted to the rank of commander as a reward for his service in France in the naval aviation field. He was then again discharged from the service. Mr. Stahl, who was a lieutenant, junior grade, in the naval aviation service, was promoted to the rank of lieutenant, senior grade. Lieutenant Stahl designed a motor which created wide attention in Europe.

John M. Robbins is vice president of the Fulton Truck Co. of Nebraska, formed recently to distribute the Fulton truck in Nebraska. For 15 years he has devoted his entire attention to the passenger car.

Ralph F. Schneider is head of the Ralph F. Schneider Auto Sales Co., which has acquired the distribution for Detroit and surrounding territory for the Bethlehem trucks.

A. B. Wagner, manager of the Nordyke & Marmon Indianapolis branch, was the proud possessor of one of the most unique window displays in Indianapolis during the week of the 500-mile race. He had obtained from the Nordyke & Marmon factory the original Wasp that won the first 500-mile race in 1911.

Walter E. Flanders has retired from the Maxwell Motor Co., Inc. W. Ledyard Mitchell, president of the company, succeeds him in the management of the company's affairs.

Lieut. F. W. Ramey, who was observation officer in the U. S. Artillery in France, has been placed in charge of the sales at the Cotta Transmission Co., Rockford, Ill.

J. H. Whiting, who brought the Buick Motor Car Co. to Flint, Mich., 16 years ago, died recently in New York.

M. V. Smith is now general superintendent of the Supreme Motors Corporation, Warren, O.

Edward A. Heffernan has assumed charge of the recently opened office of the Ahlberg Bearing Co. in Kansas City, Mo.

Frank R. Boyd has resigned as assistant treasurer of the Oakland Motor Car Co., Pontiac, to devote his time to personal affairs.

Julian S. Friede, who served with the Royal Flying Corps, is now on the engineering staff of the Haynes Automobile Co., Kokomo, Ind.

J. D. Cotton is president of a new corporation that will take care of the F. W. D. truck production in Canada as a branch of the Four Wheel Drive Auto Co., Clintonville, Wis.

J. B. Clarkson, a New Zealand operator in motor cars, accessories and motor apparatus, is on his annual visit to this country. He visited England, which country, he says, will not have its automobile organization on full production for at least two years.

H. M. Gagne has opened a wholesale branch in Seattle to distribute Kelly-Springfield tires in Washington, Oregon and Idaho.

Ralph O'Reilly, for two years with the sales department of the Sparks-Withington, Jackson, Mich., is now sales manager.

W. F. Rockwell is president and manager of the Wisconsin Parts Co., Oshkosh, Wis., a new corporation, which has purchased the assets of the E. B. Hayes

W. F. Rockwell, President and Manager, Wisconsin Parts Co., Oshkosh, Wis.

Machinery Corporation, Oshkosh. The corporation will manufacture Wisconsin axles on a much more extensive scale.

Edward McNamara is now district sales manager of New York state and the New England states for the Atter-

A. H. Doolittle, Now General Manager of the Claudel Carburetor in America, with Office in New York City.

the Claudel carburetor in America, with offices in the Aeolian building, New York.

Walter H. Shimpf, efficiency engineer, has become associated with the Paige-Detroit Motor Car Co. Mr. Shimpf will make Philadelphia his headquarters.

George A. Breeze, well known consulting engineer of Detroit, who has been with the Holley Carburetor Co. for some time, has tendered his resignation.

Capt. William Sparks is back as vice president of the Sparks-Withington Co., Jackson, Mich.

Dr. Toshikata Yamase will represent Transcontinental Merchants, Inc., so as to bring greater co-operation between prospective buyers of American goods in Japan and China and manufacturing exporters in America. He will open offices at Tokio, Oska, Kobi, Shanghai and Tien-Tsien.

C. Thomas has succeeded W. C. Christman as manager of the Miami branch of the Indiana Truck Co. For several years he was identified with the General Motors lines.

George B. Chapman has become Boston branch manager for the Garford Motor Truck Co. He was for the past three years with the Federal Motor Truck Co.

K. A. McDonald is now manager of the Conroy Motor Co., Worcester, Mass. He was formerly associated with the Ford Motor Co., Cambridge.

Robert B. Babbitt is now with the Newsum Auto Tire Vulcanizing Co., distributor for the United States Tire Co., as manager of the city sales department.

A. B. Manley has become supervisor of sales for the Monvis Auto Sales Co., Cleveland, O.

Ty Cobb will retire from baseball at the end of this season to enter the automobile business.

Walter A. Scott has formed the Scott Motor Truck Co., Brooklyn, N. Y., to distribute Rainier trucks in Brooklyn and Long Island. He was formerly secretary and sales manager for the Stewart New York City organization and prior to that time held a similar position with the Republic Motor Truck Co. for five years.

Stanley P. McMinn and Harold F. Blanchard have formed the McMinn Tire Co., Inc., at Bridgeport, Conn., to represent the Gates Half-Sole Tire. Mr. McMinn is president and Mr. Blanchard vice president.

M. B. Hoagland, for 17 years with the American Steel and Wire Co., has been appointed director of sales of the Signal Motor Truck Co., Detroit.

John M. Robbins, who was vice president and manager of the Fulton Truck Co. of Nebraska, has become manager of the Prince Auto Co.

W. F. Wilcox, Jr., is with the Southern States Equipment Co., Birmingham, Ala., in charge of the Stewart truck department.

W. D. Thompson has joined the sales force of the O. Armleder Co. as western representative, with headquarters in Denver. Jack Parker is also associated with the Armleder Co. C. B. Harvey will have charge of the middle west with headquarters in Chicago. Charles F. Ward will cover Massachusetts and Connecticut for the company.

C. E. MacTavish has been transferred to the head office at Oshawa, Ont., by the Chevrolet Motor Co. He was formerly manager of the branch at Regina, Sask.

E. H. Beacham, assistant to A. C. Barley, president of the Barley Motor Car Co., has resigned to go to the Waldon W. Shaw Co., operating the Shaw Taxicab Co. and the Yellow Taxicab Co. He has been general sales manager during the past six months.

Capt. Wakeman Hackett, recently discharged from the service, after returning from France, has become a factory rep-

Capt. Wakeman Hackett, District Sales Manager, Oshkosh Motor Truck Co.

resentative covering the middle west section for the Oshkosh Truck Manufacturing Co., Oshkosh, Wis.

George V. Lyons is domestic sales manager of the John Simmons Co., 110 Center street, New York, which has formed

George V. Lyons, Domestic Sales Manager, the John Simmons Co., Jumbo Truck Distributor.

an alliance with the Nelson Motor Truck Co., Sagamore, Mich., whereby the Simmons concern becomes the sales agent for Jumbo trucks in New England, New York, Northern New Jersey and Eastern Pennsylvania and for all export business.

O. Brunauer has resigned as director of sales and engineering for the United States Ball Bearing Co., Chicago. He was formerly with the Detroit office of the Gurney Ball Bearing Co.

Albert E. Perry, for seven years with the Columbus, O., Packard organization, has resigned as general distribution manager of the Packard-Columbus Co. He has bought the Perry Auto Top Co., which he will incorporate, giving its employees an opportunity to become stockholders. No change will be made in the name, but the scope of activities will be increased.

Henry T. Graham presided at the semi-annual meeting of the Delaware Automobile Association. Ernest S. Taite, Frank W. Pierson and Dr. Joseph W. Bastian were appointed a committee to plan for a membership campaign, which will continue until Aug. 1. The association has 700 members, and efforts will be made by personal solicitation to increase the membership to 2000. As automobile registrations in the state number 14,000, the committee is confident that the campaign will be successful. Mr. Taite, who recently returned from an automobile trip to Washington, D. C., described the Capital Trail signs in Maryland, and the association decided to ascertain the cost of such signs for the Lincoln Highway in Delaware. Dr. William Springer said that Wilmington will have but one good entrance, the Boulevard, when the work of improving the New Castle county roads is finished. The association condemned the use of its emblem on the automobiles of non-members.

MAMMOTH PARKING GARAGE FOR BOSTON

Structure, Having Ramps, Will Cost $1,250,000 And Will Be Finest in Country—Finely Located in Theater and Hotel District

WHAT is expected to prove the finest parking garage in the country will be erected by the Eliot Street Garage Co. on Eliot street, Boston. It will be a five-story fireproof garage, which with the land will represent an investment of $1,250,000. The building will cover more than five-eighths of an acre of ground and will have more than four acres of floor space. Six hundred cars will be accommodated at one time.

A feature will be a double spiral ramp, one within the other, by which cars will be able to ascend or descend on their own power. Clinton J. Warren is the architect and the George W. Harvey Co. the contractor.

Located in the heart of the theatrical and hotel district and within a few moment's walk of the shopping and financial centers, the garage will serve the various interests, which in rotation require parking space during the day for business men, in the afternoon for shoppers and in the evening for theater goers.

As an added convenience to theater goers it is intended by means of a tunnel to connect the garage with the passageway running through the Little building, which joins the Majestic and Plymouth theaters. In this way theater goers will be able to check their cars and proceed to the theater without going outdoors.

Advantages of Ramp.

The use of the ramp instead of elevators will have a two-fold advantage. It will enable any number of cars to stream in or out of the building on their own power, thus avoiding delays and congestion. During certain periods of the day, especially before and after theater, the movement of several hundred cars in or out, almost at one time, will be necessary. With eight or even 10 elevators long delays would be unavoidable.

Then an important reduction in the cost of maintenance is made possible by use of the ramps. The installation of elevators would add considerably to the annual cost of the building. It is estimated that the cost of operating and repairing these elevators would be in the vicinity of $40,000 a year.

Keeping Cars Moving.

Another interesting feature of the proposed construction is in the use of concrete guides in the spacing of cars. These guides will be shaped like huge flat irons raised 4½ inches over the floor level, four feet wide and 10 feet long. Over this guide the car backs into place. A small bumper will be provided for blocking the rear wheels. In this way a car can back into place only when it is correctly placed.

A scientific plan has also been devised for facilitating the moving of cars in and out of the garage. Near the entrance will be an attache of the garage, who will have in front of him a flashlight device, which will show which berths are vacant and which are occupied. On basis of a vacant space he will hand to the chauffeurs as they pass by a check showing the floor and berth number. On each floor other attaches will guide chauffeurs to their berths, help check robes, etc. Congestion near the entrance will thus be avoided.

Good Location.

The location is easily reached from nearly all of the main arteries of motor traffic entering Boston. It is near Commonwealth avenue, Beacon street, Boylston street and Columbus avenue, and also Pleasant street, which, it is expected, will eventually be the main route of motor travel to the south of the city.

It was not until an intensive study had been made of the probable future growth of the city that the Eliot street site was decided upon. The promoters found that the tendency for expansion was toward the Park square section, which, it is predicted, will shortly become the business center of Boston, as it is along the natural route for growth.

The garage will have an outward appearance not unlike that of a big hotel. The ground space is to be about 27,000 feet, with a 195-foot frontage and a depth of 145 feet.

There will be check rooms and gasoline, oil and air service on each floor, preventing congestion on the ground floor. Once a car starts from a floor there will be no steps on the way out of the garage.

Slight Grade for Ramp.

The ramp will have the slight grade of only one in 14 feet. It will require no more energy to reach the fourth floor than it does to turn around three times in a wide street and will take but a few seconds to go from one floor to the other.

On the ground floor, to the right of the main entrance, will be located the offices, comfortable waiting rooms for women and men and a store for accessories.

The banking firm of Baker, Ayling & Young is representing the financial interests. Architect Warren designed the building, including the ramps, which are patented. The structure will be owned and operated by the Eliot Street Garage Co., which has signed agreements through W. J. McDonald of the John Hancock building and Henderson & Ross of 148 State street, for the purchase of land and buildings which serve as the site for the garage.

The work of construction will begin this month and it will necessitate the tearing out of a large number of existing structures on Eliot street and Boylston place.

Finest Parking Garage.

From the standpoint of size, cost and innovations, it is claimed, no garage in Boston, and only a single structure in New York, will even begin to approach the projected building and it will undoubtedly be the finest parking garage in the country.

Plans by Architect Warren call for a steel and reinforced concrete building, which will rest on a foundation of concrete sunk 40 feet below grade. The architect has succeeded in making the building highly ornamental. Over the double entrance on Eliot street for automobiles will be a marquise. The building will be thoroughly fireproof throughout, with metal doors and window frames.

Special precautions have been taken to reduce the fire hazard. A system of fire sprinklers will be provided. In addition the building will be divided by fire walls into three sections equipped with fire doors communicating with the ramp. In case of fire the portion of the building involved will be cut off so that the ramp will be available for egress from the rest of the building.

Use of Floors.

The basement of the building will be used entirely for car storage. On the first floor will be the office and waiting rooms, women's resting room, men's smoking room, lavatories and the accessories store. The second floor will be for auto storage only. Part of the third floor will be given over to chauffeurs' rooms, toilets, shower baths and dressing rooms. The gasoline distributors on each floor will be under a pressure system.

A circular court, 30 feet in diameter, will be in the center of the building, inside the ramp. Illumination will be furnished by a skylight dome on top.

GOODYEAR WILL PROVIDE CARAVAN FOR BOY SCOUTS.

The Goodyear Tire and Rubber Co. will divert from its Akron-Boston express line five trucks to carry 50 Boy Scouts with their officers from Akron, O., June 26, on a 3000-mile trip through nine states. The route will include Niagara Falls, Syracuse, Utica, Albany, Lake George, Lake Champlain, White Mountains, Portland, Me.; Boston, Providence, New Haven, West Point, Ithaca, Lake Chautauqua and Youngstown. A moving picture scenario has been written for the boys.

Three trucks will carry the party, a fourth the baggage and camping outfits and the fifth the field kitchen and the "eats." The boys will camp beside lakes, scale mountains and sleep in the shadows of old forts. The pneumatic tired trucks, with double deck, providing upper and lower sleeping berths, insure comfort.

Two shifts of drivers will permit travel at night. The expedition will demonstrate the ease with which troops can be transported from inland points to the coast.

PLATE XLI.

GREAT DEMAND FOR FILLING STATIONS

Accompanying Design Shows Superstructure of Brick Trimmed with Concrete Stone or Terra Cotta—Effect is Attractive.

FILLING stations have sprung up along lanes of traffic throughout the country, and there is a constant demand for new ones. At these one should be able to obtain oils, greases, gasoline and sundries of a nature that may be needed in emergencies, such as tubes, patches, cement, etc.

As the filling stations depend to a large extent on transient trade, it is advisable to make them as attractive as possible. As individual tastes in this respect may go into extremes, endeavor has been made in the accompanying design to simply illustrate a type.

Many persons think that a mere building with a "gas" pump at the curb makes a filling station complete, but the fact is that the real heart of a filling station is buried beneath the ground.

Units of Station.

In connection with a station, large storage tanks are required for the gasoline and usually there is need for several of them. The prospective dealer is advised to secure tanks of ample capacities, as it may happen that the demand from his customers is greater than the oil companies will be able to supply him on quick orders.

In this respect suggestion is made that a 1000-gallon tank be the average, and that nothing of a capacity of less than 500 gallons be considered.

As all stations must keep adequate supplies of lubricating oils and greases on hand at all times, this stock must be given proper consideration. In the building shown herewith provision has been made for oil storage in vertical tanks, placed in separate compartments as shown, the pumps being located directly over them, as will be seen from a glance at the plan.

Grease, lubricants, etc., may be kept stored below, with some for current use on the shelves of the store or salesroom.

Construction Details.

The foundation would be of concrete, with the main or outside wall at least 12 inches thick, while the interior or dividing wall would be eight inches in thickness. A study of the section at the right will explain fully just what the nature of the construction would be, and of its components.

The mixture for the mass concrete will be found satisfactory, if a 1-3-5 is used, which is a first class quality for foundation work. A footing has been placed underneath the walls to insure equal distribution of all loads and to prevent sinking or sagging caused by excessive weights upon concentrated areas of soil, the bearing pressure of which cannot resist the loads placed thereupon. The foundation has been allowed to extend above grade, forming the base course to receive the superstructure.

The superstructure is of brick, trimmed wih concrete stone or terra cotta, these trimmings comprising cornice and coping, or, if one so desires, the entire building may be constructed of any one of these materials, with an attractive effect being attained.

If brick is used a rough textured one is suggested, with large white joint ¾-inch thick, rough struck or raked out, either of these giving pleasing effects.

Reinforced Concrete Floor.

The floor is of reinforced concrete as shown, using a wire mesh for reinforcing, or small twist bars, the latter being placed six inches on centers, the short span, with rods running at right angles, spaced at about 16 inches on centers. Concrete for all slab work of this nature should be of a 1-2-4 mixture, good and rich.

The roof may be framed up as shown, on rafters if the building laws permit that type of construction in the district where the station is located, and, if not, a concrete slab may be erected. In either case they may be treated with a coating of tar, applying gravel according to the best tar and gravel finishes.

The interior finish may be of plaster, or the walls finished in white, unplastered. The warmth derived from plaster during the cold, damp weather, will well repay for its installation.

Cost of Building.

Heating may be obtained from a small heater placed in the basement, a hot air furnace being ample to take care of the same. A toilet and a wash stand are also situated in the basement, access being gained from the upper floor by a flight of stairs as shown.

All plumbing and piping may be of standard make, insuring satisfaction at all times. Lighting by electricity, with the outlets placed to owner's advantage, these being governed by the equipment of the station.

The cost of a building of this type and size, exclusive of fittings, would come in the neighborhood of $1500 to $1800. For further information address the Architectural Department of this publication.

NATIONAL CHAMBER IN ANNUAL SESSION

Dates Set for National Shows—Decide to Hold Both Truck and Passenger Car Exhibitions the Same Week—Will Boom Foreign Trade.

AT THE annual meeting of the National Automobile Chamber of Commerce in New York Charles Clifton, the president, was, with the other officers, re-elected. The following directors were also re-elected: John N. Willys, H. H. Rice, Roy D. Chapin, C. C. Hanch and J. Walter Drake.

Definite action was taken regarding the two big motor car shows of the year. The national New York show will be held during the week of Jan. 3 to 10 in its accustomed place, the Grand Central Palace, which the government will cease to use as a hospital early in October. The national Chicago show will come during the week of Jan. 24 to 31.

For the first time the passenger car and motor truck exhibitions will be held simultaneously. Additional room will be required in New York for the truck show and Samuel A. Miles, who will manage both shows for the National Chamber, has obtained the 22nd Engineers Regiment Armory, at 168th street, near Broadway, for the truck show.

In view of the fact that so many manufacturers were heavily engaged in war work during the last year, the directors voted to allot space for the big shows on the basis of cars or trucks sold during the year ended June 30, 1917, instead of on June 30 of the year preceding the shows, as has hitherto been the custom.

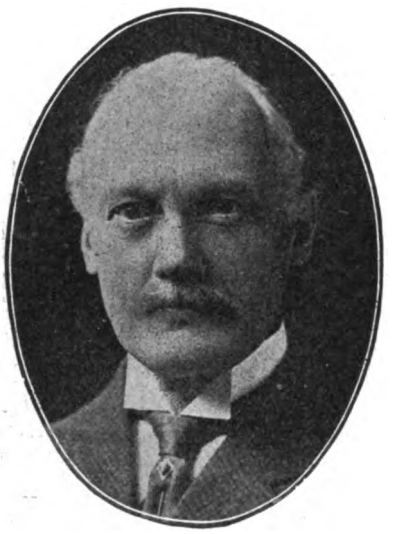
New Models Coming.

Indications, as expressed by the manufacturing representatives in New York for the meeting, were that the forthcoming shows will be the largest and best in many ways ever held in this country. There will be a wide variety of new models and several entirely new makes of cars. In the mechanical details, also, will be seen many improvements due more or less directly to the automobile experience gained from the war.

C. C. Hanch, secretary of the National Chamber and who recently returned from a four months' visit to the motor car factories of Europe with the object of studying industrial conditions and prospects for American export trade, presented a report which showed that, while the demand for automobiles is very great, there is difficulty in shipping them from this country owing to government restrictions.

Hanch Tells of Abroad.

England has permitted imports of 50 per cent. of five-twelfths of the number of cars imported by the various makers in 1913, but American imports are still prohibited in France and Italy. These restrictions have been imposed with a view of giving the home industry time to readjust itself, but the foreign importers of American cars, recognizing the need for medium priced machines, have been urging their governments to admit



COL. CHARLES CLIFTON.
Re-Elected President of National Automobile Chamber of Commerce.

a reasonable number at a moderate tariff rate.

"I was greatly surprised," said Mr. Hanch, "to see the expansion of the foreign factories as a result of war needs. Many of them will be able to produce more motor cars than heretofore. I cannot say that they will soon be very strong competitors of the American product, because their factories are not designed nor are their people trained for producing what we call mass production. The demand for motor cars, however, is so great that not alone all the European product can be sold, but many American cars, provided the embargoes are raised to permit their importation.

"The importers of American cars abroad have made strong pleas for the raising of the embargoes now that the war is over. It is worth noting that there is only one car for every 400 persons in France, one for every 225 in England, while there is one for every 18 in this country."

Boom Foreign Trade.

The exports by American motor car manufacturers are at the rate of $125,000,000 a year, which is about 10 per cent. of the total business. Last year American cars were sent to 82 countries, including 20 cars and three trucks to Iceland.

It was decided to broaden the general foreign trade department in the chamber to care better for matters relating to exports of motor vehicles to foreign countries, which approximates $125,000,000 a year out of a total normal automobile business of $1,300,000,000.

A resolution was passed asking Congress to repeal all manufacturers' sales taxes, including those on cars and trucks as suggested by President Wilson in his recent message.

There was distributed at the meeting a 36-page pamphlet, "Facts and Figures of the Automobile Industry," giving an extraordinary amount of information showing the production, registration, employees, wages and other data in connection with the motor industry during the past 20 years. Any one interested in the industry may obtain a copy by sending 10 cents for postage to 7 East 42nd street, New York.

The directors adopted a resolution asking Congress to repeal all manufacturers' sales taxes, including those on cars and trucks.

DECLARE PROHIBITION LAWS THREATEN SAFETY OF AUTOMOBILE INDUSTRY

HOW prohibition laws are threatening the safety of the automobile industry was brought out at the meeting of the directors of the National Automobile Dealers' Association at St. Louis.

The prohibition menace to the dealer has resulted from the fact that in numerous dry states Federal revenue agents have confiscated automobiles carrying liquor. In most of these cases the cars have been sold by the dealers on conditional bills of sale. After the cars have been seized they are either sold or destroyed, the dealer is deprived of his car and in many cases it is impossible to recover the balance due on the purchase.

This procedure has been upheld in the United States Circuit Court of Appeals for Georgia despite the fact that the dealer had no knowledge of the purpose for which the automobile was to be used. Cases also are pending in Colorado, Washington, Virginia and California.

The directors pledged "adequate financial support" to the Georgia dealers fighting this case, which will be taken to the United States Supreme Court and, if the dealers lose there, the National association will take steps to obtain a repeal of the law in Congress under which cars are confiscated.

One of the most serious features of the confiscation is that the Federal reserve banks are considering a proposal to refuse to rediscount automobile dealers' commercial paper when cars are sold on such conditional bills of sale. It has also seriously impaired the ability of car owners to insure their cars.

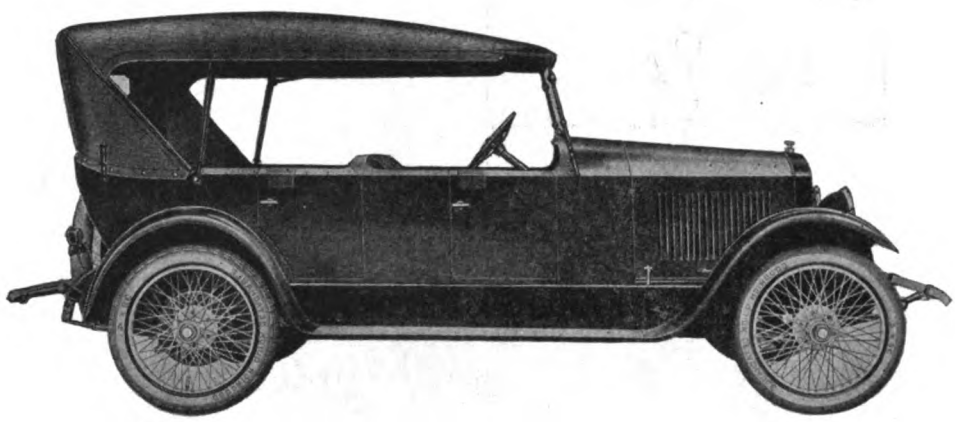
METZ MASTER SIX

6 6



Elegance - Luxury

Measured by any standard the METZ MASTER SIX is a car of distinction, — in design, in finish, in appointments, — a construction that admirably harmonizes.

No machine is more complete—no vehicle could be more carefully thought out and no car was ever perfected with greater regard for the requirements for every purpose.

Every quality has been considered. Every possibilty has been appraised and the entire design has been developed to meet the demands of those who keenly discriminate.

There is elegance in the proportioning of the body, in the graceful, sweeping lines, in its simplicity and dignity.

In every detail is evident the qualities that will make for motoring pleasure—for the driver who exacts flexibility and uniformity of acceleration on level ways and steep hills; who demands ease of control with wheel, pedal and lever; who wants perfect lubrication, small consumption of fuel, large tire mileage, and construction that means well nigh constant service with minimum of maintenance cost.

In the METZ MASTER SIX this means the fullest degree of comfort. That long, slow resiliency of the springs that absorbs all shocks and insures against fatigue; that depth of high grade leather upholstery that conforms to one's body and affords restful support; the ample space in which one can move unhampered and without cramping.

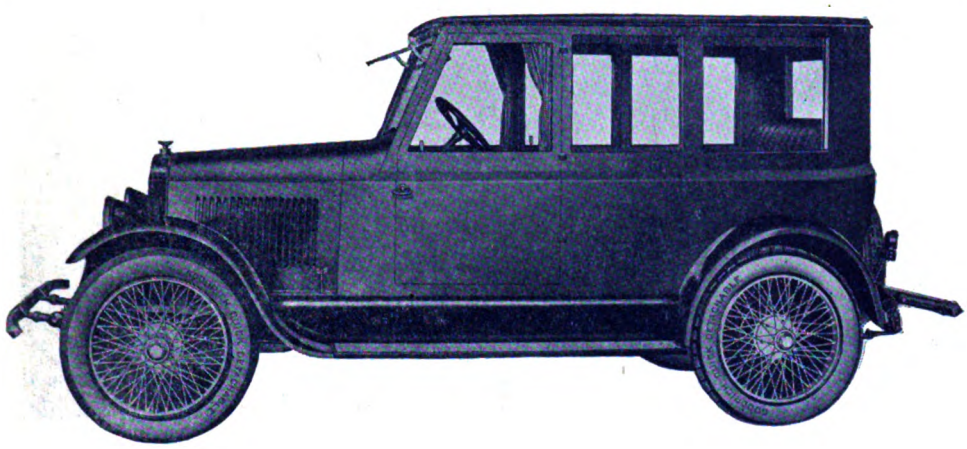
METZ MASTER SIX

6 6



Service - Endurance

The utility and satisfaction realized is in ratio to the design and the construction.

The METZ MASTER SIX is the conception and the creation of the Master—METZ—the choice of units with reference to materials, workmanship, appearance, accessibility and simplicity—the products of the best specialists of the industry, and combining them into a perfectly balanced assembly that will afford every quality that makes for undoubted superiority.

Service in the METZ MASTER SIX means that this car will measure up to every standard by which satisfaction is determined. Whether it be appearance, finish, convenience of appointments, comfort of passengers, ease of control, power, flexibility, safety, tire mileage, economy of maintenance, the car is equal to any machine built, and is unequaled when all of these qualities are considered as applied to a single design.

Endurance is meant to apply to period of utility, to the service life that can be expected. The METZ MASTER SIX is built for years of use. Every construction unit is known the world over for quality. No car was ever designed with greater factors of safety. Only with such units could a car of equal strength and light weight be realized.

There is in the METZ MASTER SIX greater value represented than any other car, because METZ owners enjoy all the superior qualities at far less expense. The best measure is a knowledge of other cars. Make every possible comparison. See them all without regard to price. Then you will learn that on the basis of quality the METZ MASTER SIX has been rightly named the PERFECT CAR.

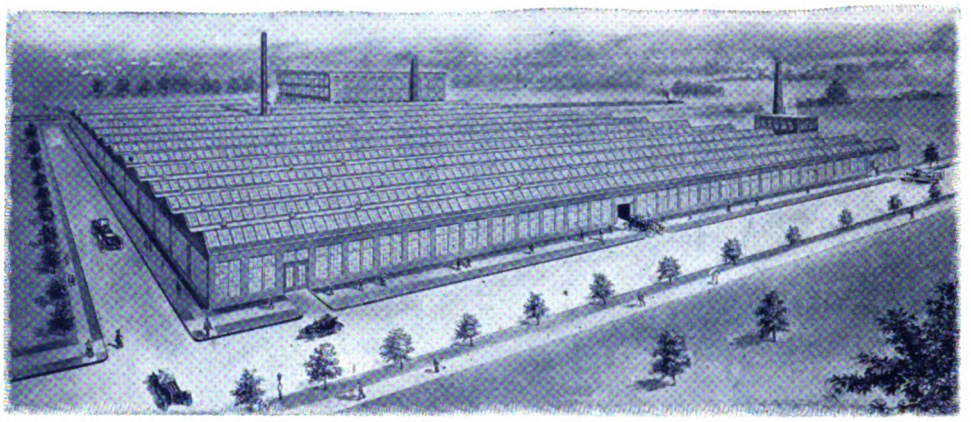
METZ MASTER SIX

6 6

Metz Main Factory, Where the Metz Master Six Is Built



Specifications of Metz Master Six

MOTOR—MASTER SIX, 3⅛x5, L head type six cylinder en bloc—unit power plant, with fully enclosed valves and detachable cylinder head.

FORCE FEED and Splash. Positive pump circulation to all parts of motor. Pressure indicator on instrument board, gauge on crank case.

CARBURETOR—STROMBERG Float Feed automatic type. Double jet, intake air heated, instrument board adjustment.

ELECTRIC EQUIPMENT—WESTINGHOUSE two unit lighting and starting systems.

IGNITION—CONNECTICUT distributor independent of generator.

BATTERY—WILLARD 6 volts, 120 hour ampere.

GASOLINE SYSTEM—15 gallon capacity tank carrier on rear. STEWART vacuum feed to carburetor, gasoline gauge.

STEERING GEAR—Worm and gear type, irreversible 18" special finger MASTER SIX walnut steering wheel, spark and throttle control levers and horn button mounted on top. Left side drive.

CONTROL—Center gear shift lever and emergency brake hand lever.

TRANSMISSION—BROWN-LIPE, selective sliding gears; three speeds forward and reverse; nickel steel gears; special alloy steel shafts. Unit construction aluminum case.

CLUTCH—BORG & BECK single 10" dry disc type, positive—yet disengaged by a gentle push on clutch pedal.

DRIVE—Hotchkiss type; two universal joints and tubular propeller shaft.

LAMPS—Special MASTER SIX electric head and tail lamps with double bulb for dimming, dash and rear compartment lamps.

RADIATOR—Special MASTER SIX, Duplex cooler, copper tubes, cellular type, generous cooling surface, ample water capacity.

COOLING—Water, positive centrifugal pump circulation.

FRAME—Pressed steel channel section very wide in rear, tapering straight to front.

SPRINGS—Special alloy semi-elliptic; front 38" long, 2" wide, rear 54" long, 2" wide, underslung; suspended directly under frame.

AXLE—Front MASTER SIX, TIMKEN, single-piece drop-forging; I-beam section, heat treated TIMKEN bearings.

AXLE—Rear MASTER SIX, TIMKEN, ¾ floating type, pressed steel housing, spiral bevel driving gears, accessible from rear, TIMKEN bearings.

BRAKES—Service, 14½" external contracting on rear wheel; 2" wide with equalizer. Emergency internal expanding.

WHEELS—5 MASTER SIX wire wheels white enamelled—standard equipment for detachable straight side type tires. Artillery type optional.

TIRES—32x4 GOODRICH, plain tread on front, and Non-Skid or Safety tread on rear. Six ply.

EXTRA WHEEL CARRIER—Special design mounted on rear with safety lock.

LICENSE TAG HOLDERS—Front—special arrangement on lamp spacing rod. Rear—integral with lamp.

BUMPERS—Special MASTER SIX design front and rear.

BODY—Five passenger, pure stream line MASTER SIX Colonial design—custom made, sturdy and extremely comfortable, roomy and of pleasing appearance, deep wide cushions, flush type well fitted doors designed to eliminate all rattle.

WINDSHIELD—MASTER SIX two-piece ventilating and rain vision.

FINISH—Highest grade custom coach work throughout. Royal blue with black enamelled guards and trimmings. White enamelled wire wheels, durable carpeted floor in rear, and special gray Linoleum covered floor in front, with running boards to match. Instrument board of dull finished walnut, with steering wheel special design to match and panel of walnut front of rear compartment.

UPHOLSTERING—Straight piped, fitted upholstery. Genuine deep buffed black leather cushions and back.

TOP—One-man, with curtains and top boot, curtains carried in pocket in top, using Dreadnaught water proof topping material.

SPEEDOMETER—STEWART, flush type, mounted on instrument board, driven through special gears at rear of transmission.

WARNING SIGNAL—Electric motor driven, operated from steering wheel.

EQUIPMENT—MASTER SIX one-man top with top cover and quick adjustable interior fastening side curtains; MASTER SIX rain vision, ventilating windshield; speedometer; motor driven horn; headlights with auxiliary bulbs; dash, rear compartment and tail lamps; ammeter; oil pressure indicator on dash; bumpers front and rear; extra wire wheel on rear with special carrier and safety lock; special robe rail; pump; jack; tool kit in special pocket; tire repair outfit; ignition lock.

WHEELBASE—120 inches, tread 56 inches.

WEIGHT—2750 lbs. shipping weight; road weight with full tanks 2850 lbs.

PRICE—Fully equipped, $1695, F. O. B. factory.

METZ SALES CORPORATION

Metz Building Boston Mass

Digitized by Google

METZ "MASTER SIX" LATEST NEW ENGLAND BUILT CAR

C. H. Metz, Designer of the New Metz Master Six Series of Car.

Metz Building, 920 Boylston Street, Boston, Location of Executive Office of the Metz Sales Corporation.

R. A. Pickens, Executive of the Metz Sales Corporation, Metz Car Distributor.

SUPERIORITY when measured by comparison with the best products of the industry, and not excepting machines that are considerably higher in price, is claimed by the Metz Sales Corporation, the selling representative for the Metz Co., Waltham, Mass., for Metz Master Six cars.

Though Metz Master Six cars are new in the sense of production, none of the units incorporated in them are experimental or untried. To the contrary, every unit is the product of a specializing concern, that is known of all who own or drive or are interested in automobiles for high quality as measured by automobile values.

Nothing radical is in the design, which was created by C. H. Metz, founder of the Metz Co., who has been identified with the automotive industry for a quarter century, or since its development. Claim is made that the machine in every detail represents the experience of not only the best specialists, but of one who has combined in one design all that is good of all other designs and obviated every factor that mature knowledge had shown might be criticised or would detract from the extremely high standard of engineering that had been sought.

The intention is to devote the entire Metz plant, which covers eight acres, and in which 2600 men were employed in war work, to car building. This statement is made to establish that the plans of the Metz company are to operate on a very large scale.

The Metz Master Six chassis is built to a design that has been standardized and which will be continued without change, although the purpose is to further refine it when this is practically possible. The main units include a Rutenber six-cylinder engine, a Borg & Beck dry disc clutch, Brown-Lipe transmission gearset, Timken full floating rear axle, Timken front axle, Perfection springs, a specially built radiator, Stromberg carburetor, Westinghouse two-unit lighting and starting system, Connecticut distributor, with all auxiliaries of equal quality.

Units Built by Specialists.

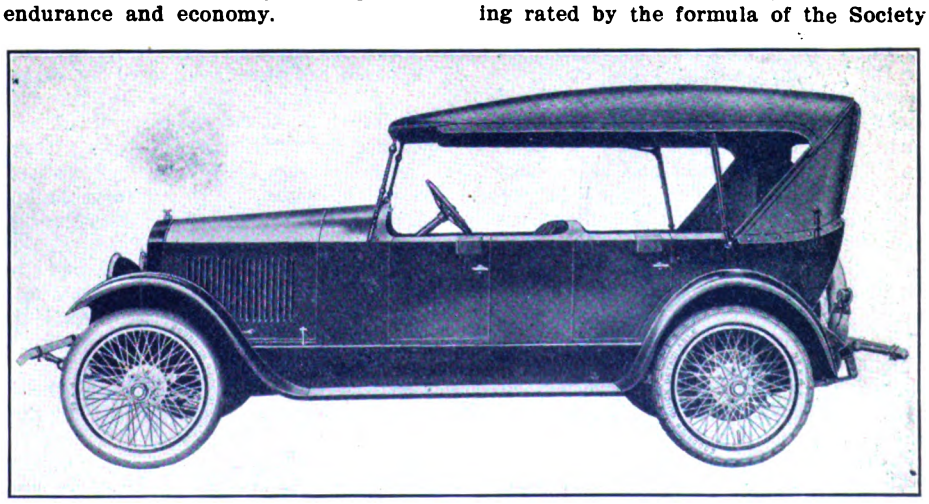
One will note that all of the units specified are the products of concerns that are known to the American automotive industry as having quality. These cannot be regarded as experimental. To the contrary they have been developed and perfected by engineering organizations from laboratory and service experience covering long periods and with the object of obtaining the highest degrees of endurance and economy.

Claim is made that by the exercise of extreme care and comprehensive knowledge of automobile construction a chassis assembly has been perfected that when carefully analyzed will be found well balanced with reference to proportions, to strength, to factors of safety, and so far as engineering science can be applied is equalized in the sense of obtaining structural endurance.

Rutenber Six-Cylinder Engine.

The Rutenber engine in the unit power plant of the Metz Master Six is the most recently perfected production of the Rutenber Motor Co., Marion, Ind., and was designed especially for passenger car construction. It is a six-cylinder, water cooled, four-cycle, vertical, L head type, with the valves located at the right side.

The cylinders have bore of 3⅛ inches and stroke of five inches, the unit being rated by the formula of the Society



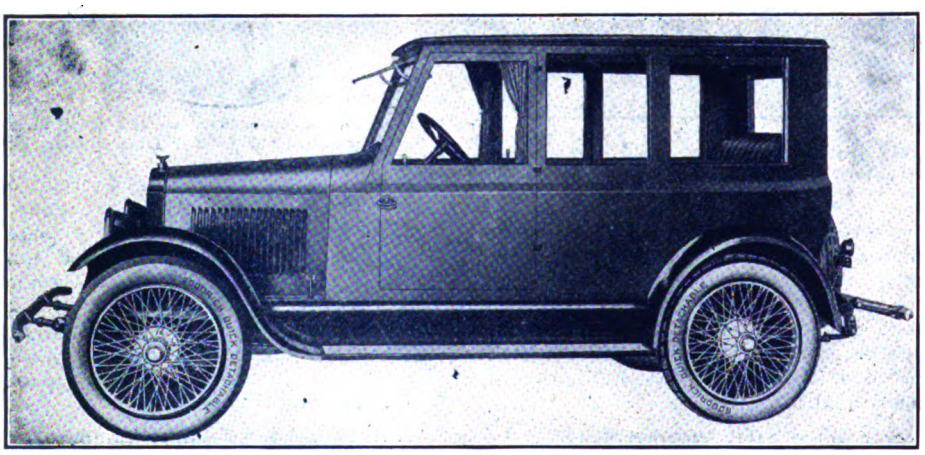
Metz Master Six Chassis with Five-Passenger Touring Car Body and Complete Standard Equipment.

Digitized by Google

of Automotive Engineers at 23.48 horsepower, but the claim is that it will develop in excess of 40 horsepower at maximum engine speed. With the large stroke to bore ratio there is every reason to justify the expectation of practically double the power determined by the specified formula.

The construction of the cylinders is to advanced practise, the casting being en bloc with the water jacket and the upper section of the crankcase integral, and with a detached head. The cylinder block and the head are cast from a high quality of gray iron. The water jacket is large and is so designed that it may be perfectly cleared, this insuring freedom of water circulation.

The walls of the jacket and the cylinders are uniform throughout, this making for thorough cooling and efficient lubrication, both of which contribute to engine efficiency. The head section is designed to have large water chambers over the cylinders and the bores for the spark plugs are in the centers of the combustion heads and are completely surrounded by water. This location of the spark plugs is to obtain the largest degree of ignition effectiveness, the sparks being in the centers of the gas filling the chambers, and there is an unusually effective cooling of the spark plugs.



Metz Master Six Chassis with a Sedan Body Seating Five Passengers and Complete Standard Equipment.

Cylinders with Detachable Head.

The water jacket offsets from the cylinders on the left side of the block. Under the valve pockets and jacket on the right side are two ends and a central web that form the seats for the large cover plates that enclose the valve mechanism. There are forward and rear extensions of the crankcase section, the former housing the timing gearset and the latter forming the upper part of the bell housing of the flywheel. The rear support arms are cast integral with the bell housing.

The upper section has three internal webs, these being vertical transversely and carry the three main bearings. The lower section of the crankcase is an aluminum alloy casting that serves as the oil reservoir and the base of the crank chamber, with forward and rear extensions. The forward extension with a cover plate completes the timing gear housing and the rear extension the flywheel bell. The bell housing has a small inspection plate at the crown for convenience in timing the valves, and at the left side of the housing is an offset for the installation of the starting motor.

The water outlet manifold is at the forward end of the head and the water intake of the engine block is at the right side directly back of the fourth cylinder. The engine head is retained by a series of studs. This is readily removable for grinding the valves or cleaning the cylinders, by simply disconnecting the hose connection of the water outlet and taking the terminals of the wiring. The fiber tube carrying the wiring is carried on brackets that are retained by two of the studs securing the head. The lower section of the crankcase is bolted to the cylinder block and this may be taken off and the main and connecting rod bearings may be inspected or adjusted. By removing the head and the lower section practically all necessary work may be done without removing the engine from the chassis. The timing gearset is also very accessible from the front of the engine.

Machine Work Carefully Done.

The machine work on the engine block and head is very carefully done. After boring the cylinder units are aged to insure against machining stresses and distortion and they are subjected to hydraulic water pressure tests to detect defects. The bores are then completed by reaming and grinding. The faces of the cylinder block and the cylinder head are machined carefully to obtain exact fitting.

The pistons are cast from close grained iron of the same grade as the cylinder block and are designed as light as is possible consistent with strength. They are turned, annealed and finished by grinding. The insides of the barrels are bored to insure the units are equal in weight, this making for close engine balance.

Each piston is channeled for three rings, which are carefully fitted, and the wristpins are steel tube, carefully ground and case hardened, which are secured in the piston bosses by set screws and cotter pins. Much care is given to obtain equal weight of all reciprocating parts.

The crankshaft is a three-journal construction, drop forged from special steel, that is heat treated and ground to dimensions. The diameter is large and the bearings are lengths that insure against shaft whipping or other vibrational stresses. The camshaft is a special alloy steel, drop forged, with the cams integral, with three large journals. The cams are specially ground to obtain exact contour and high valve efficiency. The shaft is so constructed that it may be withdrawn from the engine block by removing the cover of the timing gearset case. All shafts are accurately balanced and are remarkably free from vibration. The timing gears are large diameter and have wide faces, and they are cut helically to operate noiselessly. By the use of special equipment the gear centers are accurately maintained.

Valves Are Interchangeable.

The valves are interchangeable and have cast iron heads electrically welded to carbon steel stems. The valves are installed in long, renewable guides and are operated by oil tempered springs. The valve tappets are a mushroom type that are hardened and ground and are seated in large guides that can be replaced if worn. The tappets are fitted with adjusting screws and lock nuts.

The main, crankpin and camshaft bearings are the highest grade babbitt metal, the first two specified being fitted with shims for adjustment. The small ends of the connecting rods, which oscillate on the wristpins, are bushed with bronze.

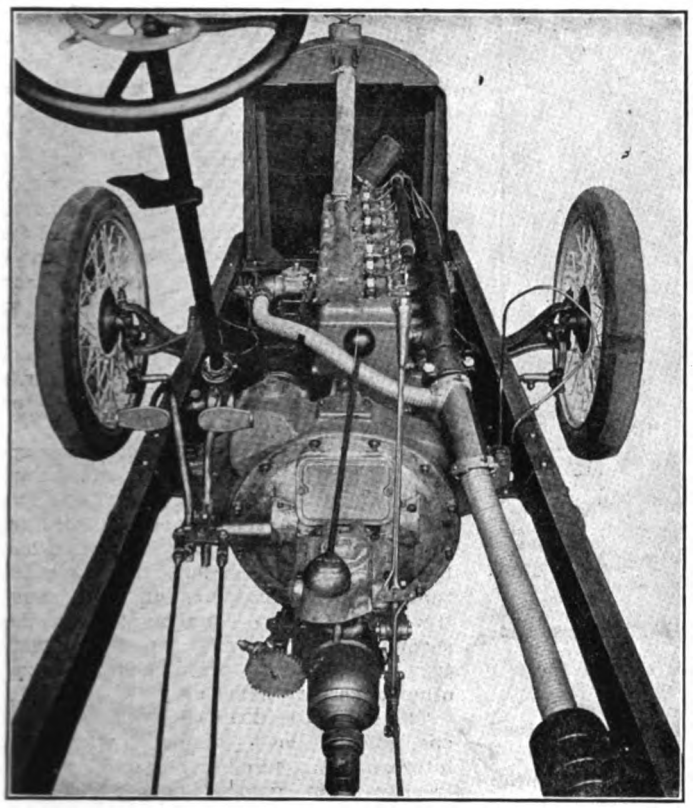
The engine is cooled by a circulation of water that is forced by a centrifugal pump of large capacity, that is driven by an outside shaft from the timing gearset, through the cylinder jacket and a duplex type special radiator, the core being formed of copper tubes. It is a cellular construction that has a very generous radiating surface. The radiator is installed on the frame so as to be thoroughly protected from chassis distortion and vibratory stresses. Radiation is promoted by a large fan mounted on annular ball bearings on an adjustable bracket on the forward end of the cylinder block, that is driven by a flat belt from a pulley on a forward extension of the water pump shaft.

Positive Lubricating System.

The engine is lubricated by a combination force feed and splash system. The oil is drawn from a screened well in the reservoir in the base of the crankcase by a pump driven from the rear end of the camshaft, and forced through tube to the crankshaft and camshaft bearings and the timing gearset. The excess oil flows to the base of the crank chamber, whence it is distributed by splash to the cylinder and piston walls, the wristpins, the cams and valve tappets. The flow of oil from the pump is through a pressure indicator installed on the instrument board and the level of the lubricant in the reservoir is shown by a gauge on the engine case.

The fuel is supplied through a Stromberg carburetor having a side flange that is secured direct to the intake passage

Digitized by Google



The Forward End of a Metz Master Six Chassis Showing the Six-Cylinder Unit Power Plant and the Duplex Radiator.

on the left side of the engine, from a 15-gallon tank suspended by straps from a tubular tie rod at the extreme rear end of the frame and a frame cross member, by a Stewart vacuum system. The carburetor is heated by a stove on the exhaust manifold connected by a flexible metal hose. The intake passage is cored through the engine block between the third and fourth cylinders and this insures that the gas admitted is heated and is a thoroughly combustible mixture.

The source of the ignition current is a Willard storage battery, six volts, 120 ampere hours capacity, which is charged by the generator of the Westinghouse two-unit starting and lighting system. This current is directed to the cylinders by a Connecticut distributor and there is a uniformly effective spark generated at all times in each cylinder, so that there is positive engine efficiency.

The Power Transmission System.

The clutch is a Borg & Beck 10-inch dry disc type that is self-adjusting and requires practically no lubrication, and is completely enclosed in the housing. It is claimed to be extremely easy to engage and to be positive in action. This is combined with a Brown-Lipe transmission gearset, a sliding gear selective type having three forward speed ratios and reverse. The shafts and gears are very large and have unusual endurance. The shafts are a special alloy steel and the gears are nickel steel, and the shafts are carried on annular ball bearings. The gearset is enclosed in an aluminum case. The gear shifting lever is mounted in an offset bracket at the rear of the case and this is a ball and socket type.

The power is transmitted from the engine to the rear axle by a long, tubular shaft with a universal joint at either end, the joints being fully housed and packed with grease. The rear axle is a Timken three-quarters floating construction, and is driven by a helical bevel pinion and master gear. The axle housing is pressed steel and there is a large rear cover pate on the central section at the rear. By removing this plate the differential gearset is easily accessible. The differential gearset and the pinion shaft are assembled on the forward plate of the central section of the axle housing. The wheels are driven by shafts that are seated in the bores of the differential gears, the outer ends of which are bolted to the hubs. The housing is webbed to obtain strength. The driving shafts may be taken out without removing the wheels and adjustments may be made to all the bearings, which are the Timken roller type.

The Other Chassis Units.

The front axle is a Timken, a drop forged steel I section with heavy steering knuckles and it is equipped with Timken roller bearings.

The frame is a pressed steel channel section that tapers from the rear to the front, and the side members are cambered at the rear to afford spring clearance. There are four cross members, one at the front end on which the forward trunnion of the engine is mounted, one just ahead of the forward hangers of the rear springs, one near the rear ends of the side members, and a heavy tube tie at the ends of the rear spring horns. In addition the frame is reinforced by the support arms of the engine. The frame is flexible and will weave without damaging stresses to conform to the road conditions.

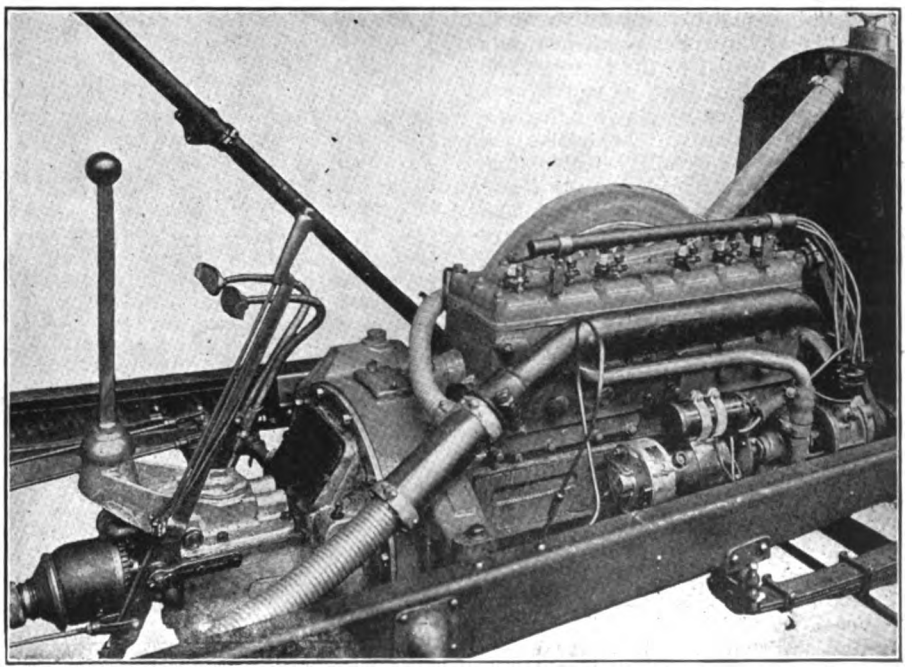
The springs are a semi-elliptical type, the forward set being 38 inches long and two inches wide and the rear set is 54 inches long and two inches wide, the rear set being underslung from the axle. The springs are directly under the frame and there is maximum slow resiliency when the car is moving. The suspension is the Hotchkiss system, the rear springs taking the driving and braking stresses and the torque.

The steering gear is a Warner worm and gear irreversible construction that is mounted at the left side, it being a fore and aft type with a heavy bracket mounted on the frame side member. The gear is adjustable for wear and it is fully enclosed and packed with grease. The linkage is very substantial.

Conventional Means of Control.

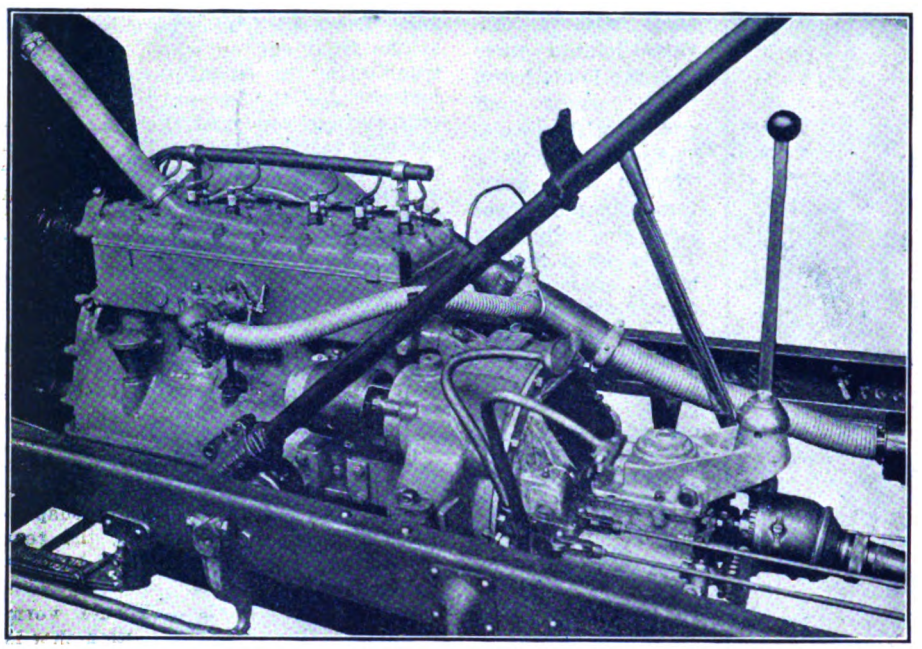
The control is by the usual foot pedals for the clutch and the service brake, with hand levers controlling the ignition and throttle and a button for operating the horn on the 18-inch steering wheel, and hand levers for shifting the gears and the emergency brake in the center of the foot board. The service brake has external contracting shoes, lined with anti-friction fabric, operating on, and the emergency brake has internal expanding shoes operating within drums 14½ inches diameter and two inches wide on the rear wheels. The service brake is equipped with an equalizer and both brakes are easily adjustable.

The wheelbase of the chassis is 120



Right or Valve Side of the Metz Master Six Engine, Showing the Water Pump, Westinghouse Generator and Distributor.

Digitized by Google



Left or Intake Side of the Metz Master Six Engine with the Carburetor and Westinghouse Starting Motor and Control Members Shown.

inches and the tread is 56 inches. The standard equipment is wire wheels, with a spare wheel, with rims designed for straight side type tires, and wooden artillery type wheels are optional with the purchaser. The wheels are shod with 34 by four-inch Goodrich tires, plain tread on the front and non-skid on the rear.

Five Types of Bodies.

The chassis are fitted with a five-passenger touring body, three-passenger roadster body, four-passenger coupe body, sedan body or a speedster, which is equipped with disc steel wheels, and two extra wheels that are carried on a running board.

The prices for these machines are: Touring car, $1695; three-passenger roadster, $1695; four-passenger coupe, $2495; sedan, $2595, and speedster, $2795.

The bodies for all these types are built by the Metz company and they are claimed to be equal to any custom work. The quality of the coach work can only be learned by a visit to the factory. The company maintains that as much care was taken in the engineering for the bodies as for the chassis. The bodies are constructed from specially selected lumber for the frames, which is milled and fitted to equal the best yacht work. The frames are extremely heavy, many of the members are laminated, and the curved frame members are bent instead of sawn.

Body Work of Highest Grade.

While all of the frame is covered with metal or upholstery great care is taken in the fitting. All joints are strongly braced with steel or bronze brackets and the frames are intended to endure for years under the stresses of chassis distortion without loosening or breaking the finish. The touring car body, for instance, is made in three units, the dash and the cowl and sides, the front seat and the sides, and the rear seat and sides, each of which is installed separately and so fitted that there can be no stress upon any one. The same construction obtains with the roadster and the speedster, which have two units instead of three, and the sedan and coupe are even heavier and have more substantial frames. The instrument boards and the backs of the front seats of the touring cars are dull finished walnut effectively paneled.

The bodies are all built to streamline effect and are finished in royal blue as a standard color, with black enameled fenders and trimmings. The wheels are white enamel. The upholstery is straight piped fitted leather seat and back cushions for the open bodies and the closed bodies are upholstered with fabric or leather as may be ordered, the standard being fabric. The front footboard and the running boards are covered with linoleum and the floor of the rear compartment is carpeted.

Equipment Is Very Complete.

The touring car is equipped with a one-man top with curtains and top boot, the curtains being carried in a pocket in the top, and the material is Dreadnaught top fabric. The equipment includes for the touring model, besides what has been specified, a rain vision ventilating windshield, speedometer, motor driven horn, headlights with auxiliary lamps, dash, rear compartment and tail lamps, ammeter, oil pressure indicator, front and rear bumpers, extra wire wheel mounted at the rear with special carrier and safety lock, special robe rail, pump, jack, tool kit in a special pocket, tire repair outfit, ignition lock and special brackets for license plates.

The sales of the Metz Master Six cars will be by the Metz Sales Corporation, an organization formed to distribute the machines, which has leased the building at 920 Boylston street, Boston, which has been named the Metz building. The sales room is on the first floor and the executive offices of the company are on the second floor. The remainder of the structure will be given over to storage and other necessary purposes.

The sales are directed by R. A. Pickens, who has been connected with Metz interests for a number of years, who is treasurer and general manager of the corporation. He has developed a very aggressive organization in the East and his intention is to increase this until the corporation is represented in practically every commercial center of the country. In addition attention has been given to export and very satisfactory connections have been made in a number of foreign countries.

The Metz company at the factory is now well advanced in production, there is every reason to expect that within a short time the output will equal the demand, although now the number of cars produced is by no means sufficient to keep pace with the orders, and the sales organization is constantly increasing.

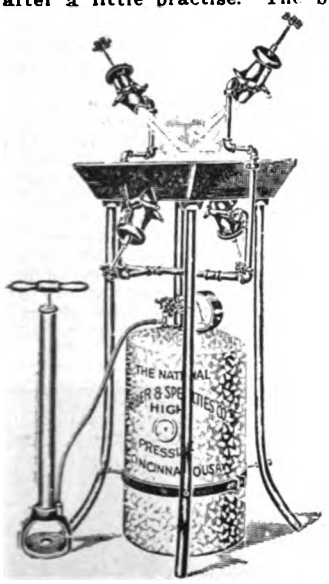
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

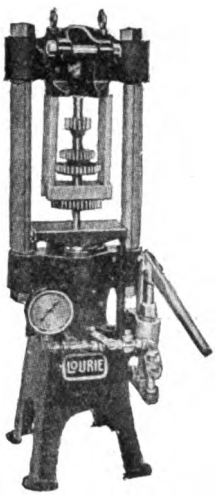
Brazing Forge. Many jobs are brought to repair shops that are too small for economical working if the shop is equipped only with a blacksmith's forge, that may readily be handled by this brazing forge described. Shops not equipped with forges can utilize a brazing forge for all small repairs that require welding. The National Rubber Co.'s Brazier No. 2 may be used anywhere in the shop, burns gasoline for fuel (74 test gasoline, if possible to obtain it), but will do satisfactory work with other grades of gasoline the maker claims. By following the simple instructions sent with the brazing outfit any repairer should be able to do good work after a little practise. The brazier



is self-contained, occupies little space, may be placed anywhere handy to the work and is complete as follows: Pressure tank and gauge with the necessary fittings and connections, burners, valves, etc., air pump and stand. When in operation the tank carries a pressure for long jobs of 40 to 50 pounds and 30 pounds for small jobs. By using the special brazing compounds other metals beside iron and bronze may be welded.

Manufactured by the National Rubber and Specialties Co., 4433-4439 Chickering Ave., Winton Place, Cincinnati, O. Prices and literature on application.

Lourie Hand Hydraulic Arbor Press. The Lourie Hand Hydraulic Arbor Press is of smaller capacity than the power sizes made by this company and is manufactured for the garage and repair shop trade that desires a hand tool for forcing gears and pulleys from shafts or forcing them into place on shafts or for broaching keyways in gears. The machines do the work quickly without battering the ends of shafts or breaking gears. They can be used for testing the strength of materials, broaching any kind of a hole, pressing bushings and pins to place, re-



moving ball races from auto and truck shafts, straightening shafts or bars and other similar uses. In operation the motion is reversed from the ordinary screw machines for this purpose, being up instead of down, as in screw or rack type. Each press has a base cylinder ram pump, with valves, cross head, strain bars and springs to return the ram quickly to the cylinder. The extras include gauge V blocks for spacing, swinging arms for V blocks and additional pump. The capacities are 20, 30, 40, 50 and 60 tons.

To operate press, fill the tank with any light running oil, close the valve and pump oil into the cylinder, which operation raises the ram very powerfully. To release the pressure, open the valve and the springs will cause the ram to return within the cylinder very rapidly.

Manufactured by the Lourie Mfg. Co., Springfield, Ill. Prices on application.

Wagner Auto Cleaner. The Wagner Auto Cleaner is a handy tool for motorists, as with it the car owner can keep the engine free from dirt and oil with slight labor. It is easily attached to an air hose either from a storage tank or from a spare tire. The second hose marked kerosene is placed in a pail of kerosene. Turning on the air pressure draws the kerosene from the pail, forcing it out of the nozzle at a strong pressure, and by

directing the nozzle against the side of the engine the oil and dirt will be quickly removed. Six pounds of air pressure is required and one quart of kerosene will clean any size engine the manufacturer claims. As a constant flow is required for the successful operation of the cleaner a foot pump is not recommended.

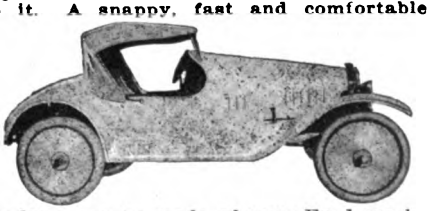
Manufactured by Wagner Specialty Co., 1902 Broadway, New York City. Sold by Asch & Co., 16-24 W. 61st St., New York City. Price, $2.

Spee-Dee Cleanser. The claims of the manufacturer for the efficiency of Spee-Dee Cleanser are based on two qualities that should commend it to automobilists. The one of these is that it may be used either with or without water, and the other is that it will serve equally well for cleansing the machine or the person. The compound is sold in cans that can be carried in the car and in which it may be protected from dust accumulations. It is butter like and creamy, contains no abrasive and it is especially efficacious, for it can be used on highly finished surfaces without damage, and it will remove oil,

grease or dirt in any form from the car or from the body. As no water is necessary to effectually clean one's hands it is very useful for car owners. Rubbing a small piece of the compound into the hands and wiping them with a dry cloth is said to be as effective as water.

Manufactured by the States Chemical Co., Chicago, Ill. Price, 25 cents a can.

Paco Special Ford Racing Bodies. Paco bodies for Ford cars have a distinctive design that will appeal to those who desire a body that is radically different from the regular Ford equipment and are inclined to the sport or racy type. A Ford car with solid wheels and a body of this type will have class and distinction added to it. A snappy, fast and comfortable



roadster can be made of your Ford car by putting on a Paco body. Modeled after the greatest speed cars, with long sloping hood, streamline cowl, low seats and a receding rear end, Paco bodies offer the least wind resistance. They are designed on scientific engineering lines for speed and comfort.

The 1919 Paco bodies include a new sport top and windshield, Paco exhaust, disc wheels and other features.

Manufactured by Paco Manufacturing Co., Peoria, Ill.

Front and Rear Views of Heald Rotary Surface Grinding Machine.

Heald Rotary Surface Grinding Machines. The Heald Machine Co., Worcester, Mass., has just brought out two new rotary surface grinding machines. They have been designed for some time and have passed through the company's experimental and service departments ready to be made up in lots for the trade. So far only two machines of each have been built up, but by the first of August the company will be able to supply any orders that may come in.

One is equipped with an eight-inch chuck and is known as No. 20 Rotary Surface Grinding Machine. The other, with a 12-inch chuck, is known as the Heald No. 22 Rotary Surface Grinder. These machines have been built up very similar to each other; in fact parts of one have been used in a good many cases on the other. They have been built with the idea of getting a more economical machine in price than the company's large size grinders, but with the same production and finish.

The eight-inch machine which the company previously built was of like construction, but while it did excellent work, is not rigid enough for a great many customers. On the other hand, the No. 225 12-inch and the No. 260 16-inch machines in many cases are too expensive and equipped with too many refinements for the commercial trade.

In the new machines the company has taken the features of both of its small and large machines, simplified them and has now two very fine rotary surface grinders to offer the trade.

The eight-inch or No. 20 and 12-inch or No. 22 rotary surface grinding machines have been designed for manufacturing purposes and at the same time will give an extremely fine finish. They have been built massive, yet simple, having all the necessary mechanical refinements required to readily get various speeds and adjustments.

The wheel slide is a massive casting, having a flat and "V" way, which assures alignment at all times. The bearing surfaces are large and carefully protected from grit and dirt. Experience has proven that a downward pull of the spindle belt adds greatly to the rigidity and has been incorporated into the design of these machines.

The wheel guard is made separate from the wheel slide. It is not put on, however, in the usual manner, as it has the back face finished off to fit a finished surface on the wheel slide, making the two parts practically one. The advantage of this design is that if a customer should for any reason desire to use a larger wheel he will be able to do so.

The wheel spindle is large in diameter and made of chrome nickel steel. It is mounted in a straight, plain, adjustable bearing at the grinding wheel end. Adjustments for this bearing can be readily made through a hole in the top of the wheel slide provided for that purpose. This is the only adjustment required, as the rear end of the spindle is mounted on ball bearings. A large sight feed oiler for the front bearing insures an ample supply of oil at all times.

The main drive bracket receives the power from the main line by tight and loose pulleys and transmits it directly by belt to the main speed box, wheel spindle and pump. The guard for the tight and loose pulleys is adjustable so that the openings can be lined up for the belt. The shifter lever is arranged with a spring plunger which locks it in place in the off or on position.

The main speed box, which is situated on the rear of the machines, furnishes power to the wheel slide by a three-step cone and three speeds to the chuck through a bank of gears. The speeds of wheel slide and chuck are independent of each other, allowing for a large latitude in regard to speeds and feeds. The speeds to the chuck are controlled by a pull rod on the front of the machine.

All control levers and adjustments are within easy reach of the operator.

The chuck spindle is driven by spiral gears, one of which is mounted directly on the spindle. This spindle is mounted in a sleeve which has vertical adjustments. The upper portion of the spindle rests in a taper bearing, while the lower end is equipped with ball bearing. With this design adjustment is never necessary, as the wear is automatically taken up. The chuck bracket is adjustable to allow for grinding of concave and convex surfaces to angles up to 10 degrees.

The feed to chuck is made by a hand wheel and vertical screw through a nut on the spindle sleeve. The machines are also equipped with automatic vertical adjustment to the chuck which will feed from .0005 to .003 at each end of the wheel traverse.

The water equipment including pump, tank, water guard and connections are regularly furnished with every machine. The tank is of unusual capacity, giving a most liberal volume of water, while a swivel joint in the distributing nozzle enables the operator to direct the flow at any desired point.

A Heald magnetic chuck, style eight-inch for No. 20 and style 12-inch for No. 22 are regular equipment. Three-jaw chucks or face plates with special fixtures may be substituted if desired or the work requires it.

Motor drive machines can be furnished if necessary, the motor being placed where it is most convenient, on the floor, wall or ceiling and belting directly to the main drive pulley. A few minor changes to the main speed bracket is all that is required when a machine is to be motor driven.

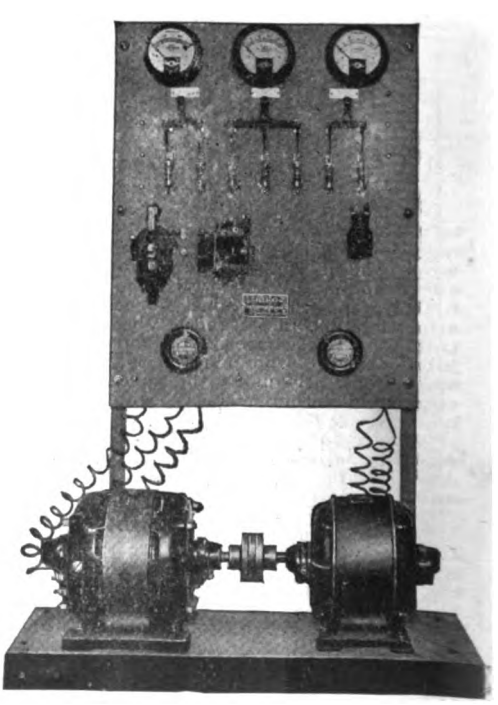
The specifications follow: No. 22, 12-inch: Face diameter, 13¾ inches; size of grinding wheel, 12 inches diameter, 1¼ inch face, five-inch hole; greatest distance, top of chuck to center of wheel, 10 inches; greatest distance between face of 12-inch diameter wheel and top of magnetic chuck, four inches; smallest diameter grinding wheel which may be used, 7½ inches; vertical adjustment of chuck, five inches; largest swing inside of water pan, 16 inches; floor space required, belt drive, 48 by 70 inches.

On the No. 20 the specifications are: Diameter magnetic holding surface, standard chuck, eight inches; face diameter, 9¼ inches; size of grinding wheel, 10 inches diameter, one-inch face, 3½-inch hole; greatest distance, top of chuck to center of wheel, 8½ inches; greatest distance between face of 10-inch diameter wheel and top of magnetic chuck, 3½ inches; smallest diameter grinding wheel which may be used, 6½ inches; vertical adjustment of chuck, five inches; largest swing inside of water pan, 13 inches; floor space required, belt drive, 48x60 inches.

Manufactured by the Heald Machine Co., Worcester, Mass. Prices quoted on request.

Andre Motor Generator Set. The Andre Motor Generator outfits are manufactured in three sizes—for the private owner charging one battery, the garage repairer who charges one or more batteries a day, and the No. 32, shown in the cut for charging batteries on a larger scale.

In charging batteries not all can be charged at the same rate. For instance, one battery may be in good condition and can be charged at a higher rate than another. By having more than one circuit the batteries may be put on charge according to their condition. That is, the charging may be at any voltage or amperage within the capacity of the set. In the case of the No. 32 set a low charging rate of three amperes can be reached on one circuit, while a high rate of 12 amperes can be obtained from the second circuit. When there are only two or three batteries to charge at one time they can be placed on one circuit. This means a saving of current, for, while the motor still runs at the same number of revolutions a minute, consumption of current is reduced through the reduction of the motor load. Short circuiting of the batteries when the current fails is protected in the Andre motor generator sets by means of an automatic cutout.



Manufactured by Julius Andre & Sons Co., Milwaukee, Wis. Prices on application.

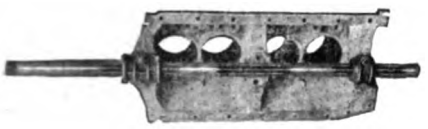
The Lewis Combination Reamer. The Lewis combination reamer is a tool of unusual value to the garage and service station repairer, for with it bearing scraping by hand may be obviated.

Fitting new bearings to an engine by hand is slow and a laborious job. The Lewis coribination reamer does the greater and hardest part of the work, insuring a more even fit without the chance of high spots so common in hand scraping. In operation the upper section of the base is held securely on the bench or engine

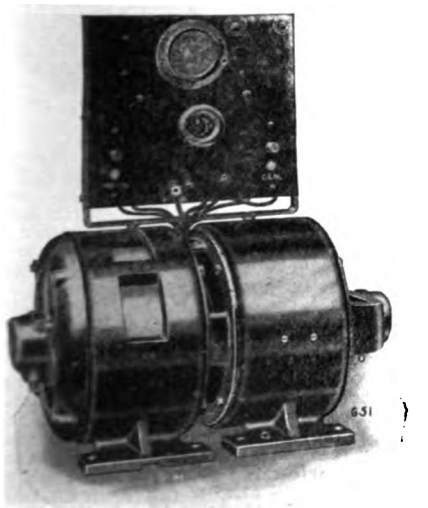


stand and the reamer held in place by the three main bearings. The reaming is done one bearing at a time, and drawing down on the cap of the next slightly, and so on till the three bearings are reamed equally. The bearings are considered finished when the caps make a contact with the block or rod. When the main bearings are finished, slip the reamer forward into position for the connecting rods, and repeat the operation as with the main bearings.

It is claimed by the manufacturer that a perfect fit of all bearings on a Ford engine can be made in one and one-half hours by the use of this reamer, while the hand method takes about eight hours. Special reamers for all makes of automobiles will be made to order. All tools are guaranteed by the manufacturer against defects in material and workmanship. Broken and defective tools must be returned to the factory for inspection.

Manufactured by the Lewis Tool Co., 915 Washington Ave., South, Minneapolis, Minn. Price of set for Ford engine, $25 net; regular set for other cars, $35 net. Handle for reamer, $2.

Robbins & Meyers Charging Set. The Robbins & Meyers charging sets consist of motor driven generators operating on direct current at 115 and 230 volts, or alternating current at 110 and 220 volts, alternating current circuits of 60, 50, 40, 30 and 25 cycles. Three sizes are made, 80, 150 and 250 watts. The 80 watt size is suitable for private garage service, but may be used in public garages where the service is light and not more than one battery has to be charged at a time. The 150 and 250 watt sizes are for public ga-



rage service where many batteries are to be charged.

All sets are regularly furnished with a steel switchboard mounted on the frame, and carries a rheostat connected to the generator field winding for regulating the charging rate, an ammeter in the generator circuit, a push button switch in both the motor and generator circuits and a fuse block with fuses in the motor circuit.

The 80 watt, eight-volt outfits will charge one three-cell, six-volt battery at a time, starting at a 10-ampere rate. The 150 watt, 15-volt outfits will charge at the same time, either one six-volt battery or one 12-volt battery, or two six-volt batteries in series, starting at a 10-ampere rate. The 150 watt 30-volt outfit and the 250 watt 30-volt outfit will charge at the same time, either one 12-volt battery or four six-volt batteries in series, two 12-volt batteries in series, or one 12-volt and two six-volt batteries in series, or one 24-volt battery, the 150 watt set starting at a five ampere rate and the 250 watt set starting at a 10 ampere rate.

The manufacturer claims that the sets are made of the finest materials and that they will operate continuously at full generator ratings with the motor connected to circuits of normal voltage and frequency with a temperature rise which will not exceed 45 degrees centigrade. They will operate without damage on voltages 10 per cent. higher or lower than rated voltages.

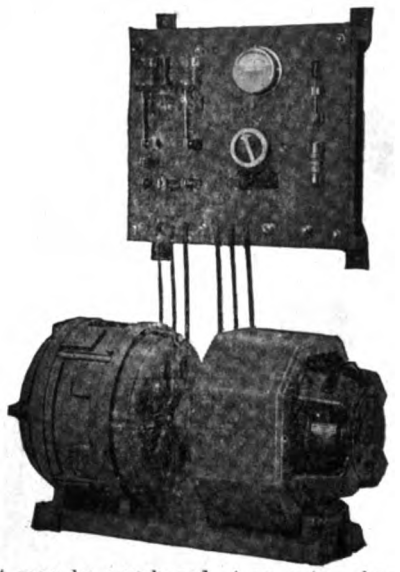
Manufactured by the Robbins & Meyers Co., Springfield, O. Prices on application.

Spoktite. Spoktite is a liquid that may be used for tightening the spokes in the wood wheels of automobiles. Spoktite is put up in cans with screw tops and may be carried in the car. When a loose or squeaking spoke is noted a small application of Spoktite will prevent the trouble the manufacturer claims. As a counter display for accessory dealers and

garage men the cans are packed in a neat cardboard box containing one dozen; the cans and box are neatly lithographed and lettered, telling what is claimed for Spoktite. The manufacturer claims that a can of Spoktite costing $1.50 used in time may possibly save a bill of $10 to have a wheel rebuilt.

Manufactured by the Woodtite Laboratories, Modesto, Cal. Price, $1.50 per can retail.

St. Louis Motor Generator. A simple charging equipment for service and battery repair stations is the 9-G type motor generator set manufactured by the St. Louis Electrical Works. This set generates 38 volts at 30 amperes and has capacity for from one to 20 batteries on charge at a time. It is driven by a 1½ horsepower motor, wired either for alternating or direct current as ordered and either single or double phase. It will charge five batteries in series and should be purchased with four auxiliary rheostats, which will give four different charging lines of five batteries each. By the use of the auxiliary rheostats the charging rate can be varied in any of these different charging circuits as desired so long as the combined charging rates do not exceed 30 amperes, the safe carrying capacity of the set. The main charging panel furnished is equipped with an ammeter, a field rheostat for the generator, starting switch for the motor and all necessary fuses and switches. Auxiliary rheostats are not included in the set,



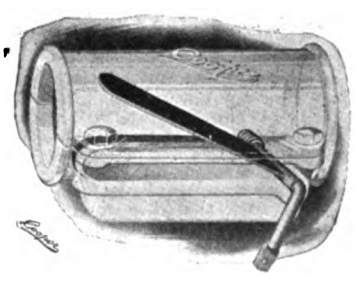
but may be purchased at an extra charge of $7 each.

The type 30-G motor generator set is driven by a five horsepower motor and may be wired for any voltage and for two or three-phase circuits. For single-phase work an extra charge is made on account of the changes in wiring. This outfit has a capacity of 64 batteries in all and has capacity for eight batteries in series or eight separate circuits. Five auxiliary rheostats will give the machine a capacity of from one to 40 batteries. The charging panel furnished with the 30-G set is equipped with voltmeter and ammeter, field rheostat for controlling the generator, battery line switch, protective fuse and necessary binding posts. A starting switch for the motor is furnished.

Manufactured by the St. Louis Electrical Works, 4060 Forest Park Boulevard, St. Louis, Mo. Prices: Single phase, 110, 220 or 440 volts, 60 cycle, 9-G, $224; 30-G, $450. Two and three-phase, 110, 220 or 440 volts, 60 cycle, 9-G, $224; 30-G, $390.

The Cooper Special Muffler Cut Out. The Cooper special muffler cut out and "4" locking pedal is designed for equipping cars that are not fitted with muffler cut outs. The Cooper special can be easily attached with very little work and once installed will no doubt be a permanent accessory on the car.

It may be attached by cutting a small rectangular hole in the bottom of the exhaust pipe, fitting the two halves of the cut out over this hole and tightening the bolts. In operation the flapper of the cut-out fits in a recess in the base. To open it the flapper is lifted, allowing the burned gas to pass out into the air, and when closed the flapper fits into the recessed seat. It is operated by a pin or push button on the floor of the car at the driver's feet and connected to the cut out by a pull cord or wire. The pressure on the pin opens the cut out flapper.

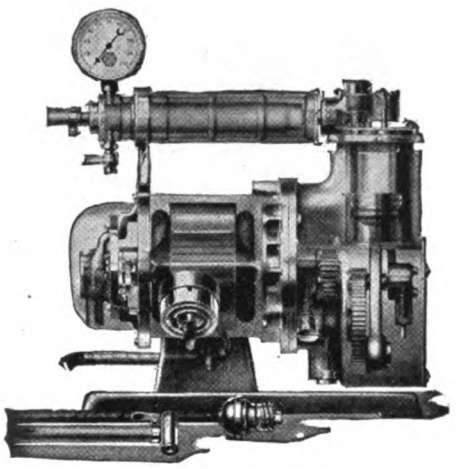


Manufactured by the Cooper Manufacturing Co., Marshalltown, Ia. Prices on application.

Digitized by Google

The Lectroflator. The Lectroflater is an air compressor and motor combined on the same base, the motor being direct connected to the compressor.

In construction it is in a separate class from others, having forced draft for cooling the motor and compressor. The air is drawn in through a screen at the commutator side of the motor, passing over the armature and through the air chamber surrounding the cylinder of the compressor, keeping the motor winding and the compressor cylinder oil cool at all times. Lubrication is by an automatic wick feed to all bearings, using grease instead of oil, which always insures a sufficient supply of lubricant and at the same time prevents flooding the cylinders with oil or injecting oily vapor into the air.

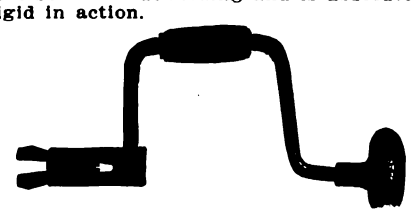


The motor is especially designed, operating from any electric lamp socket, on either direct or alternating current. It is so designed that it will start the compressor against 150 pounds pressure without the use of either hand or automatic unloading device, and will operate the compressor continuously against this pressure, the makers claim. The outfit is complete with large, accurate pressure gauge, electric switch, attachment plug and tire connector, long serviceable rubber hose and heavy duplex electric cord.

Manufactured by the Black & Decker Manufacturing Co., Baltimore, Md. Prices on application.

Utility Wrench. The Utility Universal Rim Wrench is a single tool that the manufacturers claim will fit the nuts of all demountable rims. Is built in one size only. It should be carried in the kit of every motorist and should be in the tool box of every repairer. It is a size that is not cumbersome and when needed will fit, hold and turn any nut.

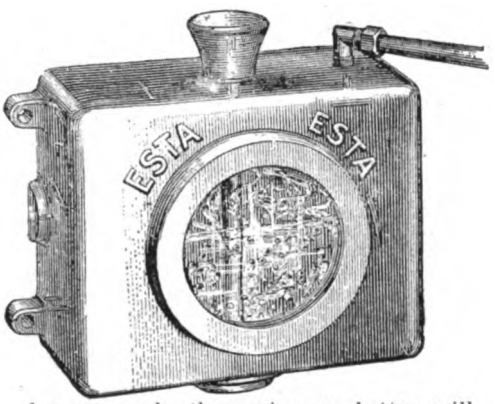
The new Utility Wrench is finished in nickel and black enamel. The jaws are practically unbreakable. It will fit the tool box without folding and is absolutely rigid in action.



For a slight additional cost a Universal Utility Wrench set may be obtained with the Utility Wrench that will take the place of a socket wrench set and may be used with the wrench in the same manner as the socket wrench.

Manufactured by the Hill Pump Valve Co., Chicago, Ill. Price of the Utility Universal Rim Wrench, $1.75. Including the extra set of socket fittings, $4.50.

Esta Water Auxiliator. It is a well known fact that water admitted to the combustion chamber of an automobile engine in small quantities will have a tendency to make the engine run better, will to certain extent eliminate carbon and increase the mileage of the fuel.



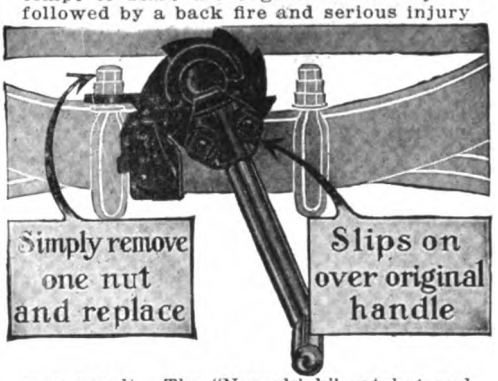
The Esta Water Auxiliator is a device of this kind that employs a somewhat different principle from the other humidifiers in use, from the fact that instead of admitting the water either directly to the cylinders or in the form of steam, the air supplied to the carburetor is passed through a body of water. The air in passing through the water absorbs more or less moisture. This moist air is carried into the intake manifold of the engine, and on into the combustion chamber of the engine by the rush of gas and air from the carburetor.

The maker claims, after very exhaustive tests, that this device will remove carbon from the engine in a short time, will increase the pulling power of the engine and the gasoline mileage of the car.

The device consists of a handsome cast aluminum water tank that is fastened to the front of the dash and connected to the manifold by a short piece of brass or copper tubing.

Manufactured by the Esta Co., 107 Massachusetts Ave., Boston, Mass. Prices on application.

"Neverkick." The "Neverkick" consists of a ratchet and pawl that may be quickly attached to the bottom of a radiator around the starting crankshaft, and is guaranteed by the manufacturers to prevent a broken arm if by chance the engine should back fire. The operator may neglect to retard the spark lever and attempt to start the engine. This may be followed by a back fire and serious injury



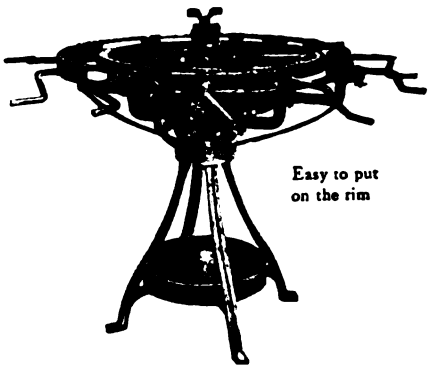
may result. The "Neverkick" ratchet and pawl is manufactured and sold to obviate this condition. It has the recommendation of accident insurance companies and its use will insure against an accident of this nature. May be applied in 10 minutes, as there are no holes to drill, and after once in place will last many years.

Manufactured by the Banner Accessory Manufacturing Co., 2629 La Salle St., St. Louis, Mo. Price, $3.75.

Universal Wheel Compressor. The Universal Wheel Compressor is a tool for the repair shop for use in the rebuilding of wheels or the cutting down of motor truck wheels for the purpose of putting on pneumatic cord truck tires. It is built unusually strong throughout of the best of materials, and the manufacturer claims that by its use many wheels that formerly went to the junk pile may be repaired to the satisfaction of the owners.

The primary object of the compressor is to provide a mechanism which is adjustable for all types of auto and truck wheels, and it is so constructed that repair work may be done speedily and with ease. The wheel can be accurately set to give it the desired dish and each spoke can be pressed individually, the rim being pressed on in a few minutes without the use of ordinary clamps.

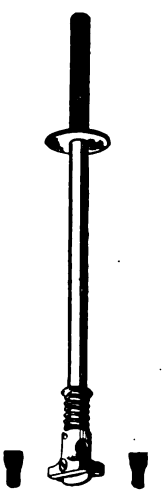
The machine is so constructed that the compressing ring may be turned like a turntable, no power being needed. Wheels of any size can be repaired. Wire and wooden wheels may be trued and new spokes put in. The machine is strong



enough to handle the heavy truck wheels as well as the smaller wheels.

Manufactured by Universal Wheel Compressor Co., Cedar Rapids, Ia. Prices on application.

Hudson Universal Jointed Valve Grinder. The Hudson Universal Valve Grinder is fitted with a universal joint that allows the working end a certain amount of motion in any direction relative to the shank. When the shank is being revolved between the palms of the hands the entire valve area is ground accurately, the manufacturer claims. The valve grinder is especially useful in grinding the valves on



the fourth cylinder of the Ford engine, which is difficult to reach with the ordinary grinder.

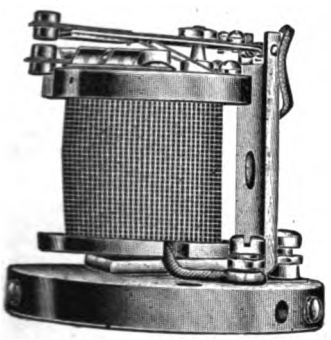
The tool is of simple, sturdy construction throughout. The universal joint is formed simply by pinning the tool head to the shank with a pin, which is much smaller than the hole, through the shank. A coiled spring between the head and the shoulder of the shank takes up all looseness and holds the head normally square with the shank.

Manufactured by Hudson Motors Specialties Co., 1932-34 Arch St., Philadelphia, Pa. Price, $1.50.

Digitized by Google

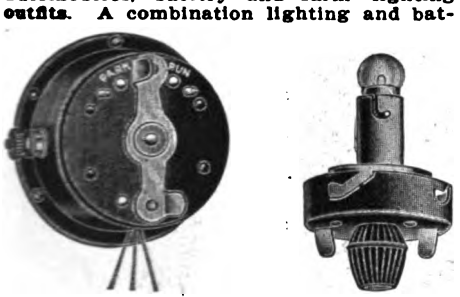
Unilite Lighting Outfit. The Unilite tail light outfit for Ford cars will appeal to Ford owners who wish to wire in a rear light. The manufacturer claims that with this outfit the current can be taken from the magneto when the engine is operating and from a set of dry cells when the car is parked. By means of a Unilite con-

troller and switch and a reverse current cutout this is accomplished automatically when the engine is stopped and reversed when the engine is again started. It is made especially for Ford cars not equipped with a storage battery. The regular outfit consists of one Unilite adapter, with bulb, one Unilite controller and



switch and the necessary wire to make the change, with instructions for installing.

The reverse current cutout No. 2, that automatically connects and disconnects the battery and generator is suitable for automobiles, battery and farm lighting outfits. A combination lighting and bat-



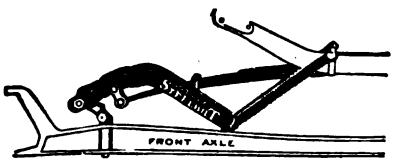
tery ignition switch is also manufactured by this concern, this is of the push key type.

The Unilite outfit sells for $4 complete, the reverse current outfit No. 2, $4.25 to $6, according to the voltage and amperage required, from six-volt 15 amperes to six-volt 20 ampere. Combination lighting and battery switch, $1.35.

Manufactured by the Briggs & Stratton Co., Milwaukee, Wis.

Badger Automobile and Truck Jacks. Badger jacks are made in capacities from ¾ ton and one-ton capacity. Walker screw jacks have lift capacity of from ¾ ton to six tons, and a steel jack of small size is made for small cars. A series of hub jacks is also manufactured. These are sometimes called tire savers and are used by owners to raise the tires from the floor when the cars are stored for any length of time.

The bases of these jacks are large, are



standard ribbed and the steel working parts are made extra strong to withstand the heaviest kind of work. The lift is exceptionally easy. A short stroke of the handle gives a rapid rise and the reverse is positive in action.

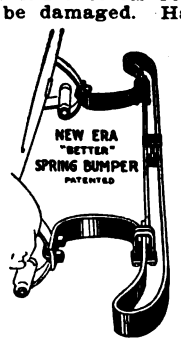
Walker screw jacks are of the same heavy construction, but are operated by screws instead of racks and pawls of the Badger jacks. The manufacturer claims

that these jacks are of unusual strength and that they will lift any weight within their capacities.

Other accessories manufactured by this firm include Auxiliary Radius Rods for Ford cars, Walker Steelbilt Shock Absorbers for Fords, Walker Steer-ezer for Fords, Truss Rods for the rear axles of Fords, running board supports and the Walker Foot Accelerator for Fords.

Manufactured and sold by the Walker Manufacturing Co., Racine, Wis. Catalogue and prices on application.

New Era Front and Rear Spring Bumper. The New Era "Better" Spring Bumper is new in the market and is applicable to 95 per cent. of the cars sold. Because of its construction, being made from flat steel bars held together by clamps at the end and a plate in the center, coming into collision will not damage it, manufacturer claims, and because of its resiliency the car will not be damaged. Hangers may



be obtained for attaching the bumper to the various makes of cars so that no cutting or drilling is necessary, whether or not the car is equipped with a mud pan. It can be attached to the front spring hams of the frame in a few moments with a wrench.

For attaching the bumpers to rear springs of cars special fittings are required because of the many types of springs used. These may be purchased with the bumper by specifying the make of car to which it is to be attached.

Ford, front or rear, black, $9; nickel, $11; other makes of cars, standard black, $10; nickel, $12; made to order, $13-$15.

Manufactured by the New Era Spring and Specialty Co., Grand Rapids, Mich.

Romort, Style "A" Tire Valve Connection. The Romort style "A" connection is an improvement over the usual valve connection in use. It consists of a bronze casting, A, with a screw cap top and bottom. The inside valve mechanism consists of a suitable plunger and spring tension. D is a diaphram that closes the

air passage, shutting off the flow of air from the tank when the valve is disconnected from the tire. E, is the base of the plunger closing the opening in the rubber, still further shutting off the flow of air, as it seats on the rubber washer in the valve housing. F is a knurled nut that allows the replacing of new washers. B is an adjusting nut at the top of the housing, allowing the tension of the spring on the valve to be increased.

It is very necessary that air should be governed, for although it is given free to customers there is a certain element of cost in connection with it, more especially in the operation of the motor and pump, and a good automatic valve properly constructed will do more to keep this cost within reason than any other thing. The manufacturer claims that the Romort automatic valve will result in a very substantial economy.

Manufactured by the Zinke Co., 1323 Michigan Ave., Chicago, Ill. Price regular stem, $3.

Tire-Doh. The Tire-Doh outfit consists of a can of Tire-Doh cement and a can of Tire-Doh, a putty-like substance. To make a tire repair the rubber surface is first cleaned and Tire-Doh cement is applied and allowed to dry for a few moments. The Tire-Doh is then spread over the puncture or tear. When applied according to instructions, Tire-Doh readily drys and becomes a tough integral part of the repaired surface. Two cents' worth of Tire-Doh will repair the average tire tube puncture. Any punctured tube can be repaired with Tire-Doh the manufacturer claims.

Torn out valve stems can be mended with Tire-Doh, as it can be kneaded into the rupture so as to obtain strength that would hardly be obtained with a vulcanizer. Tire-Doh is self-curing, a vulcanizer not being necessary.

Tire-Doh may also be used satisfactorily for repairing casing cuts. By filling these as found the motorist can lengthen his tire mileage considerably, for keeping water and dust from entering the casing will prevent a great deal of deterioration.

Manufactured by the Atlas Auto Supply Co., Chicago, Ill. Prices, large size outfit, $1; Junior outfit, 50c.

Digitized by Google

Oxigene. A motor decarbonizer and fuel saver. Oxigene is manufactured by a secret process and is warranted to be absolutely harmless, to contain no ether, picric acid, naphthalene, camphor or other deterious ingredients; is not inflammable or explosive and will increase the mileage of the car from 25 to 50 per cent.; it will remove carbon and prevent its formation and will give more power from the fuel. If this is not proven by actual use dealers are allowed to return the purchase price.

To test Oxigene, fill the tank with gasoline and carry a reserve of five gallons in an extra can. Set the speedometer at zero, start the engine and without idling the engine drive 10 miles by the speedometer. Stop the engine and fill the

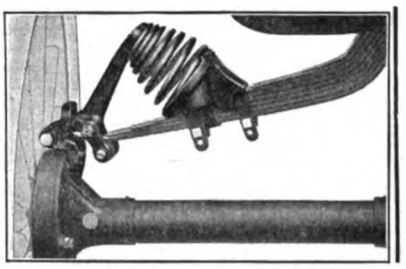
tank from the extra five gallons. Add one ounce of Oxigene to each 10 gallons of gasoline in the tank and treating the extra fuel in the same proportion. Start the engine and let it idle long enough for the treated gasoline to reach the carburetor. Fill the tank with gasoline and without idling the engine drive the car for 10 miles at a speed of 25 miles an hour. The needle valve can be turned down slightly from the point where it runs best on clear gasoline. This should be done before the start of the test of Oxigene. After running the car 10 miles, stop the engine and fill the tank with fuel. Note each time the quantity of gasoline required to fill the tank. From the 10 mile drives and the volume of gasoline used one can determine the difference of power production of Oxigene treated gasoline and untreated gasoline.

As a carbon remover Oxigene is claimed superior to any compound from the fact that being a liquid, combined with gasoline fuel, it prevents depositations on the cylinders, pistons and valves, and will break up existing deposit, fully exhausting them from the engine. After carbon is removed continuing the use of Oxigene will keep the engine free from carbon formations, the maker claims.

Manufactured and sold by the Worth Co., 20 Exchange place, New York City. Prices, five-ounce sealed bottle, enough for 50 gallons of gasoline, $1; quart cans, treating 320 gallons of gasoline, $5.

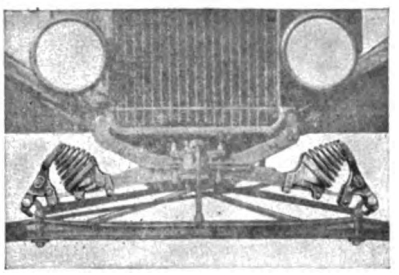
Hassler Shock Absorbers. There has been a new addition to the Hassler line this season, a shock absorber equipment for the Ford one-ton truck, being produced in addition to the regular passenger car outfit. The conical spring is used here, as in the original set of Hasslers, although for the rear of the truck "twins" are used to withstand the greater strain of carrying the load.

The Hassler factory has been enlarged and the production facilities are sufficient to take care of all dealers in good shape. The manufacturer states that there are now 1,000,000 sets of Hassler Shock Absorbers in use. The demand has become

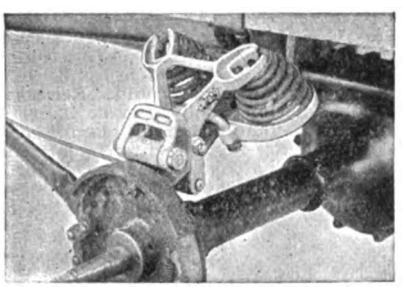


so widespread that the device is being treated now as a national motor car staple, territorial limitations having been abolished. Thousands of dealers heretofore prohibited because of dealer contracts from selling Hasslers are sharing in the big business to be enjoyed in distributing this desirable specialty for Ford cars exclusively.

The Hassler concern states that service records prove that Hasslers will actually save one-third of the ordinary tire and repair expense and reduce the depreciation one-third, these savings being in addition to the comfort and easy riding afforded.



There has been no change whatever in the principle employed in designing the original set of Hasslers. The conical spring not only has proved exceptionally good in eliminating the effect of shocks and vibrations, but it is so durable and rugged that the Hassler equipment is said to outwear the car easily.



Manufactured by Robert H. Hassler, Inc., 607 Naomi St., Indianapolis, Ind. Prices quoted on request.

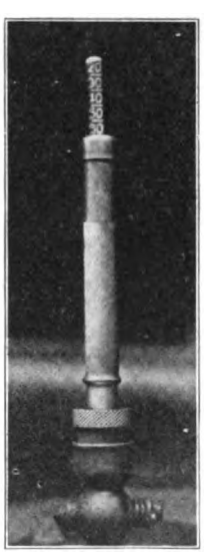
Pasco Wire Wheels for Ford, Chevrolet 490 and Overland Cars. Pasco Wire Wheels, from their light weight, resiliency and all-steel construction, the manufacturer claims, insure from 25 to 50 per cent. greater tire mileage.

A car equipped with a set of Pasco wheels can be driven through all kinds of roads during all weather, with no danger of rusting or breaking the spokes. The construction of Pasco wire wheels is such it is possible to change a tire on the road in less than three minutes. By the use of an adapter hub for Ford cars and special inner hubs for the Chevrolet 490 and the Overland 4, one set of wheels will inter-change on three different makes of cars. Pasco wire wheels have simple two-piece hub caps with lock nuts with right and left threads, which insure safety and obviate all trouble from complicated locking devices. Pasco wire wheels are claimed to be five times stronger than wood wheels of equal size, do not warp or distort and are so built they will easily clear curbs, so that curb cuts are a very remote probability. A complete set includes five wheels, four inner hubs, adapters, hub caps, dust cover for spare wheel and wrench, and for the Chevrolet 490 and the Overland four special inner hubs are furnished. The wheels are furnished in any standard color, such as black, white, red, cream, yellow and green. Pasco wheels may be furnished for other cars upon special order.

Manufactured and sold by the National Wheel Works, Inc., Geneva, Ill. Prices: Fords, Chevrolet 490 and Overland four-cylinder, each, $75 a set; spare wheel carriers, $10.

Peterman Compression Tester Attachment. The Peterman Compressor Attachment is a device that may be screwed into the top of a cylinder to replace the regular petcock. With it it is possible to tell in a few seconds the compression of any cylinders and to locate at once those that are weak. A weak cylinder may be caused by valve fault or gas or air may leak past the pistons or plug.

The Peterman Compression Attachment is adapted for using the Twitchell or the Schrader tire gauges. In using the

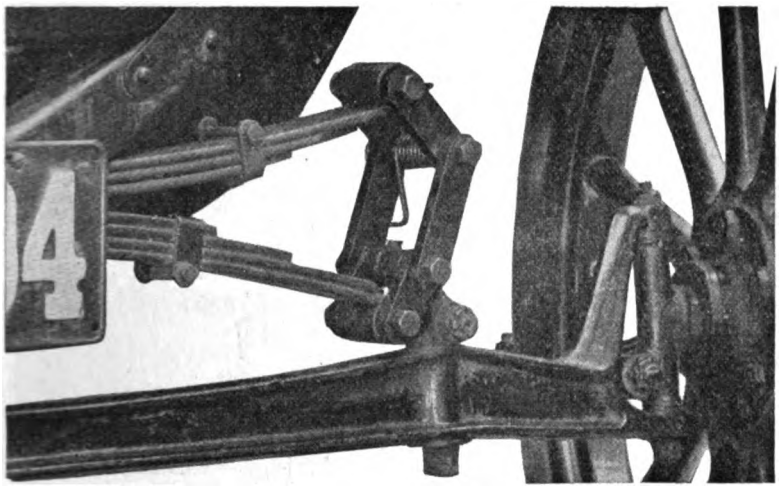


Schrader gauge the lock nut at the bottom of the gauge is unscrewed and screwed into the attachment. For Twitchell gauge a special fitting is required.

The compression is tested with the engine stopped, turning the engine by hand and testing one cylinder at a time. The pressure being shown on the gauge.

Manufactured and sold by H. A. R. Peterman, 2721 N. Clark St., Chicago, Ill. Prices on application.

Digitized by Google



The Beckman Double Action Spring Suspension is a somewhat radical departure from the regular shock absorber employed on Ford cars. The manufacturer claims great efficiency in its use, because of the saving to the car and chassis, the greater mileage made with the tires and the fact that rough roads may be driven over with ease.

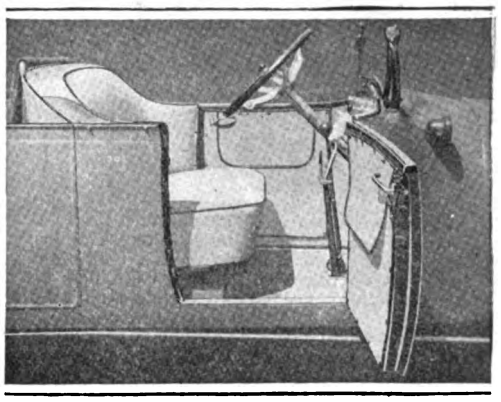
The material used in its construction is alloy spring steel, and the parts are fully guaranteed by the manufacturers against defective material and workmanship.

The spring suspension consists of a three-leaf spring, which is placed over the regular Ford spring after the short leaves have been taken out. The four lower leaves are left on the front Ford spring and five lower leaves are left on the rear spring, the three leaves of the double action spring being bolted to the regular spring by means of the center bolt and fastened to the body by the regular Ford clamps.

The ends of the spring are spaced by suitable toggles and joints to compensate for the throw of the springs and body when serving as an absorber and recoil check. A large coil spring in the upper joint gives the joint a tendency to remain in an upright position, allowing the ends of the springs to be forced apart.

Manufactured by the Beckman Metal Products Co., 400 Superior avenue, Cleveland, O. Retail price $16.50 f. o. b. Cleveland. Write for agents' proposition.

Campbell Detachable Upholstery. Campbell detachable upholstery is made by a



concern manufacturing textile and leather automobile accessories and is a new article that should commend itself to those wishing extra fine upholstery.

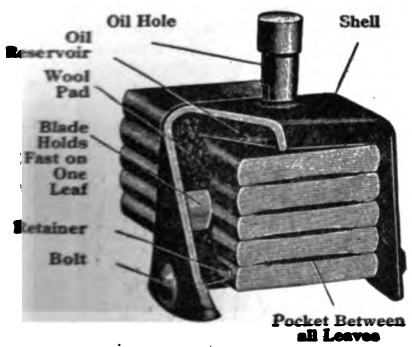
Campbell detachable upholstery has many features that has made it highly satisfactory. The range of materials to choose from is unusually complete, 22 in all, and they are designed by experts from the finest motor fabrics and linens. In taking the measurements for the patterns, expert coach upholsterers are employed, and actual models of the car are used. The manufacturer claims that this does away with all chance of imperfect fit.

There are other features well worth noting, including broad binding of heavy imitation leather and reinforced seams and the stitching on harness machinery with special thread. Another quality that gives Campbell detachable upholstery a sales value are the special fasteners used, known as the Campbell Carr Durable Fastener. They are the same as are used by the United States government on cartridge belts, haversacks and similar equipment. They always stay tight.

Manufactured by the Perkins-Campbell Co., 626 Broadway, Cincinnati, O. Prices on application.

Brown Spring Oiler. The Brown Spring Oiler Co. is making a spring oiler, sold under guarantee, for passenger cars. The oiler may be attached to the spring at a point near the spring clip and in this position will give the best results. The housing or casting holding the oiling material consists of a stamping or casting in which are fastened strips of felt. Oil is supplied through an oil way at the top by means of an oil cup with a spout. The oil, passing down and into the felt, keeps the felt saturated and the oil seeps in be-

BROWN SPRING OILER.



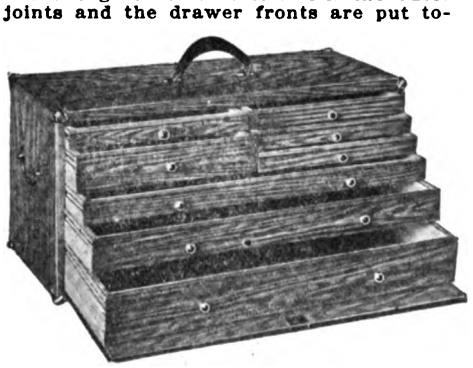
tween the spring leaves. A thin layer of oil covers the surface of the spring leaf by this method and keeps the surface in the best of condition to take care of the wear of the leaves, helping the springs to absorb the road shocks, allowing them to do their work better and giving longer life.

A light oil is preferable, especially during cold weather, as it flows freely and will work between the leaves to better advantage.

The Brown Spring Oiler is a neat appearing metal device that slips right over the spring and is securely bolted on. It is guaranteed to eliminate squeaks in the springs and to keep them in a smooth working condition when oil is applied to them at regular periods, or money will be refunded. Two oilers are required for each half-elliptic spring.

Manufactured by the Brown Spring Oiler Co., 6607 Carnegie avenue, Cleveland, O. Price per set, ¾ elliptic or platform rear springs, 10 oilers, $10; half-elliptic or cantilever, eight oilers, $8; two half-elliptic, like Ford, four oilers, $4. Write for literature.

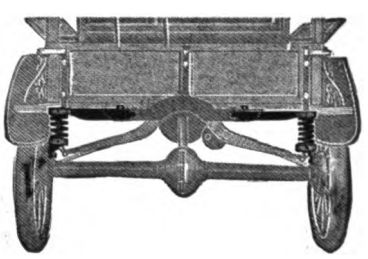
American Tool Chest. The American high grade tool chests may be purchased in a variety of styles and finishes. The outer case is made of selected lumber, mahogany or oak, seasoned and kiln dried, and the drawer sides and bottoms of hard wood. The front covers are of select oak or mahogany, three-ply veneer, and both sides and face match the finish of the case. The drawer slides are hard wood, mortised into the sides of the case, and are glued and nailed. All the outer joints and the drawer fronts are put to-



gether by an interlocking method and then glued. The manufacturer claims that only by racking cases and breaking the wood can the cases come apart. The finish consists of one coat of filler and two coats of high grade varnish for the oak and mahogany chests and the drawers have flannel lined bottoms. The leatherette chests are made of the best quality hard seal grain imitation leather. The case dimensions are outside length 26 inches, width 10¼ inches, height 12¾ inches.

Manufactured by the American Tool Chest Co., 54 to 55 Lisbon avenue, Wauwatosa, Wis. Prices on application.

Alford Auxiliary Spring Attachment for Fords. With Alford auxiliary spring attachments for Ford cars claim is made it is possible to convert a car chassis to a



three-quarter or one-ton truck in 30 minutes. The value claimed for the springs are the increase of tire mileage by 50 per cent. and the chassis riding easier, as the Alford auxiliary springs absorb the road shocks that the tires and rear axle ordinarily endure. The maker claims that the chassis will ride 50 per cent. easier empty or loaded. When the machine is unloaded the body is carried on the Alford springs and when loaded the springs are compressed and it is carried on three springs. All weight is carried on the frame and springs. The springs will prevent the swinging and tipping of the body, so often seen with regular Ford springs. This spring system is mechanically perfect, the manufacturer claims, and it is fully guaranteed. Money will be refunded upon return of the attachment after 30 days trial. Agents wanted.

Manufactured by the Andrew Hoffman Manufacturing Co., Inc., 5034 S. State St., Chicago, Ill. Prices on application.

American Folding Kampkook Stove. It is built for automobilists, the campers, hunters and sportsmen and is an efficient and serviceable camp stove that has all the qualities that are desired for camp cooking.

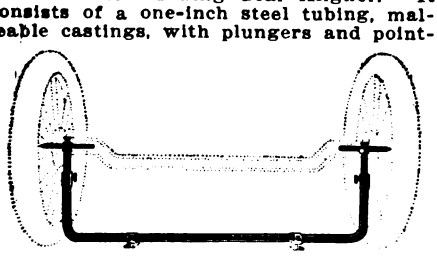
The maker claims that the Kampkook stove can be made ready for use by simply removing the cover and placing the tank in position when it is ready to light. There are no loose parts to lose, nothing to assemble and no alcohol torch is required to light it. The cover serves as a stand or base upon which to set the stove, so that it stands level and firmly wherever placed.

The stove burns ordinary gasoline, which may be purchased anywhere. The tank holds a sufficient quantity to run both burners for two and one-half hours at full capacity. A small hand pump is provided with each stove and a few strokes is all that is necessary to obtain a pressure that will force the gasoline to the burners, where it is gassified. The stove burns with a clear blue flame that can be turned up or down at will. Only the first burner must be generated. This produces gas for the second burner, which may be turned off or on at will.

The Kampoven is an extra for the Kampkook stove and is a very desirable accessory for baking potatoes, biscuits or doing all ordinary baking or broiling. It can be quickly heated to baking temperature and will maintain a uniform heat. It is made entirely of steel and assembled by slip joints. No bolts, screws or clamps are used in its construction. It folds flat and packs into the Kampkook case. The weight is three pounds.

Manufactured and sold by the American Gas Machine Co., Albert Lea, Minn. Prices on application.

Auto Running Gear Aligner. A practical method of aligning the front wheels of an automobile is a necessity in every repair shop. A tool that meets this need is the "Auto Running Gear Aligner." It consists of a one-inch steel tubing, malleable castings, with plungers and point-



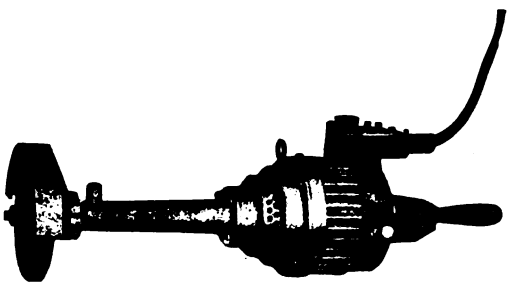
ers of steel, nickel plated; a graduated scale, etched on brass, inlaid with silver, with figures in white on a black background.

When in use the two center brackets rest on the floor, the pointers being adjusted to the centers of the tires at the front. With this adjustment of the pointers made the stand is placed in back of the axle in a similar position, and the position of the pointers noted in relation to the previous setting at the front of the tire. The difference as shown by the scale will prove the correctness of the alignment and will determine how much the tie rod shall be taken up or lengthened. By this method the maker claims the adjustment of the wheels can be made accurately.

Manufactured by the Mechanical Utilities Corporation, 5 North La Salle St., Chicago, Ill. Fully guaranteed. Price $10.

Van Dorn Aerial Grinders. The Aerial Grinder is an economical tool that can be used for many works in a garage and repair shop. It can be operated in very limited space and work can be done that would not be otherwise practical. It can be connected to any electric light fixture. It is constructed for single phase circuit, is one-third horsepower and is wired for a 60-cycle alternating current. It is equipped with one six-inch wheel, wheel guard, 10-foot electrical conductor with attachment, plug and fuses and suspension spring.

The rotor shaft is mounted on two annular ball bearings and the design insures perfect alignment. The wheel end of the extension shaft is supported by a bronze take-up bearing, which has a very simple adjustment.



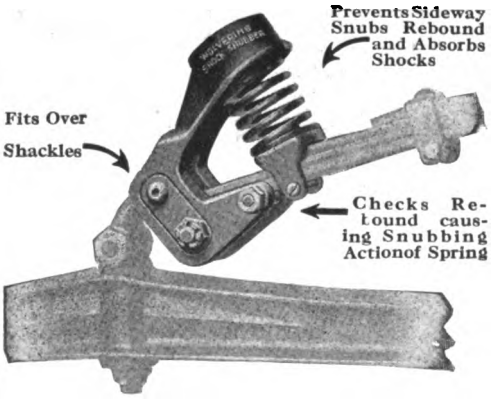
This machine is adapted for all kinds of light grinding, such as auto body work, dressing gas and arc welds, grinding castings and the like.

These grinders are made in sizes for all classes of work, such as grinding in a lathe, the work being held in a chuck, and the grinder fastened to the bed of the lathe. They are made for either direct or alternating current.

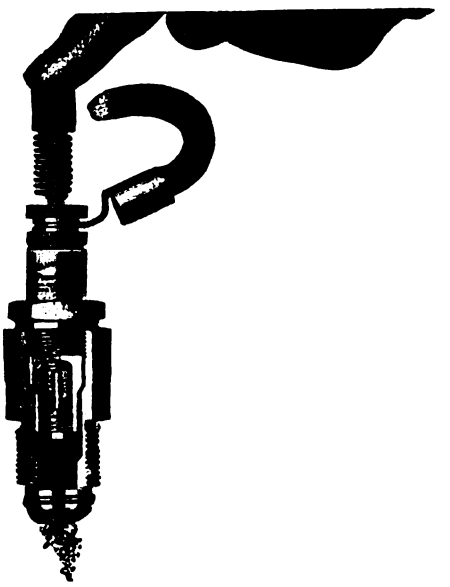
The Van Dorn Co. also manufactures a series of electric drills for garages and repair shops, for use with either direct or alternating current.

Manufactured by the Van Dorn Electric Tool Co., Cleveland, O. Prices on application.

Shock Snubber for Fords. A new shock snubber for Ford cars that is claimed by the manufacturer to prevent sidesway, absorb rebound or back throw, prevent spring breakage, increase tire mileage, prevent accidents, increase steering efficiency and relieve driving fatigue, has been placed in the market. It follows the usual construction of shock absorbers, but the side plates and castings are much heavier than those of other types and the added strength is claimed to prevent failures that are often experienced. The snubbers are fastened to the ends of the springs in the usual manner by removing the regular spring bolts and replacing them with the bolts and shackle of the absorbers, the forward ends of the absorbers being clamped to the springs of the car beneath the spring seats of the absorber. This accessory carries the regular guarantee.



Manufactured by the Wolverine Parts Co., Hastings, Mich. Prices on application.



Push Clean Spark Plug. It is an undisputed fact that the functioning of a gasoline engine is entirely dependent upon the action of the spark plug. If this useful device is broken, short circuited, or covered with carbon and oil, it makes no difference how well the rest of the machine is working, the engine will not give results.

The Push Clean Spark Plug is an innovation in spark plug design. It is both new and unique and claimed to be 100 per cent. efficient. This device consists of the conventional base, porcelain and center electrodes. The feature is the movable center electrode which is so constructed that by pressure upon the insulated top it may be pressed down, scraping away the carbon from the inside of the porcelain, as well as from the spark gap.

Two seconds time will suffice to clean all four plugs, as there is no necessity for their removal from the engine. The illustration gives a clear idea of the construction.

Manufactured by Wellman-Howe Manufacturing Co., 21 E. Van Buren St., Chicago, Ill. Price, $2.

Rose Tire Pump. The Rose Tire Pump is a single cylinder pump having patented features that the manufacturers claim make it far superior to other pumps and insures a supply of air at all times without wear. A heavy cup shaped leather is used on the plunger, air entering through the plunger rod instead of around the plunger. In the construction of this pump friction is practically eliminated, insuring

a full supply of air in the pump, with positive pressure and no leakage in the pump valve. It is made of heavy steel throughout. The Rose tire pump with its patent valve, the manufacturers claim, reduces the labor of inflating tires, making the work easier, quicker and more positive.

Manufactured by the J. H. Haney & Co., Hastings, Neb. Prices, $3 and $3.50.

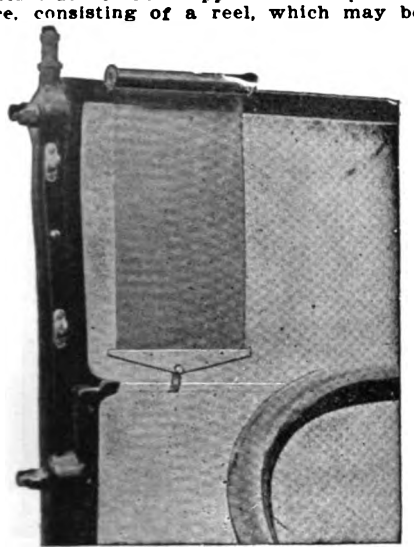
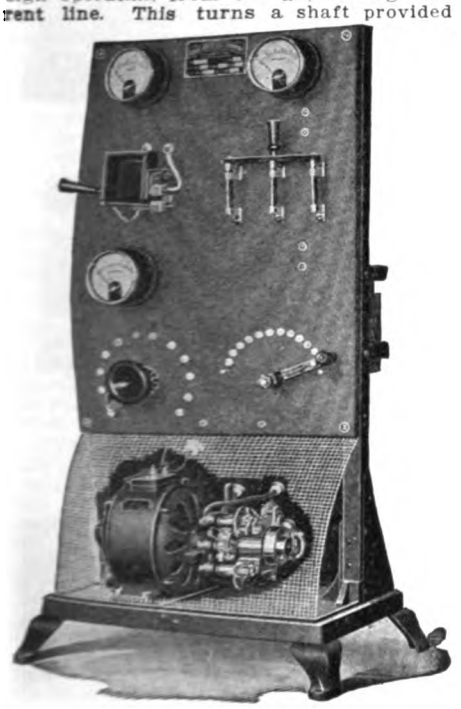
Sales Auto Glare Stopper. Every driver has at some time or other suffered the inconvenience and is aware of the danger, due to the excessive glare from the headlights of another automobile which is approaching. Some states in order to restrict the danger of accident resulting from the operator being blinded by this excessive light, have passed laws prohibiting the use of glaring headlights. The Sales Auto Glare Stopper is a simple device, consisting of a reel, which may be



attached to the top of the windshield. Upon this reel is carried a strip of colored celluloid, in a simple manner to which the ordinary window curtain is carried. At night the colored celluloid strip may be pulled out and fastened to the lower part of the windshield. Thus the blinding rays of the headlights are softened by the action of the celluloid and accidents are prevented.

Manufactured by Sales Publicity Co., 25 Carlton Court Building, Buffalo, N. Y. Price, $1.

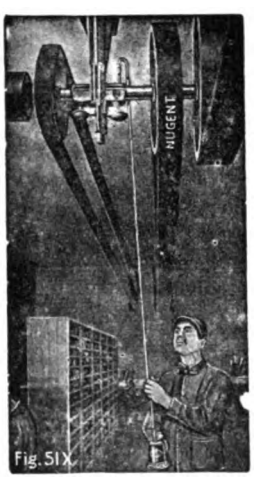
The Stahl Rectifier. Alternating current cannot be used for charging storage batteries; it must be converted to direct current before it can be used. This is the function of the Stahl rectifier, which is a low priced rectifying apparatus for garage work. The essential features are a small synchronous motor of special design operating from the alternating current line. This turns a shaft provided with collector rings and a direct current commutator. Alternating current is brought to the collector rings through brushes, taken from the rings and passed to the commutator and finally taken from the commutator as direct current by another set of brushes. The switchboard, mounted on the same frame as the motor, is provided with all the necessary switches, regulating devices, measuring instruments and automatic features. To charge a battery it is only necessary to insert a cable plug and close a switch.



This machine is made in two styles. One is for a single circuit. The other, which is for two circuit work, is illustrated in our cut.

Manufactured by the Stahl Rectifier Co., 536-538 South Clark St., Chicago, Ill. Price quoted at request.

Nugent's Shaft Oiler prevents accidents, as it does the job from the floor, saves oil and time and reduces danger to a minimum. The can holds two quarts of oil and is made of very heavy material. The pump, barrel, plunger and ball check valves may be examined, repaired, replaced or recleaned at any time, as all parts are easily accessible. The opening for the long spout is tapped one-quarter of an inch (pipe tap), so by using an elbow or a 45 degree L at this point the spout may be set at right angles or 45 degrees. The curved nozzle at the top end may be changed to suit conditions.



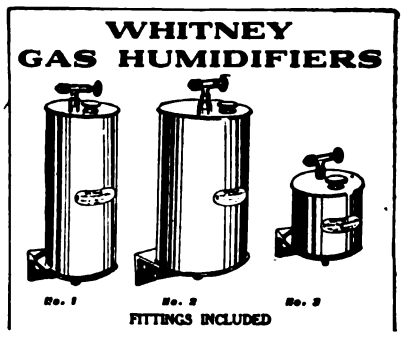
Manufactured by Wm. W. Nugent & Co., Chicago, Ill. Price quoted at request.

The Whitney Gas Humidifier. This apparatus consists of an upright cylindrical task, which is a reservoir for water and contains only a float valve and a lead pipe, which is attached to an outer connection and an adjustable needle valve. From this lead, copper tubing connects the humidifier with the manifold. When the motor is started the vacuum action in the intake manifold is effective throughout the entire system, vaporizing the water and uniting it with the gas mixture in the manifold, perfecting the combustion.

The introduction of water vapor into a motor is a carbon remover; that is, water in the combustion chamber at the time of the ignition stroke turns into steam, which prevents the formation or accumulation of carbon.

The application of the Whitney Gas Humidifier to any internal combustion motor will eliminate carbon, increase the flexibility of the motor and save fuel. Tests conducted have proven an increase of two to seven miles to the gallon of gasoline.

The Whitney Gas Humidifier is manufactured in two models for cars and a smaller size, No. 3, for motorcycles. The two sizes for cars are No. 1 and No. 2. Both are alike, the difference being in water capacity. Approximately 300 miles



may be obtained with one filling of No. 2 and 150 miles with No. 1.

Manufactured by The R. S. Whitney Manufacturing Co., 74 Nichols St., Lewiston, Me. Prices, No. 1, $8.50; No. 2, $10.50; No. 3, $8.50.

"Rusco" Brake Lining and Clutch Facing. Claim is made that more than 39 years of experience are represented in the

development of the looms which weave Rusco products and more than 25,000 shuttles are now engaged in Rusco manufacture. Only the best grade of Canadian long fiber asbestos is used in the manufacture of Rusco products. This fiber is solidly interwoven with fine brass wire (no copper wire being used) by powerful looms that insure a close, uniform weave. The fabric is impregnated with a highly developed heat and wear-resisting compound which is not affected by oil, water, grease or dirt. The material is soft and pliable with a close hugging friction surface, positive in its response to braking conditions. It is woven to correct size by special equipment and does not have to be rolled to size in fitting. This makes for elasticity and long life. The fabric retains its texture unstiffened and is unweakened by the crushing pressure of rolling.

Beside Rusco brake lining, clutch facings are also manufactured from the same material as the brake linings. These are made in stock sizes and adapted for practically all cars and trucks.

Manufactured by the Russel Manufacturing Co., Middletown, Conn. Prices and literature on application.

Universal P. V. Ammeter. The Universal P. V. Ammeter is a new instrument of superior merit recently placed in the market. Claim is made by the manufacturer that it may be installed in any car equipped with a starting and lighting system of either single or double unit type. It is applicable to all makes and types of lighting and starting systems and all voltage systems. This is a point that is of particular interest to the garage or repair man, as in the past he has been unable to recommend an ammeter that could be fitted to any car regardless of the type of starting and lighting system used. With the Roller-Smith Universal Ammeter

this is possible, as it makes no difference, the manufacturer claims, what make and type of car and system is installed, as this instrument will operate satisfactorily under any conditions, it having been designed especially for cranking circuit use. The ammeter is a flush type, finished in black, with a range from 30-0-30 amperes. The diameter of the body of the ammeter is two inches and the opening required for its insertion in the dash is 2 1/16 inches. Each ammeter is furnished with full supply of mounting screws, nuts and washers. Directions for wiring are included with each instrument.

Manufactured by the Roller-Smith Co., 233 Broadway, New York City. Prices on application.

"Eco" Air and Water Stations. The "Eco" air and water station is an equipment designed for the garage owner who has need of supplying his customers with air and water service 24 hours a day. This outfit is operated on the prepayment plan by dropping a nickel into a slot at the side of the machine, allowing the motorist to draw out an air hose and obtain air under pressure for inflating the shoes of his car, or draw water from a faucet on the front of the machine for refilling a radiator. The outfit may be connected to any air pressure system in the garage or may be equipped with a one-quarter horsepower motor for alternating current, single-phase, 110 volt circuit to be connected to the regular shop wiring system; or it may be equipped with a motor wound for use on a 32-volt circuit, for use in isolated sections where power is only available from a farm or inn power plant. The motor and air pump are located in the base in this type of outfit and are easily accessible in case repair is necessary. The air hose is wound on a large reel in the case, which by spring tension automatically reels the hose after use. The manufacturer claims that this outfit will pay for itself in from eight to nine months with the cash received from motorists.

The "Eco" air and water station is especially adapted for use at amusement parks, inns, moving picture shows, summer resorts, etc., as it may be placed in any convenient place and being self contained all that is necessary is to connect it to a source of electrical current and a water supply and it is ready for business. On special order the station may be

equipped to operate on either a nickel, a dime or a quarter.

Manufactured by the Western Manufacturing Co., Oskaloosa, Ia. Prices: No. 12, $125; No. 10, $110; No. 17, $250; No. 15, $235; No. 19, $335; No. 21, $350, f. o. b. Oskaloosa, Ia.

Revolving Cases. Automobile repair stations and truck service stations can make good use of a combination cabinet or case for stocks of bolts and screws. These cases are made to revolve on a central axis at the bottom and are fitted to hold a large assortment of sizes of bolts or bolts and screws.

The drawers are either made in triangular or rectangular form as the customer wishes for his special needs, from the best Tennessee poplar, finished in imitation mahogany. The fronts of the drawers are made of the best Norway pine, with the sizes they contain nicely printed on them. With this cabinet the sizes may be kept separate, so a stock clerk can get

any size wanted at a moment's notice. In the rectangular cases the drawers are made in several sizes so that bolts and screws may be carried in combination.

This style may be had upon special order with the size of drawers best suited to the customer's wants. They are made in the same substantial manner as the other cases, by experienced cabinet makers, are well finished and the manufacturer claims they will last indefinitely. Each drawer has a substantial label holder and a quantity of extra blank labels are furnished with each case.

Manufactured by the American Bolt and Screw Case Co., Dayton, O. Prices and literature on application.

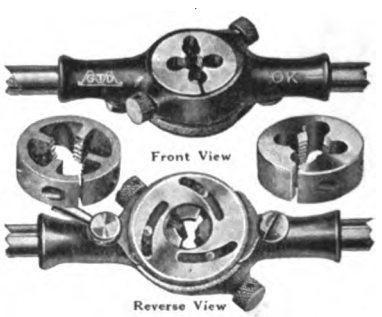
Auto Camp Stove. The Auto Camp Stove is designed for the autoist who wishes to have a small portable stove that may be carried in the car and may be set up and operated in a few moments time; that can be used for heating water, making tea or coffee, etc., while touring.

The manufacturer claims that this stove embodies all the desirable features of a camp stove. The designer after many years experience building gasoline stoves

feels that he has produced an article that has every quality demanded. The Auto Camp Stove may be safely used in a tent or shack, as it can be easily and quickly set up and made ready for use. It may be carried on the running board of the car, ready for instant use.

Manufactured by the Auto Camp Stove Co., Fort Wayne, Ind. Prices on request.

O. K. Screw Plates. A set of tools that will prove interesting to the garage and service station repairers is known by the trade name of O. K. screw plates and taps. For threading rods and rethreading bolts and tapping nuts these tools have no equal, the manufacturer claims. The O. K. dies are forged from flat bar steel, as forging improves the steel and makes the dies cut sharp, clean threads. Spaces



are left in the backs of the dies for chip clearance. Chips cannot clog O. K. dies. These spaces also make it possible to apply oil to the cutting teeth

O. K. stocks are made with an adjustable guide. This takes the place of the heavy solid guides furnished with other makes of screw plates. The cam guide is easily set to the size rod to be threaded and locked. The outfit is convenient, light and inexpensive.

Manufactured by the Greenfield Tap and Die Corporation, Greenfield, Mass. Prices on application.

RECORD OF BUILDING OPERATIONS FOR JUNE

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Denver, Col.; Cartwright Tire Co., First and Broadway; one-story garage, 75x75; $10,000.

Denver, Col.; Guy Harrison; one-story garage, 50x125; $14,000.

Denver, Col.; Hannah Wormington; one-story garage, 50x125; $10,000.

Denver, Col.; J. H. Smith; one-story garage, 50x100; $35,000.

Denver, Col.; Evans Investment Co.; two-story garage, 65x100; $30,000.

Bridgeport, Conn.; William Schmidt, 1118 Main street; one-story garage, 50x114.

New Britain, Conn.; Samuel Greenberg, 94 Hartford avenue; one-story garage, 44x68; $8000.

New Haven, Conn.; Joseph Kligerman, 300 York street; one-story garage, 58x80; $8000.

Waterbury, Conn.; J. La Rose, 17 West Liberty street; one-story garage; $7500.

Waterbury, Conn.; Antonia Germa, 73 Union street; one-story public garage, 39x48; $6000.

Waterbury, Conn.; Andrew Anderson; one-story public garage, 38x66; $4500.

Washington, D. C.; A. G. Voight, Home building; two-story garage, 50x100; $25,000.

Washington, D. C.; N. Auth Provision Co.; two-story garage, 61x85; $3000.

Washington, D. C.; Ernest D. Ryerson, 1843 Kilbourne street; one-story garage, 50x110; $50,000.

Washington, D. C.; James E. Granberry, Fleming building; 50 one-story garages; $10,000.

Macon, Ga.; McCord & Catterfield; four-story reinforced concrete auto and tractor building; 210x210.

Chicago, Ill.; Roy P. Donovan, 4432 Berkley avenue; one-story garage, 47x64; $7500.

Chicago, Ill.; United States Brewing Co., 38 S. Dearborn street; one-story garage, 130x169; $50,000.

Chicago, Ill.; Z. Erol Smith, 5501 S. Prairie avenue; two-story garage, 50x138; $30,000.

Chicago, Ill.; Henry J. Schacks, 721 N. Michigan avenue; 1½-story garage; $2000.

Chicago, Ill.; Mrs. E. K. McCumber; one-story garage; $15,000.

Chicago, Ill.; Stanley Paicus; one-story public garage, 60x126; $18,000.

Chicago, Ill.; S. M. Seator, 35 N. Dearborn street; two-story garage and machine shop, 106x150; $60,000.

Chicago, Ill.; L. Affeldt, 795 S. Morgan street; one-story garage, 25x52; $7000.

Chicago, Ill.; Walter G. O'Boile, 723 Melrose street; one-story garage, 20x46; $2000.

Chicago, Ill.; A. P. Dippold, 4747 S. Cottage Grove avenue; one-story public garage, 100x253; $90,000.

Chicago, Ill.; A. W. Quanstrom, 6374 Paxton avenue; one-story garage, 50x117; $2[illegible]000.

Melrose Park, Ill.; Mike Moreno; one-story garage, 65x90; $7500.

Robinson, Ill.; A. L. Maxwell Co.; Lawrenceville, Ill.; three-story garage; $50,000.

Staunton, Ill.; Charles Blackwell; one-story public garage, 60x115; $10,000.

Troy, Ill.; J. C. McLanagan, Collinsville, Ill.; one-story public garage, 30x84; $6000.

Anderson, Ind.; S. L. Brook, Lovett building; two-story public garage, 70x144.

Beaucville, Ind.; W. Stevens; one-story public garage, 100x148; $20,000.

Indianapolis, Ind.; A. H. Mock, 326 N. Brancroft street; one-story public garage, 44x122; $3500.

Indianapolis, Ind.; Frank N. Linder, E. New York and Oxford streets; one-story public garage, 73x105; $7000.

Indianapolis, Ind.; E. M. Hardin & Co., 534 N. La Salle street; one-story garage, 120x120; $9000.

Rockport, Ind.; A. E. Moore; one-story public garage, 40x70; for Fishback & Co.; $7000.

Tabor, Ind.; Sheirbon & Williams; one-story garage, 65x100; $14,000.

Union City, Ind.; Adlesberger; one-story garage, 70x100.

Cedar Rapids, Ia.; A. J. Smith, Granby building; one-story garage, 40x140; $12,000.

Cherokee, Ia.; Flanz Jenkins; one-story public garage, 25x70; $16,000.

Cherokee, Ia.; E. W. Nelson, 219 W. Locust street; one-story brick garage, 30x70; $12,000.

Cherokee, Ia.; L. Florine, 912 W. Willow street; one-story public garage, 25x70; $11,000.

Clarinda, Ia.; Edwin L. Leslie; one-story public garage, 140x140; $35,000.

Clarion, Ia.; O. Day Auto Co.; one-story public garage, 66x120; $12,000.

Hampton, Ia.; Peter Murphy; one-story public garage, 130x132; $30,000.

Rolfe, Ia.; Rolfe Auto Co.; one-story public garage, 50x132; $15,000.

Louisville, Ky.; J. B. Hillson; one-story brick garage; $5000.

Louisville, Ky.; F. Erhart, 409 Norton building; one-story public garage, 50x110; $15,000.

Richmond, Ky.; Richmond Motor Garage Co.; one-story fireproof garage, 63x170.

Baltimore Md.; H. E. Engnoth, 100 N. Highland avenue; two one-story garages, 10x18 each; $4000.

Baltimore, Md.; George Klein, 2921 Belmont avenue; one-story garage; $7500.

Baltimore, Md.; John R. Rafferty, 548 N. Payson street; one-story garage, 10x18; $1500.

Baltimore, Md.; Acme Building Co.; care Louis Piercus, Equitable building; one-story garage; $18,000.

Baltimore, Md.; James Keelty, 1123 Poplar Grove street; two-story public garage, 52x100; $20,000.

Baltimore, Md.; Temple Joyce, 415 E. 25th street; three-story garage; $150,000.

Baltimore, Md.; E. Crouch, 3002 York road and Morris Lesser, 3702 York road; one-story garage, 81x200, at 2819 Greenmount avenue; $25,000.

Baltimore, Md.; G. Richard Good, 512 N. Eutaw street; one-story garage, 50x75; at Reistertown road and Garrison avenue.

Baltimore, Md.; Colonial Garage Co.; one-story garage 80x200; on Greenmount avenue between 28th and 29th streets.

Baltimore Md.; George Conn, 3800 Park Heights avenue; eight garages; $15,000.

Baltimore, Md.; Henry A. Knott & Co., 2101 N. Calvert street; 10 one-story garages, 16x18 each; $4000.

Baltimore, Md.; J. C. Spedden, 2715 Harlem avenue; one-story garage, 46x127; $7500.

Baltimore, Md.; Acme Garage and Auto Co., 912 Love Grove avenue; one-story garage, 90x160; $20,000.

Easton, Md.; Harry E. Clark; one-story garage and show room, 50x100; $12,000.

Boston, Mass.; W. E. Jackson, care C. F. McFarland, 163 Newburg street; one-story public garage, 70x300.

Cambridge, Mass.; Archie J. Card; two-story public garage, 52x62.

Greenfield, Mass.; W. E. Benson, 132 Main street; two-story public garage, 50x100; $20,000.

Lexington, Mass.; Paul Revere Garage Co., Inc.; one-story garage, 50x50; $15,000.

New Bedford, Mass.; Manuel Perry, 177 Thompson street; one-story public garage, 52x104; $12,000.

Somerville, Mass.; Herbert Kingman, 14 Westwood road; one-story garage, 20x20; $5000.

Springfield, Mass.; Joseph Weisenberg, 91 Belle avenue; one-story public garage, 95x108; $20,000.

Springfield, Mass.; Austin C. Wigglesworth, 25 Harrison avenue; one-story garage and salesroom, 84x145; $45,000.

Springfield, Mass.; Chaplin Realty Co., 441 White street; one-story public garage, 50x145; $22,000.

Waltham, Mass.; Gertrude E. Straut, 30 Dexter street; one-story garage, 65x74; $4000.

Detroit, Mich.; Carl Rhutenberg, 1355 Scotten avenue; 1½-story garage, 24x26; $3000.

Detroit, Mich.; William Baird, 267 Baker street; one-story garage, 26.5x112; $3000.

Detroit, Mich.; George H. Schubitt, 119 End avenue; one-story garage, 60x100; $8500.

Detroit, Mich.; G. H. Frederick, 48 Hill avenue; one and two-story garage, 60x100; $8000.

Detroit, Mich.; George H. Raynor, 2013 Dime Bank building; one-story garage, 12x15; $3500.

Detroit, Mich.; Morris A. Jack, 186 E. Hancock avenue; one-story garage, 59x183; $25,000.

Detroit, Mich.; Lee & Grady; one-story garage, 75x130.

Jackson, Mich.; H. R. Graf, 502 Carter building; two-story garage, 60x80.

Ellendale, Minn.; C. Aronsen, Waseca and Ellendale streets; one-story public garage, 50x130; $15,000.

Fairmont, Minn.; Fairmont Auto and Realty Co.; one-story public garage, 52x150; $22,000.

St. Paul, Minn.; W. McLellan, 531 Greenwood avenue; one-story garage, 49x110; $8500.

Jefferson City, Mo.; Leo Havlich-Neider; two-story garage, 52x198; $18,000.

Kansas City, Mo.; J. R. Samuel, purchasing agent; one-story garage, 52x80; $25,000.

Kansas City, Mo.; O. B. Shaw, 3700 Agnes avenue; one-story garage, 38x50.

Kansas City, Mo.; Jensen-Salsbery Laboratories, 2037 Penn street; one-story brick and stone garage, 48x105.

Sedalia, Mo.; J. R. McAllister, 209 S. Osage street; one-story garage, 91x120; $25,000.

St. Louis, Mo.; Columbia Taxi Cab Co., 4533 Delmar boulevard; one-story garage, 128x300; $100,000.

Papillion, Neb.; J. L. Clarke, 1½-story garage, 20x26; $2000.

Newark, N. J.; Mrs. Rosina Romano, 20x60; $21,000.

Newark, N. J.; Gottfried Golz, 268 Verona avenue; one-story garage, 17x53; $3000.

Newark, N. J.; I. Cohn, 36 Mercer street; one-story public garage, 58x165; $18,000.

Newark, N. J.; G. H. Lane, 208 Ridge street; one-story garage, 18x49; $15,000.

Newark, N. J.; H. Baer & Sons, 840 S. 19th street; one-story garage; $3000.

Newark, N. J.; Offenkrantz & Mark, 117 Belmont avenue; one-story garage, 20x54x55x20; $4000.

Newark, N. J.; Heller Construction Co., 800 Broad street; one-story garage, 65x65; $5000.

Newark, N. J.; Louis Koplowitz and Morris Scharff, 207 Market street; one-story public garage, 48x130; $12,000.

Newark, N. J.; Herman H. Schary, 604 High street; one-story public garage, 75x100; $18,000.

Newark, N. J.; Okin Realty Co., 790 Broad street; one-story public garage, 97x130; $20,000.

Financial Notes

FISK RUBBER.

The growth in the sales of the Fisk Rubber Co. has made desirable at this time a revision and increase in the capitalization and the directors have consequently decided to issue $15,000,000 of new seven per cent. first preferred and $2,500,000 of seven per cent. second preferred. The first preferred will be issued at $100 and the second preferred at $135 per share. Both issues have been underwritten. With the proceeds from the sale of the new first preferred and additional second preferred the present first preferred, callable at $120, and the first convertible preferred, callable at $110 a share, will be retired.

The first preferred stockholders of record June 10 will have the right to subscribe to the new first preferred stock and second preferred and common stockholders of record July 15 will have the right to subscribe to the new second preferred.

The capitalization of the company after the new financing will consist of $15,000,000 of seven per cent. first preferred, $7,000,000 of seven per cent. convertible second preferred and $8,000,000 of common stock.

DU PONT.

The du Pont interests, under the leadership of Pierre S. du Pont, chairman of the board of directors of the E. I. du Pont de Nemours & Co., are planning the formation of a $250,000,000 du Pont Securities company, to be capitalized with 2,500,000 shares of $100 par value each. The new company's stock will be exchanged par for par for the stock of the explosives company. It was explained recently by officers of the company that the directors were finding it desirable to invest a considerable part of the surplus which has been accumulating ever since the European war started in industries other than the explosive business. Now it is supposed these investments will be made for the benefit of the new du Pont Securities company, while the explosives business will continue under the management of the du Pont de Nemours & Co. organization.

STROMBERG CARBURETOR.

The Stromberg Carburetor Co. of America, Inc., for the three months ended March 31 last, reports earnings of $157,146 and other income of $1514, making total income of $158,661. Administration and general expenses amounted to $46,959, leaving net profits of $111,702. A reserve of $25,000 was set aside for Federal taxes for 1919, and on March 15, 1919, $25,000 was paid for war taxes. Dividends amounting to $50,000 were paid, leaving a total surplus as of March 31, of $1,207,312. The consolidated balance sheet shows cash amounting to $36,220, Liberty bonds, $50,000; notes and accounts receivable of $212,277, inventories of $566,998, and deferred charges of $66,068. Property and plant were carried at $589,357 and patents at $131,476, making total assets of $1,652,397. Accounts payable and accrued accounts amounted to $135,597, the reserve for Federal taxes to $25,000, and deferred liabilities to $1,207,312.

STEEL MARKET.

Pittsburgh—There has been a further improvement in the demand for sheets and the great bulk of the business is being done at full or regular prices. There continues to be shading, but it affects no more than approximately 10 per cent. of the total sales. No serious fears are entertained that wage disputes will interfere with mill operations. While it is quite improbable that an agreement will be reached by July 1 with the Amalgamated Association on the scale, it is thought that there will be no more idleness than that of a few union mills at the outside.

An order for 245,000 tons of steel has been placed with the United States Steel Corporation by the General Motors Corporation. The Ford Motor Co. has placed an order for 150,000 tons.

Demand for long ternes, which are used almost exclusively by automobile builders for certain parts of cars in place of galvanized sheets, is very heavy, and some mills are sold out for three or four months to come.

Chicago—Mill quotations are 4.35c for No. 28 black; 3.55c for No. 10 blue annealed and 3.55c for No. 28 galvanized. Jobbers quote Chicago delivery out of stock: No. 10 blue annealed, 4.57c, No. 28 black 5.37c and No. 28 galvanized, 6.72c.

CHANDLER MOTOR.

The Chandler Motor Car Co. has declared a quarterly dividend of $4 a share, payable July 1 to holders of record June 18. This places the stock on a $16 annual basis, as compared with the $12 yearly rate which has obtained heretofore.

Following the meeting of the directors of the company President Chandler issued the following statement:

"Business is splendid and the directors feel justified in putting the stock on a regular dividend basis of $4 quarterly. The 1919 output will be the largest the company has ever had and this will be the most prosperous year in the company's history, and plans call for an even larger output next year. The company is in a very strong cash position, having on hand cash and government securities amounting to $4,500,000."

MARTIN-PARRY.

The Martin-Parry Corporation, representing a consolidation of the Martin Truck and Body Corporation, York, Pa., and the Parry Manufacturing Co., Indianapolis, Ind., has been formed with a capital of 100,000 shares of no par value. The company will go into the manufacture of automobile commercial bodies and parts on an expanding scale. Among the directors will be Guy E. Tripp, James F. Shaw, F. M. Small, S. C. Parry, Walter R. Herrick and George H. Walbridge.

WHITE MOTORS.

Stockholders of White Motors have approved the increase in the capital stock from $16,000,000 to $20,000,000. The intention of the directors to declare part of this increase as a stock dividend only awaits a decision by the United States Supreme Court that such a declaration is not subject to the income tax, which expected to be rendered soon after the reassembling of the court on Oct. 6 next.

FISHER BODY.

The annual report of the Fisher Body Corporation for the year ended April 30, 1919, shows a surplus of $1,298,750 after charges. Federal taxes and preferred dividends, this being equivalent to $6.49 a share on the outstanding common stock. In the previous year the surplus was $2,528,177, or $12.64 a share on the same stock.

GENERAL MOTORS.

The stockholders of the General Motors Corporation have approved an act of the directors increasing the capital stock from $370,000,000 to $1,020,000,000, divided between $500,000,000 debenture stock, $500,000,000 common stock and $20,000,000 preferred stock.

Gastine Organization Develops World Business

THE GASTINE CO., Bridgeton, N. J., is the manufacturer of the famous product bearing the name Gastine, the power producer, carbon remover and gasoline saver. This product has been on the market for over four years and already has world-wide distribution. The company was started in a small way by its founder, I. W. Goldberg, who is now the president and general manager. Mr. Goldberg, ably assisted by H. L. Whitney, general sales manager; Roger Thomas Butts and Frederick J. Werner, both the latter being connected with the export department, has built up an organization that reaches to the four corners of the earth.

The low grades of gasoline and kerosene need rejuvenation, such as Gastine gives. Poor gasoline causes a quick accumulation of carbon in the cylinders.

The rapid growth of the Gastine Co. is due to the fact that the organizers are practical men. Mr. Goldberg studied chemistry at the West Jersey Military Academy. Mr. Whitney is a practical oil investigator. Fate, it seems, brought these two men together both for the welfare of the motorist and the future of this organization.

During the world war it was a problem for the export department to ship its orders to its distributors in the various parts of the world, but it was one of the very few firms that was never refused an export license to ship Gastine, even though shipping space was at a premium. This is indeed a record that can only be appreciated by men who have had to do with export shipping.

Recently when the luxury tax was put on automobile accessories, the head office of the Internal Revenue Commission issued a ruling that inasmuch as Gastine was a product to rejuvenate low grades of gasoline it was non-taxable.

Many big corporations, chemists and municipalities use, indorse and recommend Gastine. Some recently added to the list are Wilson & Co., the big Chicago meat packer; the chief of the fire department of Birmingham, the City of Waltham, Mass.; Walter H. Flood, expert chemical engineer of Chicago; Milton Hersey & Co., Ltd., Montreal, Canada. And so on it goes, testimonial after testimonial praising Gastine.

The Philadelphia branch of the War Trade Board indorsed and used Gastine, the indorsement coming unsolicited. Gastine booths were in charge of various salesmen at the following shows last spring: New York, Philadelphia, Boston, Allentown, Paterson and some in the West and in Canada. Thousands of boxes were sold at these shows, resulting in many new customers and also many new dealers.

The sales method of this company is a little peculiar, in that it does not sell its output entirely through wholesalers. The company sells through resident distributors, who in turn sell to jobbers, dealers, garages, etc. Many drug stores have recently taken on the sale of Gastine, as well as hardware, department and general merchandise stores.

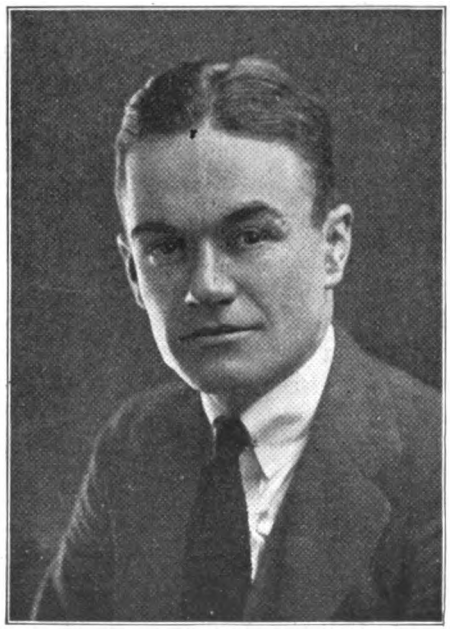
Cloud Again Advance Advertising Manager

Kenneth Cloud has resigned from the Touzalin Agency, Chicago, to resume duties as advertising manager of the Advance Automobile Accessories Corporation, 56 E. Randolph street, Chicago. He was identified with Advance in its early days, when he directed its national campaign. Advance's advertising has become so big that the officers of the company decided to have their own advertising department.

"It is very satisfactory," says M. C. Smith, sales manager of Advance, "when I read out missionary men's reports and find on one after another—'Cork Insert and White Stripe in stock; well satisfied.' Look at these reports—from all over the United States, and most all of them from small towns. That shows we have a good distribution, and if our goods were not right dealers would not stock them. Of course, all the jobbers carry stock—they are supposed to; but it's the dealer's stock that tells the story of successful goods and distribution.

"Advance has territorial salesmen, calling on jobbers, and each salesman has two missionary men constantly combing the territory for new avenues of business. The selling plan has been met by all jobbers and dealers in a most gratifying manner and today, after two years in the field, Advance shows a sales distribution that is quite remarkable."

M. C. SMITH.
Advance's Sales Manager.



K. G. CLOUD.
Advance's Advertising Manager.

MORMILES TABLETS FOR INCREASING GASOLINE EFFICIENCY.

Mormiles tablets are for use in gasoline, kerosene or distillate, for automobiles, trucks, tractors and gas engines. They may safely be used in the highest grade machines. Greater power and mileage are obtained with the added value

of cleaning the motor and keeping carbon eliminated. The manufacturer guarantees that the tablets do not contain anything injurious or detrimental to any metal, or to the mechanism or operation of any motor, carburetor or vacuum feed system.

Mormiles tablets have been manufactured for about two years and have reached such a point of efficiency as to warrant the manufacturer in guaranteeing the product in every respect.

Full information will be supplied by writing to the Mormiles Co., 226 So. La Salle street, Chicago.

Ralph O'Reilly, for two years with the sales department of the Sparks-Withington, Jackson, Mich., is now sales manager.

Ahlberg Bearing Co. Has Moved into Its Splendid New Factory in Chicago

The New Factory Building of the Ahlberg Bearing Co., Chicago, Which Is Operated with 17 Branches in Different Cities of the Country.

The Ahlberg Bearing Co., which specializes regrinding worn ball bearings for replacement purposes for motor trucks, passenger cars and machinery, recently moved into a new factory at 317-327 East 29th street, Chicago.

There are numerous interesting aspects of this particular industry. One of these is the exchange system. Throughout the country the company has a chain of branches, located in 17 cities, which have complete stocks of reground and new bearings.

A customer desiring a reground bearing for replacement may take the worn unit from his truck or car and at the nearest Ahlberg factory office exchange it immediately for a reground bearing of the same make and type. No additional charge is made for this exchange service, it being maintained for the customer's benefit.

During the 10 years of its existence the company has accumulated a stock of all sizes and types of bearings, many of which are now obsolete. If a customer has a bearing of obsolete type he can usually have it exchanged at one of the Ahlberg branches without delay, whereas if he tried to secure a new one from the original manufacturer he could not procure it.

At each factory branch there is a service man who has been through a school maintained at the factory, who is able to give customers information of their replacement problems and of new special bearings. Each of these service men have been trained in a course which covers at least a month of full eight-hour days. He first works at what is called the disassembling bench. At this he tears down worn bearings until he is thoroughly familiar with all different types and sizes and the defects of each type and size.

He next works in the grinding room, where he observes the methods of the grinders. He is not permitted to do actual grinding work, as this would interrupt production and might lower the quality which is carefully maintained in the grinding room. From observing the grinders he learns what is necessary to make a perfectly true raceway. He next observes the inspectors and from experience learns the methods of inspection. He is next turned over to the assemblers, who instruct him in the methods of assembling the various types of ball bearings.

Following this and some other steps taken in between he works in the Chicago service department for approximately two weeks. This experience makes him thoroughly capable of giving truck owners or fleet owners the best possible advice obtainable on short notice.

FULLER & SONS MFG. CO. LARGELY INCREASE BUSINESS.

Statement is made by Fuller & Sons Manufacturing Co., Kalamazoo, Mich., that its shipments of products for the first five months of this year exceed by 62 2/3 per cent. the shipments made during the corresponding period of 1918. A great demand exists for the new four-speed type GU transmission gearset for unit mounting for two and 3½-ton chassis. Delivery is just beginning of models LTU-4 and LTU-5 for unit mounting and LT for amidship mounting. These gearsets have a four to one low gear ratio, which is a reduction much desired for truck construction; have three forward speed ratios and reverse, and are fitted for pumps for inflating pneumatic tires and power take-off installations. They are regarded as the greatest advance in transmission gearset design.

SHEEPSHEAD'S WINNERS HAD DIXON'S THROUGHOUT.

Of the nine cars that started in the first 10-mile race at Sheepshead eight were lubricated throughout with Dixon's graphite automobile lubricants. These included Tom Milton, Ralph Mulford and Dario Resta. In the 30-mile event Dixon's finished first, third and fourth, in the Frontenac with Mulford, the Meteor with Dave Lewis and the Mercer with Joe Thomas. In event No. 3 the first, second and fourth winners were Dixonized throughout, in cars driven by Mulford, Joe Boyer and Lewis. In the 50-mile race all but one car was lubricated with Dixon's throughout.

JOIN MOTOR AND ACCESSORY MANUFACTURERS.

The following were recently admitted to membership in the Motor and Accessory Manufacturers' Association:

Auto Wheel Co., Lansing, Mich.; Benjamin Electric Manufacturing Co., 806 W. Washington Boulevard, Chicago, Ill.; Black & Decker Manufacturing Co., 105-115 S. Calvert street, Baltimore, Md.; Budd Wheel Corporation, 22nd street and Lehigh avenue, Philadelphia, Pa.; Columbia Axle Co., 850 East 72nd street, Cleveland, O.; E. Edelmann & Co., 351 East Ohio street, Chicago, Ill.; William R. Johnston Manufacturing Co., 359 East Ohio street, Chicago, Ill.; Parker Axle and Products Corporation, 19 West 44th street, New York; Standard Tire Co., Willoughby, O.; Sunderman Corporation, Lake and Ann streets, Newburgh, N. Y.; Texas Co., 17 Battery Place, New York; U. S. Ball Bearing Manufacturing Co., 4535 Palmer street, Chicago, Ill.

BREMER PERMANENTLY ENTERS FORD RADIATOR FIELD.

The Bremer Manufacturing Co., Chicago, has permanently entered the Ford radiator replacement field during the past year and has developed a replacement business in both fin tube (regular Ford type) and the honeycomb type. Sales Manager Ian E. Maltby reports that the war period left the company with no bad effects and that the Ford replacement department of the business will soon equal the company's special truck and tractor radiator business. The company for many years has been a heavy producer in the truck and tractor field.

FRACTO SPECIALTY CO. TO MARKET DIRECT TO TRADE.

The Fracto Specialty Co., 161 Massachusetts avenue, announces that hereafter it will market its products direct to the trade, discontinuing all connections through which it has sold to the trade. The company is handling Franco lenses, Universal vulcanizers, Ford radiator caps, accelerator foot rests and electrical connections.

ECHOLS VICE PRESIDENT OF GREENFIELD TAP AND DIE.

F. G. Echols, for many years general manager of the small tools department of Pratt & Whitney Co., Hartford, Conn., has accepted a position as vice president of the Greenfield Tap and Die Corporation, Greenfield, Mass.

PRISON FOR AUTO THIEVES.

Gov. Coolidge of Massachusetts has signed a bill which makes the larceny of automobiles or motorcycles a prison offense.

Reflex equipped White Truck in road work at one of the cantonments,

—a service that helped make the quality of Reflex Plugs a known quantity.

Proved Past Performance Sells Reflex Spark Plugs

Past performance sells Reflex Spark Plugs. Dealers point to the real reliability that has been given in the hardest known service—in war and commercial trucks. That is a definite argument which testifies convincingly to the quality of Reflex Plugs—reliability that makes it profitable to sell Reflex Plugs.

In every service these plugs have proved their merit. Good roads are now being maintained good, new roads are being built, and poor ones improved to a great extent by Reflex equipped trucks. In this work as standard equipment on White Trucks, the Reflex "Giant" urged these trucks on rigid schedule through the almost impassable sites selected for cantonments. Next, Reflex Plugs were materially responsible for building roads to them—and later, in keeping them in as good shape as many roads today.

As a dealer you will appreciate these tangible facts—of learning of Reflex past performance.

You can see how Reflex known quality, selected by the critical White engineers because of Reflex high-duty electrodes and cromite war-service porcelain, will make sales and hold trade for you.

And you can learn of the better Reflex proposition by simply writing to your jobber or us today for details. You can learn how the Reflex Company, a long established concern, helps you to sell—how you can sell a Reflex for every purpose to every user whether for passenger car, truck, motorcycle, tractor or motorboat. A post card brings the details.

WAR CAR RUMOR MONGER IS AGAIN UNDER ARREST.

Captured by secret service agents, Frank E. Speicher, who is alleged to have spread throughout the country rumors that the United States government planned to flood the market with war cars, is again under arrest.

SHEEPSHEAD RACES.

(Continued from Page 22.)

whirled down the home stretch and over the line, leading by more than a mile.

Lewis came in second by only three feet, Boyer third, Thomas fourth and Hickey fifth. De Palma on his last lap came down the home stretch at a speed estimated at about 115 miles an hour.

Nearly all of the races were run at a speed of between 112 and 113 miles an hour average.

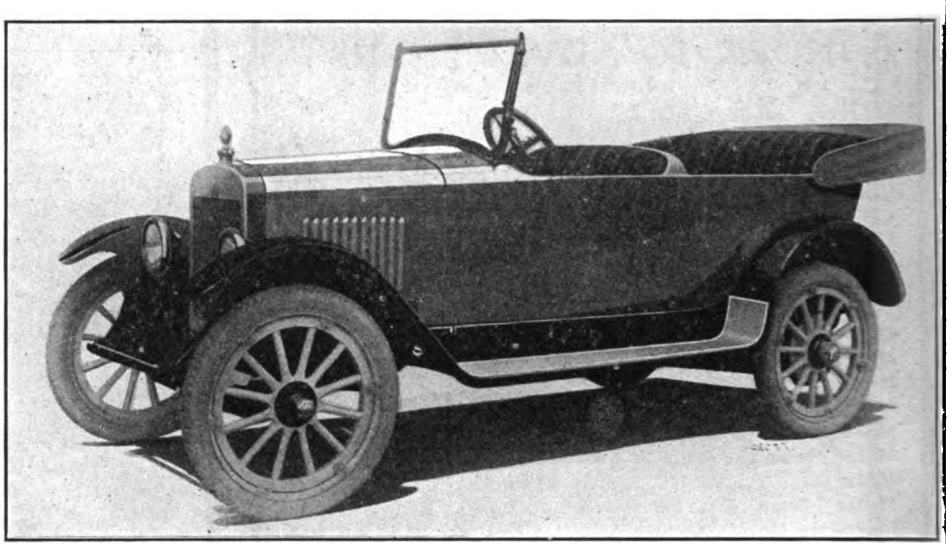
THE SUMMARIES.

Ten miles, race one, Class E, non-stock, 300 or under cubic inches displacement—Won by Tom Milton, Duesenberg; Ralph Mulford, Frontenac, second; Dario Resta, Resta Special, third (time, 5:20 1/5; new record); De Palma, Packard, fourth; Ray Howard, Peugeot, fifth; J. M. Reynolds, Frontenac, sixth; Joe Thomas, Mercer, seventh; Ralph Mulford, Frontenac, eighth. Ira Vail, Hudson, quit from engine trouble at six miles. Louis Chevrolet, Frontenac; Dave Lewis, Meteor, and Joseph Boyer, Jr., Frontenac, were scratched.

Thirty miles, Class E, non-stock, 300 or under cubic inches displacement—Won by Ralph Mulford, Frontenac; Ralph De Palma, Packard, second; Dave Lewis, Meteor, third (time, 16:20 3/5 (new record); Joe Thomas, Mercer, fourth. Louis Chevrolet, Frontenac, quit at three miles because of burnt valves. Dario Resta, Resta Special, quit at eight miles because of blown out spark plugs. Ray Howard, Peugeot, quit at 15 miles because of engine trouble. Denny Hickey, Stickel, was distanced and dropped out at 26 miles. Tom Milton, Duesenberg, was making repairs and did not start. J. M. Reynolds, Frontenac, because of burnt bearings, did not start. Ira Vail, Hudson, and Joseph Boyer, Jr., Frontenac, were scratched.

Ten miles, race two, Class E, non-stock, 300 or under cubic inches displacement—Won by Ralph Mulford, Frontenac; Joseph Boyer, Jr., Frontenac, second; Ralph De Palma, Packard, third; Dave Lewis, Meteor, fourth; Joe Thomas, Mercer, fifth. Time, 5:24 1/5. Tom Milton, Duesenberg, quit on first mile, engine trouble. Resta, Resta Special; L. Chevrolet, Frontenac; Hickey, Stickel; Reynolds Frontenac; Vail, Hudson; Howard, Peugeot, were scratched.

Fifty miles, Class E, non-stock, 300 or under cubic inches displacement—Won by Ralph De Palma, Packard; Dave Lewis, Meteor, second; Joseph Boyer, Jr. Frontenac, third. Time, 26:23 1/5 (new record). Hickey, Stickel; Thomas, Mercer, distanced. Resta, Resta Special, quit on first mile, engine trouble; Vail, Hudson, quit on sixth mile, engine trouble; Milton, Duesenberg, quit on 12th mile, engine trouble; Mulford, Frontenac, quit on 30th mile.



The New Olympian—This Is a Four-Cylinder, Five-Passenger Touring Car, Selling for $1240. It Is Claimed That the Olympian Can Be Driven from Three Miles an Hour to More Than 50 Miles in High, with 26 Miles on a Gallon of Gas.

Champion Spark Plug Salesmen In Session

The seventh mid-year sales convention of the Champion Spark Plug Co., held in Toledo the week of June 9-15, was a record breaker in many respects, particularly from an attendance standpoint. More than 125 factory representatives of the big Toledo concern answered to the roll call on Monday morning, this being the largest gathering of salesmen ever brought together by a manufacturer of spark plugs.

E. B. Caswell, sales manager of the company, believes that a specialty salesman cannot know too much about the article he is selling. For that reason he calls the Champion representatives together twice a year from all parts of the United States and Canada and devotes a week to coaching them on the finer points of salesmanship.

The convention program this year included regular business sessions every morning and afternoon at which officials of the company, heads of the different departments and a number of specialists in other lines of business addressed the men on various subjects relating to salesmanship. Other features were a trip to Detroit and inspection of the company's big insulator plant located there, the breaking of ground in Windsor, Ontario, for the new $250,000 Canadian plant of the company, an athletic meet at Toledo Beach and various social functions.

President R. A. Stranahan welcomed the men to Toledo and Sales Manager Caswell spoke on "Selling Without Misrepresentation." Robert Martland, secretary of the California Trades Association, addressed the Monday afternoon session, followed by H. L. Corey, advertising manager. and O. C. Rohde, chief engineer of the Toledo concern. In the evening special cars were run out to the Toledo Yacht Club, where dinner was served, the men getting their first glimpse of the huge arena built for the Willard-Dempsey fight.

Early Tuesday morning the sales force left for Detroit. A fleet of motor cars met the men at the station and drove them out to the Jeffery-Dewitt plant where the famous 3450 Champion insulators are produced. A new leer, or tunnel kiln more than 300 feet long was the chief center of attraction, although every step in the art of making porcelain proved a study in itself. After a luncheon at the Detroit Athletic Club the salesmen crossed over to Windsor, where special cars were waiting to take them out to the site recently purchased by the Champion Spark Plug Co. for its Canadian plant. Mayor Winter and other Windsor officials attended the ground breaking ceremonies, the Mayor turning the first sod. The return trip to Toledo was made by boat.

On Wednesday the business session were resumed at the Champion Convention Hall. Lieutenant Commander J. L. Moots, medical chief for the company, Dr. C. B. Lundy, superintendent of the recreation committee; George W. Frit field secretary of the Automotive Equipment Association, and a number others addressed the meeting. An athletic meet, in which all members of the sales force participated, was held at Toledo Beach late in the afternoon. The was followed by a barbecue luncheon the beach.

Thursday was devoted entirely to business. Among the speakers not affiliated with the company were E. A. Hart of the Willys-Overland Co. and Rice Wray the New York Life Insurance Co. The big banquet of the week was held at the Toledo Club in the evening, the feature of which was the distribution of cash prizes awarded by Mr. Caswell to members of the sales force. Seventy-three prize checks, totaling several thousand dollars, were given to those who had shown unusual ability during the past year.

On Friday and Saturday the men were grouped for special class meetings, supervised by the territorial managers. Saturday night saw most of them gone.

GARDNER AIR PUMPS

Result of 50 years manufacturing experience.

An inefficient air pump makes your air service expensive. It hurts the quality of your service.

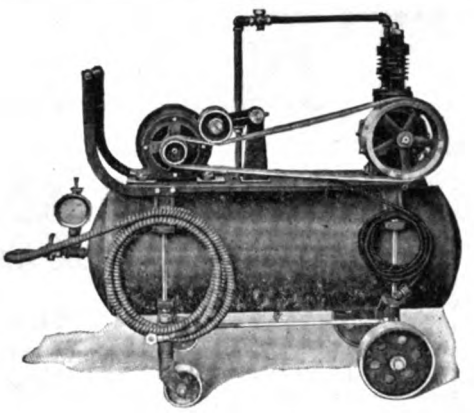
Makes a customer dissatisfied and hurts your business generally.

Install a GARDNER

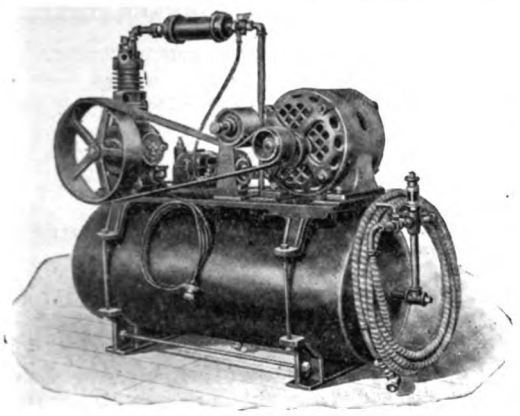
It will pay for itself in a short time.

It is simple, rugged and efficient.

The fact that many filler stations supplying hundreds of car owners daily use the Gardner air pump is proof that experience had demonstrated it is economical.



GARDNER AIR WAGON



GARDNER AUTOMATIC UNIT

Made in Single and Two Stage Types

Variety of sizes ***Prompt shipment***

There is a Gardner Air Pump to meet the demands of every garage no matter how large or small.

UNILITE

A Tail Light Outfit for Ford Cars

UNILITE OUTFIT

Unilite Adapter

The Unilite Outfit is especially designed to provide an electric tail light for Ford Cars, operated from the magneto when running and from dry cells when the car is parked. It is the only reliable tail light outfit on the market for Ford cars not equipped with a storage battery. It is much cheaper to operate than a storage battery and its first cost is very much less. The unit feature makes it possible to install one or both electric side lamps in addition to tail lamp at any time desired.

Outfit can be installed by anyone in a few minutes with no tools, except a screw driver.

Complete outfit consists of one **Unilite Adapter,** with bulb, as shown in cut, one **Unilite Controller** and **Switch,** as shown, and all wire necessary for installing. Complete instructions are packed with each outfit.

PRICE COMPLETE, $4.00.

Extra Unilite Adapter with bulb and wire for attaching to switch terminal on Unilite Controller

$1.60 EACH.

Separate Controller and Switch,

$2.40 EACH.

Write for our circular fully describing the Unilite.

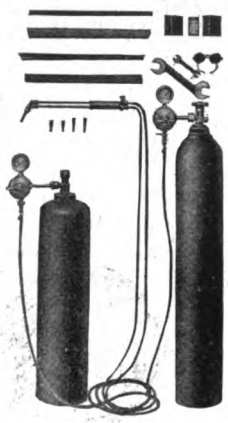
GET A WATERHOUSE WELDING OUTFIT AND WATCH YOUR BUSINESS GROW



Boost your profits—Swing the big profitable welding business to your shop. Thousands of repairers are doing it and most of them use a Waterhouse outfit.

Time is money and a Waterhouse Welding Outfit saves the time as well as labor. It affords utility great enough to meet any shop requirement, yet no shop is too small to own one.

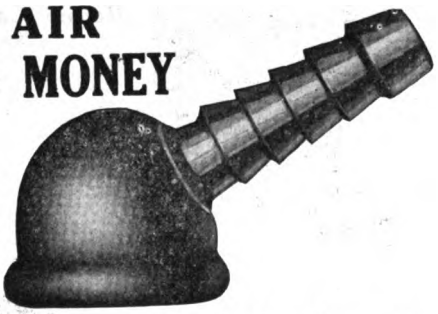
The great difference in welding outfits is all in favor of the Waterhouse. That means quality, utility, long service life, simplicity, dependability, low first cost and the best and most complete welding apparatus ever offered to the trade.

Write for descriptive catalogue, or better still, tell us your requirements. Do it today. We can supply the exact outfit for your needs.

All Waterhouse outfits are guaranteed.

WATERHOUSE WELDING COMPANY, 3 PELHAM STREET, BOSTON, - MASS.

FREE AIR COSTS MONEY



when the customers for whose convenience you provide an air station forget to turn off the flow after they have filled their tires.

Guard against this waste by attaching a

Schrader Universal Inflating Valve

to your air hose.

Thanks to this appliance your bottled air locks itself into the tank the minute it is taken off the tire-valve. You turn on the air by pressing the nozzle of the inflating valve against the tire-valve and you turn it off by removing the device from the tire-valve.

Made to fit any diameter of hose from ¼ in. to ⅝ in.

PRICE $1.50 in U. S. A.

Manufactured by **A. SCHRADER'S SON, Inc.**
800 Atlantic Avenue, Brooklyn, N. Y.

Schrader products were awarded a Grand Prize and two Gold Medals at the Panama Pacific International Exposition. "There's a Reason."

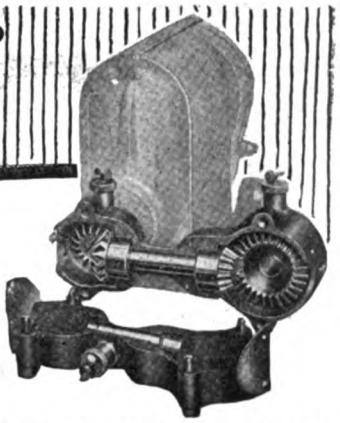
"Here's the answer—"



High Tension
MAGNETO ATTACHMENT
for FORDS

Magneto ignition was a big factor in winning the war. On every road in France and on every battle front, the magneto was standard equipment on trucks, tractors and tanks.

The magneto increases power, speed and flexibility; saves gas, simplifies wiring and means easy starting and quick pick-up.

HY-TEN
MAGNETO ATTACHMENT

With the HY-TEN, a novice can quickly install, in 30 minutes without special tools, an Eisemann, Bosch, Splitdorf, Sims or any other standard magneto on a Ford car.

Simple in construction. Attachment complete (magneto base, gear housing, gears, spark advance rod, with all bolts and screws necessary for installing).

RETAIL PRICE $25.00. *Liberal Trade Discounts*
A big money-maker for live dealers. *Write for Agency Proposition*

MAGNETO PARTS COMPANY, 1788 Broadway, N. Y.

THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive.

For Any Make or Type of Truck.

A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

Write for complete information.

GENEROMETER

The new and practical generator testing instrument. It will locate shorts and grounds in generator armatures where most of the trouble is of a Lighting System. You will need this instrument if you want to be 100% efficient in your electrical repair work. Further particulars upon request.

PAUL G. NIEHOFF & CO., INC.

232 E. Ohio Street, Chicago, Ill.

Niehoff Laminated Magnetizer

This is the most scientific and practical Magnetizer ever constructed. It will magnetize any size magnet from a Ford to all the various other magnets used on the different cars today. Due to the fact that it generates an enormous amount of magnetism, with a pulling power of about 75 pounds, you can more quickly remagnetize a magnet, and, therefore save much current. All magnetizers are subject to considerable wear. The faces will wear down according to their use. The top pieces of our Magnetizer are especially hardened and also detachable so that when worn down they may be replaced at a very small expense. We have two types; one for 6 volt storage battery and another for 110 volt D. C. current. Write for further information.

What Garagemen Think About "TRIPLEXD"

Extract No. 5

I. J. Smith, Irving Garage, 1005-7 Ave. Q, Brooklyn, N. Y.

3 Years

(Another Testimonial to Triplexd Permanence.)

"NEARLY three years ago, June 5, 1915, I purchased a length of this hose, the ¾" size. For six months I used it at Ocean Parkway and Kings Highway, after which time I moved to Ave. Q and Coney Island Ave. and made sure that the hose—after such excellent service at the first station—came with me to the new place. It has been in constant service at this place, a very busy auto thoroughfare, since originally installed. . . . This hose has been outside all the time exposed to all sorts of weather, as well as receiving such knocks and abuse as gasoline hose usually gets."

Watch from Month to Month for *What Garagemen Think.*

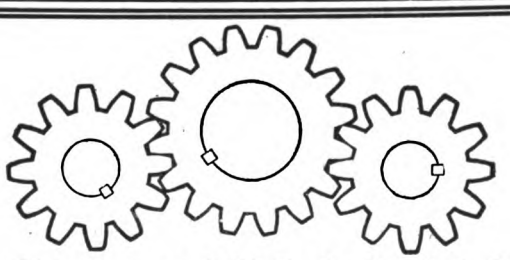
NEW ERA SPRING & SPECIALTY COMPANY
1177 Hamilton Ave., Grand Rapids, Michigan



Do Plain Grease and Oil Really Do Their Duty

But costly experience shows that they do not. They are all right under the most favorable conditions, but show a tendency to "bunch up" and "pull away" from the moving gears in cold weather—to "crowd back" into the corners and let the gears run free. Heat breaks them up. Pressure "squeezes them out."

DIXON'S GRAPHITE Transmission and Differential LUBRICANT

is a high grade grease and oil combined with a special flake graphite.

This preparation is impervious to temperature. Pressure only helps to make it more effective, by forcing the graphite into the thousands of microscopic indentations always present on the surfaces of the most finely finished gears; giving absolute smoothness.

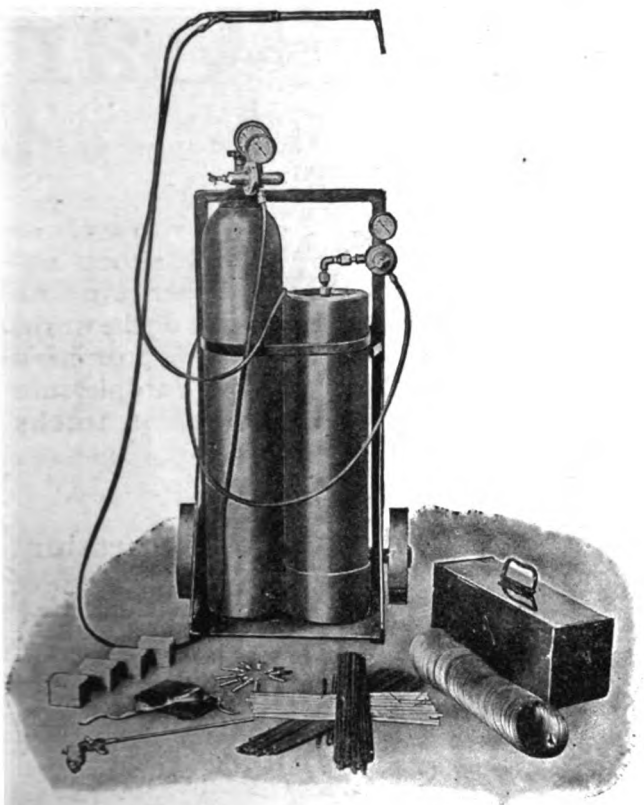
Dyer welding, cutting, carbon removing, lead burning and brazing-soldering apparatus has yearly increased 100% in popularity with garage and repair men because:—



Style A, Welding and Carbon Removing Outfit

The style A outfit which includes all the items shown in the cut except the cylinders, was especially designed for the garage or small repair shop. The welding torch is standard, covering a wide range of work. The regulators and gauges are the same as used on the large outfit. Carbon gun is of the popular pistol grip, trigger control type. The outfit is light and may be easily packed and used in emergency work.

Style B outfit includes all the items shown in the cut except the cylinders and will easily handle a wide range of welding and cutting. This outfit is complete in every detail, meeting most exact requirements.

Oxy-acetylene apparatus is very efficient for frame straightening, for heating and for brazing. Your jobber stocks, catalogues or can immediately get Dyer Apparatus.

Prices Very Attractive

It is lightly and simply designed to give the highest efficiency during long hard service. We guarantee the best quality of materials and workmanship.

Dyer Apparatus is approved by the Factory Mutual Fire Insurance Company and expert knowledge is not required to operate it successfully.

Dyer torches are of the non-flashing, semi-injector type. They practically empty the cylinders and are economical in gas consumption.

Regulators are accurate at all pressures and strongly built. Best grades of gauges.

Makes Any Ford A Perfect Riding Car

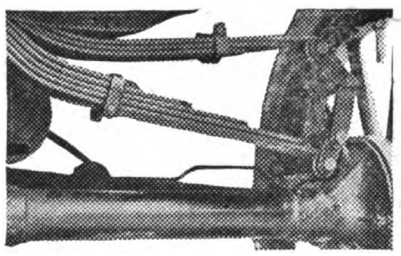
Completely absorbs all shocks. Controls the rebound, side sway and all chance of springs breaking

Easy to apply as any shock absorber. Anyone can do the work. 100% protection for Ford pleasure cars or trucks

The double action of springs is controlled by the opposite arch and suspension. Practical equipment that is guaranteed to afford full satisfaction in any service, not to break and made of the best alloy spring steel.

It greatly improves the appearance and makes the Ford look like a high priced car. For comfort, safety and efficiency it adds 100% to the service value and life of any passenger car or truck.

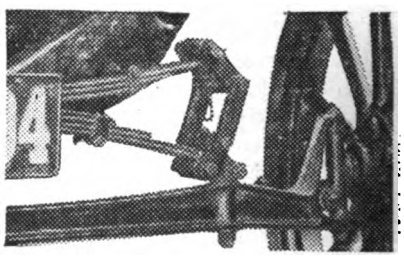
It Absorbs the Rebound or Upthrow



Rear View

By installing Beckman Springs the original spring on a Ford is lowered 2½ inches automatically. This action reduces the equivalent amount of spread on each side of the lower spring as well as the play in the steering. In other words, it improves the steering.

Approved by the leading spring manufacturers



Front View

YOUR FORD NEEDS IT

It stops the squeaks and rattles. These springs cannot dent or bump the body. Easy to clean and will last longer than the car. Our trial offer money back iron clad guarantee goes with every sale.

Introducing the new

Duracord Portable Hand Lamp

A lamp with an extraordinary cable

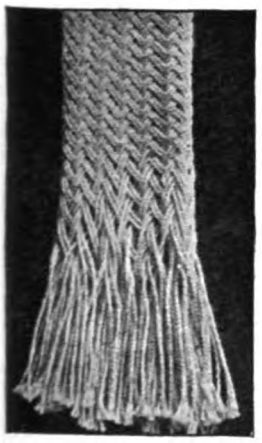
THE weakest part of most hand lamps is the cord—the part that gets the most wear and should be the strongest.

Here's a new lamp with an entirely different kind of cord. A cord that you can pull round corners and over sharp edges, walk on it, drop tools on it, drag it through oil and water—with no more injury than ordinary wear and tear. It will outlast ordinary cords 4, 5 and 6 times.

This cord is Duracord. The same cable that is used by the Cadillac, Hudson, Dodge and Ford automobile factories, big ship building corporations and other great industrial plants, for their portable tools.

DURACORD EXTENSION LAMP

Duracord will not break open as a steel armored cable will when kinked or crushed. There is no sharp metal edge to cut through to the wires, causing a short circuit or a dangerous stream of electricity on the outside of the cable. It will not scratch painted or enameled surfaces.

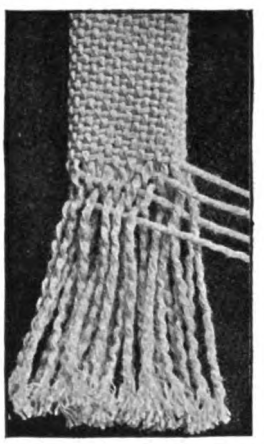


Here is the ordinary braided cable covering. Note the open and porous construction, easily cut, stretched or unravelled. Compare it with Duracord.

The 20 foot cord is gripped in the lamp by a patented "hold fast" fitting which positively prevents the wires pulling away from the terminals.

Remember, the Duracord lamp is *complete*—wired up, packed in an individual box. Everything except the bulb. The illustration on this page is an exact photographic reproduction. See the actual lamp at your dealer's.

Made in 3 designs.
Light weight . $5
Heavy duty . $6
(as illustrated)
Vapor proof . $8



*This is Duracord. Thick, heavy strands, **woven** like a piece of fire hose, not braided. Picture shows outside covering only with impregnating compound removed.*

DEALERS

This complete extension lamp means more business and less trouble for you. It is easy to stock and handle (all wired up) packed in individual boxes ready to hand over the counter to your customer.

Send for descriptive folders, price sheets and samples of Duracord and ordinary cable.

It Whistles When it's had enough AIR

Here is the Automatic Pressure Regulator

The "Automatic Pressure Regulator" absolutely prevents over-inflation—the cause of most blow-outs and give-outs.

Here it is—
Just screw it on

It is easy and simple to set the "Automatic Pressure Regulator" for just the right amount of air for a tire. When you get that much, a cheery little whistle announces "enough"! *You can't put any more in!*

Think how much this saves: It lengthens the life of tires 50% to 75%; it cuts down gasoline 15% to 20%; it saves time and mess, for you don't have to fool with a pressure gauge; and it makes a much easier riding car with repair bills cut way down.

Isn't that a real, inspiring proposition? Every motorist ought to have four Automatic Pressure Regulators—one on each tire. Our dealers will get a volume of business that they hardly dared expect.

We're backing them strong with concentrated advertising and handsome dealer helps. *You can't afford to let this opportunity slip by.* Ask your jobber or write us for details *today—don't delay!*

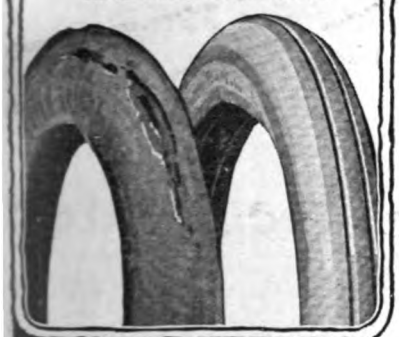
HAYWOOD'S LATEST INVENTION

Here It Is:

A new machine that will earn from $100.00 to $150.00 per week in any well established tire repair shop. More than one year of constant experimenting and development work was required to complete it.

Statistics say there will be **One Billion Dollars** worth of tires worn out this year. The insistent demand for re-treaded tires that would add 3,000 to 4,000 more miles of wear is growing. A new and better machine than had so far been produced was needed.

Two actual photographs of One Tire
BEFORE and AFTER
being repaired and retreaded on a silvur-lined mold.



HAYWOOD'S Silvur Lined MOLD

meets the need. Made of white metal—die cast—absolutely free from blemishes and smooth as glass. It is truly a wonderful machine.

Old tires retreaded on this machine closely imitate the runner, **cord type,** and are smooth, classy, bright. All 4,000 owners of Haywood Tire Repair plants will **want** this new Haywood invention. Owners of other plants should have one.

Pays for Itself in a Week

Will earn from $100.00 to $150.00 weekly. Are you an auto tire repairman? If you are not, why not enter this profitable business? Tire Repairmen earn **$2,500** to **$4,000 Per Year.** Many are doing better; some up to $6,000 and $7,000 per year. If you have a tire repair shop, you need this Haywood Silvur-Lined Retread Mold. You should write us at once and get the details. It will pay for itself in a week. Every week thereafter you should make $100.00 or more extra profit.

FREE BOOK I have an interesting book to send you that tells about tire repairmen and the Haywood method. It tells about automobile tires—it gives inside facts that you should know about profits. When you write tell me if you have a tire repair shop, or, if you want facts about the tire repair business. Address

M. HAYWOOD,
Haywood Tire & Equipment Co.

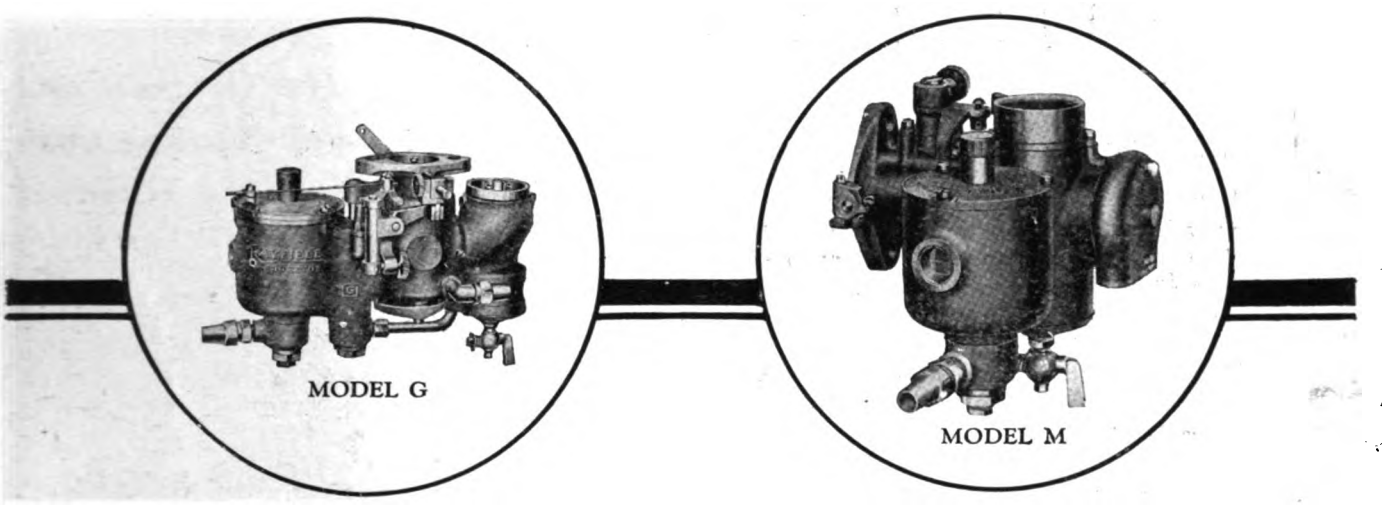
Rayfield Leadership Acknowledged by Engineers for Ten Years



Rayfield Carburetors have always been considered by the motoring public as representing the highest standards in carburetor performance.

There are sound reasons for this Rayfield supremacy.

Motorists have found that a car equipped with a Rayfield not only performs better but operates more economically over a period of months.

The big underlying reason for this performance is that in design the Rayfield is mechanically correct. It is this perfection which gives you more miles per gallon. It sends your car to the front in crowded traffic and carries it over hills and through sand without hesitation.

The Rayfield Carburetor at its price represents an unusual carburetor value. Dealers and car owners everywhere who have experienced a new satisfaction in motoring with a decrease in expense, constantly testify to the fact that Rayfield represents greater economy in the long run.

Distributors and Service Stations everywhere.

AIR COMPRESSOR FITTINGS

Take Valves for Instance:

Ordinary valves will not hold compressed air. Special design, selected materials and extreme care in perfecting a ground fit are necessary in making a satisfactory air valve. Hand operated or automatic—each type is an individual engineering problem. Brunner engineers have perfected air valves and other fittings, that Brunner outfits might not at any time give unsatisfactory service because of some apparently unimportant part.

Take Air Hose as Another Example:

Think of the trouble you have had with poor hose. Brunner "Resistoil" Air Hose has been designed and made to avoid even this trouble with Brunner outfits. And, so on down through the list,—Reducing Valves, Controllers, and all compressor accessories; each item is a perfect unit to make a perfect assembly.

A compressor outfit is no better than its component parts. One poor fitting anywhere in the system will prevent good service. For safety and convenience to yourself and for service to your trade, equip your outfit with Brunner fittings.

Regardless of what compressor you are using, you should use Brunner fittings. Write us for details--name your jobber.

Masters

AUTOMOTIVE ACCESSORIES

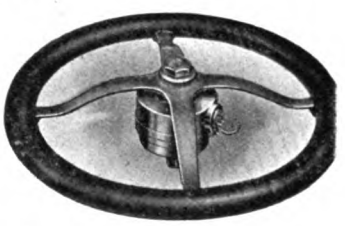
Absolutely Prevents the Theft of Your Ford

You don't need to be told that the Ford is the most easily stolen car in America. Every time you leave it for a few minutes it is at the mercy of thieves and joy-riders.

You try to protect it with insurance; but the policy won't buy the car back if it is stolen.

Foil the thieves! Lock your Ford so that it can't be stolen! Put on a

MASTERS STEAL-PROOF LOCK



This lock is easily put in place on the steering post; it clamps the gears so that the front wheels cannot be used for steering. It cannot be picked—it's a Yale—it cannot be broken; it cannot lock the car accidentally for the locking bolt rises into mesh.

You cannot remove the key except when the car is locked, so that when the key is in your pocket you have that satisfactory feeling of security—it's locked.

DEALERS—Write for descriptive circulars, terms, etc.

DUNTLEY
MAGNETO BREAK
TIMER

FOR ALL FORD CARS

Overcomes Every Timer Trouble

This timer is designed and built so it can't go wrong. Mechanically, it is perfect. The durable Duntley outlasts the Ford car.

Its fiber rollers, in addition to their superior wearing qualities, eliminate the necessity for oil. They are a feature with which all timers should be equipped.

There are no sliding contacts to become insulated with oil; the positive contact overcomes starting troubles; the tungsten points will not pit or burn; positive timing on all cylinders; interchangeable on regular Ford fittings. Tests show remarkable savings in fuel.

FOR FORDSON TRACTORS

The following letter tells the experience of a Fordson Tractor owner, who uses a Duntley Magneto Break Timer. *"The timer you sent . . . . is all you claim for it. It certainly gives the tractor twice the power it had before and also is a saver of fuel." Name on request.*

SOLD ON AN ABSOLUTE MONEY BACK GUARANTEE

Security Auto Lock

Affords every protection to Ford car owners that a perfectly designed and extremely well made lock can give. While neat and attractive it is built very strong. In operation it is positive and the car can be left with a feeling of confidence that no one but the owner can use it.

It is the original loose wheel lock for Fords.

It is approved by underwriters.

It will reduce insurance premiums 15%.

When locked the car cannot be towed.

List Price, $6.00

It makes the Ford thief-proof

Anyone can easily install the Security in ten minutes. No drilling, filing, sawing or chiseling necessary. It is made of solid brass. Nickel plated finish.

TO DISTRIBUTORS

When this lock is shown no other will satisfy Ford car owners. It sells at sight. Our trade discounts are liberal and our proposition will interest any one that can sell high grade car protection at a moderate price. ***Write for details today.***

HERE IT IS!

A Compressor of Real Capacity.

BIG capacity at high pressure is what you must have in a garage compressor these days. Big Cord Tires used on trucks demand it.

This No. 6 Au-To Air Compressor will stand the gaff of long working under full load.

All Au-To Air Compressors make good—we see that they do.

There are thousands in use in every part of the country—and we have never charged a cent for repairs on any of them.

The outfit has an unloader for easy starting and an automatic cut-out that keeps the pressure at a constant level.

Every unit is made of material of the highest grade. The workmanship is accurate.

The compressor outfit is reliable—always running. It compresses 6½ feet of free air per minute and is cut out at 150 pounds pressure.

Ask your Jobber or write us.

THE AU-TO COMPRESSOR COMPANY
WILMINGTON, OHIO

Oro
GOOD as GOLD

Oro Steering Wheels for Ford Cars are seventeen inches in diameter instead of 15 which is the size of the wheel with which the car is originally equipped. They may be had either with or without the tilting feature, the latter making it possible to push the steering wheel up into the plane of the steering column so it is easier for a large driver to leave the car. The rim of the wheel is genuine high quality walnut wood; also furnished in imitation at a less price, highly finished. Spiders in malleable iron baked enamel finish or solid aluminum highly polished. Each one packed in individual carton.

Oro Combination Spark Plug and Cylinder Head Bolt Wrenches for Ford Cars fit the Champion X plugs with which the car is equipped. The socket at the other end fits the cap screws in the cylinder head of the Ford Motor. This wrench is made of the best quality high carbon drop forged steel, hardened, and is practically unbreakable. The Ford Motor Company makes a similar wrench known as No. 2335.

Here's the Record Breaker

One man discovered it. He told another. The news spread and now thousands of people are clamoring for this wonderful tar and grease remover.

Pontoklene

is fast building a nation-wide reputation. We can't handle the business direct—what we want are dealers—the best hardware and auto supply dealers in each town to represent us—to take care of the demand.

Will You Sell It?

Here is a piece of goods that is actually—honestly selling itself, a real remover of road tar and grease that opens the eyes of every motorist who tries it. Get in touch with us today, let us send you a sample and our attractive dealer's proposition, including free samples, display cards, circulars, road signs and electros.

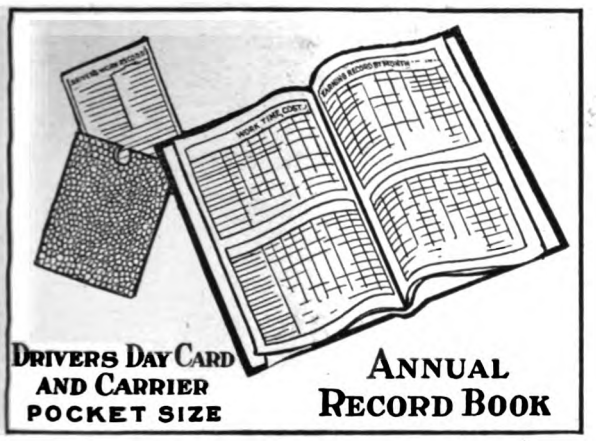
UNIVERSAL MOTOR TRUCK ACCOUNTING SYSTEM



The system includes an annual record book, 350 drivers' day cards, a day card carrier and full instructions.

Any owner can start this system at any time with an old or new truck of any make or type.

Any boy or girl clerk can maintain all records for one or a hundred trucks.

Each system is good for one year, nothing more is needed or necessary.

The records show at a glance any and all items entering into the earnings and cost of operation.

It is extremely simple. 100% complete and full working instructions are supplied with each system.

It is almost self-operating.

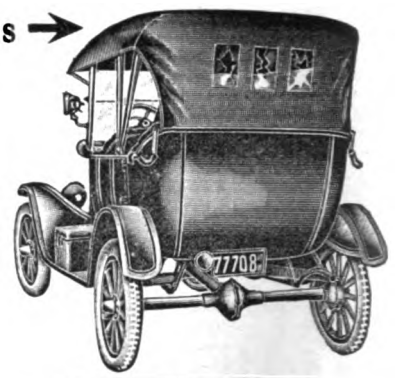
TWO FORDS THERE WERE

ONE of them looked like this → It was a good little old Ford, too, built to stand wear and tear, and to eat up the mileage day after day, at mighty low cost for "gas" and upkeep. But, bless you! How it looked! Dingy, sagging, old, back-curtain, with three dim, yellow, torn patches of celluloid to look through at the road behind.

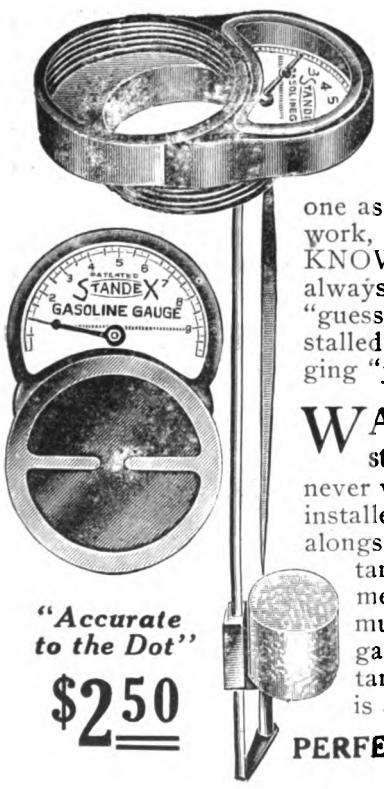


THE OTHER FORD was no better car, for all its fine clothes; but which of these Fords would YOU rather ride in? Which of them shows CLASS in its appearance? Which of them shows best the owner's respect for himself and for his good, reliable car? All the difference is in the Rear Curtain, made of better fabric (Mohair or Rubber) than standard equipment, with a big, generous oval window-light of clear, brilliant, beveled crystal glass, set in a patented interlocking frame of polished, untarnishable aluminum. No sagging; no rattle!

STANDEX **Rear Curtain for FORD Cars**

Rear Curtain for Ford Cars is a better curtain than any regular top maker sells for $16.00 or more! Try one for 30 days: Perfect Satisfaction Guaranteed or Money Back!

STANDEX Gasoline Gauge STANDEX



"Accurate to the Dot"

$2.50

THERE were two Ford owners, their cars bought at the same time—one as good as the other. Yet one owner, Mr. Guesswork, was always in trouble, always sure (without KNOWING) that he was being cheated on gasoline—always a gallon or two less than he paid for—always "guessing" he had enough "gas" for a trip, then—stalled and in for a long hike over country roads, begging "just a quart or so" from the farmers.

TWO FORD OWNERS ALSO

WAS Mr. Surething ever in such a stew? Not a bit of it! And never will be! His STANDEX Gauge, installed in one minute, in plain sight alongside filling-hole on the gasoline tank, assures him always of honest measure—tells him always how much "gas" he has to run on. Inasmuch as this is the only gauge made that is graduated to the contour of a cylindrical tank, it is the only mechanically-actuated gauge made that is absolutely accurate.

PERFECT SATISFACTION OR YOUR MONEY BACK!

Sure Brake

In the emergency my Cork Insert lining was there with a grip that held. W. G. Yeager, Lexington, N.C.

Advance Cork Insert

We have a sure brake at all times wherein the other ones were always worn out. Victor Baker, Hoosick Falls, N. Y.

Advance Cork Insert

You can stop so gradually that you can't tell when you're stopped if you don't watch something. But before using Cork Insert people would get up ready to get out and then the brake would take hold and nearly throw them against the windshield. Wm. Douthett, Jr., Jamestown, Pa.

Advance Cork Insert

I never had such good brake service before and am recommending them to all my friends who own Fords. Alfred Moger, Gaastra, Mich.

Advance Cork Insert

Smooth Action

Since using Cork Inserts I have none of that stuttering and shivering and I can even stop on a steep grade and start again by the pull of the motor alone. John James, Newtonville, Ala.

Advance Cork Insert

In starting off there is not that jerky motion as with the old linings when at their best. Also the brake and reverse take hold much better. A. F. Richmond, Williamsburg, Mass.

Advance Cork Insert

They are far ahead of the original linings that come with the car as they put a stop to all chattering in the transmission and differential and cause the engine to give more power on low gear. Harold B. Robinson, Elizabeth, W.Va.

Advance Cork Insert

We have grades up to 25% but since installing Cork Insert our Ford runs 100% smoother than when using old style linings. Jno. R. Randolph, Claremore, Okla.

Advance Cork Insert

Long Wear

Have used Cork Insert 8 months and they are working better than when they were first put in. C. H. Robinson, Peru, Me.

Advance Cork Insert

Before using your Inserts I had to line my truck on an average of five or six times a season. I did not have to line the transmission at all last season and the Inserts were working just as good last fall as they were when I first put them in. Ray A. Kingman, Ferrisburg, Vt.

Advance Cork Insert

I have had Cork Inserts on my car for the last 8000 or 9000 miles, and like them very much. Fred R. Stamm, Los Angeles, Cal.

Advance Cork Insert

Put Cork Inserts in last July and have run them about 6000 miles and they are working fine. I have always had to replace my bands at least once during the summer, but from the way these are working will not have to touch them. H. C. Moore, Princeton, N. J.

Motor Vehicles May Replace Trolley Car Service

Increasing Fares Likely to Make Street Railways Quit Business

RECENT trolley car strikes have served to demonstrate the efficacy of the motor vehicle as a common carrier of passengers to such an extent that prediction is freely made that it will eventually supplant the trolley car. During these strikes the motor vehicles used for the transportation of the public have given such good service that it is doubtful if this form of service has not gained a foothold that will be permanent.

By filling the breach in the crisis the so-called jitney has won the support of the public and municipal authorities, who have been inclined to support the vested interests of the trolley companies against competition. Up to the present, in the face of such possibilities as the motor vehicles possess, very little foresight has been displayed by the authorities in making provision for the development that is certain to come.

Street railway officials and even state transportation officials have smugly asserted that the "jitney" could never take the place of the street railway systems. Yet, as a matter of fact motor vehicles are very rapidly taking the place of the trolley cars and will continue to do so with increasing rapidity as the trolleys, by reason of their financial difficulties, are obliged to increase fares and diminish service.

Today street railways are being discontinued or are being operated at a loss and the "jitneys" are running full of passengers and at a profit.

No Chance of Swindling Foxy Old John D. When He Purchases Gasoline

JOHN D. ROCKEFELLER questioned the accuracy of a gasoline filling machine at Portsmouth, N. H., and he was not satisfied that full measure was given him until the proprietor of the garage measured a sample gallon at his request.

Mr. Rockefeller ordered five gallons of gasoline put into the tank of each of his party's four machines. When told the price was 30 cents a gallon he summoned the woman proprietor.

"Madam, are you sure your pump delivers a full gallon to the stroke?"

"Absolutely," she told him.

"It does not look so to me," insisted the oil magnate. "Would you mind having it tested for me?"

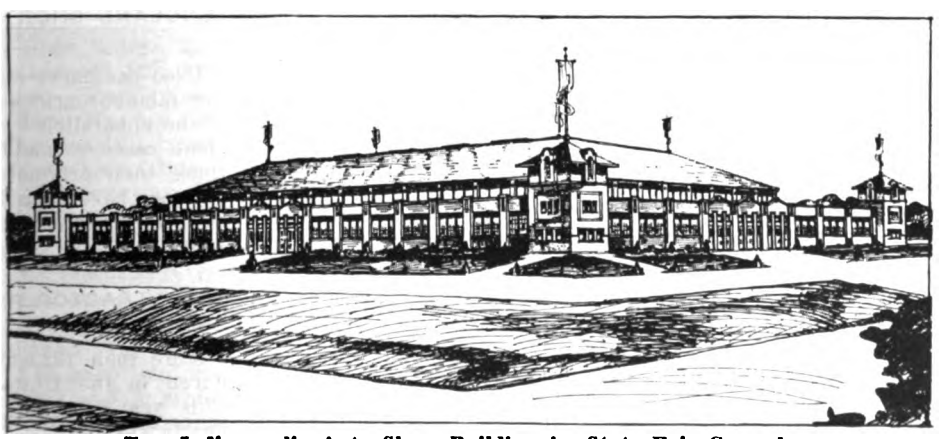
When the test proved the pump was accurate, Rockefeller said:

"It's the first pump I've seen in several days which is accurate. Thank you for measuring it for me."

INDIANAPOLIS SHOW BUILDING.

The new Indianapolis Automobile Show building, in which will be staged the 19th automobile show of the Indianapolis Automobile Trade Association during State Fair week, Sept. 1-6, will be completed about Aug. 23. It covers two acres and is being built at a cost of $120,000.

At the four corners will be massive pylons, in which will be situated offices, telephones and public rooms.



New Indianapolis Auto Show Building in State Fair Grounds.

Prices Take Jump As Car Shortage Continues

Failure of New Models to Show Radical Changes Due to War

NEW models of automobiles coming on the market fail to embody any radical changes. Improvements in detail have been added that make the cars better than their predecessors, just as the cars of 1919 were improvements of the cars of 1918, but those who expected that the extensive use of motor vehicles in the war would bring about radical changes will be disappointed, if they examine the specifications that so far have been announced.

Prices, it is believed in the industry, must inevitably go down, but not right away. Although the industry is getting back into full swing and big production, the materials and labor situation are such that prices instead of turning downward have taken a distinctly upward swing. This condition, it is believed, will continue throughout the year, because the market for cars cannot possibly be satisfied in the next six months. What will happen next spring is entirely a matter of speculation.

Distributors throughout the country estimate that there is a demand for not less than 500,000 closed cars for delivery to consumers not later than Jan. 1. The closed car builders report that they cannot build more than 230,000 in time for the car makers to mount them and make delivery to their distributors by January.

As a result of this condition the price of closed cars is increasing. Very few dealers are even now able to give customers any.

Digitized by Google

promise of delivery on the stock models, and special closed bodies of all types are already beyond the reach of the average buyer.

If materials can be obtained at reasonable prices and the labor market becomes settled, the competitive state of the motor vehicle industry will surely cause a scaling down of prices by spring. But close observers of conditions are inclined to believe that another year at least must elapse before the great deficit in the supply of motor vehicles is overcome, and that not until then will there be mucb revision downward.

War Great Educator.

While the war did not cause any discoveries of tremendous moment that will revolutionize the methods of construction that have been followed in recent years in producing cars for the general public, it was a great educator. Such a test that was given the cars and trucks that took part in the long struggle on the various fronts revealed opportunities for improvement in almost every part of the structure of the vehicle, in frame, wheels, spring, motor, transmission, final drive, axles, bodies and control. It is this information that is being applied to the new models.

There is no widespread leap to the multi-cylinder field, as some expected would result from the development of the airplane motor. The companies that have been producing multi-cylinder cars will continue to build them and there will be about the same relative number of eights and twelves on the market as there are at present. Some of the new concerns that are preparing to enter the business in the 1920 season will undoubtedly produce multi-cylinder cars, as the smoothness of operation of this type of power plant has a strong appeal to the motorist.

Indications, however, are that the trend that was apparent in this year's product will be continued. That is distinctly toward the improvement of the six and four with the aim of giving them the flexibility of control that is the great appeal of the eight and twelve. The employment of double sets of valves is a means to this end that is being extended and improved carburetion is another step in the same direction.

New manufacturers are entering the field, for the most part with the idea of going after the vast market for low and medium priced cars. Another six months, when the shows are in progress, the public may see a large number of cars of this type, mostly of the four and six-cylinder types.

However, producers of the expensive, luxurious cars have yet seen nothing to induce them to change their policy of building the best that can be built, and they feel certain that their market will increase rather than diminish. Even in the face of rising costs they have not changed their policy. New models of these cars are refined to the last detail in every part of their mechanism and body work, but they introduce no departure from former practises in the essential features.

There continues a constant demand from the sales departments for novelties in bodies, and it is practically certain that they will be forthcoming. Straight lines gave way to curves and curves to straight lines again, and with each succeeding change the grace of the bodies advanced. It is probable that the turn for the curves will soon come again; indeed, a trend in that direction is evident in some of the newest models of enclosed cars that have been produced for the fall trade.

Advances in Prices.

Touring car price advances ranged from $50 to more than $1000. Locomobile has announced a greater price jump than any, advancing $1100 on open cars and $1400 on closed models, with still greater increase on special body jobs, necessary, as explained by the company, to maintain and develop production up to customary standard under present costs. The new schedule of Locomobile prices brings the touring car from $7000 to $8100, the special four-passenger touring from $7100 to $8200, the limousine and landaulet from $8200 to $9600, the chassis alone jumping from $6000 to $7100, and with custom bodies coming as high as $11,000. The company will continue its policy of limited production.

Chalmers prices are $120 ahead on five-passenger models and $150 on seven-passenger, all effective at once.

The Maxwell touring car has been raised $90 to $985.

Cadillac is up on six out of 13 of its models, open touring models remaining the same and will probably continue so, but closed cars are increased from $100 to $300.

Studebaker has gone up $100 on touring and open models and $150 on closed cars, and Hudson inaugurated an advance of $125 on all models, with a $200 rise in the Essex phaeton, from $1395 to $1595, the five-passenger sedan remaining $2250.

The price of the Oldsmobile eight has been increased from $1795 to $1895. Although the price of other models remains unchanged, every indication points to extension of the increase in the immediate future.

The Chevrolet Motor Co., it is rumored, will inaugurate a new and higher price schedule on all models in August.

The Paige-Detroit Motor Car Co. will bring out its new series very shortly and it is altogether probable that the price will go up within 30 days. The Hupp Motor Car Corporation prices have been guaranteed until Aug. 1.

Buick has advanced $100 on closed cars, the touring model remaining as in the spring, but deliveries are far behind orders and the company does not expect to be able to produce more than half the closed cars demanded by its dealers.

Pierce-Arrow prices have been up since June 24. The five-passenger touring is $7650; seven-passenger touring, $7750; closed cars range from $9050 to $9450.

Mitchell cars in the improved model, "E-40," were raised $100 July 1, the new price being $1575. The new Liberty closed models, a four-passenger coupe and a five-passenger car, are offered at lowered prices, the former at $2370 and the latter at $2470.

Tire Makers Decide Not To Cut Prices

It is understood that the big tire companies have abandoned the plan of making a further reduction in tire prices this midsummer. Late in April when the 15 per cent. May cut was definitely agreed upon, it was tentatively decided to make another cut in August in order to keep the industry on a healthy basis with respect to margin of profit and give the consumer the benefit of lower rubber prices.

Of late, however, the cost of cotton fabric has advanced to such an extent as to preclude a big reduction in the price of finished tires. Consequently the big Akron companies will maintain the standard price policy.

TRUCK MARKET.

The passing of the Pierce-Arrow common dividend is regarded as a reflection of the unsatisfactory business prevailing in the motor truck industry. Sales of leading truck producers, particularly those who turn out the heavy types like Pierce-Arrow, have for months been disappointing. In fact, the truck business as a whole has been indifferent ever since the signing of the armistice ended the government contracts.

Earnings for the fiscal year for Pierce-Arrow have been at the rate of more than $5 a share per annum on common, but it is planned to conserve the cash for contemplated capital expenditures to maintain the high standard of quality and meeting competition. The company's war orders have been completed.

Sales of the White Motor are holding up well. Production at the Cleveland plant have been averaging 37 trucks a day for some time.

The chassis price of the 97-inch wheelbase Autocar motor truck will be advanced $150 Aug. 1 to $2300 and the 120-inch wheelbase chassis from $2150 to $2400.

ENGLAND SHORT OF USED CARS.

Used passenger automobiles are bringing fabulous prices in England because of the unparalleled car famine there. In some cases second-hand cars are three times their original prices. No passenger cars have been built in England, except for war purposes, for over four years.

TRACTOR PRODUCTION.

More than 132,000 tractors were produced in the United States last year. This year's production is estimated at nearly 315,000.

Digitized by Google

Ford Motor Co. Has Become $100,000,000 Firm

FOLLOWING the announcement that Edsel B. Ford had purchased the stock of the minority holders of the Ford Motor Co., with the exception of the 2180 shares owned by James Couzens, a certificate was filed at Dover, Del., whereby the Eastern Holding Co. changed its name to the Ford Motor Co. and increased its capital from $100,000 to $100,000,000.

It is understood that the new Ford company will take over the shares of the present Ford company and issue its own shares to the stockholders. Directors of the Ford company some years ago voted to increase the capital to $100,000,000 because the investment in the business was much greater than its capital. It was found, however, that the Michigan laws do not permit corporations to capitalize for more than $25,000,000.

After Edsel Ford bought the minority stock, J. P. Morgan & Co. managed a syndicate to provide a one-year credit of $75,000,000 for the purchase. The credit has been over-subscribed. Minority stockholders will receive about $12,500 a share for their stock of $100 par value. Couzens was the largest stockholder aside from the Fords, his shares being valued at $29,250,000. Other stockholders, the amount of stock they held before selling and the value follows:

John F. Dodge, 1000, $12,500,000; Horace E. Dodge, 1000, $12,500,000; J. W. Anderson, 1000, $12,500,000; H. H. Rackham, 999, $12,487,500; David Gray, 525, $6,562,500; Philip H. Gray, 525, $6,562,500; Paul R. Gray, 525, $6,562,500; Alice Gray Kales, 525, $6,562,500; Mrs. A. P. Hauss, 20, $250,000.

Before the purchase, Henry Ford owned 11,400 shares, Edsel B. Ford 300 shares and Frank L. Klingensmith, treasurer of the company, one share. Edsel has been president of the company.

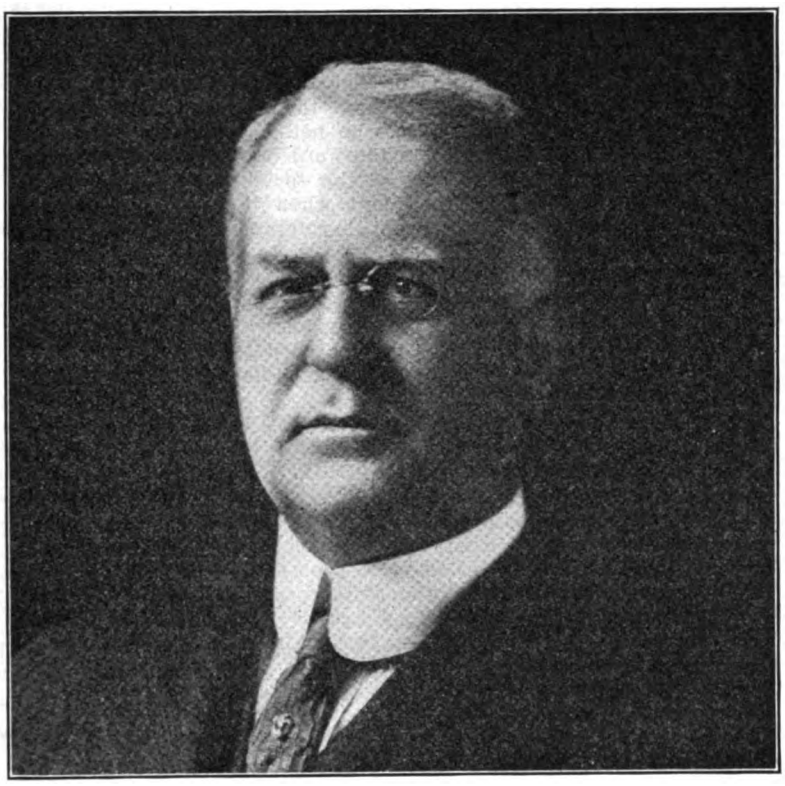
This Year's Profits.

W. C. Durant, president of General Motors Corporation, had an opportunity to buy control of the Ford Motor Co. in 1908 for $6,000,000, but Wall Street would not finance the purchase. The Ford company is understood to have total assets of about $225,000,000 and a profit and loss of about $215,000,000. Profits of the company for nine months of the fiscal year 1919 were placed by Ford's attorney in the libel suit against the Chicago Tribune at $33,982,292. The year after Ford cut the price of touring cars $80 a car the company sold 800,000 cars. It is claimed as many would have been sold had the price not been cut, and that Ford thus voluntarily relinquished a profit of $64,000,0000 to his company, more than half of which would have accrued to him personally.

Edsel Ford said: "Of course, there will be no need of a new company now. We will develop plans for the cheaper car, and will try to be ready to manufacture it just as soon as we can catch up with orders on the present standard models.

"We are overflowing with orders for the standard cars. We are making about 3200 a day, and orders are coming in for more than 4000 a day. Plans for the next fiscal year, beginning Aug. 1, call for a largely increased production. It is probable that some of our plants which are now used for assembling will be equipped to do some of the manufacturing. The completion of these negotiations leaves us free to do as we would like to do in the expansion of business."

A Detroit newspaper states that it is proposed through reorganization of the Ford company to make it possible for employes to share in the dividends. Henry Ford is quoted as saying: "By making it a cooperative company we propose to make it possible in the future to divide with employees the melons that have in the past been cut with minority stockholders."



JAMES COUZENS.
Only Minority Stockholder Retaining Interest in the Ford Motor Co.

History of Company.

The Ford Motor Co. was 16 years old last month. Twelve years before its inception Henry Ford, an employee of the Edison company, began his experimental work on gasoline driven motor cars. Because no parts for gasoline engines were available he built the first car with his hands. The building took two years, but the car ran. Five years more were spent in further experiment and the building of a second car.

The Henry Ford Automobile Co. and the Detroit Automobile Co. successfully organized to market the "horseless carriage," awakened little interest and died of inanition. In 1902 Henry Ford formed a partnership with A. Y. Malcomson, a coal dealer, and out of that partnership finally emerged, after many vicissitudes, the Ford Motor Co., now the world's biggest automobile manufactory.

Mr. Malcomson agreed to pay all expenses up to $3000. A small structure in Detroit was rented as a factory and production began. The $3000 was soon spent and Malcomson had invested $4000 in addition before satisfactory results were obtained.

The partners began looking about for more capital, but the investing public was not enthusiastic. Finally a few pioneers were found and the company was formed, Ford and Malcomson turning in their invention and rights for 51 per cent. of the stock. The Dodge brothers, John F. and Horace E., who were then operating a machine shop in Detroit, subscribed for $5000 of stock each, the money to be paid out of the profits on 650 chassis, for whose manufacture they were given the contract.

John W. Anderson and Horace H. Rackham, law partners, who drew up the papers when the company was organized, invested, against the advice of their banking acquaintances, $5000 each. John S. Gray, a conservative banker, was induced to invest $10,000 and become the

Digitized by Google

president, after Malcomson guaranteed him against pecuniary loss.

James Couzens, then a clerk in the employ of Malcomson at $1800 a year, took his entire savings, $400, placed it with $500 presented to him by Malcomson, and $100 lent him by his sister, now Mrs. A. P. Hauss, and with this and his note for $1500, subscribed for $2500 of the company's stock and was thereupon made secretary and business manager. He was likewise its bookkeeper and cashier, his entire office force consisting of a one-armed stenographer.

Malcomson Quits.

The venture was a success from the start and by the end of the year the stockholders, because of the dividends declared, had received back every dollar they had invested. Despite the financial success the original partners did not work well in harness and in 1906 Malcomson sold his interests to Ford for $100 in cash and $75,000 in a note.

Albert Strelow, who had invested $5000, sold his stock to Couzens for $25,000. He had become interested in a gold mine, in which he eventually dropped all of his money while other Ford stockholders were becoming millonaires. New buildings were erected, until finally the company came into possession of its present plant, where every process is done in a thoroughly efficient manner.

The Selden patent was one of the first stumbling blocks for the Ford company. After seven years of litigation Ford proved that his own first car was running in the streets under its own motive power before the Selden patent, which was claimed to cover every kind of gasoline driven vehicle was granted.

Early in 1914 the industrial world was astonished by the announcement that the Ford Motor Co. would share $10,000,000 in the way of profits with its employees. Following this, 10,000 men in search of jobs besieged the door of the employment office, whence they had to be turned away by the expedient of a fire hose. The plan was put into effect. Later that year the company published a balance sheet, which showed a surplus of $50,000,000 and $27,000,000 in cash on hand or in banks.

The Ford company opened an English school for its employees and took other steps to aid their welfare. But while the company was making its astonishing progress, all was not happy within its official family. Finally James Couzens, vice president, announced his retirement from the company. No convincing reason was given, but it was rumored that Couzens had objected to Ford's objection to military preparedness and his "peace ship" project.

Dodge-Ford Suit.

There had also been developing a wider breach between Ford and the Dodge brothers, and this matter came to a head in 1916 when the Dodge brothers in their position as minority stockholders began suit against Ford as the majority stockholder to compel a larger division of earnings among the stockholders. Previously Ford had announced the intention of the company to integrate itself further through the establishment of its own blast furnaces and that it was also planned to double the size of the plant.

As part of their suit, the Dodge brothers sought to prevent Ford from carrying out his designs. The Dodge brothers also assailed the policy of reducing the price of the car as production increased. The suit was vigorously waged and contested. In court Ford testified that the Dodge brothers offered to sell him their stock for $35,000,000. The contest dragged its way up to the Supreme Court and the final decision gave comfort to both sides. The right of the company to expand was upheld, its right to build blast furnaces was confirmed, and the company was ordered to disburse from its surplus $19,000,000 in dividends.

Early this year Norval A. Hawkins, the general sales manager, retired from the company. He had been sales manager from the time the company produced a small number of cars. Then came the resignation of C. Harold Wills, looked upon as the mechanical genius of the organization. He had become associated with Ford at the beginning of the company, having previously been a draughtsman. Next came the resignation of John R. Lee, who had been an outstanding figure in the Ford organization. He was head of the sociological department of the plant when it first put into effect its profit-sharing and educational systems.

Ford himself severed the close ties that bound him to the company when in the early part of the year he resigned the presidency, to be succeeded by his son, Edsel, who at 24 became head of the great comporation.

SPECIFICATIONS FOR NEXT YEAR AT INDIANAPOLIS.

Specifications announced for the 1920 500-mile race on the Indianapolis Motor Speedway foreshadow sweeping changes in the field of automobile racing. The detailed specifications are as follows: Piston displacement, 183 cubic inches; minimum weight, 1700 pounds, with no ballast allowed; standard tread, 56 inches; seats may be staggered eight inches; right hand drive; qualifying speed, average of 80 miles an hour for four laps of the track, 10 miles.

The speedway's announcement precludes all chance of converted light cars now in existence being entered for the 1920 classic, cars of this type being considered incapable of producing anything of profit to the advancement of automobile design, and being effectually barred by the restrictions governing speed and minimum weight. A fresh infusion of inventive discovery into the field of engineering knowledge is what the Indianapolis speedway seeks to stimulate, and its 1920 specifications have been carefully drawn with this in view.

P. C. Chrysler, formerly manager of the Philadelphia branch of the Hurlburt Motor Truck Co., has been appointed director of the wholesale department of Hurlburt Motors, Inc.

BRIGGS & STRATTON TAKE OVER SMITH MOTOR WHEEL.

The Briggs & Stratton Co., Milwaukee, maker of electrical apparatus and ignition systems, recently acquired all rights, titles and manufacturing privileges of the Smith motor wheel, formerly owned by the A. O. Smith Corporation, Milwaukee. The sales and manufacturing staff of the Briggs & Stratton Co. has been augmented by several former members of the Smith organization.

J. A. Benson, former sales manager of the motor wheel division of the Smith corporation, is now affiliated with Briggs & Stratton in a similar capacity, and with him are L. Kohn, service manager, and P. Mack, designer and superintendent of motor wheel production.

Additions are being made to the already large and well equipped Briggs & Stratton plant. Additional machinery of the latest improved type is being installed to facilitate an increased output of Smith motor wheels.

Production of a new model has been begun and this will be ready for delivery about Aug. 15. This new model includes several new improvements that will make it much more substantial than the old models. A national advertising campaign to increase and maintain the demand for this popular bicycle attachment is planned.

WALDEN-WORCESTER WESTERN BRANCH IS MOVED.

The western branch office of Walden-Worcester, Inc., Worcester, Mass., pioneer in the socket wrench game, has been moved to larger and more centrally located quarters at 487-91 Monadnock building, San Francisco. The object of the branch was to form a closer link between the factory and its many friends in the West.

Rapid strides have been made in this direction, as is shown by the great increase in sales due to closer work with the jobber, together with other intensive sales work carried on through this office. L. A. Raasch is branch manager. Associated with him is R. K. Flanagan.

NEW GMC OFFICERS.

H. H. Rice has been elected vice president of the General Motors Corporation. Other officers elected are: M. L. Prensky, treasurer in place of Mr. Rice; Frank Turner, comptroller in place of Mr. Prensky; E. W. Proctor, assistant comptroller, in place of Mr. Turner; W. W. Bacon, assistant treasurer in place of Mr. Proctor; J. H. Noble, assistant treasurer; A. Bradley, assistant treasurer and J. F. Porter, assistant comptroller in place of Mr. Kimmee, who has been made assistant to the manager of the division.

EDISON STORAGE BATTERY OFFICE.

The Edison Storage Battery Co., announces the removal of its district office in Pittsburgh to room 431, Union Arcade building.

How Advertising Creates Demand for Cars

ADVERTISING created the demand for automobiles which made possible tremendous production and the accompanying lessening of the overhead costs, enabling the manufacturer to turn out a wonderful machine at a comparatively low price. Without advertising the automobile industry could never have attained the lofty position it now holds in the industrial world.

Automobile men are confirmed believers in advertising. They never ask, "Does advertising pay?" They know it pays, and pays big, and their only question is, "Just how much will we appropriate for advertising?" Like theatrical men, they would not think of attempting to conduct their business without the aid of liberal advertising.

In the old days, before national advertising became such a wonderful factor in distribution, persons depended largely upon the recommendations of their local dealers. Now, however, their minds are to a great extent influenced by the national advertising of a product and they often decide just what they are to buy before they go to a store.

The fact that national influences, such as advertising, are responsible for the majority of the sales of automobiles is shown by the records of the sales of cars in various cities. The 10 most popular cars in Philadelphia are probably of the same makes as the 10 cars that sell the best in Providence, R. I., or any other city. If local influences determined the popularity of an automobile, one car would be the most popular in one city and another car the leading seller in some other place.

Must Create Demand.

Local dealers are important. They get prospects, close contracts, render service, etc., but what they actually do is small compared with the national influences set to work by the manufacturer. Therefore, it is highly essential that the local dealer shall make his advertising campaigns fit in exactly with those of the manufacturer.

The local dealer looks to the manufacturer not only to create the goods, but also to create a demand for them. The manufacturer in turn has the right to expect the dealer to co-operate with him in every way possible in bringing about this demand. It is this combination of powerful national advertising on the part of the manufacturer and the strong retailer's support that has produced the spectacular success in the automobile field.

The automobile industry excels in modern manufacturing and selling efficiency. In the manufacture of a car everything moves at a scientifically determined speed. Each task has been minutely analyzed, a factory transportation system installed and there is made possible the piecemeal fitting together of the thousands of parts with clock-like precision so that there are no waste moments.

The manufacturer, having made possible great production, insists upon intensive selling methods so that his cars will be sold as rapidly as they are made. His scheme of operations does not permit any loss for over-production. There must be a market for every car his factory turns out.

In selecting his local dealers he picks out alert business men, who will live up to his fundamentals of representation. He selects men who will see that the car attains every degree of popularity it deserves. The manufacturer examines into the possibilities of the locality and determines just how many of his cars should be sold there in the course of a given time, and his local representative must contract for this number.

Cooperation Essential.

If the dealer is to sell his quota he must combine his selling force to that of the manufacturer's advertising. He must realize that advertising is printed salesmanship—the connecting link between the supply and the demand. He must follow the lead of other dealers in intensive and effective advertising that will keep the public fully informed regarding the car he represents. But he should not overlook the fact that the function of advertising is to perform the educational work, and not to carry the entire burden of selling the product.

Advertising Creates Demand and It Is the Connecting Link.

The advertising campaign must be planned carefully. Any change after the campaign is started is bound to prove a costly one. Usually the manufacturer furnishes an advertising service which will guide the dealer. Knowledge of how the national advertiser plans his campaign is valuable.

First of all, he decides upon a protected name or trade mark. If the product is to be an automobile accessory small in size, he will usually select a distinctive package or container. He chooses a slogan or catch phrase. His next step is to analyze the field for selling his goods. He arranges for the distribution and forms his sales force. He is now ready for the advertising schedule.

Advertising creates a demand that can be estimated, so that production can be governed accordingly, without any waste in over-production. Advertising is the connecting link, the shortest line, between the advertiser and the consumer. It carries a message anywhere and everywhere.

Preparation of Copy.

Careful consideration must be given

Digitized by Google

to the preparation of advertising copy. Simply "filling up the space" with an uninteresting announcement cannot be expected to bring results. Advertising is news, just as the stories and articles in newspapers are news matter. If one is to expect the reader to read his advertisement, he must make it interesting and newsy.

If the same message is run continually in an advertisement, the chances are that it will be read only once. There is no reason why the reader should keep reading it every time it is published. Give him fresh copy and he will be interested, provided you have an interesting message for him.

The advertising should be prepared by one expert in advertising matters. The person preparing the copy should have in mind just what results the particular advertisement is expected to bring. It is too often the practise of many automobile dealers to forget all about their advertising copy until the last minute, and then have something scribbled off hastily to occupy the space for which he has contracted.

The manufacturer, fully appreciating what a potent factor advertising is in his business, has his advertising work done by skilled specialists, who give the utmost consideration to every bit of copy turned out. They usually prepare suitable advertising matter for the local dealers, who should not hesitate to avail themselves of this service.

Some automobile manufacturers employ press representatives to write interviews and other articles for the news columns of newspapers and trade magazines. As most newspapers conduct automobile pages or columns, they are glad to get these write-ups and give them considerable prominence. The same opportunity is offered to dealers to avail themselves of this free advertising. If they see to it that the material is supplied to the papers, the editors will do the rest. All such material should have a distinctive news value.

The local dealer is often supplied with prepared interviews, which he can furnish to the newspapers as coming from himself. As he receives all the latest news from the factory he represents he is in a position to prepare good newsy articles that the newspapers will be glad to get. All articles offered to newspapers should be typewritten, in simple English and in conformity with the style of the publication to which they are to be sent.

GMC PROVIDING SHELTER FOR ITS WORKERS.

The General Motors Corporation, which through the General Motors Truck Co., tractor division, builds GMC-Samson tractors at Pontiac, Mich., is forced to extremes to provide houses for its workers. It has leased a hotel in that city, the Wellington, exclusively for their accommodation, is erecting a large apartment building and is equipping a part of the old Munroe plant for rooms that may be rented. These rooms are to be rented to single men.

Property Owners and Garage Men Form Association

The Garage and Property Owners' Association, 63 Park Row, New York, was organized recently. The objects are to apply for and obtain permits from the fire department; to give any and all technical advice in regard to building zones, garage and property matters; to protect and promote the mutual interests of its members; to promote and encourage the enactment of laws beneficial to and take united action upon legislative and municipal matters; to oppose and take necessary measures to prevent the enactment of enforcement of unjust legislation in so far as it affects building zones, garages and property matters.

This association, the first and only one of its character in Greater New York, was organized at the request of numerous business interests who have had considerable difficulty on account of the building zone resolution, adopted by the Board of Estimate and Apportionment, affecting private garages. All public and private garage owners, as well as property owners, now can be saved the necessity of personally applying and obtaining permits. In addition, the association will place at the disposal of members technical and practical knowledge of construction maintenance, alteration and equipment of buildings for fire prevention and fire protection.

NEW BRITISH MOTOR SUPPLY COMPANY IS FORMED.

Trade Commissioner H. G. Brock, London, reports that a gigantic project that will furnish improved facilities for the supply and repair of automobiles was made public recently, when the Times announced the formation of the British Motor Trading Corporation, nominal capital $10,000,000. The company will be controlled by several officers who have gained prominence on account of their organizing ability; and its first step will be to open in the principal cities large depots which will carry immense stocks of spares for every make of car and be equipped with machinery capable of handling the most difficult repair work. It is stated that the "B. M. T. C. Ltd." has recently placed an order amounting to $5,000,000 for Crossley cars alone, and has entered into an agreement by which it secures the selling rights for the greater part of England and all of Scotland for the Straker-Squire cars.

NEW ERA HAS UNIQUE SPRING TEMPERING DEVICE.

New Era "better" springs are heated in an oven, whose temperature is maintained at exactly the right degree by an electric pyrometer. When the steel shows the right color to the expert oven operator the spring leaves are withdrawn and laid in that wonderful machine, exclusively a piece of New Era mechanism, and shaped and tempered at the same time, in such a manner that every fraction of every inch of the surface gets the same temperature and will touch in a close fit over its whole length, with its sister leaf in the spring, when complete.

It is customary for spring makers to bend the springs into shape, section by section, until the leaves approximately take on the shape required, but because the New Era spring is forced into shape, much as a half of a lemon conforms to the shape of a lemon squeezer, the New Era spring is shaped correctly and tempered uniformly.

The wonderful shaping and tempering machine consists of an endless chain, interspersed at equal distances with spring leaf shapers, which move progressively from the top of a 1500-gallon oil tank down to and across the bottom and up the other side. Each spring former starts with a white hot spring leaf and continues through 1500 gallons of tempered oil, gradually cooling the leaf, giving its temper as well as its shape. When the leaf rises to the top of the fluid it is uniformly shaped and uniformly tempered. The oil in the tempering tank is maintained at a uniform temperature, no matter how many springs are immersed, by a circulating device, whereby cold water comes in contact with the exterior of the oil tank, keeping it cool.

A single machine in the New Era Spring and Specialty Co. has a capacity of tempering and shaping 240,000 complete springs every year. After New Era "better" springs are removed from this shaping and tempering device they are annealed in an annealing furnace to further assure that the springs are properly tempered and will be tough as well as hard. In this annealing furnace, close watch is kept over the process and again the electric pyrometer plays its important part in making "better" springs.

Shape, temper and toughness are the qualities that determine a spring's life, resilience and value. The New Era shaping and tempering machine enables the manufacturer to produce quality springs in a quantity that in turn makes possible a low selling cost and price to the consumer.

MILLER CREDIT TO THE INDUSTRY.

Charles E. Miller, the big accessory jobber, has a 100 per cent. record on every war campaign since the beginning of the conflict. Mr. Miller's various stores contributed 18 men to the fighting forces of the United States. Although his sales force was greatly crippled, Mr. Miller sent the men away with a smile, also with a substantial present. In order to keep his force enthused in regard to the war Mr. Miller put up cash prizes for the best efforts shown in each of the various drives through the war. As vice chairman of the auto division of the Liberty Loan Committee, Mr. Miller was tireless in his efforts to put each loan over the top and, incidentally, he holds the jobbing record for individual bond purchases.

Production of Cheap Autos Stumps British

ENGLAND is discussing the cheap motor car and its possibilities. In recent years the contention has been that the English manufacturers should be able to compete with the Americans. Many persons familiar with the methods of production on both sides of the Atlantic and the peculiarities of both markets have regarded this as impracticable. The public has been led to believe that soon an English car would be on the market which would make unprofitable imports from the United States.

But a change is noticeable. Several motor experts have acknowledged that the cheap American car cannot be reproduced in England and that a wise policy would be to build a car to sell for about $2500 which would be so good that it would sell readily. It is thought it will not be long before it is acknowledged that American cars should be admitted at perhaps 25 per cent. duty in a belief that the demand for the higher priced cars will increase.

Enthusiasts have never suggested that more than 50,000 cheap cars could be sold in England in a year even if they were produced in England at the American price. When it is realized that American production reaches several hundred thousand annually, the hopelessness of an attempt at competition from England is seen.

The British and even the government take the stand that privately owned cars are a luxury and should be taxed to the limit. When this point of view changes a common sense policy will prevail. There is no country which would benefit more by motor transport than England. A horse and vehicle cost as much as a cheap car. The roads are ideal; no part of England is much beyond the reach of an auto in a day's journey.

Little or no effort is made by railroads to handle small lots of produce and delivery systems are few. The farmer has a fine road from his door to market. Since traffic makes traffic, the more cars used the more will the market expand in increasing ratio.

The English auto manufacturer gets his order before he builds, so the market loses the impetus of selling departments. The cheapest car that can be produced advantageously in England is one that will sell for about $2500. This leaves an open market for cheap American cars. "Once an auto user always one," is a trade axiom. In the end the English manufacturers would sell more machines than they would if they barred the cheap cars is the best opinion.

An idea of the abnormal demand for cars is obtained at the government auction of second hand cars. A few days ago 100 Ford cars that had seen several years of war service sold at an average of $1150 each. With the exception of two or three standard makes of high priced cars, the second hand cheap car brings a much higher price in proportion than the better type of second hand car.

"'ERE'S JUST THE BIT OF A STIMULANT H'I NEED"

Motor Transport Cheaper.

It is not difficult to foresee that most of this country's traffic will be by motor transport. That method is cheaper, quicker, more convenient and pleasanter for passenger travel. London lends itself to auto travel and motor truck traffic. Before the war there were several motor delivery services covering a radius of 50 miles.

Trade Commissioner H. G. Brock, London, has made the following report regarding post-war developments in the British motor industry:

"Automobile makers of the United Kingdom are now incorporating in their new models all that has been learned in the way of improvements during the past five years. In this way they hope to produce, despite high wages and restricted output, salable motor cars to compete in the same markets as American and other foreign built cars.

"British manufacturers appear to have realized that the first necessity is for them to treat chassis work and accessories in a totally different manner from that which was general before the war if British made cars are to be marketed at competitive prices. Factory capacities for producing standard chassis work have been greatly enlarged, and the problems of cutting down weight, reducing production costs, and securing economical domestic and foreign transport have all received a great deal of attention. It is now realized that it is necessary to treat the chassis and accessories of a car as strictly engineering propositions which must be settled more or less directly by the chassis designer and builder.

"The experience of the war appears to have taught the British motor industry, in common with others, the need for combination of effort and unity of control, and a tendency in this direction is to be seen in a movement for amalgamations in the motor trade, though, up to the present, the British motoring organizations have not achieved complete combination. They have moved in this direction, however, by forming themselves into two main groups, each of which is made up of a large number of organizations.

"This tendency to combine has been recently illustrated in Great Britain by the drawing together of the motor interests of such armament firms as Vickers (Ltd.) and Armstrong, Whitworth & Co., the latter of which has still further enlarged its motor interests by the acquisition of the Siddeley-Deasy Co. of Coventry. The engineering firm of Beardmore and of Thorneycroft are also among the steel manufacturers and shipbuilders in Great Britain who have long been interested in the automobile industry."

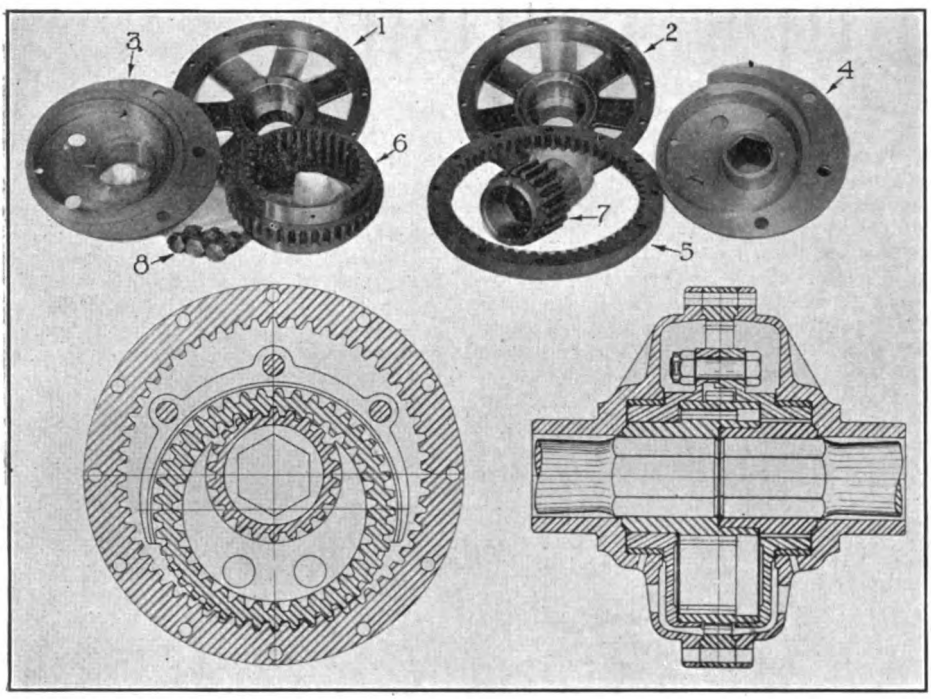
ELBERTZ DIFFERENTIAL GEARSET WELL TESTED



The Elberts Differential Gearset: Above, a Unit Disassembled After Use for 9000 Miles in a Truck; Below, a Cross Section of the Assembly.

A DIFFERENTIAL gearset for which broad claims for efficiency are made is the Elbertz, now being produced by the B. F. Everitt Co., Detroit, the licensee under the patent, and which has licensed several of the largest axle builders of the country to build these gearsets in such numbers as are necessary for their requirements.

Statement is made that the Elbertz gearset has been exhaustively tested by several concerns, builders of axles and trucks, during the last 18 months. The gearset is claimed to be fully compensating and that it will differentiate as will the ordinary type of gearset when turning. When driven straight forward it applies power to each driving wheel in the exact ratio to the tractive effort required; at least to the limit of the combined traction of both driving wheels under all conditions, instead of delivering all the power or torque of the engine to the wheel with the least resistance or traction.

The differential consists of seven main members, which are shown in the accompanying illustration. Of these those indicated as No. 1 and No. 2 are the differential cases, which are respectively left and right, No. 3 and No. 4, which are the crank members; No. 5, which is the internal case gear; No. 6, which is the intermediate gear; No. 7, which is the shaft gear, with three sets of bolts and nuts, which retain the two crank members as one unit when assembled.

The gearset is described as an ingenious arrangement of an epicyclic train of gears, consisting of the internal case gear, which is secured to the differential housing, and which in turn meshes with the intermediate gear member, which can revolve about a bearing on the crank arm or eccentric member. The eccentric member engages with one axle shaft and turns with it, and the other axle shaft engages with the shaft gear which engages with the internal teeth of the intermediate gear member.

The gearset is said to be adapted for all sizes of vehicles and may be constructed for any machine or work. Its practicality is maintained to be undoubtedly established by service. The illustration was made from parts taken from a 3½-ton truck of well known make after it had been driven 9000 miles, which was much of the time considerably overloaded. The photograph was made without retouching and the gearset is as was seen when removed. Showing no evidences of wear.

GMC EARNS $45,000,000 FIRST HALF OF YEAR.

General Motors Co. earnings for the first six months of this year, before taxes are estimated in excess of $45,000,000. Actual cash position on June 14 was as follows: Cash on hand and in bank, $74,567,449; sight drafts attached to bills of lading, $7,430,208; Liberty bonds valued on books at $23,242,025; total, $105,239,682. This represents $131.25 in cash or equivalent for every $100 of debenture stock or preferred that will be outstanding when present debenture syndicate is concluded.

The syndicate reports that the 300,000 share issue is well over 90 per cent. sold. The number of purchasers, it is announced, will exceed 6000.

Spark Plug Types For the Tractor

By O. C. ROHDE.

AN AUTOMOBILE engine runs at full load and speed during only a very small part of its term of service. A tractor engine is running at full load practically all the time. Because of this and the fact that low grade fuels are largely used in tractor engines, the problem of spark plugs for tractors differs to some extent from that of spark plugs for automobiles.

As a rule the use of low grade fuel means higher compression, higher temperature and more dirt and carbon. The last item is made still worse by dust taken in while working during the dry seasons.

It is impossible at the present time to recommend any one type of plug for tractor work. High temperature engines require a plug with an insulator which is exceptionally good electrically, can stand the repeated applications of high heat and at the same time not have enough of the central electrode exposed to cause overheating, which may induce preignition. An oily engine requires a plug having an insulator with unusually long shorting surface at the firing end.

Only Two Types.

In spite of the great number of different plugs on the market there are in reality just two types, those with petticoat or open insulators, and those with conical or closed insulators.

The former can be recommended for the engines which show a tendency to foul up rapidly, while the latter are recommended only in case the extra extension of wire in the petticoat type shows a tendency to cause preignition.

As a rule the tractor owner and operator is safe in using the plug furnished with the machine by the manufacturer. Failure of one or two plugs on any particular machine should not be considered enough cause for a change to another type of plug.

A few defective plugs do get out into service from time to time in spite of the utmost vigilance on the part of the plug manufacturer.

Troubles due to spark plugs may be divided into two classes—first, cutout or missing; second, preignition.

A missing plug can usually be detected by shorting from the upper terminal of the plug to the engine with a screw driver. The miss may be caused by a broken insulator. If this is the case the plug will miss fire pretty steadily both under load and while running idle. The only remedy in case of a two-piece plug is a new insulator and in case of a one-piece plug, a new plug.

Cause of Miss.

The miss may be caused by an insulator which is weak electrically. If this is the case it will miss when under load, but will recover when running idle. The remedy in this case is a new plug with a better grade of porcelain. In a case

Digitized by Google

of this kind it is not always necessary to get another make of plug, but to specify to the dealer that the very latest insulator is desired. In case of Champion Toledo plugs, "3450" insulator will usually solve this trouble.

The miss may be caused by fouling or surface short. By this we mean that a continuous layer of carbon or other conducting material has been deposited on the lower end of the insulator and the spark is traveling through this instead of across the gap. A miss of this kind is usually intermittent for a while and finally the plug stops firing altogether. The immediate remedy is to clean the insulator either with a Champion "Minute" Cleaner or in case of a two-piece plug by taking it out of the shell and cleaning with gasoline and by scraping if necessary.

Where plugs show a tendency to foul up in this way very rapidly, especially where a wet, shiny coating of oil is deposited, it is advisable to change to another brand of oil which in many cases will get rid of most of this trouble.

Pre-Ignition.

Pre-ignition may be caused by other things than the plugs. If it is severe, it sometimes manifests itself by a spitting back through the intake, but it is always accompanied by a loss of power. What actually happens is this: Some part of the material inside the combustion chamber valves, carbon, plugs, etc., has become hot enough to fire the mixture before time for the spark. The piston is not yet at the top of its compression stroke when the force of this premature explosion tries to drive it back down. The momentum of the flywheel carries it over for a while, but power is of course lost. In case of pre-ignition the engine should first be examined to see whether there is an excessive accumulation of carbon and whether there are any particles hanging loose on valves or spark plugs.

The plugs should be looked over for rough edges on either wire or shell. If a petticoat plug is being used and no indications of this kind are to be found, it may be advisable to try a conical plug, which very often will overcome the trouble, though it may need more frequent cleaning.

Always bear in mind that the tractor engineers have run thorough tests before deciding which plug to use. The spark plug they finally decide upon is the one they believe to be the best suited for their engine. When a new plug is needed the tractor user should insist upon the same plug his engine was originally equipped with at the factory.

In general, the spark plug manufacturer is prepared to cope with the tractor plug problem and can furnish plugs to meet all present requirements. However, present day development in engines and fuels is so rapid that the material on the market is not always the latest obtainable. The dealers are learning to classify plugs for the various conditions of service and if the tractor owner will specify clearly just what the plug is to be used on he should have no trouble getting just the plug he needs.

DEALER PROVIDES FOR FREE TRUCK INSPECTION

System of Care Established More Than Three Years by the J. W. Maguire Co., Boston, Independent of Manufacturer.

TRUCK manufacturers have made provision for inspection of machines at the service stations of branches or dealers, and have developed organizations that are intended to do this with regularity, but these have been only reasonably successful because owners frequently believe that such examinations are proposed because the manufacturers are suspicious of the use made of machines and seek evidence that will justify evasion of responsibility for guarantee made in the sales contract, or the owners assume that the degree of care recommended is not necessary.

It is a fact, however, that some manufacturers have inspection plans that have been proven very economical, and when these are understood and are made use of by owners the operation and maintenance cost of the trucks have been considerably reduced and the efficiency more or less increased. There is nothing mysterious of these inspection systems. They are simply periodic examinations of the machines by men who are expert in their knowledge and who determine whether the condition of the trucks is up to the standard that will be most productive and valuable to the owners. They do not establish responsibility. The reports are made impartially and submitted to the owner, who can do whatever may seem necessary to obtain care that will afford the degree of care desirable.

In some instances the organizations are maintained by manufacturers and in others by branches or sales representatives, and occasionally the manufacturer and dealer may operate independently or unitedly, dependent upon the policies and the contracts existing.

Manufacturer's and Dealer's Service.

The J. W. Maguire Co., Boston, agent for New Hampshire and Eastern Massachusetts for Pierce-Arrow trucks, is now operating a system inaugurated more than three years ago, and which, while independent of, is coordinated with the service of the Pierce-Arrow Motor Car Co. The Pierce-Arrow company's service

The Inspection Record of the J. W. Maguire Co., Filled in Triplicate, a Copy of Which, with Recommendation, Is Sent to the Owners Monthly.

Digitized by Google

is general the country over, but that of the Maguire company is localized in the territory specified, and its dealings are direct with the owners and not through the factory organization.

There are upwards of 700 Pierce-Arrow trucks in the Maguire company's territory and all of these are inspected save the large fleets that are under the supervision of distinct organizations. In other words, the system benefits all owners who have not their own service stations and expert mechanics. The inspecting is done by two men, one who covers Boston and its suburbs and the other the outlying territory within a radius of 60 miles, they examining the trucks approximately once a month, and those at greater distances are inspected from four to six times a year. The men have no regular schedule for their work, but arrange their daily itineraries so that they will meet the trucks in service and drive and examine them so far as may be necessary to learn every detail required in the record.

System Is Very Thorough.

The accompanying illustration of a report form shows that the examination covers the engine, governor, oiling system, radiator, carburetor, ignition system, clutch, transmission system, steering gear and linkage, rear axle, chassis and body and hoist. Each of these covers different items and collectively they include practically every construction unit and part. The inspector examines the machines systematically and careful attention is given to adjustment and to lubrication.

Emphasis is made that the chassis must be oiled and greased to what is known as the Pierce-Arrow standard and that unless this care is given there will be destructive wear that will be reflected in expensive upkeep and increased cost of operation and greatly lessened service life. The report indicates the units and parts that required attention and were adjusted, and those which were not adjusted, this applying to work that could not be done with hand tools and which must be done in a shop or garage with more complete facilities. These are shown in the first and second columns of the report form. In the event that work is imperatively necessary this is noted in the third column. This, however, is seldom done.

Report Made in Triplicate.

The report is made in triplicate on two white and one salmon color sheets. The inspector sends one white and the salmon sheet to the office of the company and retains the second white sheet in his record book. In the event that small replacements are made by the inspector from a stock he carries with his tool kit, these are noted on the report and from these notes charges are made the owner. Unless the inspector makes replacements there is no cost attached, and then only the prices of the parts.

The reports are carefully analyzed and copies are sent the owners, and when necessary they are accompanied by such recommendation as will insure the care and maintenance as will insure the average service life of the vehicles. In the event that a condition is such that a change in care is desirable the reports are noted each month and the owners are informed whether or not there is improvement. The owner is advised that he can make a change. No responsibility is placed, that being left to the owner to determine. But he is informed that he will be the loser if the truck is not kept adjusted and lubricated.

Neglect of Truck Is Shown.

The inspection reports also establish whether or not the trucks have been neglected, and should there be claim made relative to a condition for which the manufacturer is maintained by the owner to be responsible the reports will be the basis of judgment. The other report is filed, the one for comparison by months or periods and the inspectors' books are kept for reference.

The inspectors do emergency work in the sense that the one may be assigned to the other's territory to do what may be imperatively necessary, and frequently what may be begun by one man is completed by the other, so there is the judgment of two men instead of one to be applied to the condition of the truck or trucks on which they work. The reports are made impartially and there is no reason for the drivers to feel that they are not fairly dealt with. In fact, they are made to understand that if they are guided by the advice of the inspectors their work will be made easier and they will be more efficient employees.

Inspectors Ride on Trucks.

The inspectors necessarily have to drive the trucks to learn their condition and considerable of their traveling is on the machines. For this reason they cannot use cars to good advantage, for they would have to leave the machines whenever a truck was inspected and return considerable distances to them. This would reduce the time they now give to work, and by their knowledge of the owners' service they can arrange to meet and leave trucks so that practically no time is lost.

The Maguire company has at times found owners indifferent and rare instances antagonistic to accepting inspection. They are informed that his service is what they have paid for and entitled to when a truck is delivered and that the purpose is to insure to them continued utility of the machines at the lowest possible cost. They learn by practical experience that they substantially benefit and that there is varying economy obtainable if they will follow advice that is based on careful study of the reports. The inspection is continued without regard to the period of service.

The inspection service of the Pierce-Arrow company is also a check that can be studied to advantage. The main object is to follow the manner of lubrication, for statement is made if this is done systematically there will be without doubt a good knowledge of the mechanical condition and adjustment and restoration whenever needed.

Charges Against Gasoline Dealers

"EVERY day New York motorists lose thousands of dollars because of inaccurate devices for measuring gasoline," states the New York Evening World. "No check is made of the pumps officially, the Department of Weights and Measures regarding garages as an incidental. For the 320 square miles of New York City there are only 19 field inspectors and one car with a testing tank. Yet government tests show four out of five pumps to be inaccurate, always 'short.'

"An Evening World reporter asked Joseph J. Holwell, commissioner of weights and measures, what was being done by the city to protect the thousands of motor truck owners, automobilists, motorcyclists and motor boat enthusiasts from unscrupulous dealers in oil and gas. The commissioner admitted his office has few figures, has done little and is not equipped to begin a campaign against the garage and service station owners to secure honest measurement. The city has provided no funds to handle this important work, the department at present lacking even funds to buy gasoline and test the pumps when complaints are received. The one truck it possesses is used for other work principally.

"Commissioner Holwell explained about the 19 inspectors for the five boroughs. They check up scales in grocery stores, for ice and coal dealers, in fact every device used for the sale of commodities by weight. On 'rainy days' when not busy at other work they visit garages to see that dealers are giving full measure. He admitted 19 men could not go far in keeping track of the 3000 or more gasoline sellers in the city, but said that funds were not provided for any more help.

"The only way a gasoline dealer is checked up is when an irate motorist, feeling he is being delivered 'short' gallons of gas, at 29 cents per gallon, makes a complaint. Commissioner Holwell immediately sends an inspector to the garage.

"The pump is tested, and if it measures short the pump is condemned. But the dealer has only to adjust it, ask for a reinspection and obtain an O. K. He could easily adjust the outfit to measure short a few hours later and escape punishment until another kick was made."

MOTOR FIRMS PLAN VEHICLE TO REPLACE TROLLEY CAR.

The steadily increasing costs of traction service throughout the country have prompted efforts in many quarters to bring about a reduction, both in operation and in fares. In connection with this it is reported that interests identified with the Gray & Davis Co., Inc., the American Bosch Magneto Co., the Stanley Motor Car Co. and the Laconia Car Co. are developing a car which can be run on street railways.

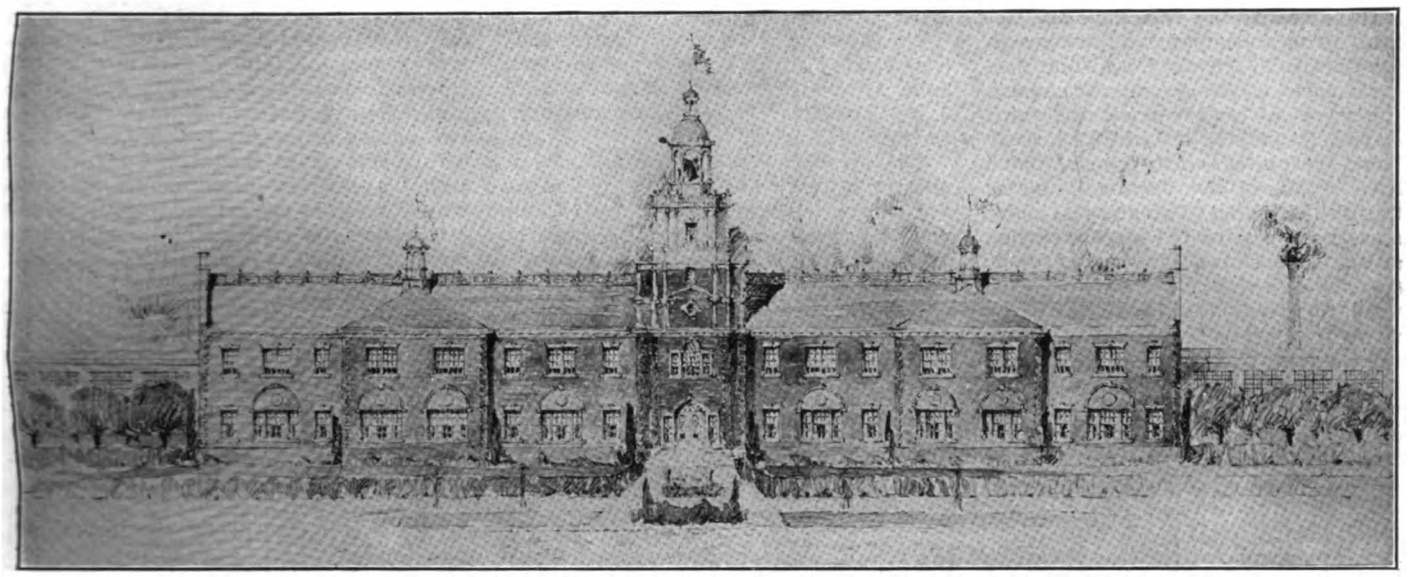
NEW AUTO ADMINISTRATION BUILDING

Attractive Structure Now Being Erected by Liberty Motor Car Co., Detroit, is of Colonial Type of Architecture.



ONE of the distinctive features of the new factory that is now being erected by the Liberty Motor Car Co. at Detroit is an administration building, which will be one of the most sightly structures ever designed for commercial use.

It will be of the colonial type of architecture, a style that is in singular accord with the ideals of the company and the name of its product, and in appearance will resemble some of the famous old buildings of colonial days rather than a regulation office buliding. As a famous architect remarked, it might be easily mistaken for an exclusive club.

Of course the building will be thoroughly modern, being as up-to-date and complete as money and brains can make it. It will front on Charlevoix avenue, which is to be converted into a handsome boulevard. The building proper will be 50 by 200 feet in size, constructed of colonial brick and steel. There will be two floors, the first housing all the production offices and a splendid display room for all the latest car models, and the second will be occupied by the executive and sales offices.

A comfortably furnished rest room of unusual size is provided for the women employees of the office force, and there is also the unusual feature of a smoking room for the men.

But one of the most novel ideas to be embodied in this unusual structure is a tower, modeled after that of Independence Hall, in which will be hung a replica of the famous Liberty Bell. It is planned to make this bell serve in the place of the conventional factory whistle. A flag pole, crowned with the typical Liberty cap, is another reminder of the colonial air which the building is to adopt.

Together with the plant buildings, which are to represent the highest type of modern factory construction, and to be replete with every provision for the improvement of manufacturing methods and for the welfare of employees, this will constitute one of the finest automobile factories in the world.

TESTIMONIALS TELL HOW GASTINE ELIMINATES CARBON.

The Gastine Co., Bridgeton, N. J., has received a great number of testimonials as to the efficacy of Gastine. A letter from W. B. Cody, chief of the Atlanta fire department, states:

"We are pleased to state that Gastine is being used by the fire department and does all you claim for it.

"In our 13,000-pound pumper we have cut down the carburetor five notches, and find it removes the carbon from the motor and gives more power and a quicker get away.

"My car shows more power, mileage and speed than ever before. I recommend the use of Gastine to truck and auto owners."

The following was received from R. S. Freeman, superintendent of the Gilmer Street Garage of the Georgia Railway and Power Co., Atlanta:

"I have tested Gastine in several makes of cars—test running for two weeks—and found a decided increase in mileage, ranging from 16 6/10 to 45% test being made from actual speedometer readings.

"Beginning test I measured the quantity of gasoline and placed one Gastine tablet to each gallon of gas. Before filling tank with gas and tablets I adjusted each carburetor to the finest adjustment that could be made. After Gastine tablets had dissolved I again readjusted carburetor, cutting down the fuel about one-half revolution of the needle valve, or 25%.

"After running test for two weeks I examined motor for carbon and found very little carbon, which was very soft. I would judge that in a couple days running with the continued use of Gastine the carbon would have been entirely removed. When starting this test the above motor was very badly carbonized.

"It is impossible for me to estimate the increase in power.

"I have a Tower truck which is overloaded and since using Gastine the car is pulling up grades and inclines in high gear, which has never before been accomplished. The drivers, themselves, did not know that the test was being made by the garage and quite a number made remarks to me about the cars pulling so well. I have recommended to the company my approval for the future use of Gastine."

COUNCIL OF NATIONAL DEFENSE STUDIES SHORT HAULS.

The Council of National Defense through its Highways Transport Committee is endeavoring to work out the short haul problem for the benefit of all concerned. It desires the following information concerning motor truck concerns now in operation: Name and address of operators, number and capacity of trucks in use, routes and schedules and rates (with copy of tariff wherever possible). These cities have been selected for the survey: Boston, New York, Philadelphia, Pittsburgh, Baltimore, Washington, Atlanta, New Orleans, St. Louis, Chicago, Detroit, Cleveland, Omaha, Denver, Dallas, San Francisco, Los Angeles, Portland and St. Paul. The information should be sent to the Council of National Defense at Washington.

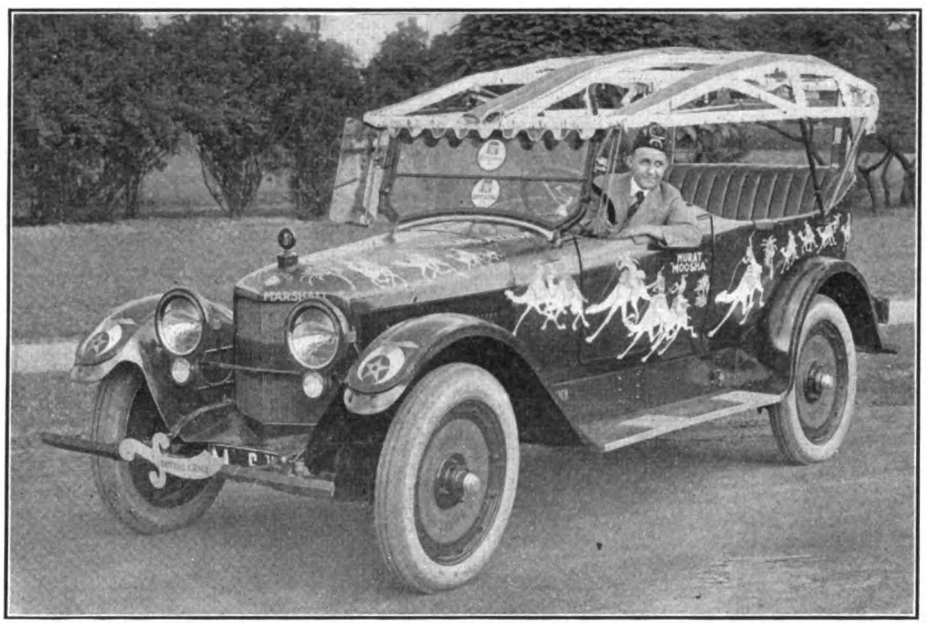
Personals and Notes of the Auto World

The Premier Motor Corporation and Indianapolis firms in general aided in the reception of the Imperial Council of Shriners of North America at the 45th annual session in Indianapolis last month. The accompanying photograph shows Charles S. Crawford, assistant general manager of the Premier company, at the wheel of his personal car, which was specially painted in lurid Shrine colors and decorated with camels, hand painted by Miss Helen Jacoby, daughter of retiring Imperial Potentate Jacoby. The automobile attracted more attention than anything shown during the week. Crawford drove it every day. Heading the two spectacular parades he was accompanied in the car by Police Commissioner George B. Coffin, Fire Chief J. C. Loucks, Capt. G. A. Haller, grand marshal, and Dr. Paul F. Robinson.



Charles S. Crawford, Assistant General Manager of Premier Motor Corporation, Drives Car, Painted in Lurid Shrine Colors, in Shriners' Parade at Indianapolis.

The M. B. D. Garage Corporation has opened its headquarters at Pacific street and Flatbush avenue, Brooklyn, N. Y., with a storage capacity of 200 cars. William O'Brien is president.

The Bolton Wechtel Co., Inc., distributor in Brooklyn, N. Y., for Exide batteries and Bosch magnetos, has opened a Flatbush branch, with W. C. Bolton in charge.

The Commodore Garage was recently opened by Charles McCabe Ford at 607 Sackett street, Brooklyn, N. Y.

Olin Finney & Co., Inc., automobile banker, Philadelphia, is now under control of the creditors. Mr. Finney was for a time the dancing partner of Mrs. Vernon Castle and later married Mrs. C. Theodore Wernwag, whose husband left an estate estimated at $1,000.000. It is hoped that the creditors will be paid in full.

Lipshitz & Zimmer, Inc., Brooklyn, N. Y., has been chartered to do an automobile supply business, with $10,000 capitalization. David Lipshitz, William Zimmer and Nathan Rodner are the directors.

The Gulf Refining Co. is building a brick filling station to cost $5000 in Brenham, Tex. The garage business in Brenham is increasing. E. P. Davis, proprietor of the City Garages, has leased the Julia R. Simon building and will spend $10,000 in arranging it as a garage. R. W. Wells will remodel the Giddings building as a garage.

The Climber Motor Co., Little Rock, Ark., recently gave its first chassis a tryout. This chassis is the first complete one ever built in Arkansas. About $150,000 worth of material for car manufacture has been bought.

The Weir & Ash Co., Scranton, Pa., has taken on the Autocar.

The Sterling Sales Co., Auburn, Ind., has elected these officers: President, John A. Rendle; vice president, Richard J. Schweitzer; secretary-treasurer, Charles W. Ruchel.

The Stephens-Williams Auto Co., Manchester, Conn., has incorporated with $10,000 capitalization. Harding A. Stephens, Margaret I. Stephens and George H. Williams are the incorporators.

Henry Ford has asked Secretary Glass to send an expert to examine the books of the Ford Motor Co. to determine the amount of Mr. Ford's share of the profits on war contracts, which he desires to return to the government. Commissioner Roper instructed the Detroit branch of the Internal Revenue Bureau to supply Mr. Ford with expert assistance.

The H. A. White Auto Co., Memphis, Tenn., has been issued a permit for a brick and concrete garage and show room to cost $65,000.

F. M. and Dabney Crump, Memphis, Tenn., have secured a permit for a garage and show room to cost $35,000.

Austin B. Benner, Doylestown, Pa., a member of the McLaughlin, Benner Motor Co., died recently after an illness of several months.

The Howard Automobile Co., Pacific coast distributor for Buick cars, has secured an injunction restraining F. R. Cyriacks from using the name Buick in the form of the Buick scroll. Cyriaks, after being relieved as Hollywood, Cal., agent for the Buick, removed the word agency from the Buick sign on his garage and substituted the words "used cars" in small letters under the Buick scroll.

Victor E. Hurley, junior member of the firm of John E. Hurley & Sons, automobile dealer, Wilmington, Del., was recently married to Miss Annabel Jarman.

William London, Dorchester, Mass., has bought 9763 feet of land on the westerly side of Fordham road, Brighton, Mass., for the site of a modern reenforced concrete automobile service station, to cover the entire lot. It will be two stories in height, the lower floor to be six feet below the street level, from which a reenforced concrete driveway will lead. The second floor will be five feet above the street level and will be made accessible by means of a similar driveway.

The Farrell Auto Supply Co., Brooklyn, N. Y., employees recently enjoyed an outing at Bayville, Long Island. Various sports, with a shore dinner, made a delightful program. "Doc" Watson, Charley Brown, M. P. Farrell and Billy Laudendorfer sang. Jimmy Webb won the swimming race.

The Lexington Motor Co., Connersville, Ind., recently entertained its distributors from every state in the Union and from a few foreign countries at Connersville. The entire city joined the company in entertaining the guests.

John M. Robbins is vice president of the Fulton Truck Co. of Nebraska, formed recently to distribute the Fulton truck in Nebraska. For 15 years he has devoted his entire attention to the passenger car.

Ralph F. Schneider is head of the Ralph F. Schneider Auto Sales Co., which has acquired the distribution for Detroit and surrounding territory for the Bethlehem trucks.

Lieut. F. W. Ramey, who was observation officer in the U. S. Artillery in France, has been placed in charge of the sales at the Cotta Transmission Co., Rockford, Ill.

M. V. Smith is now general superintendent of the Supreme Motors Corporation, Warren, O.

Edward A. Heffernan has assumed charge of the recently opened office of the Ahlberg Bearing Co. in Kansas City, Mo.

W. S. Stevenson, general sales manager of the Bethlehem Motors Corporation, has resigned, owing to ill health. Roy S. Davey is his successor.

C. R. Collins has resigned as advertising manager of the Ajax Rubber Co., Inc., and of the Racine Rubber Co.

Digitized by Google

Harris N. Pickett, recently appointed advertising manager of the Ohio Trailer Co., Cleveland, has served the advertising needs of prominent automotive material manufacturers over a period of several years. He was formerly advertising and assistant sales manager of the General Asbestos and Rubber Co. In his new connection he will be particularly interested in the service bureau formed to co-operate with Ohio trailer dealers.

The Militor Motor Co. in its operation of the Knox Motors Co. at Springfield, Mass., will supply 1500 persons. The new company is headed by H. G. Fisk. The Knox company has been engaged in government work during the war.

Birkett L. Williams, truck sales manager of the Grant Motor Car Corporation, announces the appointment of Homer L. Schneider as a member of the Grant truck sales organization, covering western territory. Mr. Schneider is well known as a truck distributor in northern Ohio. For the last four years he has been general manager of the Republic Motor Sales Co. of Cleveland. Prior to entering the motor truck field he was for several years connected with the Van Dorn Electric Co. and was instrumental in introducing to the trade the electric drill, which at that time was a new departure in manufacturing lines.

The Northway Motors Co., Natick, Mass., sales force recently had a convention, with lunch at the Boston City Club at noon, a banquet at the Copley-Plaza in the evening and an outing the next day at Riverside, with wives and other women guests in attendance. J. C. Reilly, general manager, was in charge.

O. Brunauer has resigned as director of sales and engineering for the United States Ball Bearing Co., Chicago. He was formerly with the Detroit office of the Gurney Ball Bearing Co.

George B. Chapman has become Boston branch manager for the Garford Motor Truck Co. He was for the past three years with the Federal Motor Truck Co.

W. D. Thompson has joined the sales force of the O. Armleder Co. as western representative, with headquarters in Denver. Jack Parker is also associated with the Armleder Co. C. B. Harvey will have charge of the middle west with headquarters in Chicago. Charles F. Ward will cover Massachusetts and Connecticut for the company.

The Progressive Motor Sales Co., New Haven, Conn., has increased its capitalization from $6000 to $100,000.

HANCH GENERAL MANAGER FOR MAXWELL-CHALMERS.

C. C. HANCH.

C. C Hanch is now general manager of the Maxwell-Chalmers plants in Detroit. During the war he was chief of the automobile products section of the War Industries Board. Hanch became such a factor in the automobile world that after he was president of the Indianapolis Automobile Board of Trade, he was elected secretary of the National Automobile Chamber of Commerce, of which he is now a director. Carl H. Pelton, secretary of the Maxwell Motor Co., and who was assistant to Walter E. Flanders, has resigned.

The Julian Motor Car Co., which is now being formed in Detroit, will bring out a six-cylinder car designed by Julian S. Brown. The engine will consist of twin threes made into a six, weighing only approximately 300 pounds.

E. H. Beacham, assistant to A. C. Barley, president of the Barley Motor Car Co., has resigned to go to the Waldon W. Shaw Co., operating the Shaw Taxicab Co. and the Yellow Taxicab Co. He has been general sales manager during the past six months.

The Pontiac Body Co. announces the resignation of A. W. King, vice president and plant superintendent.

The Swinehart Tire and Rubber Co., Akron, O., salesmen in New England recently held a conference at the Hotel Lenox, Boston. President Thomas F. Walsh spoke on the subject, "It Pays to Advertise." William Clendenin of the Dooley, Brennan Advertising Co., Chicago, told of the company's advertising plans. F. L. Black, New England manager, was among the other speakers.

The S. & M. Levy Co., with headquarters at 35 Grant square, is a new firm that has entered the tire distributing field in Brooklyn, N. Y. It will distribute all makes of tires, tubes, rims and rim parts. The firm consists of Mortimer S. Levy, Samuel S. Levy and William A. Brewer.

Capt. William Sparks is back as vice president of the Sparks-Withington Co., Jackson, Mich.

The Lightning Change Rim Corporation, Berrien Springs, has been formally organized, with these officers: President, J. L. Mitchell; first vice president, W. S. Mitchell; second vice president, Harold Myers; secretary, Fred S. Bynon; assistant secretary, D. S. Heim; treasurer, G. L. Valentine.

Lake Bower, a Des Moines, Ia., automobile salesman, heads the honor roll for Mothers' Day, not only of Des Moines and Iowa, but the nation, it is believed. Bower has been away from home for 30 years. In all that time he has never missed a Sunday in writing to his mother or the folks at home.

The Ohio Trailer Co., Cleveland, announces two new models. In the two-wheel trailer line the 800-1000-pound model is offered at $110, the 1250-1500-pound model at $140. The new model rated at 1500-2000 pounds sells for $185 with stake panel body, and at $200 with cattle rack body.

The Stewart Wire Wheel Corporation, Frankfort, Ind., announces the beginning of quantity production of Stewart wheels for passenger cars. At present only the department devoted to making wheels for Ford cars is in normal production, but plans are nearing completion for manufacturing a complete line for every make of passenger car. R. A. Tyree, Frankfort, Ind., is general manager of the company. During the war the entire facilities of the Stewart factory were turned over to government work.

The Conner Standex Sales Co., Richmond, Va., is now distributor for Virginia and North Carolina for Standex products.

Salesmen of the Champion Spark Plug Co., Toledo, O., Who Recently Met in Convention.

The American Motor Truck and Tractor Co., with executive offices at 110 West 40th street, New York, has bought the factory and land formerly owned by the Portland Manufacturing Co. in Portland, Conn., and will at once convert it into a plant for its own use, turning out trucks and tractors. The property includes a factory 85 by 350 feet, with railway siding extending the entire length of the building.

The Tri-State Accessories Corporation, El Paso, Tex., began business this month with a complete stock of automobile truck and tractor accessories. The corporation has purchased the entire stock and business of the wholesale departments of the Tri-State Motor Co., the Western Motor Supply Co. and the Yonge Auto Supply Co. of El Paso. The corporation has headquarters at 425 W. San Antonio street. It will operate at wholesale exclusively. Barry Cool, who had 14 years experience in the automobile and accessory line in California, is president and general manager.

The Jordan Motor Car Co., Cleveland, has distributed $25,000 in premiums among employees, as follows: Those serving two years or more, 15 per cent. on their previous year's compensation; one year or more, but less than two years, 12 per cent.; less than one year, 10 per cent. The company began business less than three years ago.

Bellanger Brothers of Paris, members of the firm of Bellanger Freres, have reached America with their chief engineer, John Faure. The noted trio will tour America and will spend some time studying American automobile methods. In Detroit they will be the guests of Briscoe and Stahl, which firm has been for many months designing a car to be manufactured in France by Bellanger Freres. American factories will turn out the parts, which will be shipped to France for assembly there.

The Apperson Bros. Automobile Co., Kokomo, Ind., announced it has just booked one of the largest single orders ever received for automobiles by a manufacturing company. The Bruening Brothers, Kansas City, placed with Elmer and Edgar Apperson an order which represents a total of $15,600,000 worth of automobiles.

The Chicago Die and Specialty Co., Chicago, announces that it has placed on the market the Kobzy Signal, which, the company states, is the combination of more than a dozen patents and resulted from more than a year's experimental work on the Moore Signal.

The Joseph Dixon Crucible Co., Jersey City, N. J., calls attention to an electric apparatus perfected by C. M. Allen, professor of hydraulic engineering at the Worcester Polytechnic Institute, for detecting small power losses and determining the efficiency of gears. Many tests were made with this apparatus to determine the best sort of gear lubricant, and the company announced that the best results were obtained with a mixture of heavy oil and flake graphite. "With a perfect blending of the oil and graphite there was a minimum loss through friction," states the announcement. "The test proved what the Joseph Dixon Crucible Co. has always claimed, that flake graphite properly combined with oils and greases, as in Dixon's Graphite Lubricants, is unexcelled. That is because of its ability to build up microscopic irregularities in gear surfaces, forming a tough film of graphite and so preventing metal-to-metal contact"

The Reliable Tractor and Engine Co., Portsmouth, O., has been incorporated with $2,000,000 capitalization by C. Heer, F. E. Adams, George W. Platt, F. N. Tynes and M. Herr. The company is now making the Reliable 10-20 farm tractor, which uses kerosene, and the Reliable Heer two-cylinder opposed stationary and portable engines for all kinds of power purposes. Alterations and extensions to the plant will be made as soon as possible.

The General Automotive Co. has opened a store at 177 Central avenue, Newark, N. J., with a complete line of automotive equipment, supplies, tools, etc. The company handles Fisk tires, tubes and accessories. In the rear of the store and opening on Sussex avenue, there is a well equipped service station, where service will be given on Stromberg carburetors, Gabriel snubbers and Sparton horns. The establishment has been designated by three prominent manufacturers as their official service station in the Newark district. Carl James is secretary and treasurer. John M. Clarke, formerly with the Motor Equipment Co. in New York and Boston and later sales manager for A. J. Picard & Co., is president and general manager.

The Briggs & Stratton Co., Milwaukee, is investing $400,000 in new buildings and equipment.

The Vesta Accumulator Co. announces the purchase of land at the southwest corner of Michigan avenue and 29th street, Chicago, now occupied by the Chicago Motor Club. The company will start immediately to tear down the present building and erect a service station which, it is expected, will be the best equipped and most elaborate of its kind in the world. General Manager W. S. Perry says that the structure will be "a model for our more than a thousand service stations throughout the country to live up to." The new building is made necessary by the large increase in business during the past year. The company had to have more room at its factory, 2100 Indiana avenue, and the entire service department will be moved to the new location. There will be 23,100 square feet of floor space devoted entirely to battery service. It is planned to accommodate more than 100 cars at once. There will be rest rooms for autoists.

The New Era Spring and Specialty Co., Grand Rapids, Mich., announces that O. A. Loew, who was for several years superintendent of the Globe Machine and Banding Co., and of the Gabriel Manufacturing Co., Cleveland, and later with the Hayes Manufacturing Co., Detroit, has become production engineer with the New Era company, whose business, according to President Smalley Daniels, is forcing it to plan a new, enlarged factory for next year. Three eight-hour shifts per day are now being run in some departments.

The Electric Auto-Lite Corporation has bought the Poughkeepsie, N. Y., plant of the Fiat Co., from which it will handle its rapidly growing eastern and export business. The first equipment will be installed by August and production should begin shortly thereafter.

The Briscoe Carburetor Co., Pontiac, Mich., announces that work on the new plant is nearing completion and that manufacturing operations will probably be under way in about a month.

The Chelsea Steel Ball Co., Chelsea, Mich., announces that the entire production has been sold for the next three months. Twelve new grinding machines are to be installed.

The Port Huron Engine and Thresher Co., Port Huron, Mich., has put on the market a small threshing machine, designed to operate in connection with the Fordson tractor.

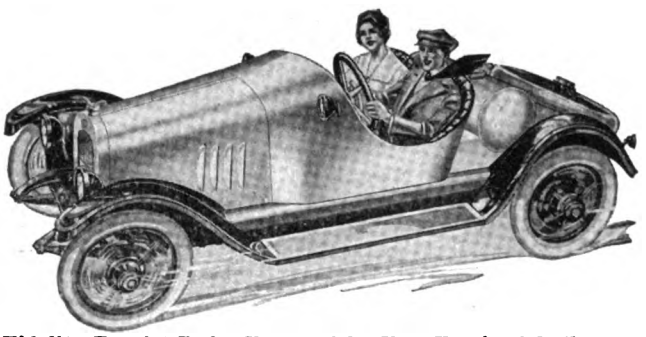
Digitized by Google

The New England Mills Co., 1219-21 S. Michigan avenue, Chicago, is offering to the trade its latest automobile body, the "Fidelity" Tourist, which is a five-passenger body, handsome, of high quality and durable. This is designed to fill the demand for a roomy, stylish body at a moderate price. It is a three-door touring body, mechanically correct and artistic. The company believes the body will be a record seller for the Ford chassis. It is easily attached, simply replacing the old Ford body, using the fender, running board, radiator and gas tank. The body is made of 20 and 22 gauge steel on substantial wood frame, with one-man top of high grade mohair, including side curtains and large celuloid lights. There is an adjustable two-piece windshield. The radiator shell fits snugly over the Ford radiator, and there is a 1918 style hood with four air vents on each side. The upholstery is of Quineleene, plaited and finished. The body is painted black and highly varnished. The company also makes the "Fidelity" roadster body and "Fidelity" runabout body. It issues every 60 days "The Little Salesman," an automobile accessory catalogue that is well worth having.

The White Products Co., 100 W. Garfield boulevard, Chicago, is adding a number of new items to its line of automobile accessories. All of them will be marked and advertised under the trade name of White Line Automobile Accessories. One of the new items is a jack truck for garage men. This truck slips under the rear axle of a Ford and raises the car for repair work. It also draws the car around the garage. A handsome display card is being sent out to the trade on the "Auto-Scope Windshield Wiper," another White product.

The Michigan State Auto School, Detroit, has placed on the market a new book, "The Auto Electrician's Guide." It is of unusual interest to automobile men, particularly those working in a garage or service station, as it answers everyday questions. The book has 850 wiring diagrams, covering every system of wiring in use on all standard cars, including the new 1919 Ford systems. There are 286 internal wiring circuits, which give complete information on internal wiring of generators, controllers, coils, starters, switches and other electrical parts. The diagrams cover all the wiring systems used on cars from 1912 to 1919 and some even back to 1906. There are also wiring diagrams for Detroit and Baker R & L electrics, also pipe connections for Stanley Steamers. The book is made up in loose leaf form, making it easy and convenient to insert additional diagrams as issued. All diagrams are printed in black on plain white paper, which makes them more easily distinguished and read than if printed in colors. The book sells for $7.50, under guarantee of satisfaction or money refunded.

The Beneke & Kropf Manufacturing Co., Chicago, as successor to the Findeisen & Kropf Manufacturing Co., Chicago, will hereafter manufacture Rayfield carburetors. Coincident with the announcement of the reorganization of the company comes news of plans for the material expansion of the Rayfield manufacturing program, including important improvements and perfections in production processes. Henry Beneke, having purchased the entire interests of Frederick Findeisen, becomes vice president and treasurer of the reorganized company. He comes to the organization from the vice presidency of Hibbard, Spencer, Bartlett & Co., one of the leading wholesale hardware concerns of the country, with which he was associated for 27 years. O. F. Kropf, whose record as a producer of high grade carburetors is well known to the trade, remains with the reorganized company as its active president. E. A. Bates continues as director of sales and advertising in the new organization. Reinforced with new capital the present manufacturer of Rayfield will enlarge both plant and equipment. Manufacturing processes will be completely rerouted. Each Rayfield carburetor is now given three tests before it leaves the factory. There is a test for gasoline leaks, a test for vacuum and the final test in which the carburetor is bolted to a gasoline motor and tried out for performance. The new company desires it to be known that it is now in a position to meet more nearly the heavy demand which has always existed for the Rayfield, and that its new facilities will enable it to serve a greater number of car manufacturers than has ever been possible.



Fidelity Tourist Body, Featured by New England Mills Co.

The Hill Pump and Valve Co., Chicago, announces that Eugene Heller, president of the company, has purchased 205,402 square feet of land at Belmont and Knox avenues, Chicago, and that the company will build on this site a new plant, with an initial expenditure of $100,000 in connection with the construction of the first unit and an ultimate expenditure of approximately $500,000. The first building will be one story high, of saw tooth construction, and will contain 50,000 square feet of floor space. Landscape gardening and the utilization of trees and shrubs will be employed to add to the attractiveness of the grounds. The new factory will be the result of the rapid growth of the company during the last few years.

The Hill Pump and Valve Co. announces that it has placed on the market an indestructible demountable rim wrench, which is made entirely of steel. The brace handle and knob at the end are heavy steel stampings attached in such a way that they cannot be broken off. The brace itself consists of a heavy steel rod, while the tube which holds the reinforced, case-hardened, drop-forged jaws, is seamless steel tubing. The handles and tube are finished in black enamel, while the brace is nickel plated. The wrench takes automatically, without any adjustment, every size of nut used on every make of demountable rim. family.

The Dearborn Truck Co. announces the appointment of the Wm. H. Rankin Co., New York, Washington and Chicago, as its advertising representative. The Dearborn company, in addition to manufacturing the Dearborn two-ton truck, manufacture the Smith Form-a-Truck. It will advertise the original phrase, which was one of the big features of the original advertising, "$350 and your Ford (new or used) will make a one-ton truck." Samuel Porter is president of the company, J. P. Newell is the sales manager and L. W. Coulson is the advertising manager of the truck company. An aggressive campaign to secure new dealers and promote the sales of the company through the regular dealers will be inaugurated at once. From the beginning the company has been a big financial success.

The Tonneau Shield Co., Inc., announces that it has obtained a perpetual injunction against a firm making a windshield that infringed the Tonneau patents, and that it will proceed to prosecute anyone infringing its patents or selling infringements of the same. The company announces that it has obtained several other patents which cover Tonneau Shields and considers its position very strong at present.

The Doble-Detroit Steam Motors Co. announces that large production of Doble-Detroit steam cars will be under way by the end of this summer.

The Ahlberg Bearing Co., which specializes in regrinding worn ball bearings and giving service on new high grade bearings, announces the opening of a new branch in Pittsburgh. This is the third branch opened by this company within the last two months.

The Gill Manufacturing Co., 351 West 59th street, Chicago, has issued what is said to be the most complete and up-to-date piston ring size directory ever published. The directory is sent to dealers free of charge. In order to discriminate between dealer and consumer, a charge of 25 cents a copy is made to those not dealers. A description of the Gill ring is given, with instructions for installation. The price list, location of stocks and distribution centers are listed. Prompt shipping service is advertised.

The Stutz Motor Car Co. announces that at a meeting of the directors W. N. Thompson was appointed general manager.

The American Tire Co. has elected these officers: President, George L. Giller; vice president, Albert Mayers; secretary and treasurer, Louis Fodt; directors, the officers and George A. Giller and Thomas W. Bannon.

New York

The New York Automobile Dealers' Association has established four classes of membership, the most important being the dealers' membership to which any individual who represents a firm or corporation selling automobiles or motor vehicles in the city is eligible. Each firm or corporation is entitled to one such member. Associate membership is open to any person engaged in business in lines allied to the automobile business. House membership is for persons having business connections with the persons, firms or corporations eligible to either of the proceeding classes. Non-resident membership is open to those engaged in business more than 30 miles from New York City. Dealers pay an entrance fee of $100, but there are no such fees for the other classes. Annual dues are: Dealer, $50; associate, $50; house, $25; non-resident, $10.

The Charlotte Automotive Trade Association is interested in a plan to bring about an organization of automotive men of North and South Carolina into one association. Lee A. Folger, Charlotte, N. C., president of the Charlotte association, is co-operating with Harry G. Moock, business manager of the National Automobile Dealers' Association, to this end. Mr. Folger recently returned from France. The first step taken by Mr. Folger upon his election to the presidency of the Charlotte organization was to appoint a committee on greater organization, and he instructed that committee to get in touch with the dealers in the two states with the intention of effecting a single organization. Manager Moock will attend the first greater organization meeting and explain the plan of organization which is in operation between the National Dealers' Association and the state associations of Texas, Arkansas, Ohio, Louisiana, Georgia, Iowa and the like. There are approximately 2000 automobile dealers in North and South Carolina. At present less than 100 of these are in any sort of a dealers' organization.

The Augusta, Ga., Automobile Dealers' Association recently listened to an address by F. B. Ludwig, traveling field secretary of the National Automobile Dealers' Association, who outlined methods to be followed in obtaining the repeal of the war tax on automobiles. Members of the newly organized Georgia Automotive Dealers' Association were present. G. M. Jones, president of the Augusta association, called the meeting, which was attended by nearly all of the car and truck dealers of the city.

Moock Asks Dealers to Seek Tax Repeal

A new appeal to dealers to interest themselves in obtaining the repeal of the war tax on automobiles, repairs and parts is being made by Harry G. Moock, business manager of the National Automobile Dealers' Association, as a result of letters received recently from congressmen and senators that there will be a stiff battle in Congress to effect a reduction of classification taxes.

The new opposition comes from the fact that when President Wilson asked for the elimination of taxes on manufacturing, every other line of industry also asked for relief from taxes. Senators and congressmen are taking the position that some industries must necessarily share the burden. The industry least organized, the industry that makes the smallest protest usually is the one so burdened. The National Automobile Dealers' Association is contending that there is no justice in making the automobile bear a greater war tax in peace time than it bore in war time and objects particularly to the automobile being classed as a "luxury."

"The automobile is a necessary and if taxed should be taxed only as a necessary and not as a 'luxury,' Moock says. "Dealers everywhere should write and telegraph their congressmen and senators to vote for elimination of the war tax. Local and state automotive associations should do the same. Every person in the automobile industry should interest every motor car owner in obtaining the repeal of the tax."

Detroit

The Detroit Automobile Dealers' Association is considering the advisability of a plan to urge a federal law that would establish motor car thefts as a federal offense. Cyril Arthur Player, editorial writer on the Detroit News, proposes such a law. He suggests a federal statue which would compel the registration of passenger cars and trucks with the federal marshals, attorneys or other officials. He would have the manufacturer cast numbers on his various units. Dealers' organizations and automobile clubs throughout the country will be asked to support the plan. A. L. Zeckendorf, Cole and Chandler dealer in Detroit, and G. Edward Bleil, Republic truck manager and director of the Detroit Automobile Club, are said to favor the proposal.

The Detroit Automobile Dealers' Association is to hold its first exclusively closed car show in the Arena, Oct. 6-11. Only such vehicles will be admitted as come strictly under the definition of closed cars. The 1920 show will be held in March, as was the case this year.

The Brooklyn and Long Island Automobile and Allied Trades enjoyed its seventh annual outing at Glenwood. Despite inclement weather, more than 300 members attended. It was in all respects the largest and best managed affair ever held by the organization. D. D. Martin's baseball team defeated Julius Bindrim's nine, 11 to 8. Arthur Delaney made a home run. Charles Tate, Charles Sperry and "Doc" Watson pitched for the victors, with "Doc" Miller on the mound for the losers. Arthur Delaney won the 100-yard dash. Frank Ainslie won the sack race. Charles J. Potbury was chairman of the outing committee, Charles Tate the manager and John S. Diuguid had charge of the prizes. Paul M. Marko was also an important factor in making the affair a success.

The Richmond, Va., Automobile Dealers' Association and the Richmond Automobile Trade Association seek the repeal of the section of the prohibition law which forfeits the interest of the vendor in an automobile seized with contraband liquor.

TIRE INDUSTRY AND TRADE

The Haywood Tire and Equipment Co., Indianapolis, Ind., announces a new invention it has put on the market. This is known as "Haywood's Silvur Lined Mold," which is for retreading repaired, rebuilt and reconstructed automobile tires. Mr. Haywood announces that this mold can be used by any tire repair man and enables any tire repair shop to do tire retreading. The mold is made of white metal, die cast, and is said to be free from all blemishes and is as smooth as glass. The company manufactures the Haywood tire repair equipment, of which Mr. Haywood is the inventor. Mr. Haywood is also the originator of "Tire Surgery.' The company maintains a school at Indianapolis where tire surgery is taught. Tire surgery is the art of tire repairing by the Haywood method, and is a course of instruction for those who do tire repairing with the Haywood equipment.

The Ajax Rubber Co., Inc., announces the appointment of Joseph C. Weston to the post of vice president and member of the directorate. For a number of years he has been vice president and director of sales of the United States Tire Co.

The Perfection Tire and Rubber Co. announces that production is being increased at the Fort Madison plant, where new equipment has been installed. When present plans materialize the plant will have facilities for producing 11,800 tires a day.

The Goodyear Tire and Rubber Co., Akron, announces the appointment of H. H. McCloskey to the position of second assistant treasurer. He joined Goodyear only four years after its organization.

The Michelin Tire Co. has arranged to insure all the employees of the company throughout America without cost to them and without the necessity of their undergoing physical examinations. The group life insurance policy was executed in New Jersey. The protection will be graduated, from $200 for employees of more than six months but less than one year's service to $1200 for 10 years service and over.

The United States Tire Co. has appointed A. L. Wendover New York branch manager, with headquarters at 1790 Broadway, under District Manager E. S. Roe.

A. S. HETZELL.
District Manager of Philadelphia Branch of Republic Motor Corporation.

The Republic Rubber Corporation has appointed A. S. Hetzell as district manager of the Philadelphia branch, in recognition of his work as manager of the Cleveland branch for the last two years. Mr. Hetzell will make his headquarters in Philadelphia.

The B. F. Goodrich Co. stockholders have authorized an increase in the capital stock of the company from $84,600,000 to $109,000,000. The increase of $25,000,000 is to be in seven per cent. cumulative preferred stock of the same type as the present preferred. The common and preferred stockholders of record July 1 will be offered $15,000,000 of the new preferred on a pro rata basis. For each share of the old preferred or common a stockholder will be entitled to subscribe to .1773 of a share of the new stock at $102 a share and accrued dividends.

The Goodyear Tire and Rubber Co. began business in 1898 with $12,500 capital, of which only $3500 was in cash and that borrowed, during the days when bicycle tires and carriage tires were the most prominent rubber products. In 1918 the company did a business of $131,000,000.

The Goodyear Tire and Rubber Co., Akron, O., announces that the Goodyear big 10-inch pneumatic truck tires are now ready for general distribution. With the addition of this tire Goodyear is prepared to equip all trucks up to and including 3½ tons.

The Goodyear Tire and Rubber Co., publishes The Tire News, with a circulation of 60,000 monthly and the Family Newspaper with 20,000 circulation. Both publications are well worth reading. The June issue of the Goodyear Tire News is a racing special, and Goodyear points with pride to its tires' triumphs at Indianapolis and Uniontown. The publications are liberally illustrated and have highy capable editorial direction.

The Erie Tire and Rubber Co., Cleveland, has raised its capital from $1,000,000 to $4,000,000.

The Winner Cord Tire and Rubber Co., which was incorporated for only $1000, has increased its capital to $1,000,000.

The Kelly-Springfield Tire Co., Akron, will put up a new plant in Maryland, which will have a production capacity equal at least to the three plants the company now has in operation.

The United States Rubber Co. announces the election of Frank A. Vanderlip as a director.

The Goodyear Tire and Rubber Co. of California, it is reported, will soon be incorporated with a capital of $20,000,000.

The Ray Tire and Rubber Co. will erect a plant in Birmingham, Ala., for the manufacture of the Ray puncture proof interliner for automobile tires, which will represent an expenditure of over $1,000,000. In connection with this plant the company will build its own cotton mill for the manufacture of cotton fabric, which will be rubberized at the plant and shipped from Birmingham to the company's other plants in the United States. The crude rubber for rubberizing the cotton fabric will be brought in cargo lots to Mobile and then transferred to barges up the Warrior river to Birmingham.

The Wilmington Tire and Rubber Co., Wilmington, Del., has moved from King street to 218 West 10th street.

Uruguay.

The American car was comparatively little known here until a few years ago, but, as a result of the war, a tendency to economize following business depression and the efforts of American manufacturers to develop the export market, our automobiles now dominate the field. The vast majority of these vehicles are passenger cars. The popularity of American cars is attributed to various factors, principally their cheapness, adaptability to local conditions and the facilities for securing repairs. Especially for use in the country districts, where the roads are often impassable for European cars, the American vehicle has had phenomenal success and is gradually replacing the sulky. At the present time importers of American cars are, apparently without exception, disposing of all the vehicles they can obtain and many orders have to be left unfilled.

INDIA.

Within the last two or three years the tendency has been toward the increase of motor trucks. A considerable number have been sold in the Calcutta section and are in daily use, and the outlook for large sales in the immediate future is good. Since December, 1916, there has been an absolute embargo on the importation of motor vehicles. American cars have had a very wide sale throughout India and are very popular.

INDO-CHINA.

The main criticisms of American cars, according to the dealers, are that the body of the car is too high from the ground, the upholstery is not as good as desired and the metal sheets forming the body of the car are too thin and not well set up. Agents have suggested that two types of cars be put on the market by American manufacturers, the first to be an ordinary car, such as is sold in the market today, and the second to cost perhaps $100 more, this money to be put in upholstering and body finish.

JAMAICA.

There should be a considerable market in Jamaica for motor trucks of both the light delivery type and the larger type for heavy hauling. The lack of railway transportation to certain fertile fruit growing sections makes the use of trucks for the purpose of bringing bananas and other produce rapidly to shipping centers a necessity. The import duty is 20 per cent. ad valorem and shipments can be made from New York or New Orleans.

CHINA.

The only good roads in the Nanking district are in the city of Nanking, and they are kept in good repair. However, the total length of roads suitable for automobile traffic is at the most 15 miles. There were only 25 automobiles in Nanking at the end of 1918, and practically all of the cars were small ones. No automobile trucks have as yet been introduced in the Nanking district for transporting goods, with the exception of a single small one-ton truck of American make, which has been purchased only recently by the Chinese postoffice. The Chinese postoffice has introduced motor trucks in other cities with great success and as that institution is growing rapidly, it is one of the most promising purchasers of motor trucks. No restrictions are placed upon the importation of motor vehicles and accessories. There is a market in China for rubber tire repairing machinery. In Shanghai there are several thousand automobiles. In addition to the automobiles there are numerous rubber tired rickshaws. A way to introduce tire repairing machinery would be through a local American agent.

CUBA.

Auto trucks are now very largely used for hauling about Habana, rapidly replacing the old-style drays and wagons for this purpose. There are a large number of the heavier American trucks, besides a general use of lighter trucks. It would seem that with the nearness of Habana to New York and to Florida, it would be desirable for concerns planning to enter the field to send some one familiar with the trade to Habana for a brief stay. He could determine whether there is a probable field there and what methods would be best in exploiting it.

FRENCH MONOPOLY OF OILS.

The French government has introduced a monopoly bill covering refined oil and gasoline. Lubricating oil and fuel oil are not included in the monopoly.

Australia.

The government plans to expend large sums for the construction and maintenance of roads, and the better roads should increase the demand for motor vehicles. The chief method of transporting goods from place to place in the cities is by horse drawn wagons, but motor trucks are gradually replacing these. The United States is supplying most of the automobiles imported. The duty on automobiles imported into Australia is not levied on the vehicle as a whole, but on the different parts at different rates, whether the car is imported complete or not.

BRITISH SOUTH AFRICA.

The total mileage of good roads in Cape Town and vicinity has almost doubled in the last eight years. During recent years motor cars have found their way into the remotest corners of the Union, and are doing daily service over roads that only a short time ago were not considered passable by anything but an old ox wagon or donkey cart. A good clearance of at least 10 inches under axles and flywheel is essential for a motor car intended for use in South Africa, and the carburetor and magneto should be placed as high from the ground as possible to allow of fording unbridged streams. Unusually strong springs and a strong engine are also essential features.

BRANCHES IN MEXICO.

The automobile business in Mexico since the first of the year has been exceedingly good, although during the past month there have been fewer sales, except in the case of low priced cars.

There has been considerable activity the last five months in the sale of the more expensive cars, accompanying the scrapping or selling of a large number of second hand cars used during the period when new cars could not be obtained. A large number of sales have been made directly from the United States. Indeed, there are many cars used at present in Mexico City which have no representatives actively at work in the Republic.

In order to extend their sales and to properly serve those who have already purchased cars, it would perhaps be advisable for American manufacturers to

Digitized by Google

establish branches in Mexico. At present sales are made by agencies and complaints are frequently made by buyers that all interest on the part of the seller is lost in the car immediately after the consummation of the sale. Doubtless there are other conditions involved in the question of the establishment of branches, but from the point of view of satisfactory service to patrons, the inauguration of this policy would be a vast improvement. It is understood that the establishment of branches is being contemplated by various American car manufacturers.

SWITZERLAND.

Four good trucks are manufactured in Switzerland, but they are high priced and invite American competition. Swiss dealers have applied repeatedly to American manufacturers, knowing that American trucks would find a ready sale in this market owing to their superior quality; but, during the war, shipping conditions prevented such imports; also gasoline for demonstration purposes was unobtainable. The principal drawback of the sale of American trucks, as also of passenger cars, is the absence of supply stations in Switzerland where repair parts may be secured. At present there is a sentiment to accept agencies and import American cars, but unless American manufacturers prepare to enter the market permanently and actively develop its needs, a large portion of the business will return to German concerns, who already offer attractive propositions to dealers.

UNION OF SOUTH AFRICA.

The motor trade of the Union has now reached such a stable basis that it is capable of absorbing annually imports of considerable value. It will, no doubt, grow in volume and importance, because the isolation of certain districts cannot be eliminated altogether by railroads.

PORTUGESE EAST AFRICA.

There are only about 150 motor cars in the vicinity of Lourenco Marques, but the demand is increasing. There are also a few trucks operating in this town having a capacity up to six tons. No discrimination is made against or in favor of motor vehicles imported from the United States.

FRENCH SURTAXES ON IMPORTS.

The complete schedule of ad valorem surtaxes on import duties contained in the French law of June 14, 1919, has been received from Commercial Attache C. D. Snow in Paris. These surtaxes are additional to the regular import duties and are imposed in order to restore in part the same relative weight between values of goods and duties payable which existed at the time the present tariff was adopted. A further object is to protect the domestic industries during the period of readjustment by restricting imports, the prohibitions on importation having been raised for the most part.

Automobiles weighing less than 2500 kilos (5509 pounds) continue to be dutiable at 70 per cent. ad valorem without surtax, but for those of greater weight there is now a surtax of 10 per cent. ad valorem under the minimum tariff, which in this case applies to imports from the United States. Agricultural tractors from the United States are now subject to the minimum surtax of 20 per cent. ad valorem, while for other kinds of tractors the rate is 10 per cent.

The new surtaxes are based upon the value of the goods at the time of importation in the custom house of entry, but not including the import duties. They do not apply to goods shipped directly for France prior to June 18, nor to those in transit at that date directly to Europe with France as the destination. The same provisions apply equally to Algeria.

Foreign Trade Opportunities Offered by the Government

(Reserved Addresses May Be Obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from District or Co-Operative Offices.)

29,632—A man in Italy desires to represent American manufacturers and exporters in gasoline engines for motor cars, electric generators and other electrical material. References.

29,583—A firm in Brazil desires to purchase on own account agricultural implements and machinery, automobiles, trucks and supplies. Quotations should be given f. o. b. New York. Payment, cash against documents or 90 days, according to terms offered. Correspondence should be in Portuguese, Spanish or French. References.

29,609—An agency for the sale of automobiles and accessories is desired by a man from Australia who is visiting this country and desires to get in touch with manufacturers and exporters. Reference.

29,745—A company in England desires to purchase four to six-cylinder motor cars, 15 horsepower and upward, complete, with lighting set, electric starter, etc. Quotations should be given c. i. f. English port. Payment against documents at destination. References.

29,617—The purchase and agency for electrical machinery, motors and vehicles are required by a firm in Norway. Terms, cash against documents. Reference.

29,743—A firm in Denmark desires to purchase machine tools and other equipment for building a shop to make motorcycles. Correspondence may be in English.

29,660—A company in Italy wishes to receive quotations on 1000 pounds of lubricating oil.

29,681—The purchase and agency for the sale of gasoline and heavy oil engines, 2 to 20 horsepower, are required by a man in Italy. Correspondence should be in Italian. Reference.

29,692—The proprietors of a company in Denmark are in this country and seek exclusive agencies for the sale in their country of rubber goods, including tires. References.

29,604—The proprietor of an import agency in Mexico desires to purchase and secure an agency for the sale of five automobile trucks—one medium large, four small—all with rubber tires, for handling freight. He wishes to demonstrate their use and obtain the sole agency for the special make of truck which he decides upon. Payment, cash with order.

29,753—A firm of manufacturers' agents in England desire to secure agencies for the sale in South Africa of hardware, motors and accessories and agricultural machinery. Quotations should be given c. i. f. port in South Africa. References.

29,731—An agency is desired in Scandinavia by a man from Norway, who is in this country for a short time, for the sale of automobiles, accessories and motorcycles. References.

29,750—A merchant in France desires to secure an agency and to purchase automobiles of 12 and 16 horsepower. Correspondence should be in French. Reference.

29,653—Motor cars, motorcycles, bicycles and all accessories; stationery, kerosene oil and petrol engines and electric light sets and electrical accessories, lamps, fans, etc.; pumping sets and household requisites of a general character are required by a firm in India. General catalogues are requested.

29,699—An agency is desired by a firm in Egypt for the sale of a general line of agricultural implements, including tractors. Correspondence may be in English. References.

29,784—An agency is desired by a manufacturer in Spain for the sale of cranes, elevating apparatus, gasoline, kerosene and crude oil engines; electric motors, dynamos and electrical apparatus and supplies; agricultural machinery and tractors. Correspondence should be in Spanish. References.

29,722—The purchase of any line of manufactured articles sold by the hardware and garage trade is desired by a company in Canada. Quotations should be given f. o. b. destination or factory. References.

29,723—Motor cars are required by a man in India. References.

29,724—An electrical engineer in New Zealand wishes to secure prices and discounts on oil engines and generators for isolated lighting plants. Reference.

29,725—The purchase and agency for the sale of bicycle parts, tires and accessories and automobile parts are required by a wholesale firm doing business in these articles in France. Terms, cash on receipt of merchandise. Correspondence should be in French. References.

29,663—A company in England, having recently established an office in this country, desires to communicate with manufacturers of machinery, electrical goods, motor cars and accessories. Reference.

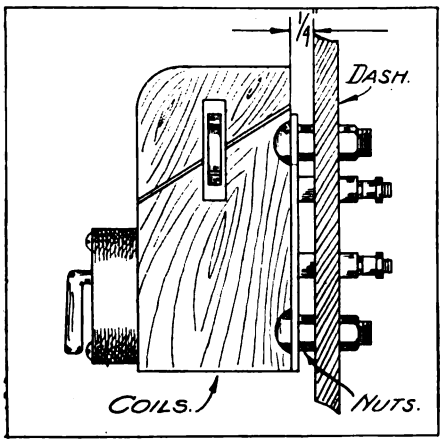
SUGGESTIONS FOR GARAGE MEN



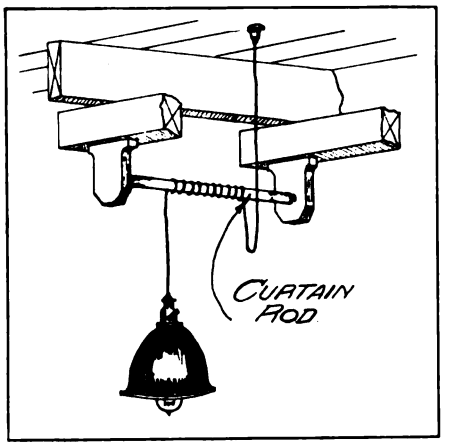
TO WATERPROOF COIL BOX ON FORD CHASSIS.

Ford owners sometimes fit waterproof canvas covers over the dash of their machines to keep the coil boxes from wetting. A far better protection is practical and the writer will pass it on for the benefit of others.

The four bolts which hold the coil box to the dash are loosened and removed. Then the coil box is moved out from the dash about half an inch. Before replacing the four bolts, four nuts are slipped between the flanges of the coil box and the dash and the bolts are placed through the nuts. If the regular bolts are too short use carriage bolts, about a quarter inch longer.

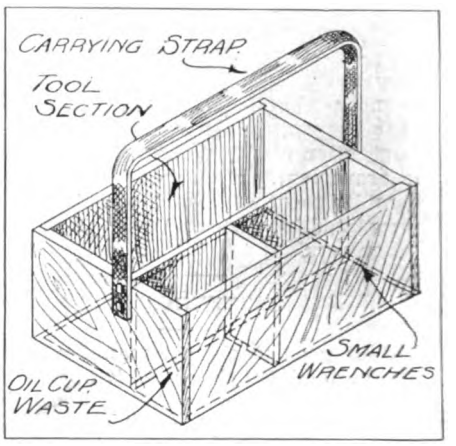
It is not necessary to loosen the wires or to remove the coil box from the dash, for the bolts can be removed one at a time, and replaced in the same order.

This places the coil box about a quarter of an inch from the dash and water that may leak through will drip without soaking the coil box.



ADJUSTABLE LAMP HANGER.

By winding the cord of the bench lamp several times around a curtain rod fastened to the ceiling a hanger is improvised with which the lamp can be suspended at any desired height about the bench. The light may also be used as an inspection lamp and carried to the job, provided the cord is made long enough. The curtain rod should be made extra heavy and is suspended exactly as though it were carrying a curtain.



HOME-MADE TOOL BOX.

A serviceable tool box can be easily made by anyone at all handy with a saw and hammer. Make a box of one by six-inch pine or hemlock boards, two feet long and 12 inches wide and six inches high. Board over the bottom and put a partition through the center. Half way between the ends of this partition and the side of the box place a short cross partition. This will make a three-section box. The long section will take any long handled tools, while one of the shorter sections will carry such small tools as flat wrenches, pliers, etc. The other section can be utilized for an oil can and waste. The general construction of this box is shown in the illustration.

46,000 DEALERS, GARAGES AND REPAIR SHOPS IN U. S.

"Facts and Figures of, by and for the Automotive Industry," published by the National Automobile Chamber of Commerce states that there are 46,000 dealers, garages, repair shops, etc., in the United States. There are 27,800 automobile and truck dealers, 25,500 garages, 13,500 automobile repair shops, 12,000 tire vulcanizers, 2550 automobile supply houses, 282 jobbers of automobile supplies, 1080 body, parts and accessory makers, 6789 concerns making some article used in the automobile trade, 372 commercial vehicle manufacturers and 238 passenger car manufacturers.

Capital invested by dealers, garages, etc., is estimated at $184,000,000, the workers employed number 230,000 and the wages paid total $184,000,000. Body, parts and accessory makers have $336,000,000 invested, employ 320,000 persons, the wages and salaries amounting to $288,000,000.

Automobile manufacturers have $736,000,000 invested, employ 280,000 persons and pay salaries and wages of $275,000,000. These figures are based on the latest available statistics, and are doubtless considerably lower than those that would reveal the present condition of the automobile world.

KISSEL ENGINEERS PERFECT AUTOMATIC OIL CONTROL.

Kissel engineers have perfected an automatic oil control which, it is claimed, accomplishes the following results:

A—When the motor is pulling its maximum load, or using its full horsepower, with the throttle wide open, the new Kissel Automatic Oil Control provides the "maximum oil pressure needed," as well as the necessary "oil supply" to maintain the proper oil film under this full load condition.

B—When the motor load is reduced and the throttle closed the new Kissel Automatic Oil Control automatically reduces the oil pressure as well as the oil supply.

C—It prevents piling up of oil at either end of oil basin, i. e., when going up grade or when going down grade.

D—It distributes the correct amount of oil in the oil pockets for each cylinder, regardless of the grade, load condition or speed. No cylinder is ever starved of oil or gets too much.

TRADE LITERATURE.

The DuPont Fabrikoid Co., Wilmington, Del., has issued a folder describing the "Victory Finish," which is bound to interest top makers, trimmers and auto finishers.

AIRPLANE MOTOR MACHINERY USED AT ALLEN PLANT.

A large special grinding machine designed for use in building Liberty motors for airplanes is among considerable specially constructed machinery recently installed at the new plant of the Allen Motor Co., Columbus, O. This machine was just being completed when the armistice was signed. By quick work on the part of Allen officials it was obtained for use in the new plant. Special adjustments were necessary so that it would fit the Allen motor, but these were soon made and the machine is now in use. It gives a better cylinder surface finish with less labor than any machine of its kind previously used.

Motor castings are thoroughly cleaned out on the inside by a new sand blasting machine which eliminates any possibility of small particles of sand dropping into the oil and injuring the bearings. In addition to this another precaution against sand is taken by painting the inside of each crankcase with a high grade, heat resisting paint that permanently seals all pores.

To facilitate drilling a highly developed multiple spindle drill is used. With this it is possible to drill all holes in a crankcase, including those for the main bearing bolts, to the number of 30 in a half minute.

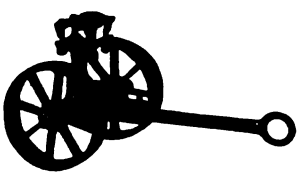
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

E & S Towing Truck. The E & S Towing Truck is an equipment for which the manufacturer makes broad claims. It is strongly made of the best of material and is very durable, having no working parts or joints to break or wear. Its simple construction makes it practically indestructible and it covers the entire range of tow-



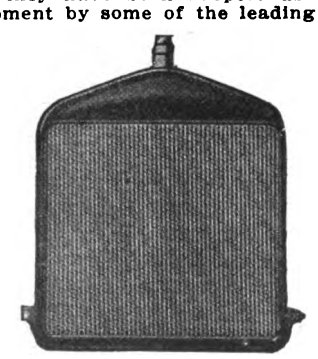
ing truck service for handling all cars, large and small, from the front or rear.

The truck is equipped with 14-inch wheels, large enough to ride over car tracks and other obstructions, and it is made throughout from high grade malleable iron and steel. The wheels have four-inch tires, the tread is 18 inches and the weight is 160 pounds. The length of the handle or towing pole is 120 inches and there is a large ring welded to the towing end. The height adjustment is up to 18 inches.

The E & S Towing Truck is guaranteed to give perfect satisfaction and the jobber is authorized to accept the return of any that do not meet the approval of the purchaser.

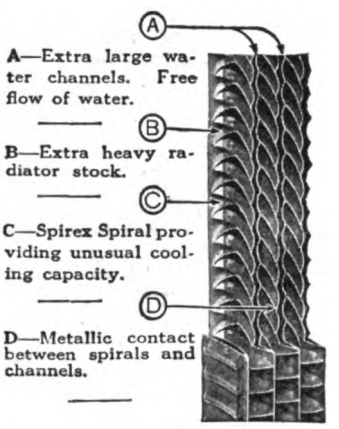
Manufactured by the Ellis-Smith Manufacturing Co., Inc., Buffalo, N. Y. List price, $32.50. Discount to the trade.

Spirex Radiators for Ford Cars. Spirex radiators are the development of careful experimenting and research into the principles of heat diffusion and the correct application of the mechanics of design. After many tests for efficiency and cooling qualities they have been adopted as regular equipment by some of the leading manu-



facturers of cars, trucks and tractors. They are constructed to a design that is half honeycomb and half tube.

The illustration will best explain this construction. Large capacity insures a larger and better cooling system. It is the claim and guarantee of the manufacturer that a Spirex radiator has 42 per cent. more cooling capacity than the regular equipment of Ford cars and that the Spirex special radiators have 67 per cent. more cooling capacity.



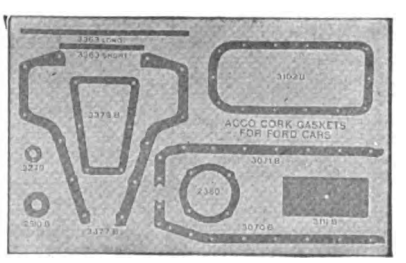
Although each radiator is doubly tested at the factory, should a defect develop, due to workmanship or material, the factory will replace or repair the units provided it shall not have been damaged through misuse or accident.

Manufactured by the Modine Manufacturing Co., Racine, Wis. Radiators may be obtained for 1916 Fords or earlier or for 1917 or later. Prices, Spirex radiators for all Fords, $28; Spirex special, $33; f. o. b. Racine.

Cork Gaskets and Transmission Bands. The manufacturer of Acco Cork Composition makes many claims for this product, the base of which is ground cork, which is used for making gaskets of all kinds and descriptions for pulley covering or facing and for washers of various sizes.

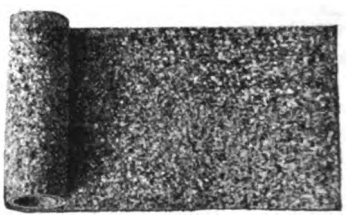
Acco Cork Composition is a satisfactory material for use where the temperature does not exceed 212 degrees Fahrenheit. It is made of selected, clean, ground cork and a special non-hardening binder. This binder not only holds the cork together, but preserves its natural elasticity and prevents shrinkage.

Gaskets made of Acco Composition are not affected by oil, gasoline, grease or water and may be kept in contact with any of these liquids without disintegration. The elasticity of the cork is not only retained, but the process of manufacture tends to increase it. This is especially desirable where the surface is uneven and a gasket is to be used. In applying these gaskets it has been found among repairers that the best practise is



to coat one side with shellac and the other with graphite. By this method the gasket may be removed as often as desirable and will not be damaged.

The manufacturer claims that oil will not seep through cork gaskets. Acco Cork Composition may be purchased either in the finished gaskets, in sections

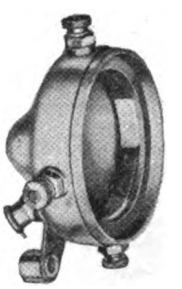


for inserting in transmission and brake bands, or in the roll or sheet form.

Manufactured by the Armstrong Cork Co., Pittsburgh, Pa. Prices and literature on application.

Milwaukee Timer for Ford Cars. The Milwaukee Timer for Ford cars is a very carefully made instrument. The case is a one-piece steel stamping, nickel plated over a coat of copper, making it rust proof.

A wide, deep bone fiber ring is fitted into the shell, providing perfect insulation, the contacts being imbedded in the fiber ring. The contacts are made of high grade cold rolled steel and are welded to screw studs, insuring perfect joints. The grooves are machine cut into the fiber ring, into which the contacts are carefully fitted. The manufacturer claims that by

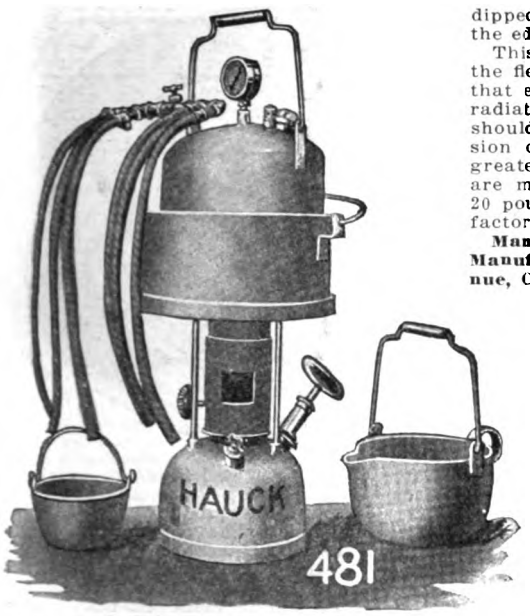


this method of construction the contacts are practically integral parts of the fiber ring, as it gives a solid backing and support on all sides, and that it is impossible for them to rock, shift or turn.

After fitting the entire surface of the fiber and contacts are carefully machined by boring and finishing operations, providing a perfect surface and a continuous, even bearing of the roller on the contacts. The roller is made of high carbon tool steel, machined, then hardened, ground and polished, making a perfectly smooth face. By this method of finishing and assembly the roller always bears squarely on the contacts.

Manufactured by the Milwaukee Auto Engine and Supply Co., Milwaukee, Wis. Price, $2.

Digitized by Google



Hauck Storage Battery Outfit. The Hauck Storage Battery Outfit, burning kerosene, is designed to steam open storage batteries. While new it has proven very necessary in service stations handling storage batteries on a large scale. The manufacturer claims that the cost of operation is six cents an hour and that with it one can open 125 batteries a day, the average time required to generate steam being four minutes. A three or six-cell battery may be opened in from two to four minutes without damage to the plates.

The outfit consists of a 1½ gallons kerosene heated furnace with hand pump, a steam generator of 2½ gallons capacity, equipped with a gauge, safety valve, fittings, manifold and six 20-inch lengths of rubber steam hose, one melting kettle of 1½ gallons capacity for heating sealing compound, one lead melting pot of 35 pounds capacity and one mold for lead bars 15 inches long and 5/16 inch diameter.

Manufactured by the Hauck Manufacturing Co., 101-113 11th Street, Brooklyn, N. Y. Price, complete outfit, $40; equipped with gas burner complete, $30; one melting kettle, 1½ gallons capacity, $2; one melting pot, 35 pounds capacity, $1.50; one lead mold, $1.50.

The Zig-Zag Honeycomb Radiators. Zig-Zag Honeycomb Radiators are built for pleasure cars, trucks and tractors, and the manufacturers make broad claims for efficiency. In construction they are a honeycomb type, with the sections arranged so that the flow of water has a zig-zag path from the top to the bottom.

The tubes, after being formed, are assembled in the core by the convex parts, or offset of the tubes, fitting into the concave or grooved parts, and they are then dipped in solder on both sides, sealing the edges of the metal.

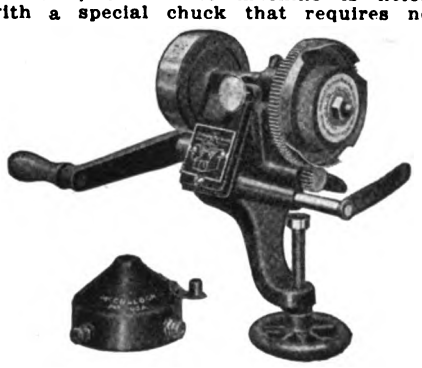
This method of construction increases the flexibility of the tubes or passages so that expansion can take place should the radiator freeze. The same result follows should the radiator overheat, the expansion of the metal allowing the radiator greater cooling capacity. These radiators are made of brass and are tested under 20 pounds air pressure before leaving the factory.

Manufactured by the Auto Radiator Manufacturing Co., 1712-14 Michigan Avenue, Chicago, Ill. Prices on application.

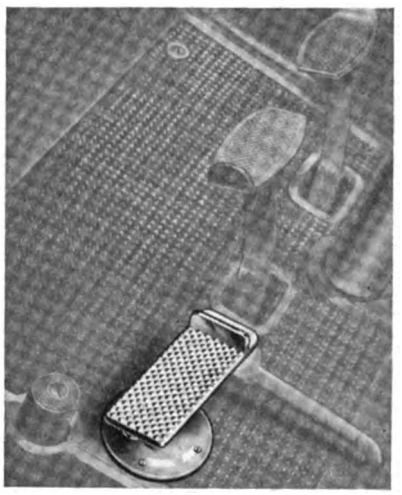
Holton Hood Clips. Holton Hood Clips are manufactured for use on Chevrolet and Briscoe cars in the place of the clips usually fitted on these cars. The manufacturer claims that with these clips all hood rattle is prevented, besides having the added advantage of one being able to lift the hood easily when inspecting the engine. The clips are fitted to the car by removing the wing nuts of the regular fasteners and slipping the Holton fasteners over the bolts and turning them until the proper tension is reached. It is claimed that the fasteners will never slip or rattle.

Manufactured by the Holton Hood Clip Co., 205 10th Avenue, W., Calgary, Alta. Price on request. Finished in nickel and furnished in sets of four.

The McCulloch Timer Grinder. The McCulloch Timer Grinder is a bench machine for grinding the contacts of Ford timers absolutely true. The machine is fitted with a special chuck that requires no skill whatever in centering; the grinding stone revolves inside the timer at high speed and the chuck and timer very slowly revolve around the stone. It is fitted with a very accurate adjustment and the manufacturer claims that the oldest and most worn timer may be ground with a surface like glass and equal to new in from two to three minutes. The whole machine is substantially constructed, all gears being cut from solid steel bar and lubricators fitted to all moving parts. When not in use as a timer grinder the chuck may be instantly removed, a large wheel fitted in its place and the machine can be used for grinding tools, twist drills, etc. It has been well tried out and has proved very satisfactory in every way.



Manufactured by the A. P. McCulloch Machine Co., 216 High Street, Boston, Mass. Prices on application.



The Feaster Foot Accelerator. The Feaster Foot Accelerator consists of a pedal hinged to a standard fastened to the floor of the car, the edge of the pedal resting upon the accelerator. A spring in the standard returns it to position when not in use. In operation a slight pressure sideways on the pedal will operate the accelerator. A lip on the side of the pedal prevents the foot sliding sideways. The manufacturer's claims are substantiated by statements of owners. Leg weariness is not experienced and more even operating of the engine, both on rough roads and pavings, is also realized.

The Feaster Foot Accelerator is made of the best materials and will not rattle or break. It is guaranteed for the life of the car and after trial if the buyer is not satisfied the purchase price will be refunded. It is adapted to practically all makes of cars, but especially those having the accelerator at one side of the brake pedal.

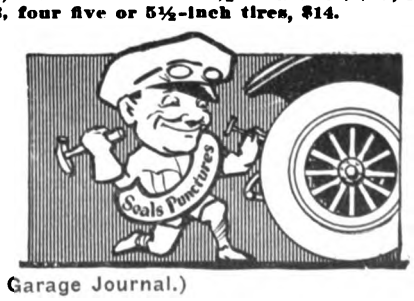
Manufactured by Peter Gray & Sons, Inc., Cambridge "C," Boston, Mass.

Kor-Ker. Kor-Ker is a mineral compound, a clean, dry powder which, when mixed with pure water to about the consistency of an emulsion, is injected into the tire tube through the valve. The water is a binder of the mineral ingredients which form a perfect air-tight plug when forced by air pressure from the tube into a puncture. There is no chemical action.

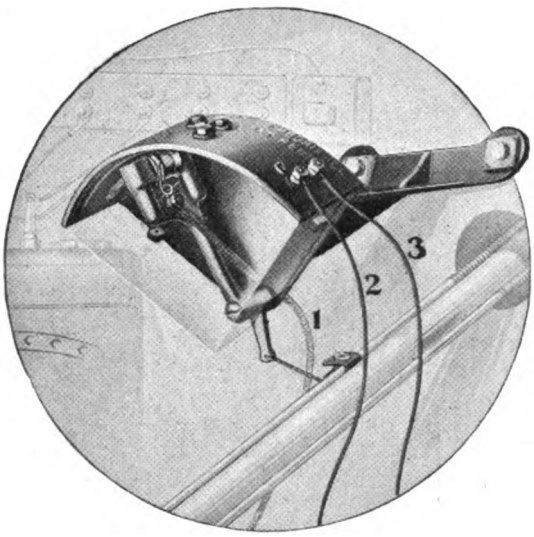
The manufacturer claims that Kor-Ker will seal punctures or porous openings in a tube while the car is in motion on the road and that this action will take place without the driver of the car knowing it. This particularly applies to punctures up to the size of a tenpenny nail.

It contains a preservative that keeps tubes elastic and prevents the rubber of the tubes from drying. Kor-Ker contains no substance that will eventually fill the valve stem and prevent it operating the manufacturer claims. Tubes filled with Kor-Ker may be as readily vulcanized as tubes that have not been so treated, as there is no adhesion of the compound to the rubber surface, and Kor-Ker falls to the bottom of the tube when not in use.

Manufactured by the Alcemo Manufacturing Co., Newark, N. J. Size No. 1, for four three-inch or 3½-inch tires, $8; No. 2, four four-inch or 4½-inch tires, $10; No. 3, four five or 5½-inch tires, $14.



Digitized by Google

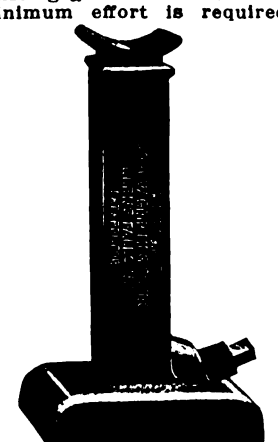


Double-Light for Ford Cars. The double-light is a simple attachment, fastened to the front of the dash, with an arm extending from the bottom that is attached to the throttle rod, turning with the rod when it is opened or closed. As the throttle is opened or closed by this connection an arm swings across the top of the box, making and breaking the circuit, keeping the lights at a constant brilliancy. The manufacturer claims one will get the same brilliancy of light while driving at slow speed as when driving fast. The claim is also made that although one bulb may be broken, the double-light attachment will continue lighting the other lamp without damage to the circuit. The device is strongly made of bronze and fiber and should last as long as the car. It is sold with a money back guarantee.

Manufactured and sold by Double-Lite Sales Co., Peoria, Ill. Price, $9.50.

Arrow Grip Jack. The Arrow Grip Jack is new and is so constructed that it may be rolled under the axle of a vehicle from a standing position, four rolls being recessed in the base. The jack is operated by a screw principle by a large gear in the base and a pinion at the side meshing with it. A folding handle or brace having an extension shaft fits a square on the hub of the pinion and operates the jack. the operator taking a standing position. The rollers in the base are, by action of springs, forced out of the way when pressure is applied at the top of the jack, as in lifting the weight of the car.

The manufacturer claims that with this jack the user need not assume a stooping position, as all of the work for its operation can be done while standing, and that in lifting a load of 50 to 1000 pounds only minimum effort is required. The



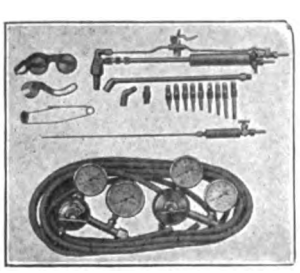
handle can be folded into a very compact form and packed in a small space.

Manufactured by the Arrow Grip Manufacturing Co., Glen Falls, N. Y. Prices on application.

Lockpach for Repairing Tubes. Lockpach is a tube patch made from pure para rubber, vulcanized to khaki cloth with a facing of red unvulcanized rubber that will vulcanize a tube permanently, the manufacturer claims. This material is also manufactured in rubber bags, so it will stretch with the tube. The khaki back material is recommended to the trade, as it will not stick to the casing and serves as a body for the patch. These patches are made of extra thick material and because of the adhesive quality of the red unvulcanized rubber is claimed to be a very superior article. Included with the can of patches is a tube of cement that is chemically pure and particularly adapted for the work done with the patches.

Manufactured by the Lockpach Co., 221 North Gay Street, Baltimore, Md. Prices on application.

Economy Welding Outfit. The Economy welding outfit is manufactured for garage and service station repairers and

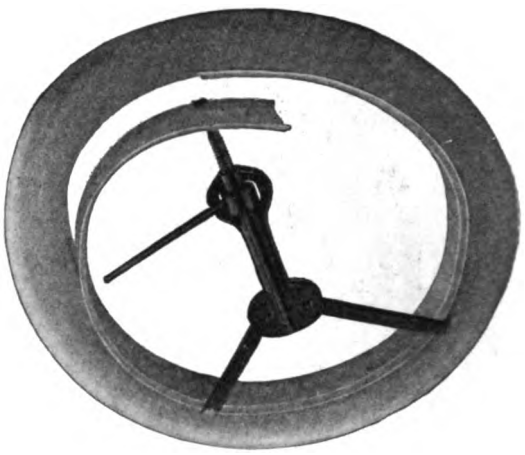


the outfit includes the necessary tools, burners, connections, tips, gauges, etc., for welding, in fact everything is supplied except the oxygen tank and the gas. With an outfit of this nature a repairer can mend broken frames, cracked engine cylinders, burn out carbon in engine cylinders and do all manner of oxy-acetylene welding.

The Economy outfit is the development of many years of successful experimenting with various appliances and types of apparatus, and the manufacturer claims that as offered to the trade it stands in a class by itself.

Manufactured by the Economy Welding Machine Co., Southwest Boulevard and Central St., Kansas City, Mo. Prices on application.

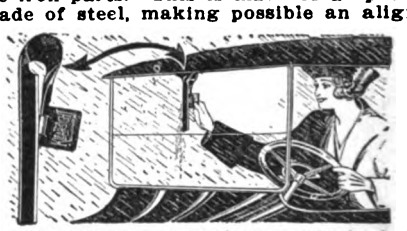
The Million Combination Rim Tool and Emergency Jack. A tool designed for work on demountable rims of the split type is the Million Combination Rim Tool and Emergency Jack, which is constructed to fold into a compact form for storing in the tool box and may be opened and used for the opening and closing of the demountable rims. In emergency it may also be used as a wheel jack for lifting a wheel for a tire change.



As a demountable rim jack it will serve for all makes of rims the manufacturer claims. The screw is three-quarter inch diameter, with a No. 6 square thread, having plenty of power for the most stubborn rim. Claim is made that with the tool rims that are out of round may be trued in a very few moments time, so that they may be applied to wheels. The tool may be attached to a rim very quickly by hooks to the sides of the rim.

Manufactured by the Million Motor Co., Adrian, Mich. Price, $6.

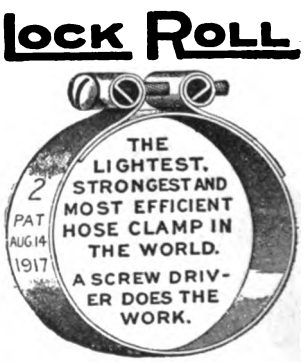
Klear-Sight Windshield Cleaner. The manufacturer claims that the Klear-Sight Cleaner is superior to anything in the market for the purpose. This is largely due to the drawn steel spring welded to the iron parts. This is made of a special grade of steel, making possible an align-



ment that insures a uniform contact of the cleaner with the glass, which is absolutely necessary to get good results. It not only removes rain, mist or snow from the glass, but leaves it clean and clear.

Manufactured by the Alcemo Manufacturing Co., Newark, N. J. Price, $2.

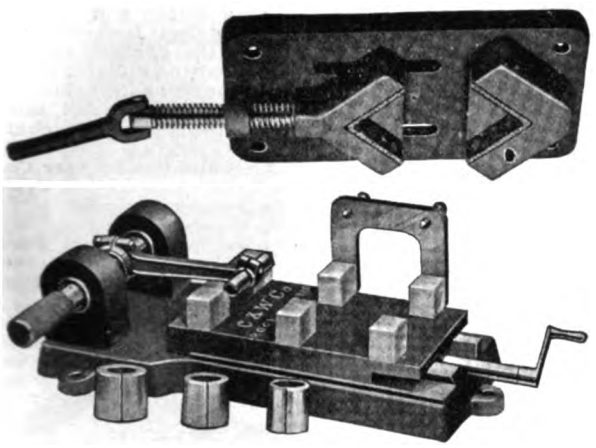
Lock Roll Hose Clamp. Something unique in hose clamps is shown in the accompanying cut. Of all the splendid features of this clamp, one that stands out the strongest is the lock nut arrangement. This device eliminates the nut so com-



monly used on the ordinary clamp, and at the same time is guaranteed by the manufacturer to be non-stripable and vibration proof. Its application is simple and it is adaptable in every case where a tight connection is an absolute necessity.

Manufactured by the Federal Tin Co., Charles and Barre Sts., Baltimore, Md. Prices on application.

Digitized by Google



Connecting Rod Aligner and Piston Clamp. Two tools of unusual interest to the service station and garage owners are the connecting rod aligner and piston clamp manufactured by Campbell & Wochner. These are bench tools that may be placed conveniently for work and will earn the investment in them many times over during the course of a year. The aligner not only proves connecting rod alignment, but also the cross diameters of the pistons. With it one can check the positions of the connecting rods, that is, the tops of the rods on the wristpins between the piston bosses. The manufacturer claims that with aligner connecting rods all makes can be aligned quickly and accurately.

The piston vise or clamp is adjustable and will hold any piston from 2⅝ to 4½ inches. It is impossible to crack the skirt of a piston or to damage the rings in any manner. The machine is indestructible and when reaming for oversize pins or installing new bushings in a piston will prove indispensable.

Manufactured by the Campbell & Wochner Co., 1611-15 Third Ave., Rock Island, Ill. Prices: Piston clamp, $8; aligner, $65, f. o. b. These are fully guaranteed.

Rees Double Worm Gear Drive Jacks. The principle of the worm gear is employed in the construction of Rees' Double Worm Gear Jacks, which are claimed to be very powerful in operation. These jacks should be used generally in garages and service stations because of their power for lifting qualities, the ease of

placing them beneath the axles and the fact that they may be operated from a standing position. They are manufactured in a variety of sizes and weights and for all classes of work, both light and heavy The manufacturer claims that a child can lift a two-ton load with ease with one of these jacks and that the jack cannot drop while under load.

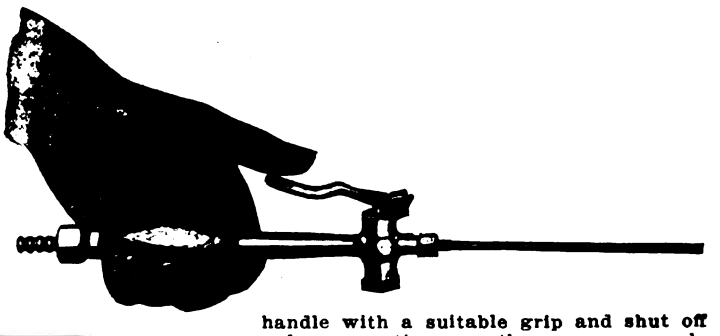
Manufactured by the Iron City Products Co., 7501 Thomas Boulevard, Pittsburgh, Pa. Price, passenger car model, $9.

Atlantic Pneumatic Grease Gun. The Atlantic Pneumatic Grease Gun is designed to move grease by compressed air from a tube by pressing a button. Air is supplied from an engine driven tire pump, foot pump, compressed air system or from an inflated tire on the machine. To operate, attach the hose to the valve connection on the pump. Fill the pump with grease, using filler provided for that purpose.

To use with inflated tire, reverse the hole ends to compress the valve inside of the valve stem. By pressing the button on the pump the grease will be forced through the nozzle. When the pressure on the button is released the grease stops flowing instantly. A small screw is supplied for use with a compressed air system or air from an inflated tire, but it must be removed when used with a power pump, as the opening where the screw is placed is the safety valve for the air when not forcing out grease. The safety valve is provided in the plunger so that when the gun is empty air will pass through the gun and out through the nozzle, preventing the air from backing up and bursting the tire pump. A small opening in the barrel of the gun allows the air behind the piston to escape when the gun is not in operation, so that the grease will not be forced out. Any grade of grease may be used, the flow being determined by the pressure of the air supply. The gun is nearly all brass, is nickel plated and holds 16 ounces of grease. The outfit includes the grease gun, two tips, ⅛ inch and ¼ inch, of iron to be inserted in place of grease cups to clean out a stopped joint, one flexible metal hose for end of cap with union, filler with paddle, one plug for inserting in the nozzle end of gun when carrying it filled in the tool kit. Packed in a wooden box.

Manufactured by the Atlantic Motor Supply Co., 63 Gorham St., West Somerville, Mass. Prices on application.

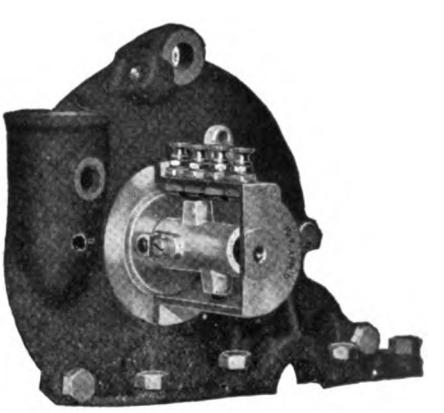
Fidelity "One Hand Torch." The Fidelity "One Hand Torch" No. 19-A is a late model handle for the garage repairer doing decarbonizing work. It consists of a



handle with a suitable grip and shut off valve operating on the oxygen supply within easy reach of the thumb. The tip on the end for insertion into the combustion chamber of the engine is made detachable, as these burn off occasionally and must be replaced. With this 20-inch semi-flexible copper torch head the tool can be extended into every part of the chamber. The "one hand" operation is a big feature. The automatic shut off valve controlling the oxygen supply is located on top of the torch, coming right under thumb of the hand holding it. A slight pressure of the thumb on the valve handle turns on the oxygen and releasing the pressure automatically causes complete shut off. New tips can be obtained quickly and at small cost from the manufacturer.

Manufactured by the Fidelity Brass Manufacturing Co., 1001-1011 West Washington St., Chicago, Ill. Price for the outfit, including torch, 50 pound gauge and six feet highest grade hose with clamps, $17.50.

The Jack Rabbit Distributor for Ford Cars. The Jack Rabbit distributor is designed to take the place of the regular Ford commutator. Unlike the Ford commutator there is nothing about the contacts to wear as its brush units break contact while traveling through space. The terminal contacts are a suspended type, attached to the top of the distributor. The wire connections are from the top of the distributor directly over the brush contacts, insuring against accumulations of oil. Jack Rabbit distributors can be easily attached to any Ford car by installing it in place of the old commutator and connecting the wires to the terminals marked one, two, three and four. Then turn the engine over until the old roller brush points down; remove it and with the engine in this position slip the



Jack Rabbit brush on the camshaft and tighten set screw securely into hole on the camshaft. Use the bolt and bushing furnished for adjusting the Jack Rabbit body to the engine. If the spark is timed too low this may be corrected by shortening the spark rod by bending.

The manufacturer claims that by the use of the Jack Rabbitt distributor the wires will be kept free from oil and ignition troubles will be reduced.

Manufactured by Jack Rabbit Ignition Co., 1062 Palmer Avenue, Detroit, Mich. Price, $5.

Digitized by Google

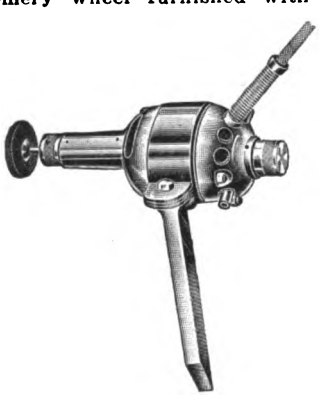
Invisible Curtain Light Repairer. The Invisible Curtain Light Repairer may be purchased from the manufacturer either separately or in quantity and may be placed in the car curtains in a few moments time without the use of special tools or cutting the fabric. The repairers are sold singly in envelopes with the necessary fasteners and full directions for fitting to the curtain. The lights are made in three sizes. No. 101, 10 by 6 inches; No. 102, 18 by 10 inches and No. 103, 25 by 10 inches. No. 101 is for all Ford cars of 1917 or later models and No. 102 is for replacing the rear lights of 1916 or earlier models.

In placing the light in the curtain a sharp knife is used to cut the inner stitch-

ing and picking out the threads. The new light is placed over the opening evenly and fastened with the small patent fasteners to the light and the inner flap of the curtain. The outer flap, covering the fastener, is cemented with glue or a good cement, making the curtain and light water proof.

Manufactured by Russell E. Tupper, Cochituate, Mass. Prices: No. 101, 50 cents each or $6 a dozen; No. 102, $1 each or $12 a dozen; No. 103, $1.50 each or $18 a dozen. Special prices to the trade.

H-B Portable Electric Grinder. The Hamilton-Beach portable electric grinder is designed for garage and service station repairers or mechanics for use with a lathe. The work is held in place in the chuck of the lathe, the grinder being fastened by a short steel arm to the adjustable rest on the bed of the lathe. The grinder may be connected to any convenient electric light socket for current and operates through a short shaft, having an emery wheel attached at the end of the shaft and bearing against the work. The motors are fitted for either direct or alternating current, either 100-120 volts, 25 to 60 cycles. The universal joint is perfectly fitted and is true in operation. The emery wheel furnished with every

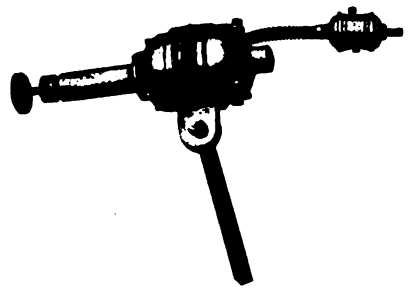


H-B grinder is tried, trued and tested before leaving the factory. All grinders are equipped with a C. H. feed through a switch placed near the grinder so that the current may be instantly cut off without leaving the work.

A special feature of H-B grinders is the dust proof bearing caps. No grit or dirt can come in contact with the high speed nickel babbit bearings. The grinder is perfectly balanced throughout, assuring absolute accuracy and eliminating any possibility of vibration.

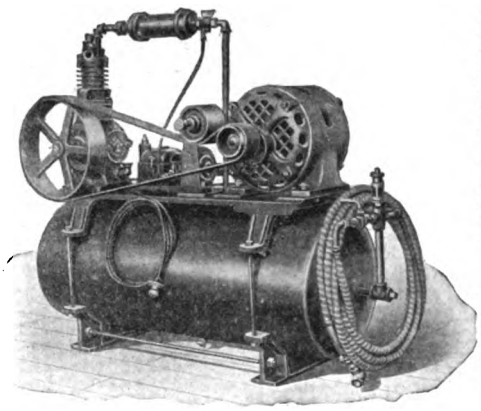
The manufacturer claims that this grinder is the result of many years of careful experimenting and research by the ablest engineers of the country. It is scientifically correct, compact and convenient, and is built of the best material the market affords.

Every H-B Grinder sold at the full advertised list price shall entitle consumer to a guarantee against defective material and workmanship, provided transportation to and from the factory is paid. Natural wear and tear does not constitute a defect. Parts worn out through lack of oiling will be furnished at cost. This guarantee does not apply to any device from which the Hamilton-Beach name plate has been removed.



Manufactured by the Hamilton-Beach Manufacturing Co., Inc., Racine, Wis. Price, $25; guaranteed for life.

Service Station and Garage Air Compressor. This service station and garage air compressor consists of a motor driven outfit mounted on a sub-base and includes the tank, with suitable gauges, and an air compressor of the single cylinder vertical type mounted on the tank and belt driven by an electric motor mounted on the opposite end of the tank. The compressor is connected to the tank by piping, check valves and fittings and a gauge, making the outfit very compact and occupying a small space in the service station. These outfits may also be purchased mounted so that they may be



wheeled to any point in a garage and used for inflating tires, or the stationary types may be connected to piping systems in service stations and by suitable valves and hose connecting them, can be used for tire inflation or other purposes. They are made throughout of the best of material and are guaranteed by the manufacturer against defective material and workmanship.

Manufactured by the Gardner Governor Co., Quincy, Ill. Prices and literature on application.

Kester Acid-Core Wire Solder. Kester acid-core wire solder is a self-fluxing wire solder. The solder (strictly tin and lead) is a hollow wire filled with a soldering flux. No additional soldering flux, paste or salts is required. The manufacturer claims it will solder any metal except aluminum and is especially suited for

Kester Acid-Core Wire Solder

automotive repair work. It is said to be cheaper to use than solder wire or bar solder as no time is lost in preparing, hunting or applying the flux. It is specially adapted for repairing radiator leaks, attaching spark plug terminals, soldering cracked fenders, gasoline pipe and tank connections, speedometer flexible shaft tubing and general garage use.

Manufactured by the Chicago Solder Co., 218 North Union Ave., Chicago, Ill. Price on application.

Lazear Auto Lock Wheels for Ford Cars. The Lazear Auto Lock is a new lock for Ford cars for which the manufacturer makes many claims.

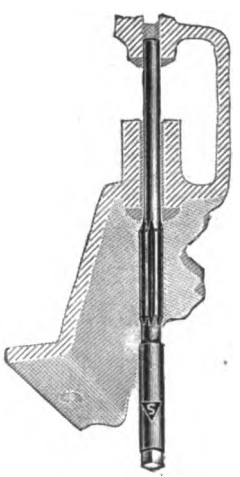
The Lazear Auto Lock is simple in construction and can be easily installed in

about 10 minutes time by anyone. It is approved by the Underwriters Laboratories and is the only lock wheel which locks without the use of a key. It has no lost motion or play even after being used a long time. It is fitted with a Corbin locking cylinder that is supplied with two keys which are designed for each particular car, no two locks having keys alike. The wheel is constructed with a polished aluminum spider and a walnut finished, corrugated rim, which adds greatly to the finish of the car. The rim is 17 inches diameter and affords the driver more comfort and convenience in driving, as it has greater leverage, which lessens the steering strain. Ball bearings are used in the construction of the lock wheel, which reduce the friction to a minimum.

Manufactured by the Lazear Auto Lock Wheel Co., 4101-13 Irving Park Blvd., Chicago, Ill. Prices, Ford model, 17-inch corrugated rim, each $12.50. Lazear Auto Lock Wheels for all large cars and trucks, 18 inch corrugated rim, each, $15.

Pilot Reamer for Ford Oversize Push-rod. The new Stevens Pilot Reamer for Ford engines is unique in construction and the manufacturer claims that with it oversize push rods can be quickly and easily installed in the Ford engine.

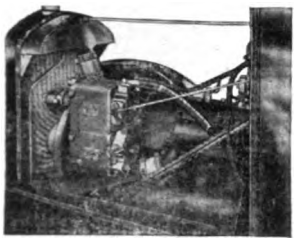
The reamer is used from the under side of the top half of the base and is passed through the push rod bore, the upper end of the reamer carrying a long pilot, fitting



the valve stem guide above and being held in alignment by the valve guide. This insures a true reamed guide for the push rod and the fitting of an oversize push rod. The reamer is 1/64 inch oversize and like all Stevens reamers, is made of highest grade crucible steel, guaranteed for accuracy.

Manufactured by Stevens & Co., 375 Broadway, New York City.

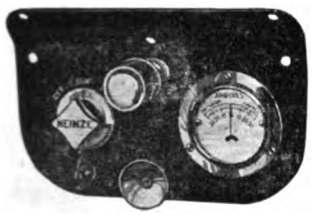
Digitized by Google



Heinze-Springfield Electric Starting and Lighting System for Ford Cars. The Heinze-Springfield electric starting and lighting system for Ford cars consists of a two-unit, six-volt, single wire equipment with Bendix drive. It is interchangeable on both old and new types of Ford engines.

The manufacturer claims that this starter insures a surplus of power for starting and a generator output sufficiently high to keep the battery fully charged and in good condition.

This outfit eliminates the dangers of hand cranking and stalling in traffic. The engine is always locked when the car is left for any length of time and steady lights are provided for night driving. The control is from the dash on which is lo-



cated the ammeter, dash light switch and lock. It can be easily placed on the front of the engine by using a special cast mounting plate and fittings furnished with the starter. The system is complete as sent out by the manufacturer and no extras are required.

Manufactured by the John O. Heinze Co., Springfield, O. Prices and literature on application.

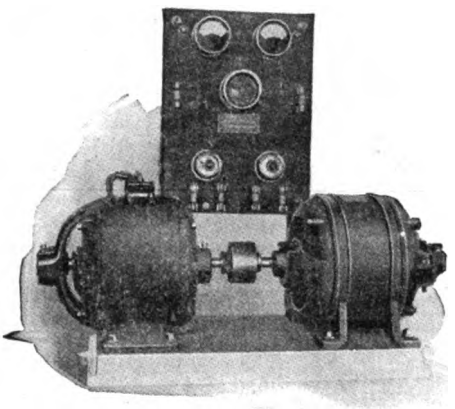
Kewanee Motor Generator Sets. Kewanee Motor Generator Sets are manufactured in many sizes and capacities and are suitable for all classes of charging work from the private owner having one battery to charge occasionally to the service station where many batteries are overhauled and charged daily.

The outfits include beside the motor generator a suitable panel of slate upon which is placed the instruments used for charging. Among these instruments are a generator field rheostat, voltmeter, ammeter, motor and generator circuit control switches, fuses, ammeter reading switches, battery circuit switches and charging rheostats; also a circuit breaker when ordered. The regular equipment consists of a two-circuit panel, including instruments and switches as specified, with charging rheostat in one circuit. Additional circuits, circuit breaker and charging rheostats are furnished at extra prices. The voltmeter reads the voltage of the generator circuit only.

The generator is shunt wound, its voltage increasing as the batteries approach the charged condition and the ampere load decreasing, thus permitting the long low rate charge necessary for the life of the batteries.

The motor generator sets are made from the best materials, guaranteed by the manufacturer, and may be operated either on single or double phase circuits alternating current. These outfits will charge from one to six six-volt batteries in series, or double this number in multiple in the smaller sizes, and in the larger outfits will charge from four to 13 six-volt batteries in series or double this number in multiple, with the amperage for charging varying from six to 37½. The point that recommends these outfits is the fact that experienced men are not required for their operation, the regular garage or service station help being sufficient.

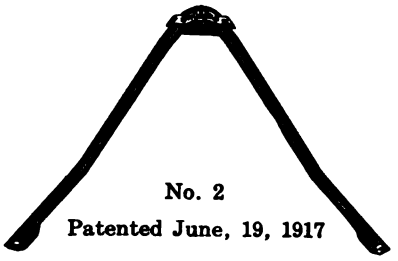
The same company manufactures a direct connected pump and electric plant for isolated service stations where electric current is not available, for which it makes many claims. This outfit will supply the necessary electric current for use about a shop for lights and small motors and also pump the necessary water to a pneumatic storage tank, either from a deep or shallow well. The pump and electric light plant may be used together or



separate as required. Power is obtained from a gasoline engine, direct connected to the dynamo and pump. A button on the switchboard starts the engine and the engine is automatically stopped when either the tank is filled or the storage batteries in connection with the outfit have reached their maximum charge.

Manufactured by the Kewanee Private Utilities Co., Kewanee, Ill. Prices and literature on application.

Radius Rod Supports for Ford Cars. Radius rod supports for Ford cars are made from angle steel and shaped to fit either beneath radius rods or inside of them. The No. 2 support is the most used because of its position when in place, as it is fitted directly in the crotch of the radius rod. In the event of the loss of the clamp or bolt there is a support for the front axle, and there are no strains on the bolt or clamp. The support is so formed at the crotch into a clamp that



No. 2

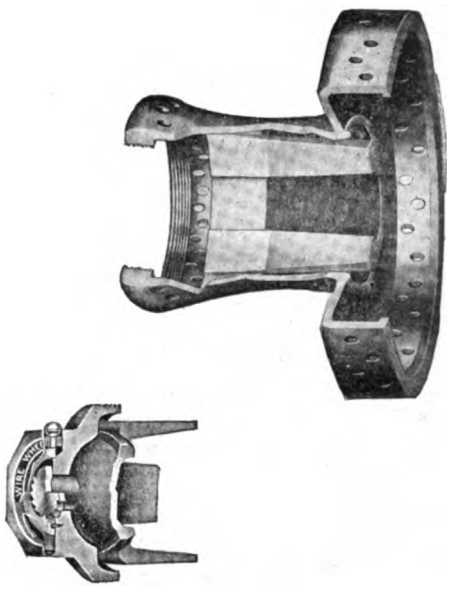
Patented June, 19, 1917

cannot be moved by pressure from its position, as the top web of the angle is formed at the crotch that when placed it hugs the radius rod its full length. The manufacturer claims that the clamp may be removed from the support and the car driven without danger of accident.

Manufactured by the Brocksmith Manufacturing Co., St. Louis, Mo. Prices on application.

Stewart Wire Wheels for Passenger Cars. Stewart Wire Wheels for Passenger Cars while new to the trade are the product of a concern that has long been connected with the automobile industry.

In the newly perfected Stewart wheel, all danger of wheels accidentally coming off is obviated the manufacturer claims. The inner hub and outer hub each have four reverse tapers. As the outer hub is applied the tapers slip into grooves and a one-eighth turn locks the reverse tapers of the outer hub to those of the inner.

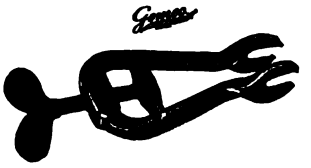


Each taper has bearing on the entire surface of the other. Even when the tapers begin to wear perfect bearing surface is maintained until both reverse tapers are entirely worn away is claimed. Until the reverse tapers are thus automatically locked the hub cap cannot be applied. Inside this hub cap is swiveled a wedge key with four tapered wedges. This wedge key has two functions. It carries the wedges for securing the wheel upon its taper bearings, at the same time the end of the inner hub projects into the wedge key, which in turn seats in the recess of the hub shell, thus affording a positive, direct drive combined with rigidity of wedge bearings. Turning the hub cap forces the wedges home and they are held by an automatic spring lock ratchet mechanism. Two or three final turns with a hub wrench make the hub cap absolutely tight, and the spring lock prevents its working loose.

Manufactured by the Stewart Wire Wheel Corporation, Frankfort, Ind. Prices and literature on application.

Gemco Universal Valve Spring Release. Garage and service station repairers will be interested in the Gemco Universal Valve Spring Release No. 202. By its use obstinate valve springs may be compressed and the pins removed to take out the valves for grinding.

It consists of two arms forked at one end and hinged to a cross member at the other. A bolt carrying a winged nut at one end passes through the center of the cross member and fits against a block



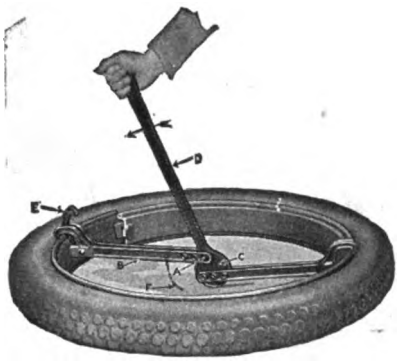
slidable between the two hinged arms. When operating the forks are placed one under the valve spring and the other over the push rod, and they are forced apart by the bolt and block, the block bearing against the sides of the arms. When the spring is compressed it is held so that the pin may be easily removed, and the valve can be taken out. By turning the bolt in the opposite direction the tool may be released for use on the next valve. The tool is made throughout of the best of material and the manufacturer claims that it will last for years.

Manufactured by the Gemco Manufacturing Co., Milwaukee, Wis. Prices on application. Sold through the jobbing trade.

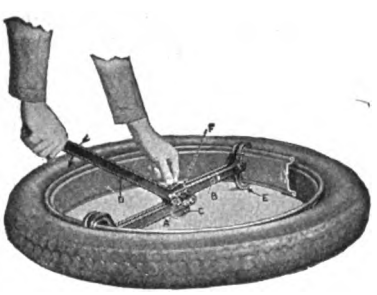
Digitized by Google

Duplex Rim Device. Safstrom's Patent Duplex Rim Device is a new tool for the removal of straight side and clincher casings from demountable rims. The manufacturer makes many claims for its adaptability, ease of operation, etc.

It consists of three levers, two of which have hooks on the ends that fit over the rim and the third is used as a handle, having a disc at one end to which the side levers fasten.



To operate the valve stem is pushed in and the casing is placed flat on the ground and the tool placed across the rim a few inches from the split in the rim. The pin (A) is inserted through the bars and the disc, making the lever stand in an upright position. With expanding movement unlock the rim. Then swing the tool to within a few inches of the opposite side of the split. Slip the lower hook (E) under the bottom side of the rim and contract to the full extent of the lever (D). Insert the locking pin (F) in disc (C) and lift the rim out of the casing, leaving the tool in the locked position ready to replace. In replacing put the rim in the casing, guiding the valve stem through first, and press down the lever (D). Then pull out the locking pin (F) and force the lever (D) to the opposite side and expand the rim until the lock fits. In expanding, fold back the lower hook (E) so that the tool may travel freely inside the rim and reach any point where expansion is needed.



As the tool is universal it may be adapted to any size rim by simply changing the pins in the disc and side levers. It will lock and unlock any make of rim and do all of its work without damage to the casing or rim.

Manufactured by the Duplex Rim Device Co., 7546-48 S. Chicago Avenue, Chicago, Ill. Price: No. 1, car size, $6; No. 2, garage size, $7.

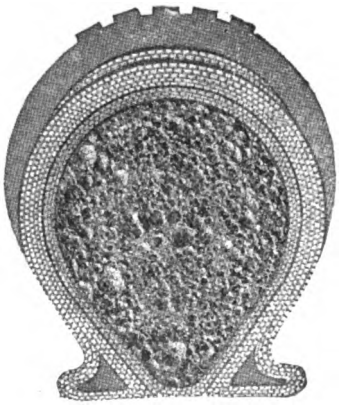
Rockway Automatic Starter for Ford Cars. Rockway Automatic Starters for Ford cars turn the engines with a powerful coil spring in which sufficient energy is stored to insure from eight to 10 revolutions, insuring an easy start. A primer is included in the outfit for cold weather starting, which injects gasoline into the inlet manifold.

The coiled spring is placed parallel to the frame at the front left corner and is connected to the crankshaft by two sprockets and a chain. A special clutch under the fan pulley engages the crankshaft when starting and during the winding of the spring. When the spring is fully wound the clutch automatically releases, allowing the engine to run free. A rod entends from the starter to the dash for operating the starter. In case the spring should be unwound, provision is made for rewinding it either by the hand crank at the front of the engine or by the brake lever at the seat. A small push pin on the floor operates in conjunction with the hand brake lever during the rewinding. The mechanism of the Rockway automatic starter operates in a bath of oil, thus insuring lubrication with minimum attention.

The manufacturer claims that the best of materials are used in the construction of Rockway starters and warrants all parts as shall under normal use and service appear to have been defective in workmanship or material. All defective parts will be replaced without charge, except transportation. Rockway starters are guaranteed to work when installed and operated according to printed instructions.

Manufactured by the I. B. Howell Co., Manufacturers, Waukesha, Wis. Price, $48.50, installed. Where no agency is established a discount of $10 is allowed to cover cost of installation, the customer being asked to send them the factory name of the garage or shop installing the starter.

Parco Inner Tires. Parco Inner Tires are a tire filler for pneumatic casings and are filled tubes of special construction for which the manufacturers make many



claims. The Parco Inner Tire is a one-piece unit, made of the best grade of pure rubber, containing innumerable tiny air filled rubber cells, each of which is a pneumatic shock absorbing cushion that is claimed to afford greater resiliency than the customary one cell air filled tube.

Parco Inner Tubes replace the vulnerable air filled tubes and can be used in any standard make of casing. With these tires the casings can be worn to the last layer of fabric, giving many miles more than would otherwise be possible.

Manufactured by the Pan-American Rubber Co., Milwaukee, Wis. Prices on application.

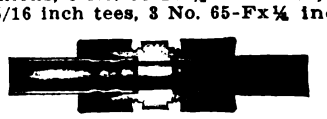
X-Pel-Zit. X-Pel-Zit is a chemical product that may be mixed with gasoline in the proportion of one ounce to five gallons for engines in ordinary condition, but where they are very foul with carbon deposits the proportion may be three ounces to five gallons, gradually reducing the proportion of X-Pel-Zit as the engine becomes free of carbon until one ounce is used. The manufacturer claims that X-Pel-Zit does not improve gasoline, but does prevent formation of carbon. The gasoline is a conveyor to get X-Pel-Zit into the combustion chambers. The moist vapor of X-Pel-Zit is sprayed throughout the combustion chamber and united with the lubricating oil. The carbon is not deposited and is forced out of the combustion chamber with the exhaust, insuring a cleaner, smoother running engine. As the pistons are better lubricated through the action of X-Pel-Zit mixed with the gasoline entering the combustion chambers, less gas is required to develop power and this means a saving in fuel.

Manufactured by the X-Pel-Zit Manufacturing Co., St. Paul, Minn. Prices on application.

Imperial Compression Couplings. Imperial Compression Couplings are claimed to be the quickest and most effective means of connecting tubing for gasoline, oil and air lines. These couplings may be connected and unconnected as often as desired or they may be taken from the tubing and used elsewhere without lessening their efficiency the manufacturer claims. In connecting them the only tools required are two wrenches. Simply insert end of the tubing through the nut

and sleeve, as shown in the illustration, and then insert the tubing into the body of the fitting so that the end of the tube seats. Tighten the nut on the fitting and the double grip of the sleeve on the tubing, thus obtained, makes an absolutely tight joint. Put up in cartons of assorted sizes for the garage and service station trade in the following sizes:

No. 110-F, handy assortment, includes the following: 12 No. 60-Fx¼ inch sleeves, 12 No. 60-Fx5/16 inch sleeves, 3 No. 62-Fx¼ inch unions, 3 No. 62-Fx5/16 inch unions, 3 No. 64-Fx¼ inch tees, 3 No. 64-Fx5/16 inch tees, 3 No. 65-Fx¼ inch elbows, 3 No. 65-Fx5/16 inch elbows, 3 No. 66-Fx¼ inch bushings, 3 No. 66-Fx5/16 inch bushings, 8 No. 68-Fx¼ inch connectors, 8 No. 68-Fx5/16 inch connectors, 8 No. 69-Fx¼ inch elbows, 8 No. 69-Fx5/16 inch elbows, 3 No. 70-Fx¼ inch elbows, 3 No. 70-Fx5/16 inch elbows, 3 No. 72-Fx¼ inch tees, 3 No. 72-Fx5/16 inch tees.



No. 111-F handy assortment is similar to the above, but contains a larger number of fittings.

Manufactured by the Imperial Brass Manufacturing Co., 1200 West Harrison Street, Chicago, Ill. Price to dealers, No. 110-F, $8; No. 111-F, $10.

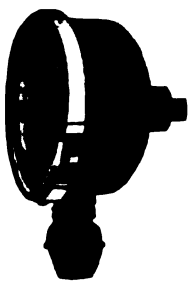
Superford Honeycomb Radiators for Ford Cars and Trucks. Superford radiators are made up to a price and are guaranteed by the manufacturer to be of the best of material obtainable and made by skilled workmen. The material that enters into their construction is identical to that used in the radiators of White and Packard cars, it is claimed.

Both 1916 and 1918 models have removable radiator casings and the inner units are easily accessible and the water tanks (upper and lower) are made entirely of brass. The radiator casings are stamped in one unit with the side walls heavily reinforced.

A lower priced radiator of the finned tube type manufactured by this company is claimed to be an improvement over other types in construction and general makeup. All important parts subject to strains are reinforced, and the side walls are riveted and solidly joined to the upper and lower brass water tanks. All water connections made of heavy castings, strongly riveted and fused. The trade name of this radiator is "Fin-A-Tube" and it is interchangeable with any original Ford radiator.

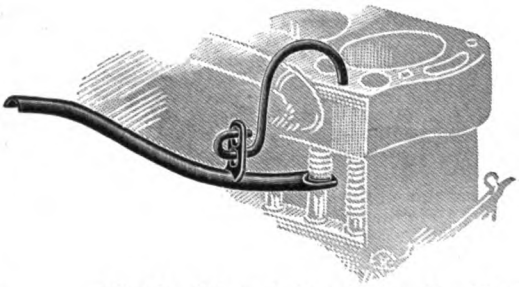
Manufactured by the Superior Lamp Manufacturing Co., 136 W. 52nd Street New York City. Prices: "Superford" honeycomb type, No. 16-F for 1909 to 1916 Ford cars, $35; No. 18-F, for 1917 to 1918 cars, $35; No. 18-F combination, for 1915 or 1916 Ford cars; streamline hood of the 1918 type, $43; "Fin-A-Tube" type, No. 16-B, for 1909 to 1916 Ford cars, polished brass, $30; No. 18-B, for 1917 to 1918 cars, complete with casing, $30; No. 17-B, 1918 radiator, with a streamline hood that will fit a 1915 or 1916 Ford car, $38.

Tail Light for Ford Cars. The Jefferson electric transformer tail light for Ford cars consists of an electric rear lamp having a three-volt low amperage bulb, a transformer conveniently located on the dash, and two dry cells. When the engine is running, light for the rear bulb is obtained from the extra current de-



veloped by the magneto. When the engine is stopped, current is obtained from the two dry cells by turning a switch on the front of the transformer. Current control is obtained from the transformer and it is automatically controlled, the manufacturer claims. The brilliancy is the same when the car is driven slow or fast. The complete outfit consists of transformer, standard electric tail light and sufficient rubber covered wire to make the connections.

Manufactured by the Jefferson Electric Manufacturing Co., 426-30 S. Green street, Chicago, Ill. Prices on application.

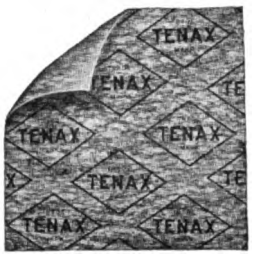


Liberty Valve Spring Lifter for Ford Cars. Liberty valve spring lifters are so designed that two valves may be taken out at one placing of the tool without removing the manifold on the side of the engine. The Liberty valve lifter is equally as useful for the home repairer as it is for the automobile mechanic. It is made of cold rolled steel and is strong and indestructible. It is simple and easy of operation, requiring only one hand, and stays in place without locking or holding.

The manufacturer claims that with this tool the most stubborn valve may be removed with ease and the necessity of resetting the pin each time is eliminated, as the valve is left free to be rotated. Full directions with each lifter for operating.

Manufactured by the Madison Tool and Stamping Works, Madison, Wis. Price, $1.

Tenax Compressed Asbestos Sheet Packing. Automobile supply houses and service stations can obtain sheet packing of a superior brand from a manufacturer who makes claim that its packing is unusually well made of the best of material; that it has been in the market for the



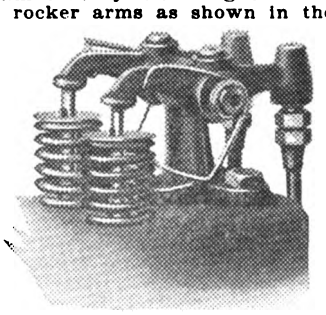
past 18 years and has a very enviable reputation not only with the steam industries, but with the automobile, truck and tractor manufacturers as well.

It is used for renewing packings, gaskets, pump packings, etc., and as the base is asbestos and it is not effected by heat, it is especially useful for exhaust pipe gaskets.

Manufactured by the Advance Packing and Supply Co., 11-15 North Franklin St., Chicago, Ill. Prices on application.

K-H-K Motor Silencers. An equipment of value to owners of cars equipped with overhead valves not of the enclosed type is the K-H-K silencer. These take the form of a spring that may be attached to the rocker arm, pass around the end of the arm bearing shaft and fastened by spring tension at the base of the post supporting the arm. Their use is to silence the noise of the arm and the push rods when operating.

The manufacturer of the K-H-K silencers claim that by attaching them to the engine rocker arms as shown in the cut



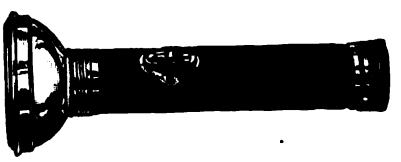
that a smoother running and snappier engine is obtained, and that the clacking noise so often heard is prevented.

It is not necessary to make alterations or to bore holes to install the silencers, as they are simply sprung into place around the rocker arms and become permanent fixtures.

Manufactured by the Kay H. Kay Co., 967 Woodward Ave., Detroit, Mich. Prices on request.

Everready Daylo Searchlight. These lights are built to the design of the famous Everready miners' flashlights and are made to meet the demand for a portable electric searchlight of the greatest possible power.

They appeal especially to automobile and truck owners who need a hard lamp of great brilliancy. They are unusually sturdy, made for the hardest kind of service and give an intensity of light that will penetrate not only ordinary darkness, but fog and smoke, the manufacturer



claims. The cases are heavy vulcanized fiber fitted with a highly polished parabolic reflector and unusually powerful beveled lens. All metal parts are brass heavily nickeled. The switch is the sliding type, the same as used on the standard fiber and nickel tubular Everready Daylo's. In every detail of construction they measure up to the Everready standard for durability, dependability and intensity of light.

Manufactured by the American Ever Ready Works, Long Island City, N. Y. Prices on application.

Magic Rubber Mend. Magic Rubber Mend, as its name implies, is a compound suitable for making repairs to automobile tires and tubes or for repairing rubber goods of all kinds. It is a cement, prepared in small cans, with snap tops, ready for use without using heat or acid.

To repair cuts in casings roughen the surface to be repaired with either sandpaper or a file and knead a quantity of rubber mend between the palms of the hands till it reaches a dough-like state. Wash the spot to be patched with gasoline and allow it to dry. Apply two or

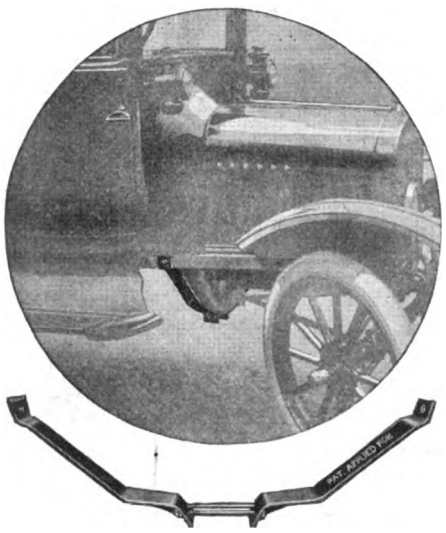
three coats of cement and let each dry. Force a thin layer of Magic Rubber Mend into the cut. Then press the manipulated Magic Rubber Mend tightly into the cut, leaving it slightly above the external surface of the casing.

When repairing tubes the method is similar, except that only one coat of cement is applied and the dough is pressed into the cut so the patch is quite thick over it. The repair is dried over night and the tube is then ready to use.

Manufactured by the Eastern Rubber Co., 1529 Ridge Avenue, Philadelphia, Pa. Price, $1.

Digitized by Google

Simpson Crank Case Support for Fords. The Simpson crank case support consists of two short strips of steel, bolted together at the center and fastened at the ends to the frame by bolts. In case of a broken arm on the engine a Simpson crank case support may be put in place in a few moments time, and the engine driven as with the regular support. Many

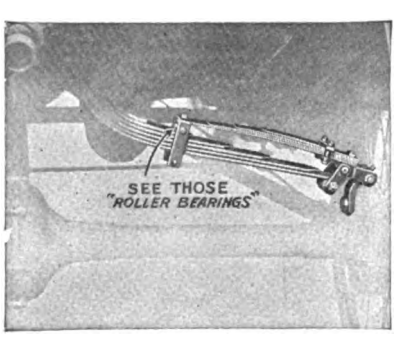


Ford owners reinforce the regular arm with the Simpson crank case support and practically prevent an accident. This support may be installed, the manufacturer claims, in from 15 to 20 minutes.

Manufactured by the Simpson Garage and Machine Co., Newark, O. Price per set, $2.

Defender Spring Shock Absorbers for Ford Cars. Defender spring shock absorbers are short springs of four leaves that are fastened to the ends of the regular Ford springs at the outer ends by clips fastened around the springs a short distance from the ends and at the wheel ends by suitable shackles.

The manufacturer claims that the absorber action is similar to that imparted by roller bearings and that the resiliency imparted to the springs is fully 50 per cent. more, and that tire mileage is greatly increased by their use. Rough roads may be driven on safely and 40 miles an

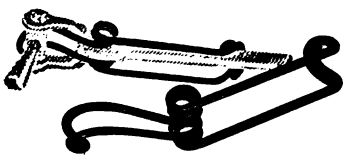


hour is not impossible by their use, as they facilitate steering, as the car will hold the road.

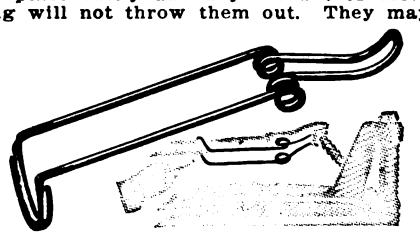
The Defender shock absorber is guaranteed never to tilt and to positively protect the car from shocks and rebound. It may be attached by any one in a few minutes time with simple tools. It has a handsome appearance when in place and requires no attention except to oil occasionally. Suitable for pleasure cars, sedans, coupes and trucks.

Manufactured by the Defender Auto Lock Co., Detroit, Mich. Sold through dealers only.

Fernald Steer-Aids and Little B-R-A-T-S. Fernald Steer-Aids and Little B-R-A-T-S for Ford cars are made from spring steel wire. The manufacturer claims that they will prevent all rattle and noise due to



wear at the ends of the front wheel tie rod and the emergency brake rods. Steer-Aids are placed one at each end of the tie rod and little B-R-A-T-S at each end of the emergency brake rod. They are put in place easily and any amount of driving will not throw them out. They may

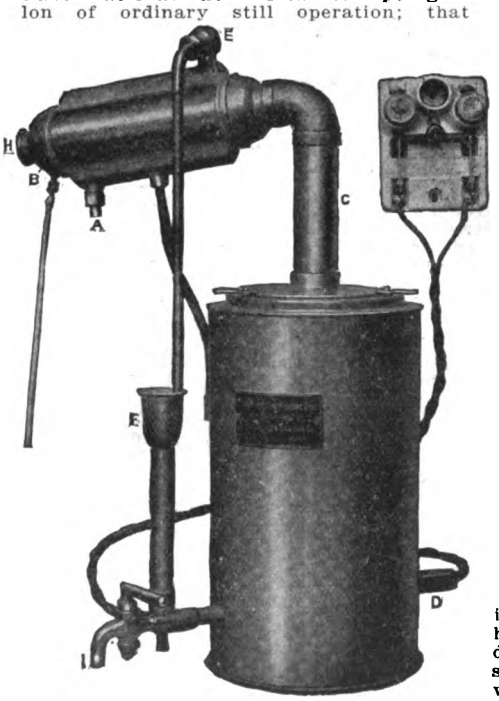


be applied instantly without the use of tools. Steer-Aids and Little B-R-A-T-S are sold to the dealer in display cartons for counter sales that are efficient silent salesmen.

Manufactured by the Fernald Manufacturing Co., North East, Pa. Prices on application.

Barnstead Water Still. Battery service station repairers, garage owners and motorists can utilize the Barnstead Water Still, an apparatus with which distilled water may be made in quantity from any water supply by the use of steam, kerosene or electricity for heating the still.

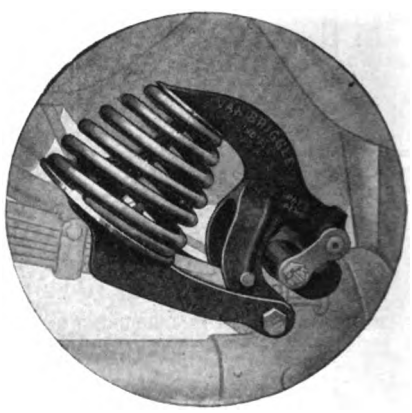
The manufacturer claims that the Barnstead Water Still can be installed at small cost and will deliver the purest of distilled water at one-half the cost per gallon of ordinary still operation; that



analysis proves that the highest degree of purity ever obtained (mineral matter one part to 1,000,000) by any process of distillation is reached with a Barnstead Water Still. The apparatus can be set up in small space, requires no attention while operating, is made of the best of material throughout and with ordinary care will last a life time. Barnstead stills are made in sizes to produce from one-half gallon an hour up.

Manufactured by the Barnstead Still and Sterilizer Co., 7 Lanesville Terrace, Forest Hills, Boston, Mass., and 189 West Madison street, Chicago, Ill. Price, one-half gallon capacity, $18.70.

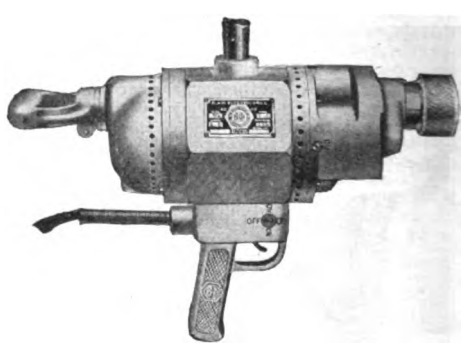
Van Biggle Shock Absorber. The Van Biggle Shock Absorber for Ford cars is a new device. The base of the absorber rests freely on the spring, allowing free action of the leaves and does not cramp or bind them. The arms of the base join the arms of the fulcrum lever and are fastened to the eyes of the spring ends by the usual spring bolt. The other section of the absorber is fastened to the clip on the axle, the same bolt being used.



In action, as the spring straightens from a shock, the arm of the absorber presses down the large coil spring and base, and on the rebound serves as a check. The manufacturer claims that this action thoroughly absorbs all road shocks and the car rides very easy.

Manufactured by the Van Biggle Motor Device Co., Indianapolis, Ind. Price, complete, cash with order, $18 f. o. b.

Portable Electric Drill. This is a new drill with a capacity of 0 to 9/16 inch that will drill a 9/16 inch hole through machine steel at a rate of 1½ inches a minute without overloading the motor, the manufacturer claims, which has been tested with pressures up to 500 pounds without stalling the drill. This drill is similar in construction to the other sizes. The housing is of magnalite, an aluminum alloy of great tensile strength. The gears are packed in grease in a separate grease-tight compartment similar to an automobile transmission gearset, the drill spindle running in a long bronze bushing and against a ball thrust bearing. The motor



is air cooled and in testing these drills have been run continuously for 14 weeks, day and night, Sundays and holidays, stopping only to renew the brushes. The weight is 21 pounds and the load speed 600 revolutions a minute.

An interesting feature of this tool is the attachment for the Morse taper socket. This is a separable sleeve secured in the drill handle by a large knurled nut. By unscrewing this nut the entire taper socket may be removed from the spindle. This drill has the patented pistol grip and trigger switch, which characterizes all Black & Decker drills.

Manufactured by the Black & Decker Manufacturing Co., Baltimore, Md. The drill complete, with interchangeable spade handle and breast plate, 15 feet of Duplex electrical cable, separable plug attachment and detachable side handle, sells for $96.

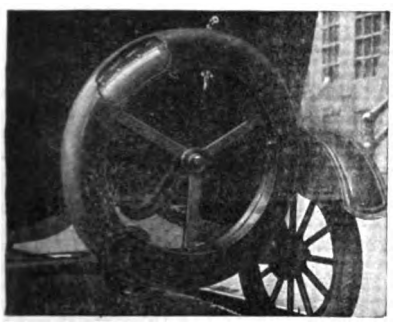
"Almetl" Tire Carrier for Ford Cars. "Almetl" Tire Carriers are new to the automobile trade and are built to a new principle that is quite different from those usually adopted. It consists of a suitable steel bracket securely fastened to the car body at the rear with a nut at the end. The tire carrier is fastened to the bracket by this nut. The carrier consists of three spokes radiating from the hub and supporting a rim at their outer ends. The



spare casing and demountable rim are mounted on this stationary rim and securely fastened to it. These tire carriers may be purchased in either the single or double type for carrying one or two casings. They are finished in black japanned or nickel and are very easy to operate, as there is only four nuts to unscrew and the casing is ready for removal from the carrier. By the use of a special side bracket the carrier may be attached to the running board of the car.

Manufactured by the Almetl Accessories Corporation, 484-6 Hart St., Brooklyn, N. Y. Price, single carrier, $14; double, $25.

Trosien Security Transmission Lock. The Trosien Security Transmission Lock is a new device that may be attached to the transmission of certain cars, and is claimed to be thief proof.

A description of the lock is as follows: Nos. 1 and 2 make use of three steel balls setting in a row. The end balls fit into a recess in the gear shift pull rods when the gear shift is in the locked position. When unlocked the end balls have a certain amount of clearance that allow the rod to pass freely by them. The lock consists of a short upright or casting located in the rear of the gear shift lever and having at the top a suitable lock using a form of Yale key. Below the key way a short shaft extends down and at the lower end carries a socket fastened to the shaft securely. The bottom of the socket is recessed in the form of a Y and rests upon the middle or center ball of the three. To lock the transmission the key is inserted in the lock and turned to the left one-quarter turn. To unlock, turn the key one-quarter turn to the right. The socket at the bottom of the lock serves as a separator, forcing the outer balls away from the center ball and into the recesses of the gear shift sliding rods when locked. In unlocking the conditions are reversed and the three balls slip towards the center, allowing a free movement of the rods.

In the No. 3 lock instead of balls for locking and unlocking the transmission are two caps, separated by a spring, supported by a small steel pin. There is a clearance between the end of the pin and one cap so that when the transmission is unlocked the caps work toward each other on the rod and against the spring, allowing the rods free movement. When locked a wedge on the end of the shaft extending from the lock fits between the edges of the caps, securely locking them in place in the recess in the pull rods of the gear shift.

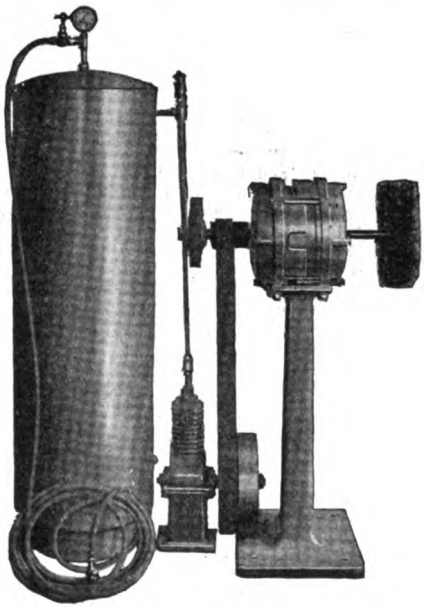
No. 1 fits Oakland model 34-B, Scripps-Booth model 34-S and McLaughlin, Canada, models H-62 and H-63.

No. 2 fits Oakland models 32, 32-B and 34; Oldsmobile, all models 37; McLaughlin, Canada, models D-60, E-62 and E-63.

No. 3 fits cars having universal type transmission, Oakland, model 34-C; Scripps-Booth, model 39; Chevrolet, model F. B. 5; Oldsmobile, McLaughlin, Canada, K-22 and K-63.

Manufactured by Charles G. Trosien, 108 Franklin Blvd., Pontiac, Mich. Prices, retail, installed, $10. For sale by dealers and distributors.

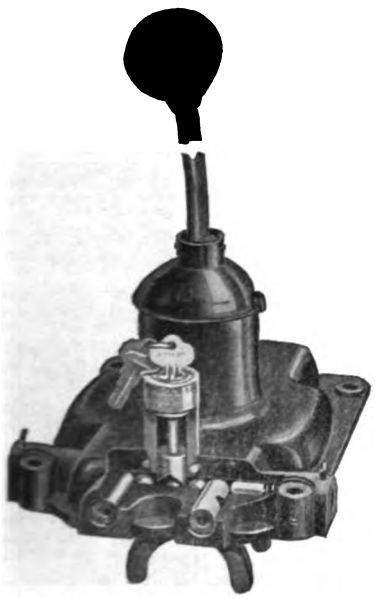
LeBron Electric Buffing, Power Grinding Machine and Air Compressor. This outfit is complete as shown in cut and consists



of one air tank, 16 by 48 inches that carries a working pressure of 150 pounds; an air compressor, belted from the motor grinder and buffer, with tight and loose pulleys, having a bore of 2⅛ inches and stroke of 2½ inches; equipped with a vertical air check, safety valve, 25 feet of air hose, one air chuck, four nipples, three long nipples, one union, 10 feet of 1½-inch belt and a 1200 pound gauge.

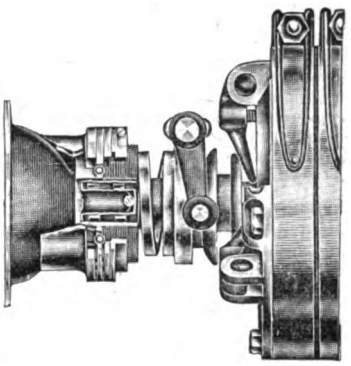
The buffer and grinder, with stand, includes an electric motor having dustproof bearings, all oil being filtered through felt before entering the bearings, with option of single phase motors from one to three horsepower wound for 110, 220 or 440 volts, or three phase motors from two to five horsepower wound for voltage of 110, 220 or 440. The wheel is a special carborundum, eight by 1½ inches and the special steel brush is 12 by two inches.

Manufactured by the LeBron Electric Works, Inc., 318-20 South 12th St, Omaha, Neb. Prices, from $220 to $275 for the motor and stand, including grinder and buffer. Air outfit, $125 extra.

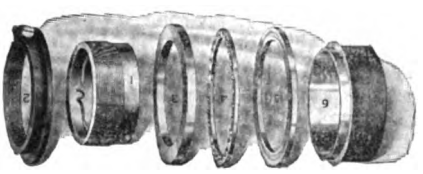


Three-Point Thrust Bearing for Ford Cars. The manufacturer of Three-Point Bearings for Ford cars make many claims for their products, chief of which is that by its use end play of the crankshaft is prevented, the magnets of the magneto are kept in better alignment and wear in the transmission bearings is minimized.

Most trouble in Ford engines is claimed to be due directly or indirectly to the end thrust of the crankshaft. This is



caused by the backward pull of the clutch spring when changing speeds, running in low and reverse gear, and from the natural backward pull of the engine towards its load. When this strain or pull is released and the car runs in high speed the tendency is for the crankshaft to slide forward and this backward and forward motion, together with the rotation of the shaft, wears the main shaft and connecting rod bearings very rapidly. Cylinders and pistons are worn out of round on account of the added strain on the connecting rods and crankshaft end play. This causes loss of compression, leakage of oil in the cylinders, fouling of spark plugs and loss of power.



The three-point thrust bearing, fitted at the rear of the clutch release spring, is claimed to obviate these causes for wear when installed in the Ford car when new, or later when they are developed.

Full instructions for installing are included with each bearing and it may easily be installed by anyone at all familiar with Ford engines.

Manufactured by the Green Dragon Co., 54 W. Randolph St., Chicago, Ill. Price, $12.

New Tool Box for Pleasure Cars and Trucks. A new Globe tool box for use on pleasure cars and trucks is that known as B-2296-SC1. The box is equipped with a suit case lock and two catches. The bottom is electrically welded to the body, making it as strong as though formed from one piece of sheet steel, and the cover corners are annealed.

It was designed to meet the demand for a box that combines strength of body with permanence of finish, and at the same time can be sold at a price that is attractive to motorists.

The box measures 22 inches in length by nine inches wide and 6⅞ inches high.

Manufactured by the Globe Machine and Stamping Co., 1200-50 West 76th St., Cleveland, O. Prices on application.

RECORD OF BUILDING OPERATIONS FOR JULY

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Birmingham, Ala.; A. Tebshrany and J. Macksawd, 2016 Avenue 3; one-story garage; $15,000.

Bridgeport, Conn.; City of Bridgeport, Board of Contract and Supply; one-story garage; $150,000.

Hartford, Conn.; A. C. Hine Co., 314 Pearl street; two-story garage, 65x300; $140,000.

Hartford, Conn.; T. Yaffo, 127 Lawrence street; one-story public garage; $15,000.

Washington, D. C.; Harper & Zimmerman; two-story garage, 65x140x130; $70,000.

Washington, D. C.; Stanley Simmons, District National Bank building; three-story garage and show room; $75,000.

Washington, D. C.; A. G. Voight, Home building; two-story garage, 50x100; $25,000.

Washington, D. C.; Thomas Machen, 1325 Fidelity building, Baltimore, Md.; one-story, semi-fireproof garage, 22x68.

Jacksonville, Fla.; P. J. McCullough; two-story fireproof garage, 40x105.

Miami, Fla.; D. V. Freeman; two-story concrete garage, 50x115; $9000.

St. Petersburg, Fla.; Ford Service Station, 600 First avenue S; one-story fireproof garage, 100x120; $8500.

Atlanta, Ga.; Reo Atlanta Co.; four-story automobile building; reinforced concrete, 50x190; $90,000.

Eastman, Ga.; Reynolds Auto Co.; one-story garage and salesroom, brick and concrete, 100x130; $12,000.

McRae, Ga.; E. S. Street, Dublin, Ga.; one-story garage, 70x100.

Rome, Ga.; Rome-Buick Co.; two-story garage; $15,000.

Chicago, Ill.; John G. Beutler Co., 2411 W. Madison street; one-story brick garage and storage station, 33x125; $25,000.

Chicago, Ill.; William Lamack, 346 Roscoe street; one-story garage, 50x125; $15,000.

Chicago, Ill.; Morris & Co.; U. S. Yards; one-story garage, 50x125; $25,000.

Chicago, Ill.; Charles D. Frey, care C. D. Frey & Son, 104 S. Michigan avenue; one-story garage, 18x21.

Decatur, Ill.; George A. Keller, 148 S. Franklin street; one-story garage; $12,000.

East Chicago, Ill.; George Saxbo, 4857 Alexander avenue, Chicago; one-story garage, 50x150; $15,000.

Evanston, Ill.; E. W. Kinback, care M. J. Morehouse, 343 S. Dearborn street, Chicago, Ill.; one-story garage; $2000.

Fairfield, Ill.; Sexton Manufacturing Co.; one-story stucco and hollow tile garage, 60x75; $5000.

Grayville, Ill.; Frick & Skiles; one-story garage, 60x140.

Marion, Ill.; Melvin Pulley, 300 E. Bouboard street; one-story public garage, 40x90; $10,000.

Mt. Sterling, Ill.; Sterling Auto Co.; two-story public garage, 62x120; $21,000.

Frankfort, Ind.; Nees Construction Co., 1152 E. Walnut street; two-story public garage, 86x132; $35,000.

Hammond, Ind.; F. S. Betz, 890 Hohman street; one-story garage, 75x95; $10,000.

Hammond, Ind.; John Schmuesser, 92 Clinton street; two-story garage, 50x136; $22,000.

North Vernon, Ind.; Calvert Klingner; one-story garage, 50x150; $15,000.

Sioux City, Ia.; Harry Barish; one-story public garage, 48x130; $13,000.

Kansas City, Kan.; J. A. Butler, 753 Central avenue; one-story garage, 50x60; $5000.

Topeka, Kan.; F. C. Blodgett; one-story stone garage, 50x140; $7000.

Wichita, Kan.; E. W. Lewis; five-story garage, 50x140; $60,000.

Wichita, Kan.; O. S. Shirk, 201 N. Main street; one-story garage, 50x130; $15,000.

Winfield, Kan.; A. L. Lippert & Co., 608 Main street; one-story garage; $5000.

Alexandria, Ky.; Clifford B. Gospey; one-story garage, 53x79; wing, 6x30.

Louisville, Ky.; Gulf Refining Co.; one-story service station; $10,000.

Lake Charles, La.; B. F. Singleton; one-story brick salesroom, 50x100; plate glass front, tile floors; $8000.

Annapolis, Md.; Frank Kries, 3 Conduit street; one-story garage, 10x18; $2000.

Baltimore, Md.; E. H. Kiester, 648 W. Lexington street; one-story garage, 60x80; $7500.

Baltimore, Md.; Phillip Woodarek, 1716 Fleet street; one-story garage, 60x160; $15,000.

Baltimore, Md.; E. R. Springer, 10 Uhlers alley; one-story garage, 40x140; $10,000.

Baltimore, Md.; Mrs. Julia R. Emory; one-story garage, 21x51.5; $23,000.

Baltimore, Md.; Acme Building Co., 511 Equitable building; one-story garage, 84x217.11; $9000.

Baltimore, Md.; J. C. Spedden, 2915 Harlem avenue; one-story garage, 46x127; $7500.

Baltimore, Md.; I. Rosenstadt; one-story garage, 75x219; $25,000.

Easton, Md.; Harry E. Clark; one-story garage and show room, 50x100; $12,000.

Hagerstown, Md.; Hagerstown Welding and Automobile Works; one and two-story concrete block and steel garage, 40x100 and 40x50; install machinery, automobile repairing and acetylene welding. Recently organized with $50,000 capital.

Hagerstown, Md.; John Jones, 801 Pennsylvania avenue; two-story concrete and concrete block garage, 40x100; $8000.

Salisbury, Md.; William B. Lowe and Weldon Fooks; one-story brick machine and repair shop, 61x175; $20,000.

Westminister, Md.; Klee & Hoff; two-story brick and concrete garage, 60x198; $60,000.

Framingham, Mass.; Framingham Garage, Inc.; one-story garage, 170x170.

Lynn, Mass.; William Miller & Son; one-story public garage, 59x110; $30,000.

Waltham, Mass.; Gertrude E. Strout, 30 Dexter street; one-story garage, 96x109; $10,000.

Detroit, Mich.; Roy Weaver, 576 Brook building; one-story garage, 40x100; $6500.

Detroit, Mich.; Joseph P. Keena, 46 Erakin place; one-story garage, 42x8x48; $3000.

Detroit, Mich.; Joseph Nowack; one-story garage, 30x100; $10,000.

Kalamazoo, Mich.; Leo T. Flanksburg, 449 W. Main street; one-story garage, 111x165.

Muskegon, Mich.; Bert Bennett; one-story garage; $12,000.

Hinckley, Minn.; H. Dempsey; one-story public garage, 50x100.

Kansas City, Mo.; W. B. Weaver, 304 Commerce building; one-story garage, 60x130; $15,000.

Kansas City, Mo.; Lion Eagle Realty Co., care I. Adler, 3717 Tracy street; one-story garage, 50x100; $8000.

Kansas City, Mo.; T. A. Bechtal Lumber Co., 328 Railway Exchange building; two-story garage, 48x132; $20,000.

Joplin, Mo.; B. L. Buhrer, 2022 Main street; one-story garage, 50x75.

Joplin, Mo.; Lanpher Motor Co., 826 Joplin street; one-story garage, 60x100; $10,000.

St. Louis, Mo.; United Motors Co. (General Motors Co., sales agency); three-story reinforced concrete automobile building, 100x122 and two wings.

St. Louis, Mo.; John Branz, 3231 Dittman street; one-story tile garage; $5000.

Sedalia, Mo.; J. R. McAllister, 29 S. Osage street; one-story garage, 91x120; $25,000.

SELLS HUB AUTO BUILDING.

Boston—Papers have passed in the sale of the two-story fireproof building, together with 36,606 square feet of land at 49-67 Lansdowne street, near the corner of Brookline avenue, by the Boston Garage Co. to Max E. and Charles E. Wyzanski.

In acquiring this property the Messrs. Wyzanski secure a modern automobile building, built from plans of Monks & Johnson and having an exceptional frontage of more than 300 feet on Lansdowne street.

This sale is an added indication of the demand for property in this section, and a forerunner of several other transfers now under agreement.

NEW YORK OAKLAND.

New York—William H. Masten, general sales manager of the Oakland Motor Car Co., is in the city to see that the new factory branch for the metropolitan district, officially established July 1, gets off on its right foot and to introduce Charles M. Brown as New York's new branch manager to the many Oakland dealers in this territory.

Mr. Masten states that business prospects are unusually attractive.

FISK TRUCK TIRES

Digitized by Google

PERFECTION ANNOUNCES THREE NEW TYPES OF TIRES.

Three new types of tires and a marked extension of the mileage guarantees on its present lines have been announced by the Perfection Tire and Rubber Co. The asbestos protected tire, which formerly carried a guaranteed covering 6000 miles, is now guaranteed for 8000 miles, while the "rib-skid" mileage has been advanced from 3500 to 6000, making it one of the most generously guaranteed automobile shoes now being offered.

One of the new Perfection tire types is known as the "Perfected." It will be made on the Dickinson cord tire machine, controlled by the Perfection company.

The Perfection "rib-skid," another new type, is a combination of the popular rib-thread and non-skid design with the desirable qualities of both.

DAVIS LYNN STORAGE BATTERY

Ground has been broken in Lynn, Mass., for a new plant of the Davis Lynn Storage Battery Manufacturing Co. There will be 10 batteries of storage tanks and this will increase the output of the concern just nine times that of today. Eventually the manufacturing facilities will cover five acres. Five hundred operatives will be employed at the start.

RACERS USE DIXON'S.

All of the racers, except Howard Wilcox, at Sheepshead, July 4, lubricated their cars with Dixon's graphite automobile lubricants.

QUICK LIFT SERVICE JACK FOR FORD CARS.

The White Products Co., 100 W. 55th street, Chicago, announces a new service jack or jack truck for the quick handling of service work on Ford cars. The cut shows this jack as it appears with the handle raised, ready for the same to be placed under the Ford rear axle. As the handle is lowered the car is raised, a safety lock holding the handle in position.

The jack is mounted on roller bearing castors, making it easy to move the Ford to any location desired. The dealer's price of this jack complete is $10 f. o. b. Chicago. Circulars and full information will be mailed on request.

QUICK LIFT SERVICE JACK.

Record of 100 Miles Smashed by Chevrolet

Gaston Chevrolet in a Frontenac car won the 100-mile automobile derby at Sheepshead Bay, July 4, breaking the world's record for the distance with the time of 54 minutes, 17⅛ seconds. The former record, made by Louis Chevrolet on the same track in September, 1917, was 54 minutes, 20 98/100 seconds.

"Howdy" Wilcox, in a Peugeot, finished second and Dave Lewis, in a Meteor Special, third.

A special match race of three 10-mile heats between Ralph De Palma and Wilcox was called off when De Palma retired because of motor trouble after his opponent had won the first heat.

LOUIS CHEVROLET WINS BIG EVENTS AT TACOMA SPEEDWAY.

Louis Chevrolet won both the 60 and the 80-mile events at the Tacoma, Wash., Speedway, July 4. Ralph Mulford captured the opening 40-mile event in 24 minutes 2 2/5 seconds. Durant finished second in the 40-mile race, with Chevrolet third.

In the 60-mile race Chevrolet led the field from the start and won in 36 minutes, 47 1/5 seconds, or at the rate of 98½ miles an hour. Mulford, Hearne, Durant and Resta finished in the order named.

Mulford was forced out of the lead and the race in the final 80-mile run with tire trouble. Chevrolet's time was 49 minutes, 19 2/5 seconds. Hearne was second and Durant third.

INGENIOUS DISPLAY CARD SHOWS BOTTLE OF WAXIT.

The Waxit Manufacturing Co., Plymouth building, Minneapolis, is providing its dealers with an attractive and practical window or counter card. In the center a bottle shape space is cut out so that an actual 14-ounce bottle of the polish can be put on display. The background of the card is a fine representation of American walnut with the letters in yellow.

Scant justice is done by the picture shown herewith. The company will send a sample package of its product to any dealer and advise how this display card may be obtained. Any car owner may get a bottle of Waxit by sending 10 cents to the company.

WAXIT DISPLAY CARD.

BIDDLE & SMART FOREMEN GIVEN SPECIAL TRAINING.

The Biddle & Smart Manufacturing Co., Amesbury, Mass., maker of Hudson automobile bodies, has installed a course of training in "Modern Production Methods." A study group of 67 foremen has been organized by William E. Biddle. John E. Calder, M. E., is director of the course of the Business Training Corporation, New York, which is conducting the work.

LIBERTY SPARK PLUGS ANNOUNCED TO TRADE.

After a long period of development the Casey Hudson Co. has started quantity production on its Liberty spark plugs. The company has been specializing in the making of automobile parts and during the war made some of every screw machine part that went into the Liberty motor—nearly 150 of them. Liberty spark plugs are said to deliver an especially hot, penetrating spark, largely due to an improved and patented spark gap intensifier, built right into the porcelain assembly where it cannot come out of adjustment or cause trouble.

The gap is perfectly adjusted for giving the proper intensifying of the electric current. It is neither too great to throw strain on the ignition system nor too small to get the proper intensity into the spark. It is claimed that Liberty spark plugs make starting easier and stop missing and skipping caused by compression, killing the spark in the cylinder. It is also claimed that they will fire in carbon and oil where some other plugs foul out in a short time.

Liberty spark plugs are packed four or six to the box instead of separately, as is usually the case. Full information regarding them may be secured by writing to the Casey Hudson Co., 361 E. Ohio street, Chicago. Liberty spark plugs packed in heavy leatherette box in sets of four and six sell for $1.25 each by set and $1.50 each for less than sets.

Mosco No. 200 Timer for Ford Car

Patented Oct. 31, 1916.

The case is made of extra heavy pressed steel, finished in aluminum. Gray bone fibre is used for raceway, with steel inserts dovetailed in and all lathe finished to a polished surface. The threaded terminals are insulated by fibre washers all the way through to contact points, thus removing cause of short circuiting common to this style of Timer.

The Curtis Sign is 10 x 14 inches—baked enamel on steel. It is furnished FREE with every Curtis Garage Air Compressor and cannot be obtained in any other way.

FREE
CURTIS AIR
FREE FROM OIL

Conserve Your Patrons' Tires

Motorists will go a long ways to find the Curtis Sign and get Curtis Air—FREE FROM OIL—because it means less blowouts and greater tire mileage.

CURTIS Air — Free From Oil

Because of correct design and good construction, Curtis Garage Air Compressors are dependable and operate with minimum power. The patented and exclusive self-regulating splash oiling system prevents oil from getting into the air line. The air is pure, clean, safe and FREE FROM OIL.

OTHER CURTIS FEATURES

Fan flywheel cools cylinder. Valves of light weight and large area. Hand unloader permits starting against full tank pressure without injury. Large drop-forged crank shaft. Adjustable, renewable, die-cast, non-cutting bearings. Head removable without breaking pipe connections—only one gasket.

MADE IN VARIOUS SIZES

Curtis Compressors are made in various styles and sizes to suit your special needs. Write today for illustrated literature giving full particulars. Use the coupon.

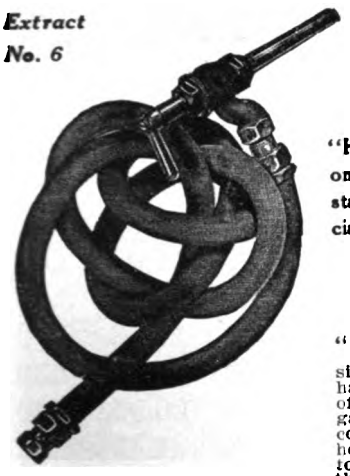
What Garagemen Think About "TRIPLEXD"

Extract No. 6



Before

"Had considerable trouble on account of leaks constantly developing, especially around the couplings."

and After

"I HAVE been using a length of this hose since June 18, 1917, and have averaged at the rate of about 2500 gallons of gasoline per month; in comparison with other hose, I must say in justice to Triplexd, that none of the others have stood up as well; I have had absolutely no trouble, and from appearances expect none for some time to come."

York, Pa., U. S. A.

Wanted: Distributors

Manufacturer of well known and nationally advertised automobile shop equipment will consider applications from jobbers and distributing agencies for exclusive territorial rights. This is one of the easiest selling and most profitable selling lines open today, and the opportunity is offered only because of a change in selling policy. In answering please state lines you are now handling on a similar basis, number of salesmen and territory covered. None but high grade connections will be considered, and inquiries will be treated as confidential. Address

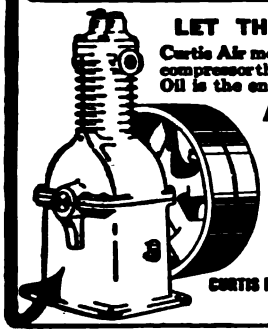
CURTIS AIR FREE FROM OIL

MOTORISTS Have CONFIDENCE IN THIS SIGN

LET THEM FIND IT AT *YOUR* DOOR.



Curtis Air means more mileage, because Curtis is the only air compressor that can't flood cylinder with more oil than it can use. Oil is the enemy of rubber. It rots tires, causing blow-outs.

A Curtis Compressor is Dependable

requires practically no attention, costs very little, quickly pays for itself, always delivers the kind of cool, clean air that makes tires last longer.

5 sizes and 125 combinations. Write for full particulars and let us tell you why the Curtis will prove to be your best investment. Ask your jobber for prices—but be sure and mention Curtis—the name is your protection against substitution

GENEROMETER

The new and practical generator testing instrument. It will locate shorts and grounds in generator armatures where most of the trouble is of a Lighting System. You will need this instrument if you want to be 100% efficient in your electrical repair work. Further particulars upon request.

PAUL G. NIEHOFF & CO., INC.
232 E. Ohio Street, Chicago, Ill.

Niehoff Laminated Magnetizer

This is the most scientific and practical Magnetizer ever constructed. It will magnetize any size magnet from a Ford to all the various other magnets used on the different cars today. Due to the fact that it generates an enormous amount of magnetism, with a pulling power of about 75 pounds, you can more quickly remagnetize a magnet, and, therefore save much current. All magnetizers are subject to considerable wear. The faces will wear down according to their use. The top pieces of our Magnetizer are especially hardened and also detachable so that when worn down they may be replaced at a very small expense. We have two types: one for 6 volt storage battery and another for 110 volt D. C. current. Write for further information.

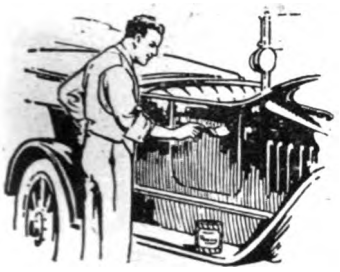
PANVAR



SELF LEVELING RE-FINISH FOR AUTOS THAT HAVE BECOME DULL and SHODDY

It will make any car with original paint in fair condition look like new. Recoating with Panvar lasts as long as varnish, protects and is wonderfully lustrous. It is self leveling and dries perfectly over night.

Just As Good On Seats, Top and Plated Parts Do Not Confuse Panvar With Varnish. Its Different.

Panvar is prepared for cars where ground paint is in fair condition, but varnish has become dull and needs livening up. Such cars anybody can restore to look like new in an hour's time. If there are bruised places in the ground coat of paint, buy a tube of our FIX-A-MAR color to touch up the marred part, at $1.00 per tube, delivered: 12 colors, white and black.

PANVAR ADDS $150 TO THE LOOKS OF ANY CAR

Two Quarts of Panvar is enough for the largest car. Car owners want something that is economical and lasting. Garagemen and car dealers can sell and use Panvar. It has proven a big saving on thousands of cars. It eliminates costly repainting and affords full satisfaction.

$1.50 $5.50
Send 1 Qt. 4 Qts. Delivered

UNIVERSAL AND MARVEL SPARK PLUG INTENSIFIERS

Pat. 3-19-'18.

Attached to Plug Stops all Spark Plug Troubles

The spark is always visible. It is a window in the cylinder.
It will make a plug fouled with grease or carbon or that has a broken porcelain, fire perfectly.
When the magneto is not working properly, a wire short circuited or broken, or the battery is out of order, the Intensifier will prove it at a glance and it can be adjusted to overcome almost any ignition weakness.
No more guess work or testing with screw driver or pinchers. The Intensifier shows it all at a glance and what causes it, whether no spark, a loose or broken wire, poor connection or shorted. It will increase the voltage and the spark and make starting easy. Eliminates carbon, adds to power, saves the gas and oil, preserves plugs and will last indefinitely. Almost instantly attached to any screw terminal plug.

Jobbers—Dealers—Distributors

It is a wonder worker, a time, trouble and money saver. Sells at a glance. Thousands in use. It is the original and proven Intensifier. Sold with a money back guarantee if it fails in any particular or to afford perfect satisfaction.

LIBERAL DISCOUNTS. PROMPT DELIVERIES.

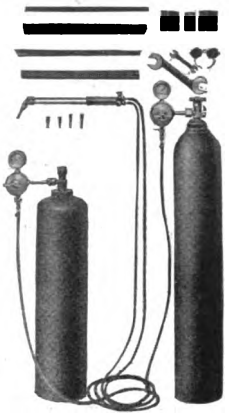
GET A WATERHOUSE WELDING OUTFIT AND WATCH YOUR BUSINESS GROW



Boost your profits—Swing the big profitable welding business to your shop. Thousands of repairers are doing it and most of them use a Waterhouse outfit.

Time is money and a Waterhouse Welding Outfit saves the time as well as labor. It affords utility great enough to meet any shop requirement, yet no shop is too small to own one.

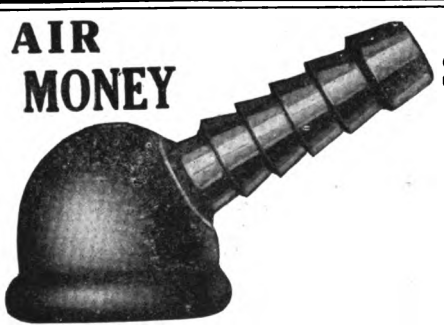
The great difference in welding outfits is all in favor of the Waterhouse. That means quality, utility, long service life, simplicity, dependability, low first cost and the best and most complete welding apparatus ever offered to the trade.

Write for descriptive catalogue, or better still, tell us your requirements. Do it today. We can supply the exact outfit for your needs.

All Waterhouse outfits are guaranteed.

WATERHOUSE WELDING COMPANY, 3 PELHAM STREET, BOSTON, - MASS.

FREE AIR COSTS MONEY



when the customers for whose convenience you provide an air station forget to turn off the flow after they have filled their tires.

Guard against this waste by attaching a

Schrader Universal Inflating Valve

to your air hose.

Thanks to this appliance your bottled air locks itself into the tank the minute it is taken off the tire-valve. You turn on the air by pressing the nozzle of the inflating valve against the tire-valve and you turn it off by removing the device from the tire-valve.

Made to fit any diameter of hose from ¼ in. to ⅝ in.

PRICE $1.50 in U. S. A.

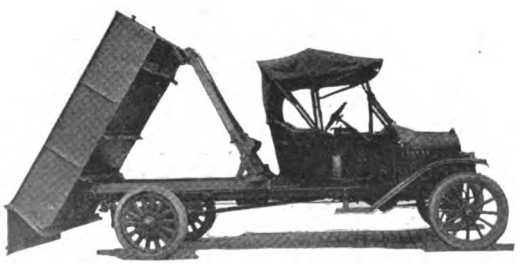
Manufactured by **A. SCHRADER'S SON, Inc.**
800 Atlantic Avenue, Brooklyn, N. Y.

Schrader products were awarded a Grand Prize and two Gold Medals at the Panama Pacific International Exposition. "There's a Reason."

THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive.

For Any Make or Type of Truck.



A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

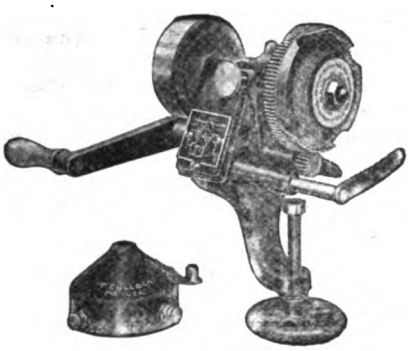
The McCulloch Timer Grinder

THE OLDEST AND MOST ABUSED AND WORN TIMER CAN BE GROUND WITH A SURFACE LIKE GLASS AND EQUAL TO NEW IN LESS THAN THREE MINUTES.



FOR GRINDING THE CONTACTS OF FORD TIMERS.

Made to attach to any bench.

Positive in Action—Anyone Can Do the Work

The McCulloch Timer Grinder is fitted with a special chuck which requires no skill in centering. The grinding stone revolves inside the timer at a high speed while the chuck and timer revolves very slowly around the stone. The adjustment furnished is so accurate that the oldest and most worn timer can be made as good as new.

The Grinder is scientifically and very substantially made and will last a life time. It is guaranteed to give perfect satisfaction and perfect results. All gears are cut from solid steel and lubricators are fitted to all moving parts.

When not in use the Timer Grinder can be instantly removed and a large wheel fitted and used for grinding tools, twist drills, etc.

Tried, tested and proven in Europe for the past three years and extensively used by the War Office of Munitions.

On the basis of estimated work that can be secured and done, the saving in time, material and labor, as well as the first cost, there is no tool in any shop that will earn so constantly or show a greater profit. It is necessary and fitting equipment in any repair shop or service station.

SAFE POWERFUL CHEAP

"LAFAYETTE PORTABLE STEEL CRANE"

The war is over and we are ready again to fill orders promptly. Labor and materials are 100% higher than pre-war. Our advances are only 50%. It is steel. It will not break. Roller bearings. Low center of gravity and will not upset. Double locked. It is safe. It is a heavy, strong machine for heavy, rough work. It won't wear out in 100 years. For the thousands in use we have not furnished $100 worth of repairs in seven years. It will always invoice at cost. It is in every state and most foreign countries. The only successful steel crane made and standard everywhere. It saves its cost in a short time. No first class garage or shop is without them and none other should be. For sale by jobbers everywhere. If the jobbing men who call upon you do not have it listed, write direct to the manufacturers.

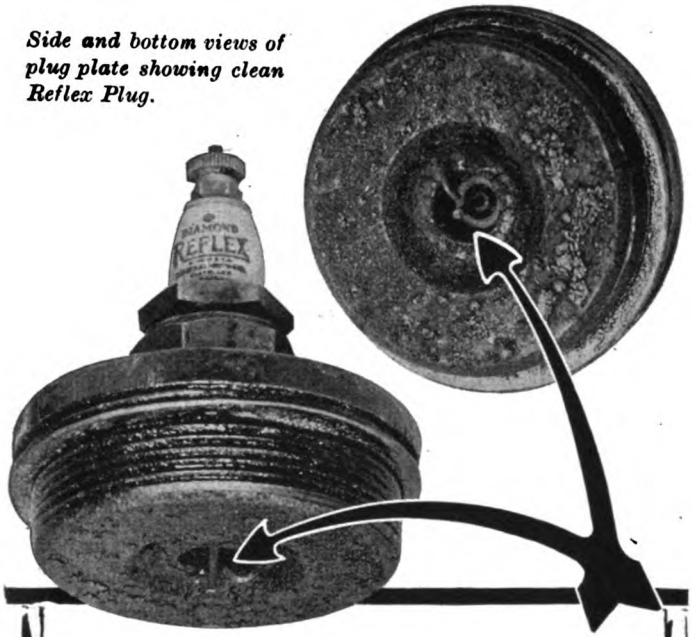
Side and bottom views of plug plate showing clean Reflex Plug.



It took a Reflex Spark Plug to do this

to **unfailingly** snap spark after spark into the carbon loaded cylinders of the five-ton truck from which this plug plate was taken! Note the **unretouched** photograph—the **clean** points of the Reflex—the dense carbon deposit massed on the plate **completely surrounding** the plug.

This Detroit firm had continual trouble with this truck operated in coal haulage service. The hot gruelling grinds and the necessary heavy lubrication were too hard on plug after plug. Delays were not eliminated until the sturdy Reflex was tried. *And now, every truck of their big fleet is Reflex equipped.*

The cromite war service porcelain and non pit electrode construction of Reflex plugs gave just as trouble-free service in thousands of White Trucks in the war zones. It is this Reflex feature which insures an absolutely dependable ignition unit for your trade whatever the engine or whatever the work. The war and commercial record of Reflex plugs takes the uncertainty out of selling them. Order from your jobber—or us direct if he is not stocked.

STOP THAT NOISE!

caused by loose action of push rods and rocker arms in

BUICK CHEVROLET

and other valve-in-head motors

with

K H K Valve in Head MOTOR SILENCERS

This attachment is guaranteed to eliminate from 75% to 90% of the noise in the valve action of Buicks and Chevrolets; takes up the play in the push rods and rocker arms and holds the cam rollers snugly against the camshaft.

Nothing Else Like It

K H K Motor Silencers have successfully solved the problem of stopping that clicking noise in valve-in-head motors. There's no other attachment of this kind on the market. Every owner of a Buick or Chevrolet motor appreciates the value of this attachment the moment they see it.

Satisfaction of Money Back

A written guarantee that K H K Motor Silencers will eliminate from 75% to 90% of the noise caused by loose valve action in Buick or Chevrolet motors goes with each set. K H K Motor Silencers are further guaranteed against breakage for six months.

Notice to Dealers

The overwhelming demand for K H K Motor Silencers tells the true story of their success. They sell on sight. We've got a very attractive proposition for the right kind of dealers. List prices—for Buick 6, **$3.00**; Buick 4 and Chevrolet, **$2.25**. Liberal dealers' discount. Sample sent C. O. D. on request.

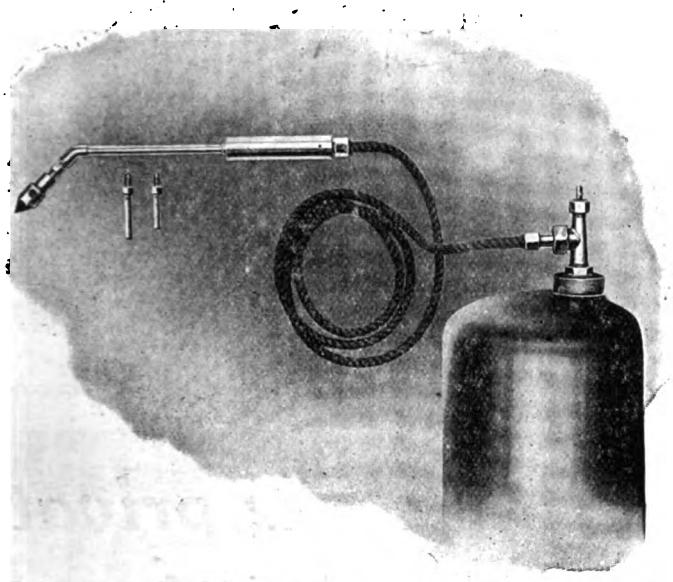
If It's DYER, It's Right!

that is why hundreds of garage and repairmen are using Dyer welding, cutting, carbon removing, lead burning and brazing-soldering apparatus.



Style A Acetylene Soldering and Brazing Outfit.

This torch is used on any size acetylene tank working on the principle of a Bunsen burner. Soldering irons are heated instantly and kept at right temperature while working. The range of work is large, including lead burning and aluminum soldering. Gas consumption is very low. Outfit includes torch, 3 open flame tips, 1 standard soldering copper, 1 special square copper, 6 feet of hose and Prest-O-Lite connection.

The style A outfit which includes all the items shown in the cut except the cylinders, was especially designed for the garage or small repair shop. The welding torch is standard, covering a wide range of work. The regulators and gauges are the same as used on the large outfit. Carbon gun is of the popular pistol grip, trigger control type. The outfit is light and may be easily packed and used in emergency work.

Oxy-acetylene apparatus is very efficient for frame straightening, for heating and for brazing. Your jobber stocks, catalogues or can immediately get Dyer Apparatus.

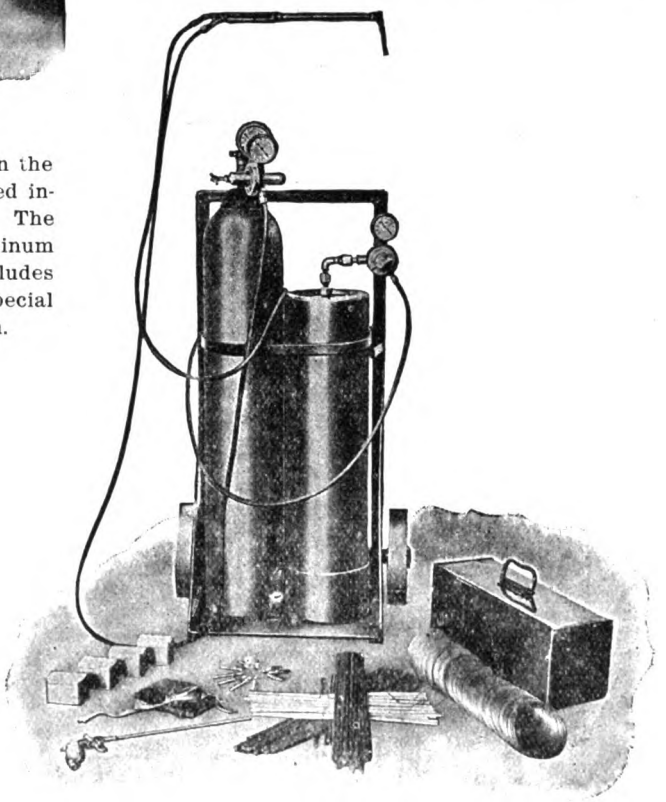
Prices Very Attractive.

It is lightly and simply designed to give the highest efficiency during long, hard service. We guarantee the best quality of materials and workmanship.

Dyer Apparatus is approved by the Factory Mutual Fire Insurance Company and expert knowledge is not required to operate it successfully.

Dyer torches are of the non-flashing, semi-injector type. They practically empty the cylinders and are economical in gas consumption.

Regulators are accurate at all pressures and strongly built. Best grade of gauges.



Style A Welding and Carbon Removing Outfit.

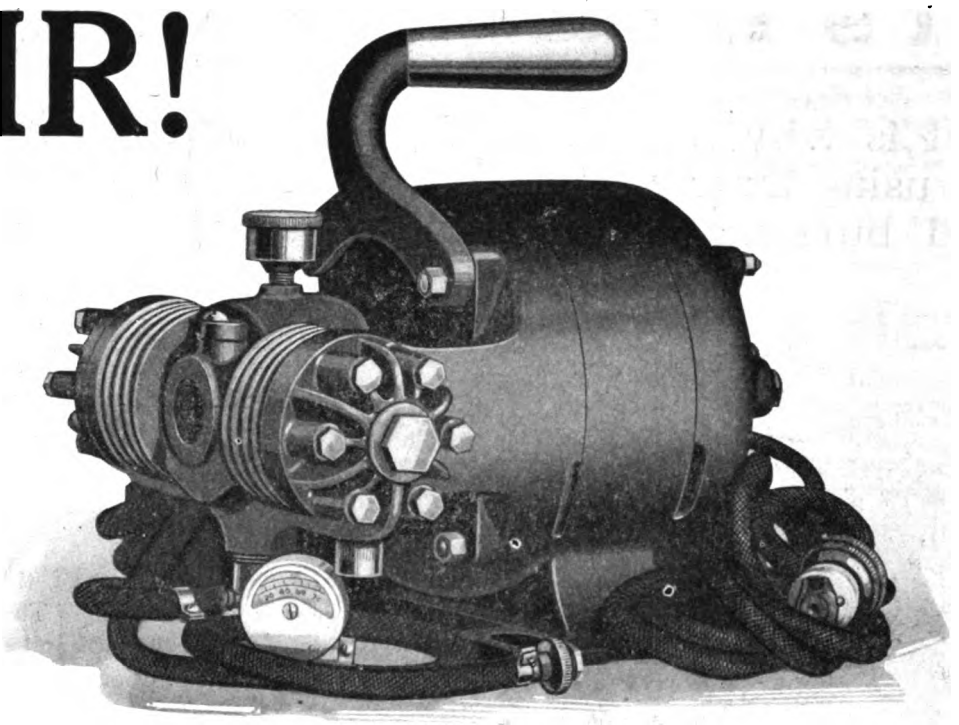
AIR!



An ideal little outfit for the private garage and the small public garage!

The illustration above shows all there is to it—and you'll be surprised how wonderfully it does the job! All the air you need—when you need it—without bother or fuss. No tank needed at all.

You can lift it about easily—weighs only 35 pounds. Just attach to electric light plug—simple, durable, lasting—just exactly what you want for your garage. Thousands of small public garages find it all the air equipment they need. Private owners declare it solves their air problem perfectly.

Gives pressure up to 100 pounds, and will provide 2.61 cubic feet of air a minute.

Air is free from oil and grease. In fact, this little compressor will give you satisfactory service and you have the worth while economy in first cost and operation.

It comes complete with motor, cable, gauge and connections, ready to run—and to keep running.

Further information if you'll write.

FIVE O'CLOCK!

What does that hour mean to you?

TO thousands of dealers in the United States five o'clock means *genuine* closing time. It is then that their day's work ends. To them it means a few hours of recreation—perhaps a spin in a machine over country roads with their families, time for a little reading in a comfy rocker at home, an hour or two at the movies.

You, Mr. Dealer, need no longer be a slave to your work. You too can get through at five o'clock. There is no reason in the world why you shouldn't be able to enjoy the few hours of daily leisure from business worries to which you are entitled.

But—not so long as you are a victim of bookkeeping drudgery, not so long as you are a slave to posting, can you expect to close at a certain time every day.

Eliminate your bookkeeping drudgery. Save yourself the endless time of recording credit purchases. McCaskey System of Accounts will enable you *with only one writing* to automatically and correctly record all charges as a part of order filling. Every customer's account is always balanced—without an expensive, time-wasting and complicated bookkeeping system. You and your customers always know how much is owing up to the last purchase.

There will be no more night work for you with a McCaskey System of Accounts. Two hundred thousand satisfied users of McCaskey Systems in the United States are able to enjoy a few hours of personal comfort every day.

We'll be glad to supply you with fine illustrated matter, complete information. It's free. Just clip and mail the coupon. Send it in—TODAY!

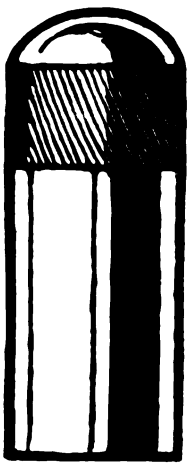
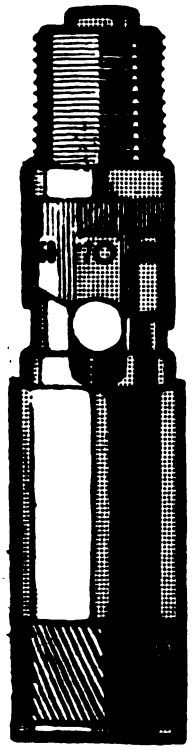
save 60% on tires





Here it is—screw it on

WHAT causes from 50% to 75% of all tire trouble? Over—or under inflation.

Over inflation stretches the tire, causing blowouts, blisters, etc. Under inflation causes rim cut, fabric breaking, etc.

Stop wasting your tires! Equip with the Automatic Pressure Regulator and you can't make a mistake. With this safety valve on your tire, you can start the air going in until a cheery whistle announces that the tire has enough. No time lost using a pressure gauge.

How does this strike you as a sales proposition? Did you ever hear of anything in the accessory business that had such a great chance of going over—*big?*

There are five million pleasure cars in America. The majority of owners will jump at an opportunity to save 60% on tires. *You'll* get their business—their friends' business and the satisfaction they'll get will make them your customers for good.

We furnish the advertising and dealer helps. Ask your jobber or write us about our generous proposition today.

The Automatic Safety Valve Corporation

HAYWOOD'S LATEST INVENTION

SILVUR LINED RE-TREAD MOLD

Here It Is:

A new machine that will earn from $100.00 to $150.00 per week in any well established tire repair shop. More than one year of constant experimenting and development work was required to complete it.

Statistics say there will be **One Billion Dollars** worth of tires worn out this year. The insistent demand for re-treaded tires that would add 3,000 to 4,000 more miles of wear is growing. A new and better machine than had so far been produced was needed.

Two actual photographs of One Tire
BEFORE and AFTER
being repaired and retreaded on a silvur-lined mold.

HAYWOOD'S Silvur Lined MOLD

meets the need. Made of white metal—die cast—absolutely free from blemishes and smooth as glass. It is truly a wonderful machine.

Old tires retreaded on this machine closely imitate the runner, **cord type**, and are, smooth, classy, bright. All 4,000 owners of Haywood Tire Repair plants will **want** this new Haywood invention. Owners of other plants should have one.

Pays for Itself in a Week

Will earn from $100.00 to $150.00 weekly. Are you an auto tire repairman? If you are not, why not enter this profitable business? Tire Repairmen earn **$2,500** to **$4,000 Per Year.** Many are doing better; some up to $6,000 and $7,000 per year. If you have a tire repair shop, you need this Haywood Silvur-Lined Retread Mold. You should write us at once and get the details. It will pay for itself in a week. Every week thereafter you should make $100.00 or more extra profit.

FREE BOOK I have an interesting book to send you that tells about tire repairmen and the Haywood method. It tells about automobile tires—it gives inside facts that you should know about profits. When you write tell me if you have a tire repair shop, or, if you want facts about the tire repair business. Address

M. HAYWOOD,
Haywood Tire & Equipment Co.
955 No. Capitol Ave., Indianapolis, Ind.

WRITE ME!
I will tell you how to start in business as an expert tire repairman and earn $2,500 to $4,000 per year. Sounds too good to be true. But it is true, every word of it.

M. HAYWOOD,
Haywood Tire and Equipment Co.
955 No. Capitol Ave., Indianapolis, Ind.
(Mark an X for interest in either or both subjects)

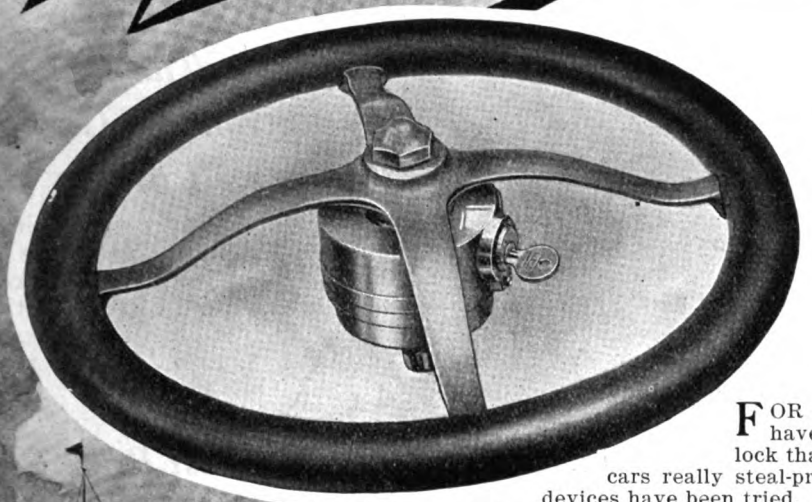
Masters

AUTOMOTIVE ACCESSORIES



It Locks the Ford

FOR years Ford owners have sorely needed a lock that would make their cars really steal-proof. Many locking devices have been tried. Here's the one that stands every test—makes good on every claim—it's the

Masters

Steal-Proof Lock

Fords by the thousand will be safeguarded by this lock. It clamps the front wheels so that they cannot be used for steering. It is strong, can't be picked, can't lock accidentally, for the locking bolt **rises** into mesh. Study the illustrations.

You sell it over the counter—any owner or driver can put it in place as easily as he inserts a spark plug.

Sells for $6.50. Dealers write at once for terms and particulars for there's bound to be a big call for this lock.

"—saves two-thirds of my Tire Expense"

"Once a week I go over my tires—and seal the little holes and cuts that ruin tires by permitting dirt, oil and water to reach and rot fabric. With the SHALER Vul-Kit I 'vulcanize' these holes with tough, new rubber that makes a lasting job of it. It takes only a few minutes—but keeps my tires good as new—prevents tire trouble—*doubles* my mileage—and actually saves ⅔ of my tire expense."

Sell the SHALER VUL-KIT

It's easy to sell. Motorists are looking for a tire-saver like this. Their word-of-mouth endorsement of the SHALER to their friends gives you a chain of sales. The repair material they buy of you to use with this vulcanizer gives you "repeat" profits that come to you regularly—without effort. You make a good profit selling the Vul-Kit itself and big, steady "repeat sale" profits.

SHALER Vulcanizers are advertised regularly throughout the year. Motorists are now reading the large, dominant advertisements in the leading national and motorist publications. Every car-owner needs a SHALER Vul-Kit—sell it to him and make these big steady profits for your self. **Complete Outfit only $3.50.** Price slightly higher west of the Rockies and in Canada.

Order From Your Jobber Now—Write Us for Catalog

of the complete line of SHALER Vulcanizers for garages, tire repair shops and motorists' use.

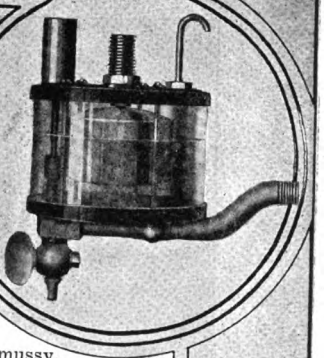
LET THE STANDEX EYE WATCH YOUR OIL!



Standex Automatic Lubricating System for Ford Cars

Spells ECONOMY—One quart of oil gives practically as much mileage as you now make on a gallon. An end to guesswork, waste and worry.

ENGINE EFFICIENCY—Oil for lubrication; not to make smoke and smell. Oil waste reduced to minimum. Smoother running motor, because lubrication is scientific. No more fouled spark plugs or carbonized cylinders.

CLEANLINESS—Reservoir and oil-gauge conveniently located under seat. No more mussy, underhood filling. No more soiling hands and clothes by "getting under" to try the pet-cocks.

What the Standex System Is and How It Operates

The System consists of A GALLON RESERVOIR, with built-in oil-gauge, easily accessible, under seat at end of gasoline tank—A FLEXIBLE COPPER TUBE which leads (making one turn around exhaust pipe to keep oil fluids at all temperatures) to THE AUTOMATIC CONTROL CHAMBER—"THE EYE THAT WATCHES YOUR OIL."

The Standex System feeds oil to crank-case only when motor is at rest. The moment motor starts, vacuum valve locks automatically; oil flow ceases. Whenever motor stops, feed valve opens, and all the lubricant that has been consumed while running is instantly replaced—whether it be an ounce, a quart, or a gallon!

One Filling of Reservoir Gives Traveling Range of 1,000 to 1,200 Miles without a Thought or a Worry about Lubrication

$10.00 Complete

LET THE STANDEX GASOLINE GAUGE METER YOUR FUEL!

JOHN D. ROCKEFELLER thought he was being cheated the other day—by a gasoline pump! So he made the garage owner test the pump to make sure.

¶ You may not be under the same necessity of practicing economy that Mr. Rockefeller is; but just the same you will find it a satisfaction to know that you get 5 gallons—not 4—when 5 gallons are what you pay for. ¶ And never to get stalled on the road for want of "gas"! Never to have to walk a mile—or three—or five—to beg a quart from a farmer! ¶ That mental ease is yours for only $2.50. **EQUIP YOUR FORD WITH A STANDEX,** the only accurate mechanically-actuated gauge made—the only gauge graduated to the contour of a cylindrical tank (not merely to depth).

Try One for 30 Days Under Our Money-Back Guaranty. Then you'll know—to the dot—how much "gas" you get for your money—and, at any moment, how much you have in tank to run on.

$2.50 your dealer or by parcel post prepaid

LET THE STANDEX REAR CURTAIN TRANSFIGURE YOUR FORD!

APPEARANCE counts. Are you as happy in old clothes as you are in your tailor-mades? Of course not! And you can't possibly take the same comfort in a commonplace, ordinary-looking Ford that you will when that self-same Ford is "dressed up." "Clothes make the man" or the motor, provided man or motor is O. K. underneath the clothes.

STANDEX REAR CURTAIN dresses up any Ford to look like the good, reliable car it is. RICH LOOKING FABRIC shows quality—a far better material than is found in standard equipment.

BRILLIANT WINDOW-LIGHT—a big, generous oval of beveled crystal plate glass, set in an unstainable frame of polished aluminum. A window you can SEE through! No dingy, yellow, crinkly, brittle celluloid! DURABILITY insured by patented interlocking construction of frame. Fabric forms a gasket between glass and metal, clamping the pane firmly.

ALL THIS for only $7.50! Any "custom topmaker" charges $16 or more for such a job. TRY ONE FOR 30 DAYS UNDER OUR MONEY-BACK GUARANTY. THEN YOU'LL KNOW ALL THE COMFORT OF RIDING IN A FORD!

$7.50

Standex Distributors everywhere are authorized to cover every Standex Motor Device with our guaranty—*Perfect satisfaction or your money back!*

PHOTO OF TRINDL MACHINE WORKS-CHICAGO-WHERE THERE ARE SIX HEALD MACHINES & FIFTY MEN WORKING DAY AND NIGHT REGRINDING CYLINDERS.

How One Man Succeeded With Heald Grinders

Four years ago the Heald Machine Company sold their first cylinder grinder to Mr. Trindl. Since that time their business has increased with leaps and bounds until now they have six machines in operation day and night. Their whole business has been literally built up on Heald Grinders.

When Mr. Trindl bought his first machine he operated it himself. Today he employs fifty men and has a fine business, devoting his whole time to looking after the plant.

There have been many other concerns who have tried to induce Mr. Trindl to purchase so-called cylinder grinder machines or make-shifts for handling his work, but he has come to the conclusion that Heald Machines are the only accurate machines for turning out high class work such as his trade demands.

At the time these photographs were taken there were 200 cylinder blocks in the Trindl Machine Shop waiting to be reground and half as many were finished waiting for the checks to come in.

This is an example of the many opportunities in the regrinding of cylinders that are waiting for bright, up-to-date young men to go in business for themselves. Now is the time to start when automobiles are being overhauled and put in shape for next year.

Grind with a Heald and be sure. Write for our Blue Bordered Bulletins, Series No. 6 for cylinder grinding up-to-date.

"The LAFAYETTE" PORTABLE STEEL CRANE

THE ONE MAN CRANE

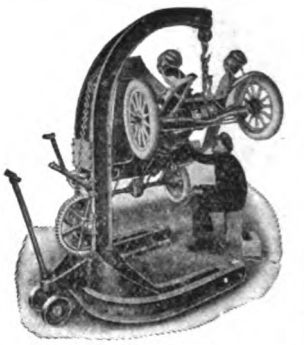
The Lafayette Portable Steel Crane will meet any requirement in any garage, repair or machine shop and service station.

When better and quicker work and the saving of time and labor are factors, there is no other shop equipment that can be operated at so great a profit. None used so constantly, or that has the utility. The Lafayette always saves, serves and earns.

It is an all-steel crane and doubled locked. It will not upset, or break, and it is absolutely safe in use. One man can easily raise the front or rear of the heaviest car in less than two minutes, and any boy can move it to any position, as it is mounted on roller bearings.

For tire changes it is quicker and easier to use than a jack. For under the car adjustments it makes all work accessible and takes the place of a pit or hoist. It makes a one man job when removing the motor or replacing it. It is 100% efficient and will last a life time. The first cost covers all the investment.

Let us tell you about the thousands of Lafayette cranes in use. How low in first cost, how enduring and their wonderful shop utility. Before buying any crane know the distinctive and superior features of the Lafayette.



Listed and sold by jobbers everywhere. Detailed information at request.

Write for it today.

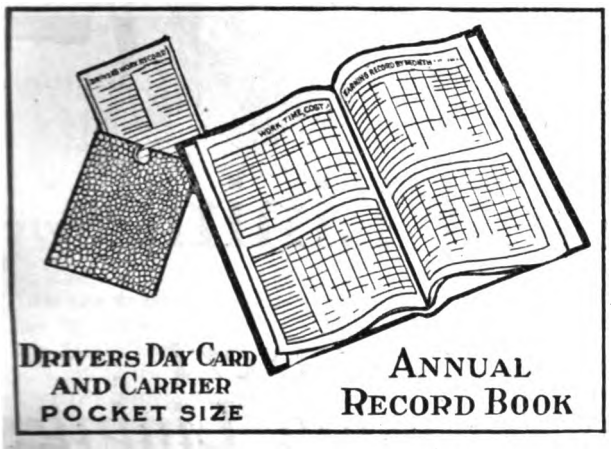
Know what it costs to Run your Truck

Learn what your Truck Earns

Know your Truck Profit and Loss

UNIVERSAL MOTOR TRUCK ACCOUNTING SYSTEM



The system includes an annual record book, 350 drivers' day cards, a day card carrier and full instructions.

Any owner can start this system at any time with an old or new truck of any make or type.

Any boy or girl clerk can maintain all records for one or a hundred trucks.

Each system is good for one year, nothing more is needed or necessary.

The records show at a glance any and all items entering into the earnings and cost of operation.

It is extremely simple. 100% complete and full working instructions are supplied with each system.

It is almost self-operating.

Shortage of Cars May Continue For Years

Manufacturers Are Spending Millions of Dollars for New Plants

WITH the demand for passenger cars keeping pace with increased production, there is every likelihood that the shortage will continue for many months to come. Car makers and dealers are fairly bubbling over with enthusiasm, and there appears to be at least a full year's prosperity in sight for practically everyone connected with the industry and trade.

Work calling for the expenditure of millions of dollars for new factories and additions to present ones has already been launched, and car production next year should reach staggering figures. Most of the manufacturers have announced their 1920 models, the demand for which guarantees capacity production for a long time.

Just how long the shortage will continue is problematical. One manufacturer states that he believes it will keep on for at least three years. The car makers have been building up strong export organizations and there is no doubt that a great many of the machines will be exported as soon as the domestic demand has been somewhat alleviated.

Several important facts indicate that the annual national shows will be the greatest in the history of the industry. The holding of the car and truck shows at the same time will insure a greater attendance.

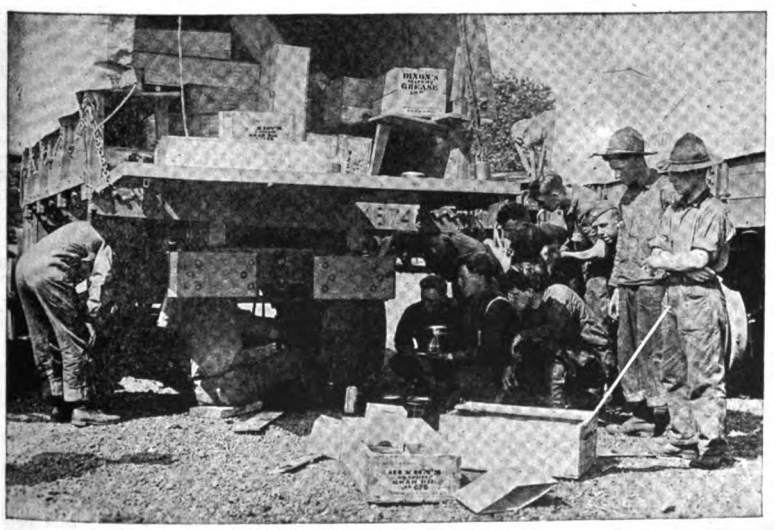
Says General Motors Is About to Distribute Auto Equipment

MAY SELL SPEEDOMETERS, HORNS, SPARK PLUGS, ETC., TO RETAIL DEALERS.

The Leader, the official organ of the Automotive Equipment Association, states: "It has been rumored quite frequently of late that the General Motors Co. is going to go into the business of distributing automotive equipment, and as a beginning will sell well known makes of horns, spark plugs, speedometers, etc. It is stated that branches are going to be opened in various cities, from where salesmen are to operate and sell to the dealers."

ARMY TRUCK TRAIN.

The Motor Transport Corps transcontinental truck train has arrived at Cheyenne, Wyo., where it was met by the governor. No serious mechanical troubles have been experienced. Dixon's lubricants are being used. The accompanying photograph was by Harris & Ewing.



Getting Truck Ready for Army Transport Caravan.

Truck Education Tour Proving Success

Demonstrates Great Value of Commercial Car to the Farm

SUCCESS is crowning the national motor truck development tour, which started from Chicago, Aug. 4. Seventeen pneumatic tired motor trucks are making the journey of 3000 miles through Illinois, Iowa, North and South Dakota, Minnesota and Wisconsin. The tour will run on a regular schedule and cover a period of 60 days, making several stops a day and in some cases staying in cities two or three days.

The tour is not run as a selling proposition, but solely to demonstrate to the farmer the value of a pneumatic tired motor truck for his farm. The trucks range in size from three-quarters of a ton to 2½ tons. City officials, truck dealers and others are cooperating at all points en route.

With the beginning of the second week the tour settled down to real business. On Sunday the tour impedimenta was transferred to as few trucks as possible in order that spare trucks might be loaded with from 16 to 20 tons of wholesale groceries, fruits, etc., from Grand Rapids wholesale houses for towns along route.

Each house sending out a consignment had a representative along. One wholesale concern much opposed to intercity hauling decided to let the present movement of intercity goods by the truck train be its criterion.

N. A. C. C. Committees Are Appointed By Clifton

Charles Clifton, president of the National Automobile Chamber of Commerce, has appointed the following committees, which are to handle the activities of the business organization during the coming year:

PASSENGER CAR SHOW COMMITTEE.

John N. Willys, chairman, Willys Overland Co.; H. G. Root, Westcott Motor Car Co.; Harry M. Jewett, Paige-Detroit Motor Car Co.; S. A. Miles, show manager, National Automobile Chamber of Commerce.

PATENTS COMMITTEE.

C. C. Hanch, chairman, Maxwell Motor Co.; Windsor T. White, White Motor Co.; C. W. Churchill, the Winton Co.; Wilfred C. Leland, Lincoln Motor Co.; Wm. MacGlashan, Studebaker Corporation; Robert A. Brannigan, manager, National Automobile Chamber of Commerce.

LEGISLATIVE COMMITTEE.

H. H. Rice, chairman, Chevrolet Motor Co.; D. C. Fenner, Mack Bros. Motor Car Co.; J. I. Farley, Auburn Automobile Co.; J. I. Barrows, Lexington Motor Co.; David Ludlum, Autocar Co.

HIGHWAYS COMMITTEE.

R. D. Chapin, chairman, Hudson Motor Car Co.; W. E. Metzger, Columbia Motors Co.; Royal R. Scott, Willys-Overland Co.; S. M. Williams, Garford Motor Truck Co.; Geo. M. Graham, Pierce-Arrow Motor Car Co.; Pyke Johnson, secretary, National Automobile Chamber of Commerce.

TRAFFIC COMMITTEE.

William E. Metzger, chairman, Columbia Motors Co.; A. I. Philp, Dodge Brothers; F. C. Chandler, Chandler Motor Car Co.; William L. Day, General Motors Truck Co.; Geo. Dickson, National Motor Car and Vehicle Co.; J. S. Marvin, manager, National Automobile Chamber of Commerce.

ELECTRIC VEHICLE COMMITTEE.

W. C. Anderson, chairman, Anderson Electric Car Co.; Fred R. White, Baker R & L Co.; H. W. Suydam, Milburn Wagon Co.

MEMBERSHIP COMMITTEE.

C. W. Churchill, chairman, the Winton Co.; J. Walter Drake, Hupp Motor Car Corporation; Hugh Chalmers, Chalmers Motor Co.

FOREIGN TRADE COMMITTEE.

J. Walter Drake, chairman, Hupp Motor Car Corporation; Peter S. Steenstrup, General Motors Truck Co.; H. M. Robins, Dodge Brothers; Jay Rathbun, White Motor Co.; E. C. Morse, John W. Willys Export Corporation; J. P. Roberts, Studebaker Corporation; H. B. Phipps, Hudson Motor Car Co.; H. R. Cobleigh, secretary, National Automobile Chamber of Commerce.

CONSERVATION COMMITTEE.

W. C. Sills, chairman, Chevrolet Motor Co.; G. R. Lippard, Stewart Motors Corporation; M. Cook, Service Motor Truck Co.; F. E. Bradfield, Velie Motors Corporation; C. A. Baird, Jas. Cunningham Son & Co.

Heads Rural Motor Express Committee

James L. Geddes.

MOTOR TRUCK COMMITTEE.

Windsor T. White, chairman, White Motor Co.; Alvan Macauley, Packard Motor Car Co.; George M. Graham, Pierce-Arrow Motor Car Co.; Victor L. Brown, Sterling Motor Truck Co.; M. L. Pulcher, Federal Motor Truck Co.; R. H. Salmons, Selden Motor Vehicle Co.; D. C. Fenner, Mack Bros. Motor Car Co.; F. W. Fenn, secretary, National Automobile Chamber of Commerce.

RURAL MOTOR EXPRESS COMMITTEE.

James L. Geddes, chairman, Kelly-Springfield Motor Truck Co.; E. A. Williams, Jr., Garford Motor Truck Co.; O. H. Browning, International Harvester Corporation; A. T. Murray, Bethlehem Motors Corporation; Geo. D. Wilcox, Commerce Motor Car Co.; F. W. Fenn, secretary, National Automobile Chamber of Commerce.

TRUCK STANDARDS COMMITTEE.

David C. Fenner, chairman, Mack Bros. Motor Car Co.; Francis W. Davis, Pierce-Arrow Motor Car Co.; F. A. Whitten, General Motors Truck Co.; B. M. Sternberg, Sterling Motor Truck Co.; F. F. Beall, Packard Motor Car Co.

HAND BOOK COMMITTEE.

E. T. Strong, chairman, Buick Motor Co.; F. H. Akers, Reo Motor Car Co.; Geo. A. Kissel, Kissel Motor Car Co.; Wm. T. White, Mercer Auto Co.; Chas. Denby, Denby Motor Truck Co.

TRUCK COMMITTEE ON STANDARD REPAIR PARTS & SERVICE POLICIES.

E. T. Herbig, chairman, Service Motor Truck Co.; H. W. Drew, Packard Motor Car Co.; W. M. Ladd, Pierce-Arrow Motor Car Co.; A. B. Cumner, Autocar Co.; W. M. Britton, Republic Motor Truck Co.

Municipal Bus Service Planned by Hylan in New York

Mayor John F. Hylan of New York has a plan for establishing a system of city owned buses throughout the city to compete with the street car lines. He prophesies the doom of the street cars, and says it will not be long before the municipal buses will be operating in great numbers all over the city.

"A lot of people," says Mayor Hylan, "say that bus service might cost more than five cents. The answer to that is that I now have a proposition from a private concern to run five-cent buses. If a private concern can do it, I am sure that the investigation to be made by the Board of Estimate will demonstrate that we can have five-cent buses.

"Traction people will begin to have all kinds of objection to bus operation. They will probably tell us we will have tire trouble and that we will have to repave lots of streets. I expect them to be very insidious and active against me. But when we call the automobile people and the tire people in to help us solve these problems I am sure they will be mighty glad to see the biggest city in the world modernize its traction methods and they will wipe out all such objections."

The mayor believes that a bus express service could be established, the buses making long distance trips down town and up town during the rush hours without stopping except at long intervals.

Mayor Hylan says he noticed that the Broadway Association was in favor of bus lines and he thinks that it is very intelligent in this matter. He believes it would be a good idea if local associations would immediately begin studying the question and make suggestions to him about the needs of their districts. Speaking of service for ball games, he says:

"After a big ball game the crowd has a frightful time to get started home, and the last car, the one nearest the ball ground, cannot start away until the forward car is filled. A fleet of buses could be stationed all around the ball park to handle the crowd, and each bus could start as soon as it was filled."

Other crowds would be taken care of in the same way.

GARDNERS PLAN CAR.

The Gardner Motor Car Co., St. Louis, incorporated for $2,000,000, plans to make a small, moderately priced car, first models of which are expected to be ready for display in October. The 1920 schedule provides for 15,000 cars. The corporation is headed by Russell E. Gardner, Sr., and Russell E. Gardner, Jr., will be vice president in charge of sales.

Roger Babson, statistician and a director of the Bay State Railway Co., told the Federal Electric Railways Commission that automobiles were responsible for much of the street car traffic loss. With 5000 street cars in Massachusetts there are 186,000 automobiles running.

Dealers Should Know About Trade Acceptances

Books Accounts Converted into Negotiable Paper and All Concerned Are Benefited

TRADE acceptances have been such a potent factor in mercantile transactions that it is essential that the automobile dealer be thoroughly acquainted with methods employed in connection with them.

A trade acceptance is a time draft or bill of exchange drawn by the seller of merchandise on the buyer for the purchase price of the goods and accepted by the buyer, payable on a certain date, at a certain place designated on its face.

A trade acceptance differs from a sight draft or a promissory note in that it constitutes an acknowledgment of a debt for merchandise, payable at a definite time.

Sight drafts drawn for the collection of open book accounts tend to injure the credit of the buyer, whereas a properly drawn trade acceptance, payable at a bank, represents a purchase of merchandise, implies credit standing on the part of the acceptor, and becomes an order on the bank to pay the obligation at maturity.

A promissory note is a promise to pay, but does not necessarily indicate the character of the underlying transaction, whereas a trade acceptance is an order to pay a merchandise debt, of which the instrument should give evidence on its face.

The use of trade acceptances benefits the seller of goods, the buyer of goods and the banker. The advantages to the seller include the following: Converts non-negotiable book accounts into acceptances which are negotiable and acceptable to the banks, thereby relieving the seller of the burden of carrying and financing his customers; encourages prompt payment at maturity, prevents the taking of unearned discounts and the abuse of sales terms, tends to check overselling, as credits will be more carefully scrutinized, and places seller in stronger position when applying for banking credit.

Advantages to the buyer include: Improved credit standing with seller because the acceptance indicates the buyer's intention to abide by the terms of the sale, better sales terms, as the seller is furnished paper which can be converted into cash, more efficient business methods due to the sense of responsibility for definite obligations and a check on overbuying, as the buyer's ability to properly finance his business will tend to control the volume of his purchases.

The advantages to the banker include the substitution of two-name paper, representing a merchandise transaction for the one-name paper which has been so generally in use and a better understanding of his customer's business policies.

Advantages to business in general include: The substitution of readily negotiable acceptances for non-negotiable book accounts, the introduction of an instrument which increases business capital by releasing funds tied up in book accounts, better and more conservative business methods and improved trade relations between buyers and sellers.

The operation of trade acceptances in business is simple. The goods are shipped by the seller to the buyer. An acceptance form draft of even date with the invoice, payable a certain number of days after date, is sent by the seller for presentation to the buyer or direct to the buyer, with or without shipping documents attached.

If the buyer wishes to avail himself of time he accepts the bill, which is returned to the seller, but if he wishes to receive the benefit of the cash discount offered he returns the draft unaccepted and pays the bill within the discount period. When the acceptance method is used the completed bill may be held by the seller until maturity or may be discounted at a bank. The buyer is expected to meet the bill at maturity.

An acceptance is better than an open account, as it is written evidence of a sale of goods. An acceptance may cover one or more shipments of goods and may be drawn at the time of shipment or within a reasonable time thereafter, 30 days being considered a reasonable time. Acceptances may be made payable to a third party and may be indorsed by holders to other parties. The question whether shipping documents should accompany drafts drawn for acceptances is a matter to be settled by the parties to the transaction.

A draft drawn for acceptance, payable a certain number of days after date or on a certain date, has the advantage over one drawn payable a certain number of days after sight, as in the first instance the maturity is clearly defined by the seller, and any delay in presentation will not affect the due date.

Preferential Rates.

While acceptances may be drawn for longer periods, the Federal reserve banks can only rediscount for member banks acceptances representing commercial or industrial transactions, maturing within 90 days from date of rediscount, or acceptances representing agricultural or live stock transactions, maturing within six months from date of rediscount. Preferential rediscount rates have been established by Federal reserve banks for trade acceptances having not more than 90 days to run.

The trade acceptance should have nothing to do with nor be employed in any class of transactions except that concerning the purchases and sales of goods. It should not be given for borrowed money or past due accounts, but should represent current transactions only.

The trade acceptance plan is not a new scheme or method, as it was used somewhat in the early history of this country. The Civil War disturbed the financial situation at that time and the risk and uncertainty attending the granting of long credits led to the introduction of offers of large cash discounts to insure prompt settlements in cash and gradually the open book account, with the cash discounts, superseded the use of trade acceptances.

In Great Britain and in many countries of continental Europe practically every commercial transaction is financed by means of a time draft, or bill of exchange. The draft is drawn by the seller of the merchandise and presented to the buyer, who, if he finds it satisfactory, writes across its face the word "Accepted," signs his name and returns the draft to the seller. It then becomes a trade acceptance—a sound circulating medium of

Specimen Form No. 1.

TRADE ACCEPTANCE

No. 126 New York, N. Y., July 3, 1919. $1,687.13.

Ninety Days after date pay to the order of OURSELVES one thousand six hundred eighty-seven 13/100 Dollars.

The obligation of the acceptor hereof arises out of the purchase of goods from the drawer, maturity being in conformity with original terms of purchase.

To James Smith & Co.,
Rye, N. Y.

Due Oct. 1, 1919

THE JOHN DOE CO.,
By S. Marks, Treas.

Date July 5, 19—

interest and which the seller, if he desires, may discount at his bank.

Open Book Accounts.

Open book accounts, as assets, are neither quick nor sure. They are frequently slow and uncertain of realization. Even the best of them are seldom marketable for more than 50 per cent. of their face value. In the form of eligible trade acceptances, accounts can be converted in full into cash at a better rate of interest than is commanded by promissory notes.

A disadvantage of the open account system is the ease with which payment can be postponed, thus enabling purchasers to abuse their credit by putting off the settlement of their obligations for long periods of time without even paying interest. This results from the fact that since the time of payment is usually not fixed, the privilege of obtaining an extension is regarded as a matter of course.

If it becomes necessary to sue on an open account, in order to collect, the correctness of the book entries must first be proved. The buyer thereupon may raise objections which may cause much delay. The trade acceptance is an acknowledgment of the receipt of the goods and of a proper invoice, and is proof of the validity of the debt, since the debtor has already admitted the existence of a valid contract by his acceptance of the terms of the bill.

When an innocent third party becomes a bona fide holder of the paper, payment cannot be avoided by seeking refuge in the usual technical defences, since only the signature of the acceptor needs to be proved and no offsets or counter claims of any sort can be urged.

The open account is costly. The expense involved in collecting slow accounts, in extensions of the time of payment, and in trade discounts—all characteristic of the open account system—constitutes, in the aggregate, a heavy tax on business. All these disadvantages are eliminated by the use of the trade acceptance, which gives stability to commercial credit and transforms deferred obligations into definite assets and liabilities.

Conveniences Retained.

Conveniences of the open account are retained under the trade acceptance plan. The right to make partial payments may be arranged with the bank, and if the trade acceptance cannot be conveniently met by the customer upon its maturity, the merchant, if he desires to help him, may do so by taking the customer's promissory note with interest. Thus the merchant granting the extension does so without the loss of interest, which results under the open account system. Since trade acceptances are not given for renewals or for old accounts, they should be settled with notes which draw interest.

In the issuance of eligible trade acceptances there are three principal parties at interest.

The maker must be satisfied with the standing, credit and responsibility of the acceptor for the amount involved. For him it is a plain matter of extending credit to the acceptor, and up to what amount. When he secures the acceptor's signature on the bill he has a definite acknowledgment of debt by the acceptor, not subject to any further claim or offset, or to any request for delay or extension of payment. If the maker is particular in the selection of his customers and careful in extending credit facilities, he can expect to discount at his bank, when convenient, the trade acceptances held by him, and obtain the full value of his invoices, thus avoiding a lock-up of money until their maturity. He may also have the benefit of a preferential rate.

The acceptor should be careful to limit his total obligations through acceptances to an amount proportionate to his capital, to his volume of business and to the credit extended to him by the banks expected to buy his acceptances. Any good business man is jealous of his standing and knows that a default in meeting his obligations at maturity will ruin his credit for a long while and will almost destroy his chances of further success.

BIG ACCEPTANCE CORPORATION FORMED IN BOSTON

A NEW corporation, operating on original lines, to assist in the rapidly expanding field of financing the purchase of automobiles, has recently been organized. It is the National Acceptance Corporation, with headquarters in Boston and a Massachusetts charter.

It will be directed largely by Boston interests, thereby more actively identifying with the automobile business that section of the country, which hitherto has been little concerned with either the financial or the manufacturing side of the industry.

The officers of the new corporation will be: Edward Colton Boyce, president; Charles H. Keith, treasurer; Rodman Schaff, secretary. Mr. Boyce, who has had much experience in automobile financing in the West, acted as president of the Metz company on behalf of the government in execution of its contract for De Haviland four aeroplanes. The board of directors will include President Louis K. Liggett of United Drug Co., W. Cameron Forbes, former governor-general of the Philippines; President Percival S. Hill of American Tobacco Co. and Eugene W. Lewis, largely identified with the Timken-Detroit Axle Co. and with banking in Detroit.

The National Acceptance Corporation will start operations with a cash capital of $5,000,000.

The total of banking resources employed in its financing of sales of cars through use of trade acceptances is expected to reach $75,000 000. It will thus act as a financing link between banks in all sections of the country and the makers of standard cars, whose capital is now so fully employed in the manufacture of automobiles. Incidentally, through wholesale or lump insurance a saving will be effected that will bring the net total cost per car to the individual purchaser almost as low as that on an outright cash purchase.

The phenomenally rapid expansion of the automobile industry offers a wide field for such financing operations, and these in turn may be expected to facilitate a further expansion. Bankers nowadays have come to appreciate that the automobile is very largely a utilitarian rather than a pleasure vehicle. It supplies an essential business commodity—transportation.

The aggregate retail sales value of the country's annual output of cars has already reached $2,000,000,000. About $1,800,000,000 of this total is provided in cash by the buying public, and the balance of $200,000,000 by banks and financing companies. Aggregate wholesale selling value approximates $1.500,000.000, about $400,000,000 of which is financed by bank and other credit. There is abundant room here for well justified increase in credit expansion on both the manufacturing and the distributing ends.

The truck business in particular has risen by leaps and bounds; likewise the technical manufacturing progress. In five years the average life of a truck has risen from 14 to 21 months. It is an interesting incident of recent experience that trucks rebuilt at an average cost of 30 per cent. will outlast the first use of new cars, gaining a further active life of as much as three years. Another unappreciated development is the marked growth in inter-city business. In Boston alone there are 19 concerns now so engaged, and every day sees two lines of long-distance trucks plying between Boston and New York. During the war the movement between New York and Philadelphia reached a daily peak of about 600 trucks on the road.

It is the financing of this rapid expansion that the new corporation is designed to take an active part, on direct but conservative lines.

FULLER & SONS MFG. CO. OPENS NEW YORK OFFICE.

The Fuller & Sons Manufacturing Co., Kalamazoo, Mich., announces the opening of a New York office at 22 American Circle building, 1834 Broadway, with F. George Walker in charge. This company is making a complete line of motor car, motor truck and tractor transmissions.

SHERMAN HEADS FULLER TRUCK.

W. F. Melhuish, Jr., has been replaced as president of the Fulton Motor Truck Co. by George C. Sherman, president of the Universal Tobacco Machine Co. and the advertising agency of Sherman & Bryan. Carl Page has been elected vice president in charge of sales and advertising, and F. G. Saunders, San Antonio, is the new treasurer. Executive offices have been taken in the new Ford building, Broadway and 54th streets, New York.

General News of Industry and Trade

Tusla, Okla.—Automobiles are to be manufactured in a plant which the Tusla Automobile Manufacturing Co. will build here. The enterprise is capitalized at $50,000 and the incorporators include R. M. McFarlin, R. O. Hollerine and A. H. Rogers, all of Tusla.

New Haven, Conn.—Messrs. Rubin & Krall have formed an automobile company to be known as the Cleveland Automobile Sales Co., and have acquired quarters in the Law Chambers building. They will handle the Cleveland car.

Little Rock, Ark.—Articles of incorporation have been filed by the Climber Motor Co., which is being organized to take over and merge with the Climber Motor Corporation of Poteau, Okla. The capitalization is $1,000,000. The incorporators include W. F. Drake, C. A. Roth and D. Hopson.

Norfolk, Va.—L. Berman has opened an automobile supply station at the old Berman livery stables on Liberty street extended. The building has been fitted for garage purposes.

Baltimore—W. T. Nishwitz, president of the Stutz Sales Co., local Stutz distributor, announces the opening of his company's new service station at 1018 Brevard street. Several new appliances based on factory principles have been installed.

Baltimore—C. C. Secrist, who has been in the service of Uncle Sam, recently returned and will manage the affairs of the Standex Sales Co.

Baltimore—The National Tire, Retreading and Vulcanizing Co., 900 North Gay street, has been opened by Frank Seidel and Frank J. Kraus.

Baltimore—William F. Bond recently rejoined the sales force of the Baltimore Republic Truck Co.

Baltimore—Allein W. Owens announces that he has completed negotiations with the Stewart Motor Corporation, Buffalo, to represent the Stewart line of motor trucks in this territory. The acquisition will not affect the Kelly-Springfield line.

Columbus, O.—W. E. Armacost has been selected as general manager of the Columbus Tire and Rubber Co., the new concern recently organized here and soon to start production in a new plant which the company is building on a 12-acre site at Goodale street and the Olentangy river.

Baltimore—A Hudson super-six on display at the salesroom of the Lambert Automobile Co. is being shown as an example of the effectiveness of Alcogas. It is said that the machine has gone almost 10,000 miles and that the piston heads, valves and valve seats are still practically free from carbon.

New York—The Martin-Parry Corporation, which is the consolidation of the Martin Truck and Body Corporation, York, Pa., and the Parry Manufacturing Co., Indianapolis, Ind., has completed the taking over of the Pennsylvania and Indiana corporations and the two operating companies have been dissolved. The New York company, the Martin-Parry Corporation, will henceforth be the sole company representing the business of the two former corporations.

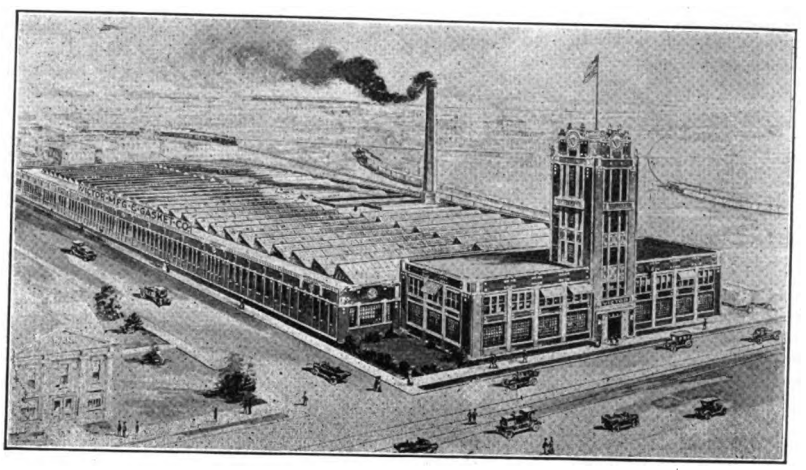
Brooklyn, N. Y.—George Lewis, president of the L. A. D. Motors, states that the corporation is negotiating for larger quarters for service stations.

Brooklyn, N. Y.—About 125 employees and friends of the New York and Brooklyn branches attended the outing of the Lexington Motor Co. at New Dorp Beach Casino, Staten Island. The New York nine won the baseball game. Charles Rogers, manager of the Brooklyn branch, has challenged the Gothamites to a return game.

New York—Capt. H. H. Hunnenwell drove the first new Cleveland car over the roads from Buffalo. He said that the car was assembled while he waited.

Lansing, Mich.—General Manager Durant of the General Motors Co. recently inspected the Lansing plant of the Olds Motor Co., which is now up to an unprecedented production of both cars and trucks. New factory groups are being built. The housing problem of Lansing is still largely unsolved.

New Haven, Conn.—A certificate of incorporation has been filed by the F. B. Markham Co., New Haven, which will engage in the automobile business with $25,000 capital. The incorporators are Harry Chaikind, Hyman A. Bettigole, Frederick B. Markham, Louis Feinmark, Aaron F. Apsel and Maxwell H. Goldstein, all of New Haven.



New Plant of Victor Manufacturing and Gasket Co.

The Victor Manufacturing and Gasket Co., Chicago, producer of high quality gaskets, better known as Victor Copper Asbestos Gaskets, is elevating its standards, as evidenced by its new manufacturing plant, now nearing completion. This plant, which is entirely modern in construction and design, will have more than four acres of daylight manufacturing floor space, which will enhance the company's facilities more than treble to those of the present factory.

The company renders a service that extends to all parts of the globe. The name "Victor" has been associated with the manufacture of gaskets for the automobile industry for many years and has attained world wide recognition as a never failing source of supply, which is the result of high ideals rigidly maintained and an excellence of service and product that has created an unprecedented insistence for Victor copper asbestos gaskets.

The new building, land and equipment when completed will represent an outlay of over $500,000. Several hundred thousand dollars have already been expended for various additional improvements, including restaurant, welfare and recreation quarters, a fresh air ventilating plant and circulating distilled ice water for the convenience of its employees.

Plans are under way for an authorized capital of $1,000,000, which is an advent in the automobile history and will be known as the only exclusive gasket manufacturer with such facilities.

The company has purchased enough additional land on its present site for a still further extension, where it has plans in mind for an eight-story, 100x300, warehouse and storeroom.

There has been no change in the company's executive personnel, and the following officers still preside: John H. Victor, president; Joseph B. Victor, vice president; Paul F. Victor, secretary-treasurer.

The company announces that it is enjoying the patronage of the majority of automobile, truck, tractor, aeroplane and gas engine manufacturers, and the ever increasing demand and popularity of the Victor product has necessitated this large plant, so that the reputation for quality and good service may be maintained. The new plant will be located at 5750 Roosevelt road.

Personal News of the Industry in Brief

George G. Bailey, for several years years sales manager for the Brown-Lipe Co., Syracuse, N. Y., manufacturer of

George G. Bailey, Sales Manager, Hinkley Motors Corp., Detroit, Mich.

power transmission clutches and gearsets for automobile vehicles, has resigned to become associated with the Hinkley Motors Corporation, Detroit, manufacturer of gasoline engines.

R. C. Getsinger has been appointed sales manager of the Lincoln Motor Co. and will assume his new duties about Sept. 1. The company was organized less than two years ago to build Liberty motors for the government. The organization is now being readjusted to manufacture and market a product which has been in development since the signing of the armistice.

Clarence A. Triphagen, formerly manager of the Reo factory branch at Lansing, Mich., is now manager of the factory branch at Detroit.

E. B. McCoy, who for two years has been advertising manager of the Olds Motor Works, is now head of the sales promotion department, which is a new division of the sales organization.

Walter C. White, vice president of the White Co., has been made a chevalier of the Legion of Honor by the French Republic. It was conferred in recognition of the services rendered to France by the White Co. during the war.

Lucius French, advertising manager of the National Motor Car and Vehicle Corporation, has resigned to become secretary of the Western Oil Refining Co., Indianapolis.

H. M. Bacon is now connected with the McGraw Tire and Rubber Co. as general sales manager, with headquarters in Cleveland. He had been with the Diamond Rubber Co. for eight years.

H. A. Seiler, San Francisco, has taken over the distribution of Paige cars in Northern California. He has had great success as a distributor of trucks.

George Bell, formerly with the Remy Electric Co., as sales manager, is now assistant general manager of the Teagle Co., Cleveland, manufacturer of magnetos.

Ralph D. Webster has resigned as sales manager of the Wire Wheel Corporation of America to join the Fred E. Castle Co., distributor of Hayes wire wheels throughout the United States.

Earl W. McGookin has resigned as vice president of the Martin V. Kelly Co., Toledo and New York, to become a manufacturers' representative in Detroit. He will represent the Macbeth-Evans line of green visor lenses.

Otto T. Szekely has resigned as chief engineer of the Velie Motors Corporation, to become a consulting engineer, with headquarters in Rock Island, Ill.

F. George Walker is in charge of the New York office recently opened by the Fuller & Sons Manufacturing Co., Kalamazoo, Mich., to take care of the rapidly growing trade in the eastern district. The office is at 1834 Broadway.

A. L. Viles, formerly traffic manager of the Rubber Association of America, has become general manager of that organization, succeeding H. S. Vorhis.

James J. Harrington, formerly manager of the New England branch of the Ford Motor Co., has been promoted to take charge of the company's branch in Copenhagen. He was given a farewell dinner at the Boston City Club, at which he was presented with a diamond ring. R. P. Jones, formerly of Washington, is Mr. Harrington's successor.

Harold J. Vogler has been appointed general sales manager for the American Motor Truck Co., Newark, O. During the war he was an officer in the Ordnance

Harold J. Vogler, Sales Manager, American Motor Truck Co., Newark, O.

Department. Following the armistice he became general manager of the White service station at Philadelphia.

Homer L. Schneider has become a member of the truck sales department of the Grant Motor Corporation. Mr.

Homer L. Schneider, Western Salesman, Grant Motor Car Corp., Cleveland, O.

Schneider was for four years manager of the Republic Motor Sales Co., Cleveland, and prior to that was associated with Van Dorn Electric Co. for several years.

D. H. Torrey, sales manager of the Bearings Service Co., has finished his tour of inspection of eastern branches with his visit to Boston, and he complimented L. H. Dodd on the manner in which the business has increased and the improvement in the service.

Herbert L. Boehm, formerly connected with the Hudson Motor Car Co. of New York, is now with the investment securities house of E. H. Clarke, Inc., 27 William street, New York.

Col. Fred Glover, formerly chief of the motors division of the War Department has become assistant general manager of the Timken-Detroit Axle Co. Before entering war work he was vice president of the Emerson-Brantingham Co., Minneapolis.

Ralph B. Dort, recently discharged from the Marine Corps, has been appointed by the Dort Motor Car Co. as director of sales for Europe.

Fred C. Cole, Jr., has formed a company to handle United States trucks in New York and Connecticut. P. B. Haynes is secretary and general manager. Offices are at 236 West 54th street, New York.

Earl J. Moon has been elected vice president of the Moon Motor Car Co., St. Louis. He is the son of the late Joseph W. Moon, founder of the company, and is a graduate of Princeton.

Byron H. Riess is now associated with the Charles E. Riess Co. in the wholesale distribution of the Columbia car at 1737 Broadway, New York.

Intimate Notes of Men in Automotive World

Mark Havenhill has been appointed regional agricultural director for the *southwest* by the Cleveland Tractor Co.,

Mark Havenhill, Regional Agricultural Director for Cleveland Tractor Co.

Cleveland, O. His headquarters will be at Oklahoma City, Okla. He is a graduate of and was formerly an instructor at the Iowa State Agricultural College, Ames, Ia. Mr. Havenhill is to cooperate with Cletrac tractor dealers and owners.

B. L. Combs has charge of the experimental laboratory of the Oakes Co., Indianapolis, manufacturer of radiator cooling fans for tractors, trucks and passenger cars. During the war Mr. Combs served for two years as an officer in the Signal Corps, A. E. F., and before entering the service was an assistant instructor in physics at the University of Wisconsin.

Fred W. Jones has been appointed advertising manager for the Holt Manufacturing Co., Peoria. He was formerly with the advertising department of the International Harvester Co.

W. E. Finney is now service manager for the Goodrich Tire and Rubber Co., San Francisco. He was formerly with the big Akron organization.

Ralph W. Cook has become general and sales manager of the Automobile Sales Corporation, Philadelphia.

H. F. Shepherd has joined the Baldwin Supply Co., Charleston, W. Va. This company enters the automotive equipment business as jobber. He was formerly manager of the automotive equipment department of the Toledo Rubber Co.

J. A. Massie has resigned as sales manager for the Hoyt Electrical Instrument Works, Penacook, N. H. He is succeeded by **M. T. Rogers.**

Harry D. Benner, formerly eastern district sales manager of the Federal Motor Truck Co. in New York, has joined the Federal Rubber Co., Cudahy, Wis., as manager of the accessory sales department.

S. R. Montgomery has joined the sales department of the General Motors Truck Co. He has had considerable experience in the truck field, having sold GMC trucks and Knox tractors in Arizona. During the war he served in the Motor Transport Corps.

Walter T. Sewell has left on a trip of six weeks throughout the West and will open branches along the Pacific coast and in the Northwest. He is treasurer of the Sewell Cushion Wheel Co., Cincinnati.

C. Fisher Hepburn is now the Republic Motor Truck Co.'s vice president and general manager. Frank W. Ruggles, the president, will devote his time to the development work in connection with all of the company's interests.

Roger L. Tennant has been appointed secretary, treasurer and sales manager of the Texas Battery Corporation, Dallas, Tex., succeeding Max Rothman. Mr. Tennant has been engaged in the automobile trade for a number of years and has covered all of Texas, Oklahoma and New Mexico.

Herbert T. Hare is now manager of the sales promotion and advertising of the Automobile Sales Corporation, Philadelphia.

Lieut. J. Lowcher, recently discharged from Camp Upton, has been appointed head of the accounting department of the Eisemann Magneto Co.

William L. Johnson is now treasurer of the St. Louis Automobile Manufacturers and Dealers' Association, succeeding W. S. Roberts of the J. I. Case Co. Mr. Johnson is associated with Johnson Automobile Co., one of the oldest Ford dealers in St. Louis.

J. L. Hibbard has returned from a three months' inquiry into trade conditions in Europe. He is the foreign sales

J. L. Hibbard, Recently Returned from Studying Trade Conditions in Europe.

manager for the Cleveland Tractor Co., Cleveland, O.

Wallace C. Hood is now general sales manager of the Standard Motor Truck Co., Detroit. Four years ago Mr. Hood

Wallace C. Hood, General Sales Manager of Standard Motor Truck Co.

held this same position. Just recently he was sales manager of the King Motor Car Co.

L. A. Shadburne is now the Olympian Motor Car Co.'s western district representative. He has had wide experience in marketing automobiles.

Arthur J. Haynes has resigned as sales manager of the Ford Motor Co., London, Ontario, to go to Windsor. He will become sales manager of the Champion Spark Plug Co. of Canada, Ltd. A new plant is being erected by the Champion company in Windsor.

J. C. McAdams, formerly connected with the Wyeth Hardware and Manufacturing Co., St. Joseph, Mo., has joined the Martin-Lumaghi Co., St. Louis. He will distribute gasolaters in West Virginia, New Jersey, New York, Delaware, New England and Canada.

E. G. Parsons has been appointed chief of engineering for the Dayton Wire Wheel Co., Dayton, O. At McCook Field, Dayton, Mr. Parsons was engineer at the airplane experimental station. He was formerly associated with the firm of Thomas & Thomas, consulting automotive engineer of Detroit.

Raymond A. Wiens has been elected secretary and treasurer of the Racine Manufacturing Co. Mr. Wiens has just been relieved from army service. He was formerly secretary of the old Mitchell Wagon Co., Racine, Wis.

Frank H. Jones has become president and general manager of the Jones Gear Co. The company is erecting a large plant in Cleveland. Mr. Jones was for many years in charge of the manufacturing and engineering department of Warner Gear Co., Muncie, Ind., and later superintendent of the company.

W. J. Lane has resigned as buyer for the Maxwell Motor Co. to become associated with the Trumbull Steel Co., Ford building, Detroit.

TIRE INDUSTRY AND TRADE

The India Tire and Rubber Co., Akron, announces that William G. Lerch, for many years prominent in the rubber world as a production and research man, is now its superintendent. Among rubber men Mr. Lerch is perhaps best known for his work on cord tires of the Miller Rubber Co., of which he was assistant superintendent and in charge of production for nine years. Prior to his connection with the Miller company Mr. Lerch was with the Carnegie Steel Co. and the B. F. Goodrich Co. in the production and cost departments. The India Tire and Rubber Co. is expanding and will soon almost double its present production of tires. A new superintendent was wanted for the larger factory, and of all the men available in the Akron rubber district Mr. Lerch was chosen.

The Perfection Tire and Rubber Co., Ft. Madison, Ia., and Wabash, Ind., has contracted with the Nemours Trading Corporation whereby Nemours becomes the exclusive general sales department for world-wide distribution of the entire output of the Perfection brand of tires and tubes. This arrangement consolidates the former existing Nemours contract controlling the export trade of Perfection tires into one universal operation.

The B. F. Goodrich Co. has more than doubled the asset value behind its common stock in three years, entirely from earnings. Goodrich has put much of its earnings back into working capital. For the six months ended June 30 last, net profits after all charges, but before Federal taxes were $7,150,000. At the current rate earnings for the full year would approximate $15,500,000, which after preferred dividends would be equal to more than $21 a share on common before taxes. In view of the fact that tire makers look for increased business during the latter half of the year, it is not improbable that Goodrich will return substantially higher earnings for the full year than the present rate indicates.

The Bergougnan Rubber Corporation, Trenton, N. J., is having its tire mileage guaranteed by the National Surety Co., New York. "In order to remove all possible uncertainty as to the service to be expected from Bergougnan tires," states the Bergougnan announcement, "and to convince prospective purchasers that they will actually get the number of miles that we guarantee for these tires, we announce that arrangements have just been made with the National Surety Co. whereby that organization, which is the largest of its kind in the world, will guarantee our guarantee." Fabric tires are guaranteed for 6000 miles and cord for 8000.

WILLIAM G. LERCH.
New Superintendent of the India Tire and Rubber Co.

The Essenkay Products Co. announces that President Fran D. Mayer has left for England, where a gigantic new Essenkay is being erected to fill the demand for Essenkay tire filler, which is now world-wide, being especially strong in Great Britain, her colonies, dominions and dependencies. Mr. Mayer is expected home about Sept. 15.

The Pennsylvania Rubber Co. announces the election of George W. Daum as assistant general manager, and also that President-Treasurer H. Wilfred DuPuy has relinquished the title of treasurer in favor of A. H. Price.

The Goodyear Tire and Rubber Co. will have 30,000 spindles in its proposed cotton mill in Los Angeles, which will be used to make fabric for pneumatic tire casings. The enterprise will have $6,000,000 capitalization.

The United States Rubber Co. announces that the money derived from the proposed sale of the $36,000,000 common stock will be used "to pay off all current indebtedness that can be paid (certain accounts payable and acceptances will always exist), for new construction planned and in process, designed principally for the increase of the product of automobile and truck tires, for extension of rubber plantations in the East, and to facilitate the carrying of stock under profit sharing for benefit of our employees." The company during the first half of this year earned $10,815,750, after provision for all interest charges, depreciation, Federal taxes and reserves. These figures are contained in a letter to stockholders calling a special meeting to pass on the recently proposed capital increase from $120,000,000 to $300,000,000. Upon ratification of the plan $36,000,000 of the proposed increase in common stock will be issued.

The Madison Tire and Rubber Co. has been incorporated in New York state with $2,000,000 cumulative eight per cent. preferred stock and 220,000 shares of common stock without par value. The company will engage in the manufacture of automobile tires, with a plant at Buffalo. The corporation also will acquire and continue the business of the United States Rubber Reclaiming Co. The company has been supplied with $1,400,000 additional working capital, which, together with the quick assets of the rubber reclaiming company, gives the new concern current assets in excess of $2,242,000. The preferred stock is convertible at the option of holders into common stock at any time until July 1929, on a share for share basis.

The Savold Tire Corporation has concluded arrangements with the Finance and Trading Corporation of New York whereby the latter will assume the international management and control of the Savold tire business. The new interests also will supervise the general operation and business of the various state Savold tire companies.

The Pressman Tire and Rubber Co. plans to erect a six-story building in New York.

Digitized by Google

The McGraw Tire and Rubber Co. announces the appointment of H. M. Bacon as general sales manager, with headquarters at the company's main office in Cleveland, O. Mr. Bacon comes from the Diamond Rubber Co., where he has been in charge of sales since 1914. He is well known throughout the tire and motor car industry. After a long experience in the motor car field he joined the Diamond Rubber Co. in 1911 and became its sales head three years later. The association of Mr. Bacon with the McGraw Tire and Rubber Co. is an evidence of this company's rapid growth into one of the big factors in the tire business. New branches have recently been opened in Boston, Baltimore, Detroit and Denver. According to information received from the company's sales officials, branches will open in several additional cities within 30 days.

H. M. BACON.
Newly Appointed General Sales Manager of the McGraw Tire and Rubber Co., Cleveland, Formerly in Charge of Diamond Tire Sales.

ATLAS TIRE CO. HAS MADE GREAT PROGRESS.

The Atlas Tire Co., 1777 Broadway, New York City, announces that it is selling tires as fast as it can make them, and is also getting a good share of foreign business. The company has made great progress. It started in business less than two years ago with one store in Philadelphia. A capacity business was reached almost at the start, and since then the company has been getting all the business it could handle. In Philadelphia the company did a wonderful business in rebuilt tires and seconds.

The Pressman Tire and Rubber Co., Philadelphia, which was recently incorporated under the laws of Delaware with $3,000,000 capitalization, has already leased several units of its proposed nation-wide chain-store system for retail distribution of tires, including Boston, Baltimore, WilkesBarre, Pa.; Scranton, Pa.; Reading, Pa.; Allentown, Pa.; Easton, Pa., and Harrisburg, Pa.

Other branches to be opened in the near future include New York, Chicago, Detroit, St. Louis, Cleveland and San Francisco. The Baltimore branch is located at 15 Mount Royal avenue.

The company has purchased for $500,000 three properties, 250-52-54 North Broad street, Philadelphia, in the heart of the automobile district. The officers of the new corporation are: President, and general manager, Herman Pressman; vice president and sales manager, William J. Ryan; comptroller and office manager, G. W. Manwaring; director, R. T. Moyer; general counsel, Michael F. Donahue.

The Pressman Tire and Rubber Co., through contracts, controls the output of three factories, a total of about 700,000 tires annually. Negotiations are under way for the output of other factories. The activities of the company embrace the entire tire field.

The principal factories now turning out tires for the company include the Sebring Rubber Co., manufacturer of the Omar tire; the New Castle Rubber Co., manufacturer of the Liberty tire, and the Universal Rubber Co.

Arrangements are being made for the establishment of distributing branches in all the principal countries of South America. Because of its mammoth business the company is enabled to sell tires at unusually attractive prices. Its sales are made under liberal guarantees.

Truck and Trailer Manufacturers

The Fruehauf Trailer Co. has bought a site in Detroit for a new factory.

The Commerce Motor Car Co., Detroit, has adopted the new Everyway body, made by the Highland Body Manufacturing Co., Cincinnati, O. This all-purpose body is made in three sizes for trucks of ¾, 1, 1½, 2 and 3-3½ tons capacity.

The Abbott-Downing Co., Concord, N. H., builder of Concord trucks, has been purchased by M. A. Sevigne, Boston, president of the National Wrapping Paper Co., who becomes president and managing director. The company will market a delivery truck for the bakery trade.

The American Motor Truck Co., Newark, O., which has just placed in production the new Ace truck, is erecting a concrete office building.

The California Trailer and Radiator Co., San Diego, Cal., has changed its name to the Marx Trailer Co., incorporated with $200,000 capital. The company is now specializing on the Komfy Kamping trailer.

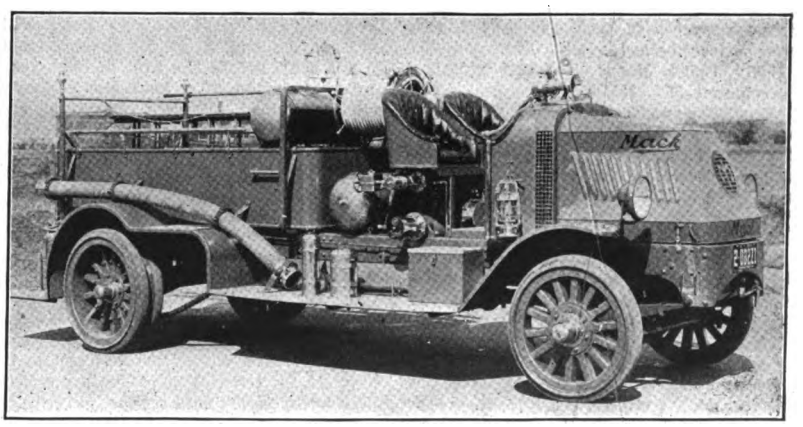
The Reliance Motor Truck Co., Appleton, Wis., has increased its capital from $500,000 to $1,000,000, and is to erect a plant addition to cost $160,000.

The Winther Motor Truck Co., Kenosha, Wis., has increased its capitalization by $1,000,000, and is bringing out new types of trucks. One is designed especially for telephone and telegraph companies. It is reported that the company will market a farm special truck of the quadruple drive type, combining the advantages of a farm tractor with those of a truck.

The Parker Motor Truck Co., Milwaukee, has brought out four new models, a four-cylinder two-ton, a six-cylinder two-ton and four-cylinder 3½ and five-ton trucks. Four-cylinder Wisconsin engines replace the six-cylinder Continental. A larger radiator, new hood and dash, a different transmission and a new design rear axle on the 3½-ton models are among the changes.

EQUIPMENT IMPROVEMENTS IN JUMBO TRUCK ANNOUNCED.

The Nelson Motor Truck Co., Saginaw, Mich., announces changes of construction along slightly heavier lines, making possible an increase in the rating of the Jumbo model D from 4000 to 5000 pounds. Several equipment improvements are announced, including installation of a new lubricating system. The chassis price has been increased from $2500 to $2700. Two new Jumbo models will be announced shortly, 1½ and 3½-ton sizes, each to be supplied in three wheelbase lengths.



Mack Truck Chassis Equipped with a New Type Rotary Fire Pump That Is Claimed to Be Entirely Free of Vibration, Designed Expressly for the International Motor Co.

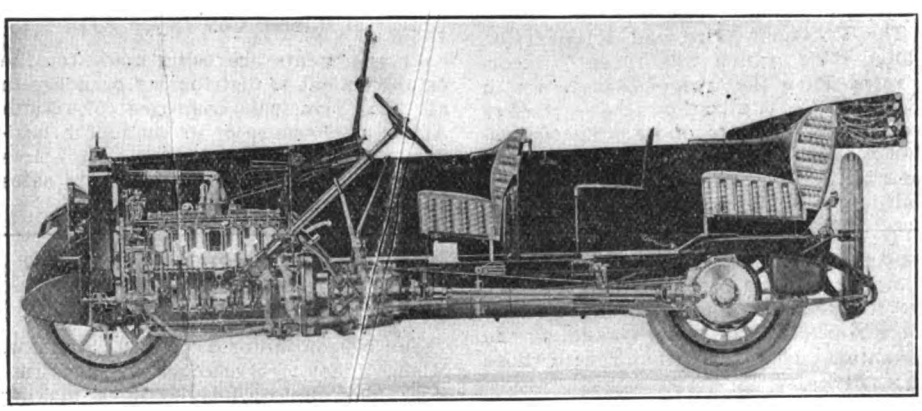
News of the Passenger Car Industry

The Grant Motor Car Corporation, Cleveland, O., has insured all of its employees in a group policy.

The Studebaker Co. is swinging into the second half year with production at the rate of 4200 cars a month, its best operating achievement since it resumed its normal manufacturing functions this year. For the full year Studebaker will probably turn out 40,000 cars, but on account of the revamping of its factory layout can hardly hope to better that mark very considerably. Next year should tell a different story.

The Continental Motors Co., it is reported, may be the next company to startle the automobile world with an inexpensive car calculated to compete with the Ford. Interests that dominate in the Detroit Steel Products Co. are said to have taken over a block of 450,000 out of the 1,400,000 shares of Continental at $12.50 a share.

The Moon Motor Car Co., St. Louis, is bringing out the 1920 model 6-66, which will sell for $2750. It will have a Continental motor, 3½x5¼, with piston displacement of 303 cubic inches, horsepower 29.40 S. A. E. and maximum brake horsepower 66, with 2275 revolutions per minute at maximum.



Cutaway of Packard, Showing Internal Working Parts and Other Features.

The Buick Motor Car Co. has made reductions of from 15 to 35 per cent. on parts.

The Paige-Detroit Motor Car Co. has made advances of from $40 to $90, the new prices being: Paige Linwood 39, $1595; Paige Essex 55, $2150; Paige Larchmont 55, $2255.

The Scripps-Booth Co. of California will erect a $1,500,000 automobile factory, beginning next spring.

The Hudson Motor Car Co. plans to spend $2,250,000 to build and equip a plant for the manufacture of the Essex cars. This year's schedule calls for 20,000 each of the Hudson and Essex cars, both of which are now made in the Hudson plant. It is expected that the new factory will be ready in October.

Dodge Bros. is reported to be preparing for tremendous expansion. The firm has bought a site, costing $2,085,000, for a new plant on the river front in the southern part of Detroit. The tract purchased extends from Zug Island to the Great Lakes Engineering Works, affording about a mile of frontage on the great waterway, and backward for about half that distance to the Detroit, Toledo and Ironton railroad. There are 287 acres. The development will require several years for its completion.

The Dort Motor Car Co. announces new prices as follows: Touring, $985; roadster, $985; sedan, $1535; coupe, $1535.

The Pierce-Arrow Motor Car Corporation, it is believed, will be managed by Geo. W. Goethals & Co., Inc., following the election of John C. Jay, Jr., as president. The Goethals firm managed the Wright-Martin Aircraft Corporation during the war. It is understood that new financing will be necessary for Pierce-Arrow. Pierce-Arrow's passenger car output is normally about 1200 a year. So great is the demand for these cars that twice this number could be disposed of this year if the company had the facilities for turning them out.

The General Motors Corporation is reported to have purchased the plant of the Hastings Consolidated Press and Tool Co., Hastings, Mich., the deal involving $1,000,000.

The Stutz Motor Car Co. of America has completed plans for doubling the capacity of its plant in Indianapolis. Work will be started immediately on the additions which, with equipment, will cost $800,000. The company states that it will increase the capacity of the plant at least 50 per cent. before the first of next year and that inside of a year the capacity will be doubled. Present operations are at capacity, or 3000 cars annually. Recently 25,000 additional shares of stock were issued, making a total of 100,000 outstanding. The present officers are: President, Allan A. Ryan, New York; vice president, Frederick E. Gunnison, New York; secretary, George F. Lewis, New York; treasurer and general manager, William N. Thompson. Harry C. Stutz resigned as president July 1.

The Franklin Motor Car Co. has begun the erection of a $400,000 addition to its plant in Syracuse, N. Y. The production plan is for 18,000 cars a year.

The Maxwell Motor Car Co., through its president, W. Ledyard Mitchell, has announced that the plant under construction on Oakland avenue, Detroit, when completed will cover close to 75 acres, will cost approximately $12,000,000 and will employ 15,000 men. This is one of the biggest industrial undertakings Detroit has ever seen and with its location there Dayton, O., loses the Maxwell shops. "It is our intention to reduce as much as possible work done in outside shops and bring it to the Detroit plant," said Mr. Mitchell. "This refers only to Maxwell branches which are manufacturing parts of our cars in other cities. We hope to make the Maxwell a self-contained company. Dayton shops are now doing most of our body work and making a large number of axles. All these departments will be replaced in our Oakland avenue plants. There are about 2000 employed in the Dayton branch." It was also stated that with improvements already contemplated the output of the factory has been increased from between 200 and 250 cars a day to 300 cars. Ultimately the company will have facilities for turning out 500 cars daily.

PARTS MAKERS

The Simms Magneto Co., East Orange, N. J., is enlarging its factory.

The Oliver Rim Co., recently organized with $1,000,000 capitalization, has begun construction of a factory in Atlanta, Ga. The company will make a split demountable rim.

The Roller-Smith Co., 233 Broadway, New York, recently held a sales conference at its Bethlehem, Pa., works, with the following present: G. L. Crosby New York, sales manager; M. Frankel Chicago, assistant sales manager; C. M Hunt, New York; C. G. Kahant, New York, export manager; W. G. Merowit Buffalo; C. H. Nicholson, Detroit; F. C Perkins, Philadelphia; W. G. Pieksen, St Louis; F. W. Ryan, Chicago; W. J. Shire New York, and J. E. Wood, Clevelan I. E. Hall, assistant works manager, an Superintendent W. H. Pugh entertaine the men at several social functions du ing the conference. The final sessio was in the company's New York office.

The Herbrand Co., Fremont, O., mak of drop forgings for automobile firm has purchased a 35-acre tract of land which it will build a new plant. T working force of 500 will be doubled.

The Piston Ring Co., Muskegon, Mic has begun an addition that will be tw thirds as large as the present plant. addition to the machine and a found more than twice as large as the prese one will be started soon.

The Kelsey Wheel Co., Inc., Detro will spend $1,000,000 to increase its ma ufacturing facilities at Memphis, w employment to 4000 workers. The co pany makes parts for Ford cars.

Digitized by Google

The Detroit Pressed Steel Co. has announced the purchase of the large Carlton avenue plant, Detroit, recently operated by the Detroit Shell Co., and will take immediate possession, using it in addition to its present plant at 1800 Mt. Elliott avenue. This important acquisition, made necessary by the rapid expansion of business, and comprising 167,200 square feet of floor space, will be used exclusively by the wheel division of the Detroit Pressed Steel Co. Here will be concentrated the company's entire production of Disteel wheels for motor cars, an accessory which, although introduced on the American market only about a year and a half ago, has made such rapid headway that the main plant, busy with other products as well, no longer can spare manufacturing space and facilities equal to the demand for the new type of wheels. The Carlton avenue property was originally acquired and the factory built about four years ago for the Springfield Body Co. when that concern, known then as the Springfield Metal Body Co., decided to move to Detroit and expanded its operations for the manufacture of automobile bodies. The plans were not successful and the concern went into the hands of a receiver, the court appointing Byron F. Everitt. A little more than a year ago, when the government was eager for a quick production of munitions, the existence of this splendid plant, then idle, suggested its use for that purpose. Encouraged by a government official, who came to Detroit to inspect the property, a group of Detroit business men, gathered at a luncheon at the Detroit Athletic Club, formed the Detroit Shell Co. and took over the plant to manufacture munitions. When their contracts were completed and a settlement made with the government there was no further need to continue the company. Consequently its president, John Kelsey, offered the property for sale and it was almost immediately snapped up by the Detroit Pressed Steel Co. for the special use of its wheel division. The property comprises 27 acres, with a frontage of 2989 feet on Carlton avenue, 370 feet on Southern avenue and on the north side 547 feet, approximately 900 feet from Michigan avenue. There is an office building, 25x60, a one-story brick dry kiln, 50x100, and a main building, 316x500. With such space and facilities the Detroit Pressed Steel Co. will now be able to speed up production on its Disteel wheels to meet the pressing demand.

The General Motors Corporation has bought 63 acres of land in Janesville, Wis., adjoining its previous holdings of 200 acres. upon which is located the Samson tractor plant. Further extensions are planned.

SE-MENT-OL COUNTER DISPLAY.

Helping the dealer to make more sales and increase his business on Se-Ment-Ol is the object of a unique display stand furnished by the Northwestern Chemical Co., Marietta, O. The display stand clearly tells the purpose of the merchandise it displays. It is an actual reproduction of a leaking radiator holding one can of Se-Ment-Ol (powder and one can of Se-Ment-Ol (liquid) with the familiar slogan, "Finds the Leak and Fixes It." Being made entirely of metal this display stand is designed to give greater service and will not soil or become damaged

from use or handling like wood or cardboard stands. Counter displays such as this one have doubled sales on many products, their appeal being wholly in their power of suggestion and impelling action. Goods everlastingly displayed on a counter stand induce attention, create desire and lead to purchase. The impression created by advertising right in the dealer's store gives an impulse to buy, which is created right where the goods are, and can be conveniently and immediately satisfied. Dealers who are interested in this display for increasing sales should write to "Norwesco" at Marietta, O.

The Ohio Carbon Co., Cleveland, O., announces that it has outgrown its present quarters and has made preparations to move into a modern manufacturing plant within the next month or two. The new plant will consist of a number of up-to-date factory buildings equipped with the latest conveniences, both for manufacturing and for the help. The first unit of this installation is now well under way. In a period of four years the company has developed from a small beginning into one of the strongest factors in the carbon industry and "Ohio carbon products" are becoming well known not only in the United States, but also in foreign countries. The high standard of quality of the material produced by this company, combined with its efficient method of making deliveries and sound business principles, has resulted in a very rapid growth. The company specializes in the manufacture of carbon, graphite and metal-graphite brushes for all types of motors and generators, particularly brushes that are used on automobile electric starting motors and lighting generators. In its new plant the company will be in a position to carry out even further its policy of giving all of its patrons the highest standard of quality that can be produced in every brush that is manufactured and continue its customary high standard of service in the way of deliveries.

United Motors Service, Inc., with its 15 branches and 38 distributing stations throughout the country, has added the service of rims and rim parts of the Jaxon Steel Products Co., Jackson, Mich., to its accounts. The company plans to take over other new accounts which it will undertake to departmentalize so that specialization along various parts of the car may be accomplished by the organization. Arrangements for handling the Jaxon rim service were made when the Bearings Service Co., Detroit, decided to concentrate its entire energies upon bearings service exclusively. A. D. Trempe, who has had general supervision of the rims service of the Bearings company, will supervise the rims service of the United.

The Phoenix Manufacturing Co., Eau Claire, Wis., is building a new type of tractor under contract with the Yankee Boy Tractor Corporation, which is soon to enter the market. The Yankee Boy firm plans to have its own factory by the end of the year. The tractor is a three to four plow design, using kerosene.

The Bear Tractor Corporation, New York, has been chartered in Delaware to make and deal in farm tractors. The parties are H. A. Victor Crawford, J. L. Crandall and S. I. Donner.

Great Britain Will Admit U. S. Cars

A large quantity of American motor vehicles, possibly 5000, may be admitted into Great Britain in the next few months, says the American Chamber of Commerce in London. This will include passenger cars, commercial cars and motorcycles.

Up to the present time importers have been rationed on the basis of 50 per cent. of their 1913 imports, in proportionate monthly quantities up to Sept. 1, 1919, at which time the British government's "transitional policy" is to be reconsidered. Those importers who established their business later than 1913 have not been getting anything at all.

Although it is only a temporary arrangement and should in no way be taken as an indication of the British government's trade policy on motor vehicles after Sept. 1, the news will be welcome to American manufacturers, who have had trouble up to the present in putting their cars on the British market.

OPPORTUNITIES IN PERSIA.

The American legation at Teheran, Persia, reports that there appears to be a considerable demand for low priced motor cars in Persia and suggests that American manufacturers send a supply of their catalogues to the legation to be put in the commercial reading room, where those interested could consult and obtain them.

MOTOR CARS IN HYOGO.

The number of motor cars in the Hyogo prefecture of Japan in 1918 was four, in 1912 there were 14, in 1916 there were 89, and at the end of 1918 there were 282 cars registered. The city of Kobe, which is located in this prefecture, is said to have 182 automobiles.

Foreign Trade Opportunities

(Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from district or co-operative offices.)

30,221—An agency is desired by a man in Algeria for the sale of agricultural tractors and motor cars. Quotations should be given c. i. f. Algeria. Payment against documents. Correspondence should be in French.

30,217—A firm in Algeria desires to secure an agency for the sale of automobiles, motor cars and tractors. Quotations should be given c. i. f. Algeria. Payment, cash against documents. Correspondence should be in French. Reference.

30,194—An export and import house in this country with agencies in India and England is desirous of communicating with dealers in gasoline and kerosene tractors, pleasure cars and motor trucks, with a view to securing agencies for selling in Morocco. References.

30,124—A firm in Italy desires to secure an agency for the sale of machinery, automobiles and accessories, rubber goods, electrical supplies and other goods needed in that country. Catalogues and price lists are requested. Correspondence should be in Italian or French.

30,133—The purchase and sole agency is desired by a firm in Czechoslovakia for the sale of motor trucks, passenger autocars, tractors and rubber tires. Payment to be made in United States currency. Reference.

30,183—Cash purchase with agency rights is desired by a firm in Syria for about 15 automobiles, 20 to 35 horsepower; five at $700 to $800; five at $1250 to $1500 and five at $1750 to $2000; and accessories and spare parts sufficient to stock an automobile repair and equipment shop. Quotations c. i. f. Syria should be given. Terms, cash against documents in New York. Further information may be had on application to the bureau or its district offices. References.

30,112—The purchase is desired by a firm in India of complete rubber tire and tube manufacturing machinery, hardware and mill stores, machinery and machine tools of all kinds. Quotations should be given c. i. f. place of destination. Terms, cash against documents. Reference.

30,189—The purchase and exclusive agencies are desired by an importer in Spain for agricultural machinery, tractors and lubricating oils. Quotations should be given f. o. b. New York or c. i. f. Spanish city. Payment, usual credit terms desired. Correspondence may be in English. References.

30,190—A business man in France wishes to secure the representation of exporters of agricultural implements, machines, automobiles, electrical implements and, in general, all industrial material. Correspondence should be in French.

29,812—The purchase and agency are required by a firm in Australia of all motor requisites, accessories, tires, cars, etc.; cycle and motorcycle accessories. Terms, cash against documents or 90 per cent. to 120 days after sight; also consigned stock to be paid as sold. Reference.

29,816—A firm in Trinidad with agents in this country desires to be placed in touch with manufacturers and exporters of automobile tires and accessories and cycles and accessories. References.

29,861—An importer in Belgium wishes to purchase and secure an agency and consignment of bicycles and automobiles. Quotations should be given c. i. f. Antwerp. Payment against credit guaranteed by bank. Correspondence should be in French. Reference.

29,871—A manufacturer's agent in Australia desires to secure an agency from manufacturers of hardware and motor car accessories.

29,833—Agencies are desired by a firm in Brazil for the sale of tires, rubber goods, machine tools, plows and agricultural machinery. Correspondence may be in English. Reference.

29,826—The representative of a firm in New Zealand, who is in this country for a short time, desires to be placed in touch with exporters of electric motors, gasoline and kerosene tractors, rubber goods and hardware. Reference.

29,879—The purchase of asbestos packing, piston rings, drills, files, magneto copper connections, wheels, automobile tools, parts, tires and automobile accessories are desired by a firm in Spain. Quotations should be given f. o. b. American port. Terms, cash against documents at destination. Correspondence may be in English. References.

29,885—A commission merchant who has resided in Turkey for several years desires to return to that country or to the near East as a representative for the sale of farm machinery and gasoline engines. Correspondence may be in English. References.

Illinois Dealers Must Not Deface Numbers

The National Automobile Dealers' Association has warned automobile dealers of Illinois not to deface motor numbers on cars under any circumstances, even though they have bought the cars and paid for them outright. The warning is the result of a decision by the Illinois Supreme Court that the motor vehicle law of 1917, forbidding the defacing of numbers, is constitutional.

The Topeka, Kan., Automotive Dealers' Association recently held its annual picnic at Tecumseh. Practically all garages and repair shops were closed for the occasion. The members were accompanied by their families and women guests. The dinner was a barbecue. Every man had been ordered to wear overalls. There were many amusing features, including the "arrests" of various members on grotesque charges. Harry G. Moock, secretary and business manager of the National Automobile Dealers' Association, praised the spirit of cooperation between dealers, garage and accessory men as exemplified at the outing.

The Greenville, Miss., Automobile Dealers' Association was recently organized, with these officers: President, J. F. Russell; vice president, J. E. Foster; treasurer, W. L. Shelton; secretary, Herbert Stanley. Plans are being made for a banquet, at which representatives of the Memphis Automobile Dealers' Association will be present.

The Baltimore Automobile Dealers' Association plans to buy property in which to establish permanent headquarters, with club features, including a grill and billiard and lounging rooms.

The Grand Rapids, Mich., Automobile Business Association's members have agreed to close nights and Sundays, with the exception of two in different sections, who will keep open to whom all customers will be referred for night and Sunday service. These officers have been elected: President, W. K. Philip; vice president, G. A. Belby; treasurer, E. H. Barstetter; secretary, M. D. Elgin.

The Union County, O., Auto Trade Association is holding monthly meetings, at which instructive talks are given by automobile experts.

The Ohio Auto Trade Association has established a speakers' bureau to supply the local associations with speakers for their monthly meetings. An accounting system for garages and repair shops is being worked out by a committee. The next annual convention will be held in Cleveland, Dec. 3-5 inclusive.

The Arkansas Automobile Dealers' Association, at its annual meeting, elected these officers: President, F. L. Reed; treasurer, F. L. Oilar; secretary, A. W. Parke. Under a change in the constitution each local organization will elect a vice president, who will be a member of the board of directors.

The Montreal Automobile Association, Montreal, Can., keeps its members informed on matters of interest by a weekly bulletin sent to them by mail.

The Wilmington, Del., Automobile Dealers' Association recently held a meeting to formulate some details of the future policy of the organization. Announcement was made that a charter would soon be applied for, with the present board named as directors. The board comprises Messrs. McDonald, Bixby, Ulrich, Norman, Merrick, Johnson, Loose, Howell and H. White.

The Milwaukee Automobile Dealers, Inc., will hold a three-day truck transportation demonstration beginning Sept. 8. It is planned to have 40 or 50 trucks loaded with merchandise, farm products and machinery hauled over a 1900-mile highway route in an efficiency test. The tour will be concluded with a review by Gov. Phillips at the State Fair. The caravan will consist of trucks that are exhibited in the automobile show at the fair.

The Louisiana-Mississippi Automotive Trades Association will hold its second convention at Jackson, Miss., Oct. 9-10. It is expected that 600 dealers will attend. The association was organized only a few weeks ago, but has had marked success in getting members.

The Boston Commercial Vehicle Dealers' Association is displaying interest in the proposed establishment of a statewide system of motor transportation and the creation of a similar system throughout New England, to be utilized in case the railroads are tied up by another strike. A committee appointed by the mayor of Boston has recommended this plan to Gov. Coolidge.

Show Building Ready Soon at Indianapolis

The Indianapolis Automobile Trade Association announces that the new Indianapolis show building, in which will be staged the 19th automobile show of the association, will be completed late this month. The show will be held during State Fair week, Sept. 1-6. The new building covers two acres and is being built at a cost of $12,000. At the four corners will be massive pylons, in which will be situated offices, telephones and public rooms.

The Philadelphia Automobile Trades Association supported the Cox bill, which has become a law in Pennsylvania. The law requires the registration of the sale of used cars.

The California Automobile Trade Association, at its annual meeting, elected these officers: President, George Haberfelde; vice presidents, Chester N. Weaver, R. O. Baldwin, Ralph L. Skinner and C. R. May; secretary-treasurer, Robert W. Martland.

The Waterbury, Conn., Auto Dealers' Association has appointed a committee to bring about better facilities for unloading automobiles at the freight yards in Waterbury. A conference will be held with railroad officials.

The Boston Commercial Vehicle Dealers' Association, the Garage Association of Greater Boston and other Boston and Massachusetts automobile organizations will work in cooperation with the Motor Truck Club of Massachusetts, which was organized recently by motor truck owners. The new club will endeavor through educational measures to reduce accidents. A frequent inspection of trucks is planned. Drivers will be given courses of instruction, and owners who wish to attend the lectures and work may do so.

The National Automobile Chamber of Commerce announces that General Manager Alfred Reeves and other officials of the chamber are convinced, following a conference with officials at Washington, that there is little hope of bringing about a withdrawal of the revenue tax on trucks. They were told that the government is in need of the money.

SUGGESTIONS FOR MODERN FILLING STATIONS

Four Types Presenting Essential Features Which May Be Followed Throughout or Incorporated with Prospective Builder's Own Ideas.

(Designed by the Architectural Department of the Automobile Journal Publishing Co.)

THE accompanying sketches are suggestions for filling stations. The proposed structures are for brick or hollow tile stuccoed, also terra cotta, a material from which wonderful effects may be obtained. The aim has not been to produce drawings from which a contractor may build, but to bring out the essential features, which the prospective builder may follow throughout or incorporate with his own ideas.

In design No. 1 the building has been planned to fit a rectangular corner at the intersection of two important lanes of travel, an ideal location for a filling station. Because of its shape, some may think this idea is not practical, but it has been tried out to good advantage.

All that is necessary above ground is a shelter for the attendant, as the heart of a filling station is always buried beneath the surface, the only part visible being the pumps. Its size enables the handling of greases and supplies. The general dimensions are 16 feet wide at the rear and 18 feet long. On the ground floor two pumps are shown, also a show case for accessories and a storage space for greases. A stairway leads to the basement, where toilet and wash room are located. There is also accommodation for a boiler room and a small heater.

The elevation is of brick, trimmed with concrete stone of terra cotta. Large plate glass windows afford an abundance of light, while one may be pintled to swing so as to give plenty of air and ventilation.

The foundation is of concrete, at least 12 inches thick, with spread footing as shown. The floor is of tile laid in a good bed of concrete with a white mortar joint. The roof is of wood, covered with tar and gravel, providing fire regulations permit, and otherwise a reinforced concrete slab.

Gasoline pumps are shown on the sidewalk line, three in number, with air pumps as intermediate members. The approximate cost of this structure without equipment would be $1000.

In design No. 2 the size is 14 feet wide and 20 feet long, and the station is constructed to face an important highway. It is dignified in appearance. There are three oil pumps, a show case for parts, etc., and storage closets for supplies and greases. A stairway leads to the basement, where the toilet, boiler room and storage space are located. On the sidewalk are gasoline pumps, as well as an air pump.

Brick has been used for general construction, with eight-inch walls on three inner sides and 12-inch piers on front side. The trim of concrete stone or terra cotta gives a pleasing effect of light and shade. The floor is of concrete, finished with six-inch tile as shown, laid up with a white joint.

The roof is of concrete slab with tar and gravel finish, properly drained to insure dryness at all times. The foundation is of concrete, 12 inches thick, with spread footing as shown. This structure would cost about $1200.

A slight variation will be found in design No. 3, owing to the fact it is what is called free standing, permitting a treatment not always permissible in this sort of building. It has a pointed roof and overhanging cornice, supported on large wooden brackets.

The general dimensions are 12 feet wide and 16 feet long, with a frontage on a main street. The entrance is through two doors, one at either end. A large window affords an abundant supply of light, with transoms arranged for ventilation. The equipment includes three oil pumps.

A large show case for exhibiting parts and accessories is provided for, and in the basement there is room for storage purposes. The basement is reached through a trap door in the floor by descending a winding staircase or ladder. There is a toilet and washroom in the basement. On the sidewalk are two gasoline pumps with an air pump.

The construction calls for a concrete foundation, 12 inches thick with spread footing as shown. The floor is of reinforced concrete, covered with six-inch tile laid in white cement mortar. The super-structure is of brick, with 12-inch walls and eight-inch panels as shown on both sides of the doorways.

There is a concrete base course formed by extending the foundation above grade and finishing with concrete stone effect. There is a wood cornice with brackets and a copper roof on wood frame cast iron final. The approximate cost would be $1000.

In design No. 4 the station is circular in shape, giving it individuality. The general type of architecture is classic, with a combination of brick and terra cotta. The cornice is somewhat ornate, relieving a coldness that might arise without a slight play of shades and shadows, and this is executed in terra cotta. There is a pyramid roof. The approximate cost would be $2000.

TYPES OF MOTOR VEHICLES TO BE RETAINED BY ARMY.

Brigadier General Drake, Motor Transport Corps, announces that the following types of trucks and passenger automobiles will be retained by the army for its use:

Type 1: Passenger cars: Medium, open, Dodge; medium closed, Dodge; heavy, open, Cadillac; heavy, closed, Cadillac.

Type 2: Light delivery truck: ½ ton light delivery, Dodge; ¾ ton, White; ¾ ton GMC.; 1 ton, White, Tebo.

Type 3: 1½ and 2 ton trucks: White, Garford, Packard.

Type 4: 3 and 4 ton trucks: Standardized "B;" Riker; Mack, 3½ ton trucks; F. W. D.

Type 5: Five ton trucks or over: Mack, 5½ ton trucks; Mack, Special Engineer.

Type 6: Motorcycles: Harley-Davidson.

Type 7: Ambulances: GMC.

Type 8: Trailers, cargo: Trailers, ¾ ton, tank, water, 180 gallons; trailers, ¾ ton, ration and spare parts; trailer, 1¼ ton, 2 wheel, light aviation; trailers, 1¼ ton, 4 wheel, cargo; trailers, 1¼ ton, 4 wheel special bodies; trailers, 3 ton, gun and cassion; trailers, 4 ton, 4 wheel, cargo; trailers, 4 ton, 4 wheel, special bodies; trailers, 5 ton, tire press; trailers, 10 ton, portable crane; trailers, 10 ton, tank corps with ramp.

Type 9: Trailers, kitchen; trailers, 1½ ton, 2 wheel, kitchen, A and B type.

Type 10: Trailers, machine shop: trailers, 4 ton, 4 wheel, machine shop, spare parts.

Bicycles: Westfield.

None of these machines will be placed in the surplus equipment. The statement says specifically that these cars are not placed as army standards at the present time.

APCO MANUFACTURING CO. BUILDING NEW PLANT.

Work has been started on a new machine shop and assembling building for the Apco Manufacturing Co., Providence, R. I., maker of the Apco equipment for Ford cars. The building is to be of fireproof construction with a maximum of light obtained by liberal use of glass set in steel frames. When this building is completed it will more than double the present floor space. It will be ready for occupancy early in October.

HOLT FIRST TRACTOR TO REACH PIKES PEAK SUMMIT.

The first tractor to make the ascent of Pikes Peak, the famed summit in Colorado, was a Holt "Caterpillar," which had been exhibited at the Denver Farm Tractor Demonstration, and driven from Denver to the top of the mountain and back to Denver, a distance of 235 miles. The last two miles of the ascent and for the same distance returning the tractor plowed through a snow storm.

New Twin City Truck Hauls Tractor to Wichita

What was probably the most novel introductory of a new truck ever attempted by a manufacturer without a campaign of advertising was made by the Minneapolis Steel and Machinery Co., Minneapolis, Minn., when a machine which the company is to produce commercially was driven from the factory to Wichita, Kan., loaded with a tractor that was exhibited at the National Farm Tractor Demonstration July 14-19.

The company has built farm tractors since 1910 and these machines are one of the standard makes of the industry. Tractor manufacturing is one division of the company's business, for besides building Twin City threshers it produces structural steel in large volume. That the company purposed to build trucks was unknown until recently, and thus far no statement has been made concerning the mechanical details of the machines.

As the company was one of the principal exhibitors at Wichita, and as its initial market for trucks will be in the Central West and Northwest, the national demonstration was believed to be the opportune time for interesting both farmers and dealers.

Then the plan determined was to deliver a Twin City 12-20 tractor, the 16-valve engined machine brought out last year, to each branch, beginning with that at Wichita. Another idea was to stimulate the interest of farmers in shipping by truck. The truck and tractor, as shown in the accompanying illustration, were sent out to make the drive by easy stages, the crew being instructed to make as many plowing demonstrations en route as were practical. The drive was without accident and Wichita was reached when the city was crowded with visitors.

The company maintains that the undertaking served three purposes, demonstrating the quality of the new truck and the utility of the tractor, and awakening interest in truck transportation.

REFLEX IGNITION CO. IS NOW IN NEW HOME.

The Reflex Ignition Co., maker of Reflex spark plugs, is now in its new plant on West 106th street, Cleveland, O. The factory is spacious and modern in every respect, and means still better handling of Reflex users and dealers' needs. Test benches and plug proving apparatus are placed in positions where this important work can be done with the best results. A spur on the New York Central truck line permits easy shipping.

Charles Clifton, president of the National Automobile Chamber of Commerce, has appointed the following truck show committee to handle the matter of commercial vehicle exhibits: M. L. Pulcher, Federal Motor Truck Co., chairman; David S. Ludlum, Autocar Co., and A. J. Whipple, Diamond T Motor Car Co.

NEW VESTA SERVICE STATION AT CHICAGO.

The Vesta Accumulator Co., Chicago, has purchased the building and land at the southwest corner of Michigan avenue and 29th street, now occupied by the Chicago Motor Club. The company will immediately begin the destruction of the present building and erect a service station, which will be the finest equipped and the most elaborate in the country.

The purchase was made necessary by the large increase in business during the past year. The company had to have more room at the factory, 2100 Indiana avenue, and the entire service department will be moved to the new location.

With a frontage of 145 feet on Michigan avenue and 180 feet on 29th street, there will be 23,100 square feet of space devoted entirely to battery service. More than 100 cars can be accommodated at once. Cars will drive in the large entrance, receive service and drive out through an exit, both of which will be on 29th street.

In addition to complete equipment for charging and repairing and rebuilding batteries, the new station will have rest rooms for motorists. Special quarters will be provided for the ladies, with telephones, stationary, magazines and other conveniences. These rest rooms and the large show rooms will front on Michigan avenue.

ENGINE CASTINGS CO. BUILDING.

The Motor Castings Co., Milwaukee, Wis., is breaking ground for a new foundry in West Allis. The new corporation is capitalized for $100,000 and was organized by Gustave Anderson, formerly works manager for the Wisconsin Aluminum Foundry Co., Manitowoc; Arthur C. Swallow and John S. Wilson. The concern will specialize in gray iron and semi-steel castings, the principal products to be cylinder castings, flywheels, crankcases and brackets. Work on the plant will start at once and be pushed so that the first metal will be poured about Sept. 1. One cupola will be provided with a capacity of 300 tons a month. The building will be 111x180 feet, leaving room for a second cupola later.

LEITELT IRON WORKS REORGANIZED.

The Leitelt Iron Works of Grand Rapids, Mich., has recently been reorganized with a capital stock of $250,000 and is about to incorporate. David C. McKay, who has been a member of the concern for the past four years, is president. The other officers include: Vice president, F. J. Zylman; secretary and general manager, F. H. Meyer; treasurer, G. W. Sachett. The directors will consist of the officers of the company and Charles B. Kelsey, chairman; A. L. Murray and S. O. Fink.

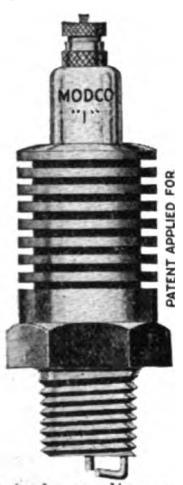
The Taplex Corporation, 87 35th street, Brooklyn, N. Y., announces that it has added to its lines a manifold heater for Ford cars and a radiator heater for all makes.

Digitized by Google

ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

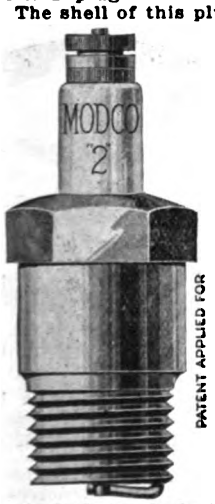
"Modco" Spark Plugs. "Modco" Spark Plugs differ from standard type plugs in their construction. The No. 1 plug is made in two parts, so the porcelain is as far as possible from the intense heat of the engine.

The grooves around the shoulder of the porcelain keep it at lower temperatures



and insure it to be cooling gradually. The spark points are high grade material tested to a melting point of approximately 2900 degrees Fahrenheit. The porcelains are renewable by unscrewing the two parts.

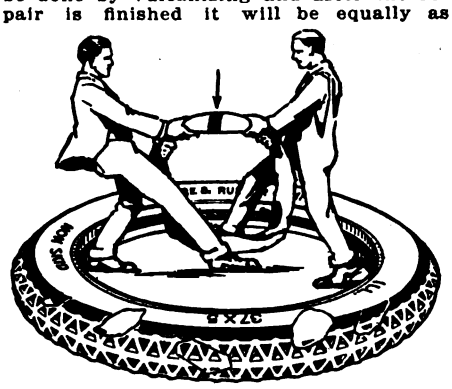
The manufacturer claims to have created a large demand for the plugs from automobile, truck and tractor engine manufacturers. No. 2 plug is a smaller plug than No. 1. The shell of this plug is made



of one inch stock, has a body that can be used in any make of engine.

Manufactured by the Modern Comb and Device Co., Dayton, O. Special prices to the trade upon request.

Superfix Rubber Repair. Superfix Rubber Repair is a cement-like substance contained in a can having an air tight cover. It may be safely carried in a tool box for use on the road or may be used by tire and tube repairers in shops. It is claimed by the manufacturer that it will mend punctures or blowouts. The work can be done by vulcanizing and after the repair is finished it will be equally as



strong as a repair made with a vulcanizer. It is claimed that neither tools, heat, acid or skill is required to use Superfix successfully and that friction, heat or cold does not effect it. The time required to use Superfix is from five to 20 minutes, according to the size of the tear or puncture, and a tube can be ready immediately for the road in the case of a small puncture and may be inflated at once.

Manufactured by the Superfix Rubber Co., Elyria, O. Price, $1 per can.

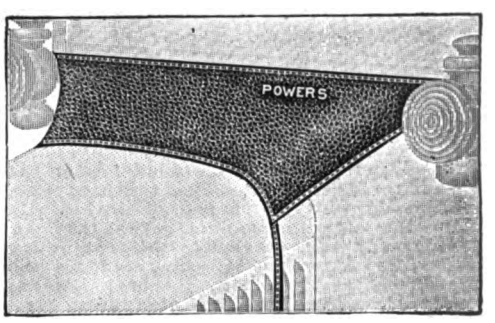
Dixon's Graphite Non-Leak Grease No. 680 and Gear Oil No. 675. Dixon's Non-Leak Grease No. 680 is prepared for use in differentials, and by its use the manufacturer claims that troubles such as grease working out around the hub bands and the brakes are prevented. The consistency of this grease is rather heavy and it should only be used in extreme cases where lighter greases or oils will not serve successfully. It cannot, however, be used in transmissions.

Gear Oil No. 675 is a very light bodied gear lubricant for use in transmission and differential cases designed for light oil lubrication. Generally speaking, it

should be used only in cases fitted with plain bearings. The manufacturer especially recommends this oil for worm drive trucks as it readily follows the gears and has unusual lasting qualities and will keep cool under heavy loads.

Manufactured and sold by the Joseph Dixon Crucible Co., Jersey City, N. J. Prices on application.

"Powers" Coil Protector for Ford Cars. The "Powers" Coil Protector for Ford cars consists of a suitable covering for the dash, fastened at the bottom of the windshield, by loosening the two screws, slipping the protector in place and tight-



ening the screws. The manufacturer claims that this shield will absolutely protect the coils and wiring in the event of rain. Once in place the protector remains a permanent fixture that adds to the appearance of the car.

Manufactured by the Powers Manufacturing Co., Waterloo, Ia. Price, 32-ounce rubber drill, $1.50; 28-ounce enamel drill, $1.25.

The Victor Gasket Assortment for Ford Engines. The Victor Gasket Assortment for Ford engines is put up in a neat show case carton, containing cylinder head gaskets, cylinder head outlet gaskets, cylinder head inlet gaskets, carburetor flange gaskets, inlet and exhaust pipe gaskets and transmission drain plug gaskets.

The Victor boxed gasket assortments for Ford cars have been sold on the market for several years and thoroughly meet

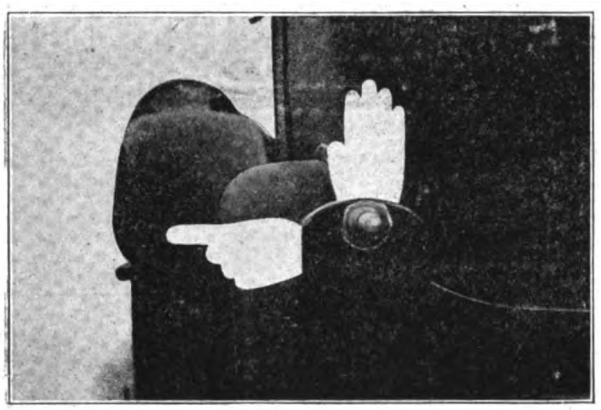
the requirements of dealers and garage repairers. The manufacturer claims these gaskets have become universally adopted.

The gaskets are fully guaranteed against all defects and imperfections. None are genuine unless stamped with the Victor trade mark, which insures their superiority and guarantees perfect fit for all models of Ford cars.

Manufactured by the Victor Manufacturing and Gasket Co. Troy and 21st Sts., Chicago, Ill. Prices and literature on application.

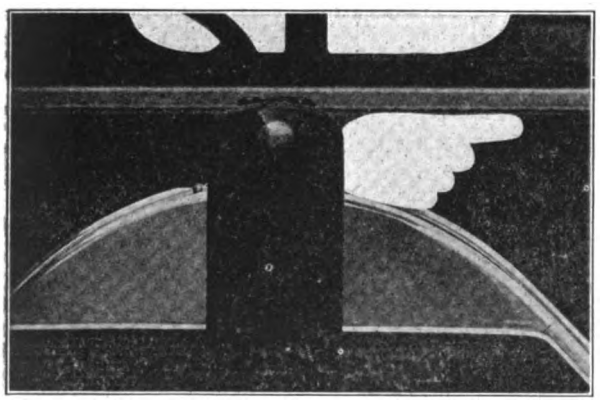
Digitized by Google

"Safdicator" Signal System. The "Safdicator" is a device for signaling; either at the front or rear of the car, or both. It consists of two boxes, one placed on the filler spout of the radiator, measuring 3¼ by 8½ inches and containing two hands, indicating the direction, right or left, for the benefit of a traffic officer, an approaching car or pedestrian. The other box, measuring 4½ by 8½ inches, is mounted on the left rear fender or on a bracket on the left rear side and contains three hands. Two of the hands indicate the direction right and left and work simultaneously with those in the front box on the radiator filler spout, being operated by a push and pull switch placed conveniently on the steering column. The third or stop hand is connected to the foot brake, and is automatically operated by the slightest pressure upon the brake, warning any car behind of an intention to stop.



In each box is a light, connected to the tail light circuit, and when the tail lamp is lighted the circuit is on in the "Safdicator." The lamp of the "Safdicator," however, does not light until the hands are thrown to an indicating position, when they are illuminated. The boxes are aluminum, finished in black enamel and the hands are aluminum, enameled white.

The hands are mounted on ball bearings and all lever connections are hardened roller bearings. The current consumption, the manufacturer claims, is less than that required for a side or tail light, as the device is only in operation while the engine is running.



A branch block mounted on the engine side of the dash handles all the wires necessary for the operation of the signal, and this branch block is amply equipped with the necessary fuses. Each of the hands, as well as the battery wires, are fused, and in case of trouble may be easily traced.

Manufactured by the Universal Safety Corporation, 624-28 East Cerro Gordo St., Decatur, Ill. Prices and literature on application.

Pronto Spark Plugs. Pronto Spark Plugs are made to a new principle for spark plug construction, the plug having an intensifier unit. The Pronto plug consists of a one-piece shell or bushing with the center electrode surrounded by a mica insulator, the mica being wound laterally instead of in sections. The intensifier is placed at the top of the electrode and is a part of the plug. It is claimed by the manufacturer that Pronto plugs and intensifiers are practically trouble proof and in the event of ignition failure the driver may forget the plugs and look for the cause elsewhere. With the intensifier the driver can note whether the plugs are firing without removing them from the cylinders. The plugs are from the best materials, in sizes and types for all cars, trucks and tractors.

Manufactured by the Pronto Manufacturing and Sales Co., 706 South 24th street, Omaha, Neb. Price, $1.50 each; tractor size, $2.

Shurnuff Spark Plug. The Shurnuff Spark Plug differs from other types of plugs in that an air inlet is provided at the side of the plug, for the admission of air on the downward stroke of the piston, supplying oxygen to the mixture. The manufacturer claims that this added air will lessen fouling of the plugs, increase mileage, develop power and decrease carbon. It is claimed that the air passing into the plug breaks a gas pocket which forms above the firing points, as it is the free oil in the unburned mixture that accumulates on the insulator, attracts free particles of carbon and causes other type plugs to foul. On the return stroke of the piston the flow of air is automatically shut off by a ball check at the inlet, which insures full compression.

Manufactured by the Shurnuff Manufacturing Co., 3147 Locust St., St. Louis, Mo., Dept. J. List price, $1.50 each.

Weaver Auto Oiler. The Weaver Auto Oiler consists of a self-measuring container having a handle for carrying and a spout for delivering the oil. With it the service station repairer can supply oil to motorists without waste and accurately measure the oil placed in an engine oil reservoir.

The spout is heavy brass and is adjustable to deliver oil at any angle. The oil is released from the container by a button located conveniently to the thumb of the operator. A slight pressure releases the oil and removing the pressure shuts off the flow, the spout automatically draining itself.

The volume discharged is accurately shown by a direct float gauge operating within a graduated brass tube. The height of the tube is adjustable and the figures may be read from either side. The Weaver auto oiler is constructed from heavy galvanized iron and has a capacity of two gallons. Shipping weight, 10 pounds.

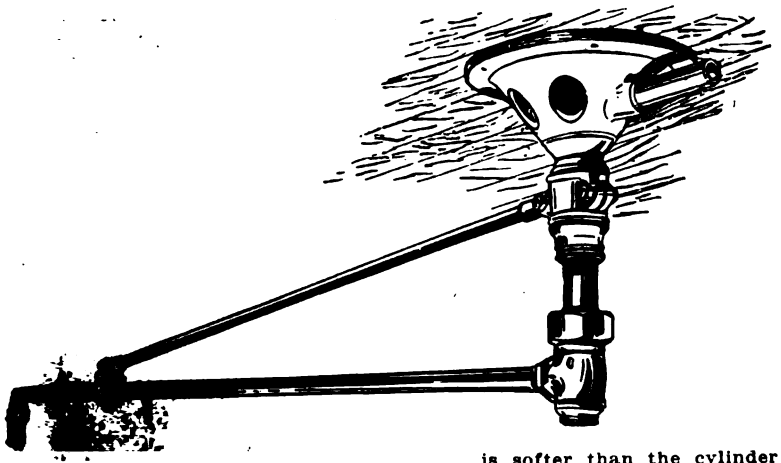
Manufactured by the Weaver Manufacturing Co., Springfield, Ill. Price, f. o. b., $8.

Hart's Ford Locking Device. Hart's Locking Device for Ford cars consists of a heavy cold rolled steel bar that is attached to the spark and throttle levers and fastened by a padlock. An opening at one end of the bar is slipped over the spark lever and in the forked end holes are drilled, through which a padlock is locked. The manufacturer claims that should a thief try to cut a bar and steal a car he would be sure to attract attention.

The device is heavily nickel plated. They are packed in attractive boxes (containing 24 separate locks in separate cartons) for counter display. Padlocks are supplied by the manufacturer when desired, the price depending upon the quality of the lock.

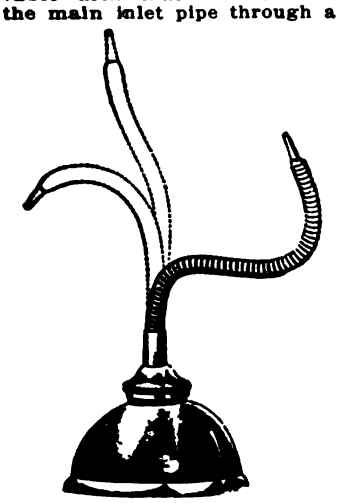
Manufactured by Hart & Co., 3 Appleton St., Boston, Mass. Price, each, 75 cents without padlock.

Digitized by Google



All-Way Oiler and the Deluxe Overhead Vehicle Washer. The All-Way Oiler is an oil can with a flexible steel spout that may be bent to any desired angle or position without breaking or obstructing the flow of oil. Simply bend the spout to the part to be oiled and use the can in the ordinary manner. The All-Way oiler is fitted with a device at the end of the spout with which it may be cleaned in a second. The same device prevents the oil flowing too freely, preventing waste. The All-Way Oiler is strongly made of copper-plated steel, in different sizes.

The DeLuxe Overhead Vehicle Washer is a fixture that can be fastened securely to the ceiling over a wash stand and has a movable arm that carries the water from the main inlet pipe through a suitable connection in the swivel joint to end of arm, at which point hose is attached.



The device is made of the best materials and is guaranteed by the manufacturer. Claim is made by the manufacturer that the swivel joint is positively non-leakable.

Manufactured by the Famasco Distributing Co., 604 Main St., Buffalo, N. Y. Prices and literature on application.

Steel Spring Piston Rings for Ford Engines. Steel Spring Piston Rings for Ford cars have steel spring inserts fitted under the rings in the grooves of the pistons. With this construction the manufacturer claims that a constant, even pressure is exerted on the rings which fit the cylinders tighter, insuring greater compression and preventing loss of compression.

In fitting the springs no filing is required and claim is made the 12 rings may be easily fitted in the piston grooves in 15 minutes. As the metal of the rings is softer than the cylinder walls, better bearings will result than where conventional rings are used.

Each steel spring ring takes care of .025 wear, making it the equivalent of six ordinary rings (zero, .0025, 005, .010, .015 and .025), and greatly simplifying the stock problem for the dealer as well as giving greatly lengthened service to the customer.

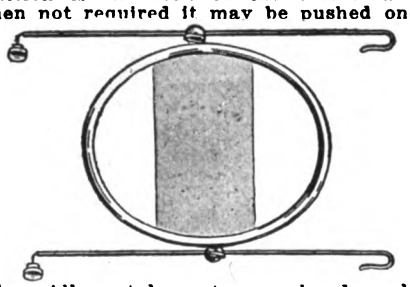
Manufactured by the Steel Spring Piston Ring Co., 2 Columbus Circle, New York City. Guaranteed absolute satisfaction or money returned. Prices and literature on application.

"Fracto" for Preventing Headlight Glare. Fracto units are constructed of glass and are attached to headlight bulbs at the rear, fit around the lower half of the bulbs. The side of the Fracto next to the bulb is plain glass, while the opposite side is a ribbed formation that will diffuse the light rays back and into the lamp reflector.

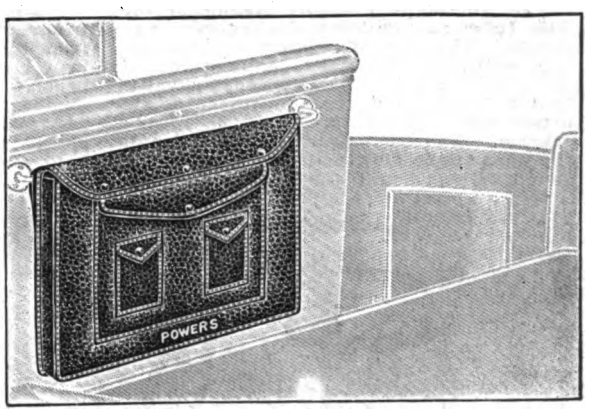
The manufacturer claims that when a bulb has been properly focused and a Fracto is installed the light rays pass through the Fracto as through a prism and are directed down and onto the road so that the light of the head lamp meets the requirements of the law.

Manufactured by the Fracto Specialty Co., 161 Massachusetts Ave., Boston, Mass. Prices on application.

Auto Antiglare. The Auto Antiglare is a device of glass and metal that is made to fit any windshield. It fits over the top of the shield and may be placed in any position desirable. When in use its logical position is in front of the driver and when not required it may be pushed one side. All metal parts are handsomely nickel plated and polished. Small vacuum cups hold the device firmly in place at the bottom and the glass may be raised or lowered to suit the convenience of the driver. May be used either on the right or left side as desired.



Manufactured by the Portland Sales Co., 15 Chardon Street, Boston, Mass. Price, $2.



"Powers" Robe Rail Pocket. The "Powers" Robe Rail Pocket is suspended from the robe rail of a car and serves for storage for small articles, such as calling cards, driving glasses, ladies' veils, gloves, etc. The case is made of a good grade of artificial leather and is bound with the same material, double stitched. Equipped with snap buttons and extra pockets. Size, 18 by 24 inches, with three-inch gusset. Weight, 1¼ pounds.

Manufactured by the Powers Manufacturing Co., Waterloo, Ia. Price, $6.

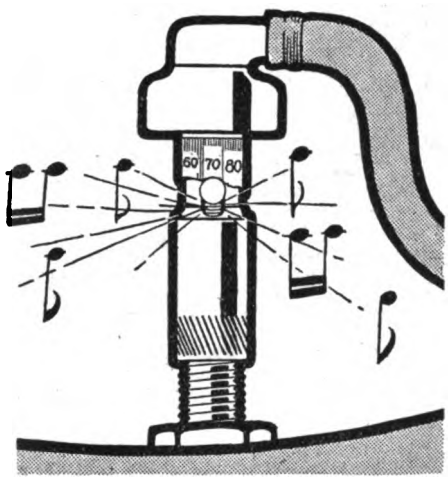
Twin Fire Spark Plug. Twin Fire Spark Plug electrodes are so made that a plug gives two positive sparks at the same instant. The center electrodes, through the porcelain insulator, is turned over in the usual manner. At the bottom of the insulator is an intermediate electrode or ring fitting the end of the porcelain. The point of the center electrode is separated from this intermediate electrode. The second or ground electrode is fastened to the shell of the plug and is separated from the intermediate electrode. When in operation the high-tension current passes down the center electrode to the bent point at the end, jumps the gap to the intermediate electrode and is carried across to the opposite side, where it jumps again to the electrode leading to the shell of the plug and to the ground of the engine. In this manner the plug fires in series order and gives two positive sparks.

The manufacturer claims that soot, carbon or oil will not prevent the plug firing and if by chance carbon should collect on the points it would be blown off by the second set of points firing. The lead pencil test is given as proof of this statement.

Manufactured by the Twin Fire Spark Plug Co., Detroit, Mich. Made in ½, ⅝, 18 regular and ⅝ extension sizes and metric. Price, $1 each in the United States. In Canada, $1.25.

Digitized by Google

The Automatic Pressure Regulator for Tire Inflation resembles the ordinary tire gauge. The movable collar around the top, with which it is set for any desired pressure, controls a ball and spring valve that will not allow the admittance of air after the desired pressure has been reached. The excess air escapes through the port at the side, emitting a whistling sound, giving audible evidence that the

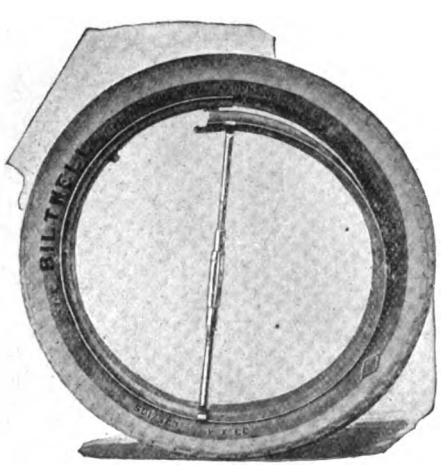


pressure is right. The maker states that after the regulator is once attached and set it needs no further attention. The hose connection is made in the usual manner.

The manufacturer claims that by using the pressure regulator many of the tire troubles so common may be eliminated, resulting in fewer blowouts, greater mileage per gallon of gas, longer tire life and lower repair bills.

Manufactured by the Automatic Safety Tire Valve Corporation, 1765 Broadway, New York. Prices and literature on application.

The Universal Split-Rim Contractor and Expander is manufactured for the use of passenger car owners and tire repairers. The manufacturer claims that with its aid it is possible to remove the most stubborn tire. The tool is in three sections and is carried in a neat roll in the tool



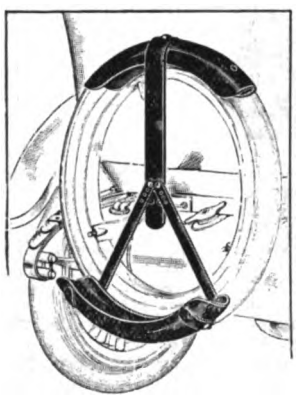
box. It consists of two rods, having one end of each threaded, the opposite end formed in the shape of a hook for inserting over the edge of the rim at opposite points.

A center section is screwed onto the threaded ends of the rods and acts as a turn buckle, drawing the two ends toward the center of the rim. This action causes the rim to be separated at the split portion, allowing the tire to be easily removed from the rim.

Manufactured by the Moss-Ochs Co., 9801 Manor Avenue, Cleveland, O. Price, $2.

2-R-3 Tire Carriers for Fords and Other Passenger Cars are manufactured from the best of material throughout and by their method of construction and suspension enable the motorist to carry a number of extra shoes. These carriers may be fastened at the rear of the car or placed upon the running board, and will hold one, two or three tires. The construction of the carriers is such that they may be disassembled and packed away in a comparatively small space.

The cradle sections fit about one-quarter of the circumference of the tires, and the carriers are adjustable for wider tires by



means of a suspension bar provided with a series of holes to receive the two narrow bars, thus allowing adjustment for any size tire. The carriers fit any car, the manufacturer claims, and provision is made for the carrying of one extra tire.

Manufactured by the International Stamping Co., 400-412 N. Leavitt Street, Chicago, Ill. Prices, model S, from $2 to $3.50; model Y, from $3.50 to $6. License brackets and tail lights extra. Running board side carriers for car or truck, from $4.50 to $8. Tire carriers and spring bumpers from $6.50 to $17.50.

Tipco Spark Plugs differ from the usual spark plug construction in that two porcelains are employed instead of one. The manufacturer explains that since the introduction of the internal combustion engine spark plug manufacturers have been working and experimenting in an effort to find a porcelain that would withstand two temperatures under pressure. It is claimed that the Tipco Spark Plug meets the two different temperatures with two different porcelains.

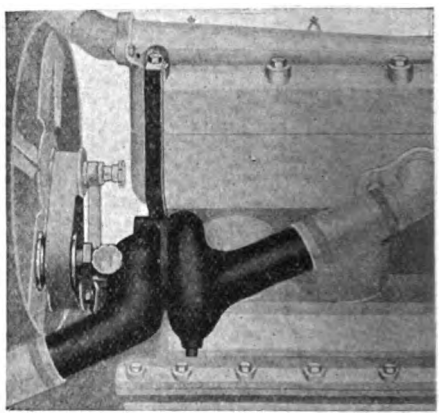
The shell of the plug is the regular threaded type made of steel. A threaded bushing screws into the top of the shell, having a porcelain insulator cemented to

its inner surface with the electrode passing through its center. Over this porcelain fits a porcelain shell, held in place by a set nut at the top of the porcelain and threaded to the center electrode. Provision is made for an air space between the upper and lower porcelains so that the temperature of the lower will not affect that of the upper.

Manufactured by the Ignition Plug Co., 1411 West Broadway, Louisville, Ky. Prices and literature on application.

The Fond Du Lac Circulating Pump for Ford Cars consists of a centrifugal water pump fastened by suitable brace iron to the top of the engine and the front of the base, rigidly supporting it at the side and in line with the hose passing from the radiator at the bottom to the water jacket intake at the side of the engine. It is driven by the fan belt from the crankshaft pulley, insuring, the maker claims, a positive and even circulation of the water while the engine is in operation.

The manufacturer states that the pump is constructed of the best of semi-steel and bronze, perfectly machined, and is fool proof. The parts are made to a templet and are interchangeable. The



pump is made specially for engines using kerosene, gasoline or tops. It is also constructed for use on stationary or portable engines, but made principally for the Ford engine. It is easily installed in a few moments time by any one handy with tools, as it is not necessary to bore holes for its installation. It weighs eight pounds.

Manufactured by the Fond Du Lac Tractor Corporation, Fond Du Lac, Wis. Prices and literature on application.

The O-So-Easy Hand Cleanser for the Motorist, the maker states, is made from a pure vegetable oil base, combined with products of the highest quality, and is for the use of the motorist after working about the car. The manufacturer claims that it will remove dirt, oil and grime without burning or scratching the skin or injuring it in any way, and that O-So-Easy contains no injurious chemicals that

clean by corroding action, but cleans because it is a soap.

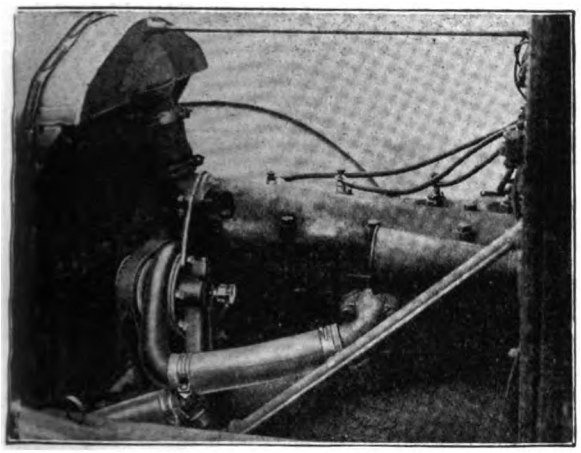
It is also a cleanser for enamel ware, bath tubs, porcelain sinks, paint, floors and silver.

Other articles made by this company include nickel polish, a mohair top dressing, a brass polish, a leather top dressing, a cushion dressing, a tire paint and an automobile soap. All articles are guaranteed.

Manufactured by the Boston Blacking Co., East Cambridge, Mass. Prices to the jobbing trade on application.

Digitized by Google

Atlas Special Pump for Ford Cars. The Atlas Special Pump for Ford cars is a centrifugal type that is attached to the water connection at the top of the engine by a bracket. To attach the pump the two screws that hold the water connection to the engine head are removed. The connection is slipped apart, the gasket taken out, the bracket put in place with a gasket each side and the water connection is rebolted with two special bolts supplied with the pump. The pulleys of the pump, fan and crankshaft should line up, as the same belt drives the fan and pump from the crankshaft. This may be accomplished by bending the brackets slightly till they line. Hose connections are made at each side of the pump.



It is claimed by the manufacturer that overheating is prevented by the use of this pump; that steaming and evaporation are reduced to minimum, and that higher percentages of anti-freezing solutions may be used. The pump is made of highest grade of materials and is equipped with bronze bearings.

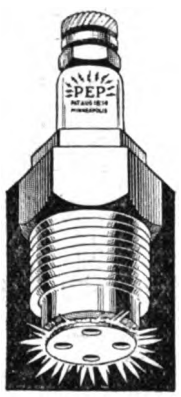
Manufactured by the Atlas Brass Foundry Co., Columbus, O. Prices and literature on request.

The Electric Spotlight No. 100 is a spotlight with universal bracket for attaching to the windshield of any car. It has a quickly adjustable focus, and a positive key switch in handle. It is equipped with a waterproof cord for attaching to the lighting system of the car and is fitted with a condensing mirror on the side of the lamp. It has a silver plated parabolic reflector, one-piece heavy steel body, bayonet type door nickel plated and made for either oval, round or square windshield frames.

The manufacturer claims that this lamp is handy for reading signs, or driving, etc., and may be quickly changed from one focus to the other by merely changing the focus adjustment.

Manufactured by the Jno. W. Brown Manufacturing Co., Columbus, O. Prices and literature on application.

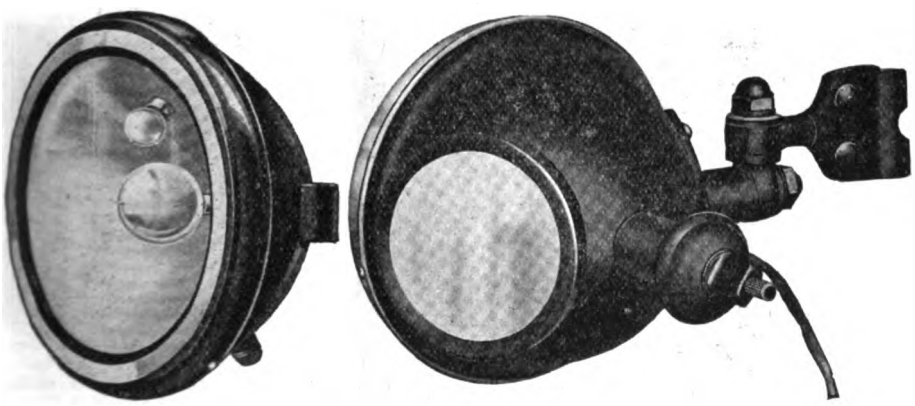
The Pep Self-Cleaning Spark Plug offers a new feature in spark plug construction, the manufacturer claims. The disc electrode, covering the lower end of the Pep, gives two inches of sparking surface, and the size of the disc causes the electric current to expand, giving it greater volume. The result, the maker states, is a ring of large hot sparks all around the outer edge of the disc, giving better combustion, even on a poor mixture or with a weak battery or magneto current. There is much less pull on the battery or magneto and the engine will show more snap and pep, according to the manufacturer.



It is further claimed that the Pep spark plug is self-cleaning because the ring of hot sparks all around the edge of the disc is constantly loosening ani burning away any particles of carbon which may form and because of the continuous back and forth movement of the gases from alternate compression and explosion, keeping the carbon and oil from stopping in one place long enough to become fixed.

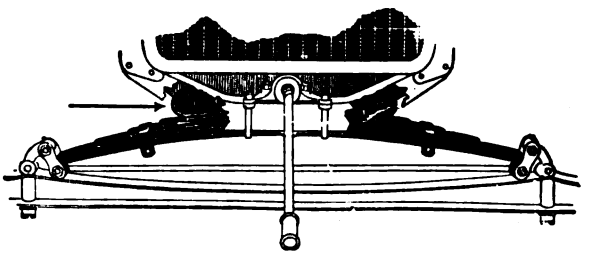
Manufactured by the Pep Spark Plug Co., 932 McNight Building, Minneapolis, Minn. Price, $1.

The Electric Side Lamp Model No. 510 for Ford Cars is an attractive side lamp of new design, harmonizing with the contour of the headlights. It consists of a heavy rolled door that is easily removed and has a positive set screw lock. The interior of the lamp is easily accessible, and is fitted with a polished silver plated reflector with adjustable focusing device and four candlepower 6-8 volt Mazda bulb. This lamp is usually supplied with a combination prop, but is regularly supplied with stud to fit 1915, 1916, 1917 and 1918 Ford cars. The regular finish is black enamel or combination black and nickel front.



Manufactured by the Jno. W. Brown Manufacturing Co., Columbus, O. Prices on application.

The Saveur Ford Front Spring for Ford Cars consists of the regular Ford front spring having an extra spring leaf attached at the center of the regular spring, with the ends bent in the form of a loop. When in use the springs take position at each side of the bottom of the radiator, their purpose being to help out the Ford spring when carrying heavy loads. When the spring is deflected three-fourths of its arc the open loop comes into contact with the V angles of the frame so that the open loops absorb the extra heavy thrust of the spring and, the manufacturer claims, prevent the spring from breaking.

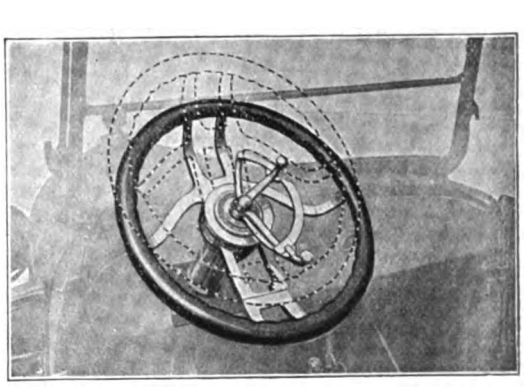


The Saveur spring is uniformly oil tempered from end to end by a new process, and graphite is placed between the leaves for lubrication. The spring is guaranteed against breakage and a new spring will be supplied if one is found faulty.

Manufactured by New Era Spring and Specialty Co., Grand Rapids, Mich. Prices on application.

The Monarch Auto Lock consists of a locking device attached to the steering post of the car, having a wheel that in the locked position is forward of the driving position. The lock is composed of a Yale cylinder and a pair of Yale keys. The lock is made of aluminum alloy, while the center piece, called the driving lug, is composed of red brass. The space between the jaws below the hub is much wider than between the driving jaws when the wheel is on center in the driving position. When the wheel is pushed forward the space being so much wider below, it cannot grasp the driving lug. In this manner the wheel is entirely disconnected from the steering post and it is impossible to drive the car when the steering wheel is pushed forward and disengaged from the steering post.

The only time that the lock can be disassembled is when the wheel is in the driving position. All bolts and nuts that secure the top cap are concealed when the wheel is in the locked position.



The maker claims that it is impossible to steal a car locked with the Monarch as with its method of locking a thief could not get away with the car either by towing or operating it.

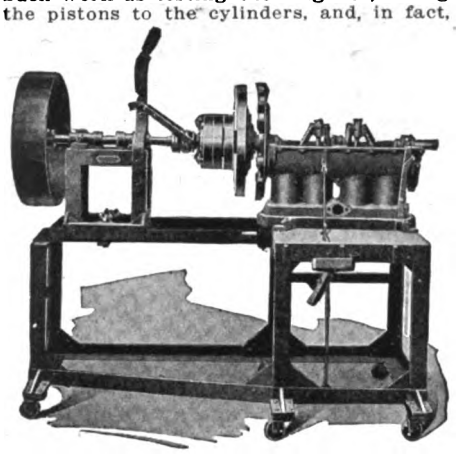
The tilting wheel effect is claimed to be an advantage in the case of a stout person, as it allows a roomy passage behind the wheel when entering.

Manufactured by the Monarch Auto Lock Co., 357-367 Market Stret, Kenosha, Wis. Prices and literature on application.

Digitized by Google

The F. & M. Burning-In Stand consists of a combination burning-in stand, engine work bench and differential stand all in one unit. By its use in a service station or garage much valuable time may be saved, the manufacturer claims. The stand is mounted on rollers so that it may be wheeled easily to any part of the shop when loaded, and when empty is light enough to be carried by two workmen. It is made from angle iron bolted and riveted and well braced so that it is unusually strong. It may be placed in front of the car when an engine is to be removed, the engine placed upon it and fastened, the stand and engine moved to the work bench, connected to the power and the bearings burned-in.

In work of this nature the stand is rigidly held to the floor by a special fastening, as is also the engine to the stand. Such work as testing the magneto, fitting the pistons to the cylinders, and, in fact,

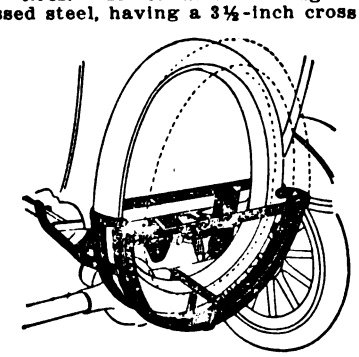


all kinds of work necessary in connection with the engine, may be done while the engine is on the stand.

For differential repairs, special brackets are provided that are placed at one end of the stand, including a drip pan for the oil, allowing the repairs to be done quickly and easily without the repairer having to move from standing position. The manufacturer claims that the stand is a time and labor saver, and that by its use more and better work may be turned out in a given time than by any other method.

Manufactured by the Hastings Manufacturing Co., Hastings, Neb. Prices and literature on application.

The New Era Cradle Carrier for Ford Cars consists of a steel frame easily attached to the running board of the car or at the rear, and will accommodate one or two tires. It is made throughout of pressed steel, having a 3½-inch cross sec-

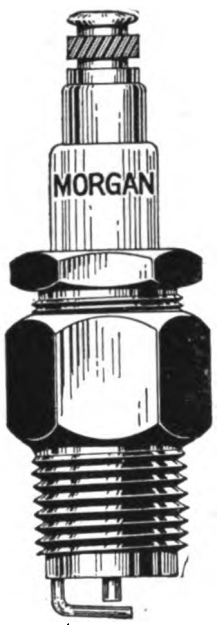


tion rolled to snugly fit the tread of the tire. It fits 30 by 3½-inch tires, plain or non-skid, and is suitable for tires mounted on demountable rims or casings only. The carrier is made either single or double. The rear carrier also provides for the attaching of the number and light bracket and is provided with a suitable cross bar suitable for locking the tire.

Manufactured by the New Era Spring and Specialty Co., Grand Rapids, Mich. Prices, No. 208, single, side, $4.20; No. 327, double, side. $6.30; No. 326, double, rear, $7.35; No. 207, single, rear, $5.25.

The Morgan Spark Plug for Passenger Cars is designed to meet the demand for a plug that has the desirable features, but not the faults common in spark plug construction. All shells and bushings are made from the best grades of cold drawn steel, machined and rigidly inspected many times during manufacture. The Morgonstone insulator is of a special grade of porcelain.

Electrodes are of the best grades of special heat resisting wire. The ground electrode, the maker states, is clinched into the shell from the inside in a manner that prevents motion, while the center electrode is firmly affixed in the insulator. The cap is attached to the insulator so as to be inseparable and forms a perfect

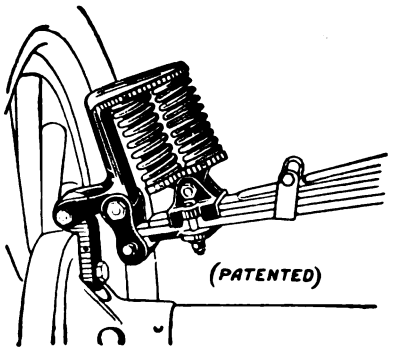


circuit with the center electrode. The terminals are closely threaded to fit the caps and the caps are easily placed with the fingers.

Manufactured by the Morgan Manufacturing Co., Inc., Keene, N. H. Price, "Standard" type, 75 cents; "400" type for passenger cars, $1; "500" type for trucks and tractors where a heavy duty plug is required, $1.25.

Champion Shock Absorbers for Ford Cars. Champion Shock Absorbers are a twin spring type and the manufacturer claims that by making use of eight coil springs instead of four he has prevented rebound, and that with this equipment a car rides as easily as a vehicle costing several times the price.

The Champion absorber is attached very easily and with practically no altera-

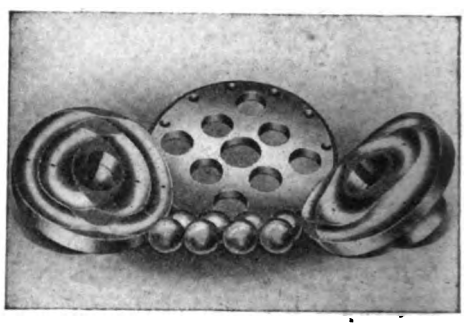


tions. Extra tools are not required for installing. The absorber is attached to the ends of the spring in the usual manner. A 10 days' trial is allowed and if not satisfactory the absorbers may be returned and the money will be refunded.

Manufactured by the Champion Shock Absorber Sales Co., Inc., Indianapolis, Ind. Prices and literature on application.

The Dorr Miller Differential for Fords and Chevrolet 490 Types is simple in design and construction. The danger of skidding is reduced because both wheels are locked when driving over slippery roads and the same amount of power is supplied to each wheel. In rounding corners the same effect is gained as when the regular differential is used.

The unit consists of a center disc having nine holes drilled in the face, into which are inserted nine steel balls. Fitting against this disc at each side is a grooved disc or camblock having an enlarged hub with key way for receiving the axle and key. The three discs and the balls are fastened together by retaining collars or casings and a flange for attaching the



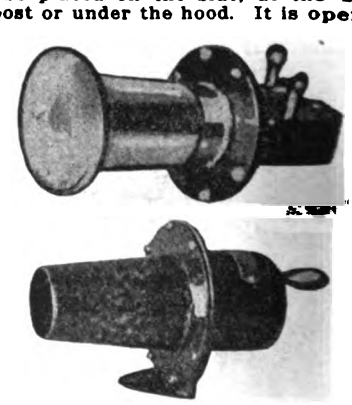
large bevel gear, making a unit that may be inserted in the housing of a Ford or Chevrolet 490 car with little labor.

The maker claims that the unit eliminates the necessity of differential replacements, that it is practically waterproof and also that greater tire mileage is possible as the wheels do not spin on slippery roads.

Manufactured by the Dorr Miller Differential Co., 90 West Street, New York, and Gas Building, Chicago; factory, Detroit. Price of unit, ready to install, $20 f. o. b. Detroit.

The Talking Horn is similar to the ordinary hand-operated horn, and is attached to the side of the car near the hand of the operator. Besides giving a clear warning sound, it may be manipulated so that its sounds will correspond somewhat to the human voice.

The company has added two new models to this line and they are known as the Torpedo No. 6 and the Leader No. 7. No. 6 may be placed on the side, at the steering post or under the hood. It is operated



by a strap and by using additional cord it may be blown by the occupants of the rear seat. It is equipped with suitable bracket according to its location.

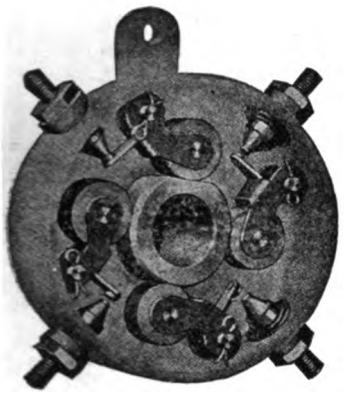
No. 7 is made of solid brass, nickel plated or black enamel, and is also equipped with a universal bracket to fit any model car. A larger ratchet is used, having more teeth in the gears so that 420 strikes at the central diaphragm button are had at a single turn of the crank. The horn is 12 inches in length and the manufacturer claims that it is possible to make it heard for a distance of a mile.

Manufactured by the Talking Horn Co., Middletown, N. Y. Price, $15.

Digitized by Google

The Duntley Magneto Break Timer for Ford Cars. The Duntley Timer is built to have all roller contact on the cam, having four rollers, one at each contact, as shown in the cut. The rollers operate on a solid cam having a flat surface on one side, the tops of the rollers being fastened by suitable pivots to the case. From the top of each roller holder or caster a small arm is suspended that makes contact with the end of the terminal post at the edge of the timer case. The timer contacts are an alloy metal that will not burn and carry the current from the rollers through the arms to the contacts, and thence to the terminal.

It is claimed by the manufacturer that with this timer it is possible to start a

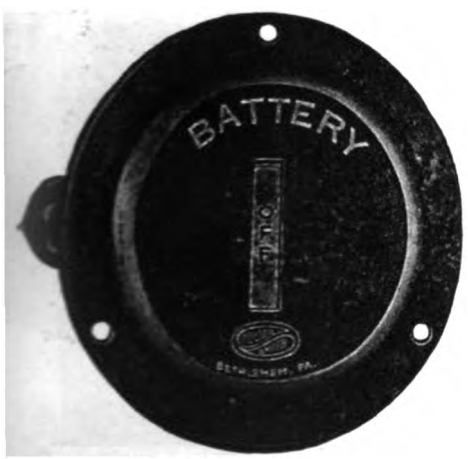


car easily in cold weather, as it delivers large sparks perfectly timed to all four cylinders; that no oiling is required and that it saves fuel and increases car mileage. It is guaranteed for the life of the car. Ten days trial is allowed and money is refunded if the timer is not satisfactory.

Manufactured by Jack Duntley, 1004 Michigan Ave., Chicago, Ill. Price, $5.

Universal "C. O. D." Indicator. The Universal "C. O. D." Indicator is designed to be placed on the dash of a car and shows at a glance whether the electrical system is operative. It may be used on any car with any system or any voltage is the claim of the manufacturer. It is a flush type, finished in black.

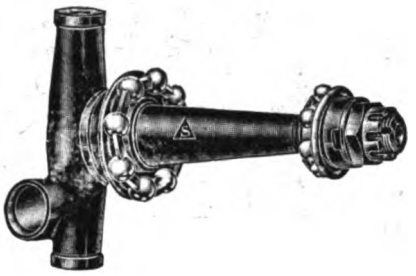
The outstanding feature of this instrument is its universal application. The ordinary indicator designed for lighting cir-



cuit work will not function when installed in a cranking circuit, as for instance, on cars equipped with single unit, single wire systems. This instrument is designed to fill this need and is especially suited for cranking circuit work. The C. O. D. Indicator is so-called because of the three indications on its movable barrel of "Charge," "Off" and "Discharge."

Manufactured by the Roller-Smith Co., 233 Broadway, New York City. Prices and literature on request.

Star Semi-Annular Bearings for the Ford and Chevrolet 490. Star Semi-Annular Bearings for Ford and Chevrolet 490 cars consist of two sets of ball bearings accurately spaced by a spacer, that are fitted to the front axles in the places of the regular bearings. The separator is punched from a single piece of stock and the openings for the balls are accurately



punched. After the balls are inserted in the spaces the lips of the spacer are turned in, holding the balls securely in place. The balls used are the Hoover chrome balls and are guaranteed.

It is claimed by the manufacturer that friction is reduced by the use of this bearing, that the car steers easier, that the balls are held in line better and do not zig-zag on the cones. It is further claimed that longer life to the cones is assured by their use, as the adjustment of the cones is better provided for.

Manufactured by Stevens & Co., 375 Broadway, New York City. Price, $2.50 a pair; $5 a set of two pair.

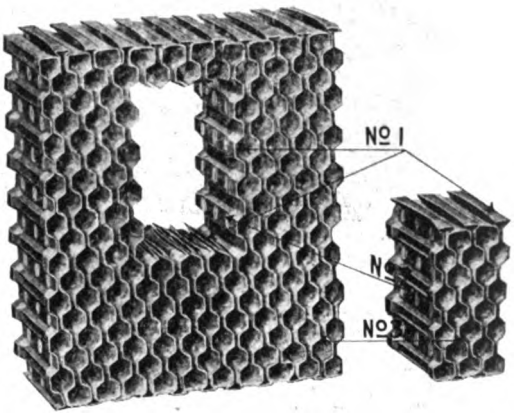
The "Jitlock" for Ford Cars. The "Jitlock" for Ford cars is a locking device that may be applied to the regular switch key used on the Ford switch. It is made of three pieces for 1918 or later cars and is fastened in place as follows: The regular Ford switch cover is removed and replaced with a switch cover provided in the device. The second section covers the first and is fastened by two screws at the top to the switch cover previously mentioned, this section being provided with a hinge at the bottom. The third section is the final cover and is placed over two lugs

extending upwards from the second section and the lugs snapped into place. A screw is inserted at the bottom fastening the three sections securely. To lock the switch the hinge is raised and slipped over the Ford switch key and a padlock inserted through the hole in the key. Special fittings are available for Fords earlier than 1918. Finished to match the metal parts of the switch and coil box. The manufacturer claims that it will prevent a car being stolen as thieves will rarely tamper with a car that is locked.

Manufactured by the Metal Specialties Co., Attleboro, Mass. Price, $1.50.

Wabash Honeycomb Radiators. One of the main features of the Wabash Radiator is the large cooling capacity. This is made possible by the arrangement of the corrugated brass sheets forming the water channels (No. 1). These channels contain small pockets, increasing the water capacity of the radiator to a great extent (No. 2). In this construction the distance is increased in which water must travel from the inlet to the outlet connection, thereby prolonging the time in which the water comes in contact with the radiator surface.

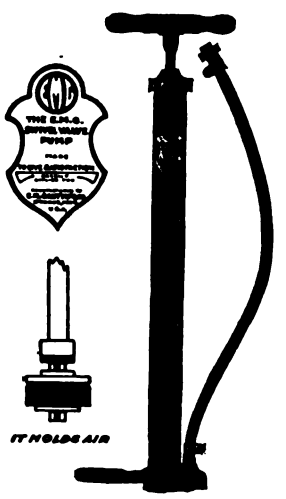
The Wabash core contains no dead channels, or so-called dead tubes, every channel containing water. Each channel is constructed of only one layer of brass and not several layers. Air rushing through



the roomy air passages (No. 3) between the channels, absorbs the heat rapidly from the water through the one layer of brass, the manufacturer claims. Wabash radiators are guaranteed to give satisfaction in every detail.

Manufactured by the Wabash Auto Radiator Manufacturing Co., 1117 Wabash St., Chicago, Ill. Prices on application.

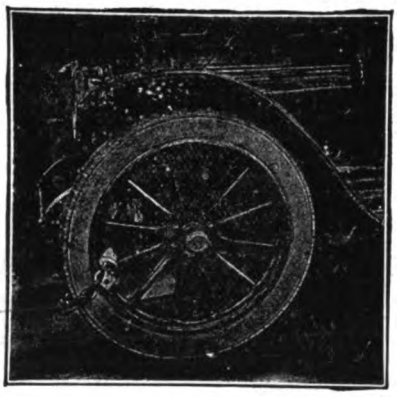
The E. M. G. Swivel Valve Tire Pump. The E. M. G. Swivel Tire Pump consists of a single cylinder of 16-gauge steel tubing, 1¼ inches diameter and 20 inches long and screwed into a heavy malleable iron base, with folding foot rest. The plunger rod is heavy cold rolled steel with detachable handle. The tubing connection for the tire valve is 24-inch reinforced fabric rubber with screw connection to fit any standard tire valve. The pump is finished in baked green enamel. The pump is 24



inches over all. It has an extra heavy oil treated leather cup on the plunger and a special air valve on the side of the plunger rod insures a full pump load of air at each stroke. The plunger head rides straight from the top to the bottom regardless of any turning movement of the handle.

Manufactured by E. M. Gaut Manufacturing Co., Inc., Ethridge, Tenn. Sold by John E. Chumley & Co., Nashville, Tenn., sole selling agents. Price, $3.25.

Digitized by Google



Blackhawk Combination Wrench Sets contain all tools necessary for the repairing or overhauling work in a garage or service station. The set consists of a nine-inch ratchet wrench, two extensions bars, pipe wrench, brace wrench, universal joint, two spark plug sockets, five open end thin wrenches, pliers, combination tee and offset handle, double end screw driver, valve grinding attachment, cotter pin puller, 16 hexagon sockets, sizes 7-16, ½, 9-16, 19-32, ⅝, 11-16, ¾, 25-32, 13-16, ⅞, 15-16, 31-32, 1 inch, 1 1-16, 1⅛, 1¼ inch, and 11 square machined steel sockets, sizes, 7-16, ½, 9-16, 19-32, ⅝, 11-16, ¾, 25-32, ⅞, 1 1-16 and 1 9-32. The case is a heavy wooden box, with hinged cover and finished in mahogany.

The company manufactures a complete line of wrenches of all kinds for the automobile and truck repairer, including Ford sets of various assortments, Buick, Cadillac, Cole-8, Chalmers, Chevrolet, Dodge, etc., covering practically all of the principal cars. These tools may be purchased in set form or separate as desired.

Manufactured by the American Grinder Manufacturing Co., Milwaukee, Wis. Prices vary from $18 for the set described to smaller sets selling as low as $3. Special prices of sets on application.

The Tirrill Headlight Regulator consists of a regulating switch having eight points of contact and a swinging arm attached. The switch is placed one-quarter of an inch below the hub of the steering wheel and fastened to the steering wheel post. It is placed so that the lever is at the right of the switch and within easy reach of the operator.

The purpose of the switch is to reduce the light through suitable resistance and

eliminate the glare of the headlights. The regulator may be attached to the lighting system when ordering. Adjustment within the switch provides for the no-glare position of the lever when used with different voltages.

The manufacturer claims that this device has been tried out successfully for two years and that it positively stops the glare of the headlights, and this when using the plain glass lens. The lever allows the operator to control the light so that it may be shifted from minimum to maximum easily and without damage to the lighting system.

Manufactured by Tirrill Manufacturing Co., Pittsburgh, Pa. Prices and literature on application.

The Woodworth Worth While Auto Lock consists of a heavy steel chain, having links two inches wide, made of one-half inch steel with a high grade Yale tumbler lock for locking the ends of the chain together around the tire and rim. The chain is covered with leather where it comes in contact with the paint of spoke and rim.

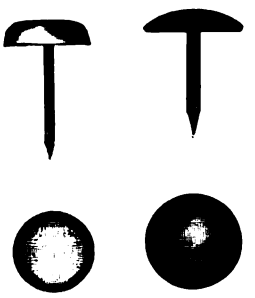
The manufacturer recommends that the lock and chain be used on the right front wheel. This lock does not prevent the car from being moved in case of fire, but effectively prevents stealing, as it causes such a bumping that the car cannot be run except very slowly and the chain makes such a clattering sound that the attention of the police would immediately be called to it if any one attempted to steal the car. The device is easily carried in the car, fits any style or size of wheel or rim, and is inexpensive. In emergencies it may be used as a mud hook, the manufacturer claims.

Manufactured by the Woodworth Manufacturing Co., Niagara Falls, N. Y. Price, chain and lock complete, $6; without lock, $2.50.

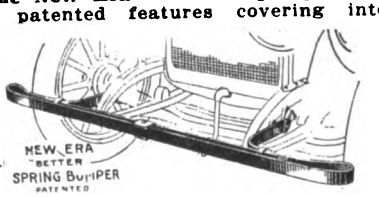
Lethermet Nails for automobile top upholsterers embody the desired qualities for this class of work. They come enameled, to match practically any shade of leather or upholstery in plain and Spanish effects. The stems are of steel burred, so that they will not pull out under ordinary stress, and the points are sharpened. The heads are made in one piece and will not pull away from the stems.

They are made in varying lengths and assorted sizes, according to the class of work for which they are to be used.

Manufactured by the Brewer-Titchener Corporation, Cortland, N. Y. Prices on application.



The New Era "Better" Spring Bumper has patented features covering inter-



changeable attaching arms, fastenings and separated double bars (always the full proper width), which create a drum like rebound if any severe blow is made. The bars are highly tempered spring steel and the attaching arms only semi-tempered. In case of a severe bump the arms will be the part that will suffer the most damage, the manufacturer claims.

The bumper is covered by a liberal guarantee and the manufacturer will make good all damaged or defective parts of the bumper when returned to the factory by any one not a dealer or jobber, when the express has been prepaid. The bumper is suitable for attaching to any passenger car or truck.

Manufactured by the New Era Spring and Specialty Co., Grand Rapids, Mich. Price, black, $10.50; nickel, $12.60.

The Safety Oiling System for Engines consists of an auxiliary oil tube passing from front end of the engine base to the top of the transmission cover. A special cover is fitted to the transmission case, having a filter attached, and the manufacturer claims that this is capable of catching fabric thrown off from the band linings, particles of metal, etc.

The oil is thrown upward by the balance wheel and transmission drums and is caught by the oil pan, shaped like a

shovel; filtered by the teeth of the filter and allowed to pass down and into the oil pipe extending to the front of the base of the engine. The object of using this device is to secure a positive flow of oil to the Ford engine.

The manufacturer allows a 30 days trial and will refund purchase price if the buyer so desires.

Manufactured by the M & M Co., 488-500 Prospect Avenue, Cleveland, O. Price, $5.

Mac-Lar Storage Battery. The Mac-Lar Storage Battery is new to the trade, and the claim of the manufacturer is that the plates or grids are treated by a special patented process which makes them extremely hard so that they have unusual capacity and recharging efficiency. The hard plates also insure longer battery life and a higher momentary discharge rate. It is further claimed that the Mac-Lar battery has a 25 per cent. greater capacity for the same plate area than a soft plate.

Tests have been given the battery by the manufacturer that are claimed would not ordinarily be met with in service and the results have shown it is superior to other batteries of the same type. The

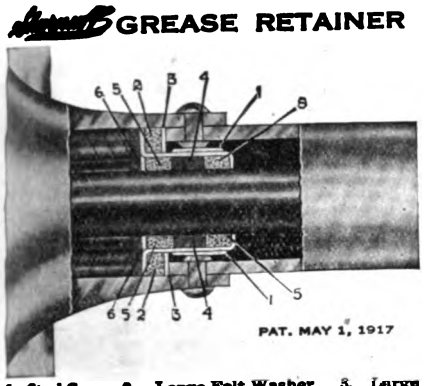
battery is guaranteed by the manufacturer for 18 months service and claim made that it will endure longer than the guarantee.

The Mac-Lar battery is built in two standard shapes for replacement purposes and will fit 99 per cent. of all cars. The two shapes are built for six volt and 12 volt battery work, making four standard Mac-Lar models. Universal terminals are furnished with each battery so that they may be easily and quickly connected.

Manufactured by the MacLar Battery Co., Detroit, Mich. Price, six volt size, $25; 12 volt size, $36.

Digitized by Google

Shurnuff Grease Retainers for Ford Cars. Shurnuff Grease Retainers for Ford cars consist of three extra high grade felt washers, one rubber asbestos washer, a cold drawn steel cup and two retaining rings, placed in the differential housing at the end of the Hyatt roller bearings. By this method of placing the washers the manufacturer claims that the leaking of the grease from the differential housing



1. Steel Cup. 2. Large Felt Washer. 3. Large Steel Retaining Ring. 4. Asbestos Washer. 5. Small Felt Washers. 6. Small Steel Retaining Ring.

to the brake drums is prevented. The grease retainer is stationary and is held in place by the two rivets of the axle housing. The method of installing is very simple and directions are included with each pair.

For counter display by jobbers the retainers are packed six or 12 dozen pair in a carton.

Manufactured by the Shurnuff Manufacturing Co., 3147 Locust St., St. Louis, Mo. Price, 90 cents a pair.

Tubo Puncture Sealer. Tubo Puncture Sealer is a liquid that is to be placed in the tubes of tires and the manufacturer claims that by its use leaks in tubes are vulcanized as thoroughly as if with an outside source. Tubo Puncture Sealer is made by treating the finest and strongest mineral fiber with other materials that

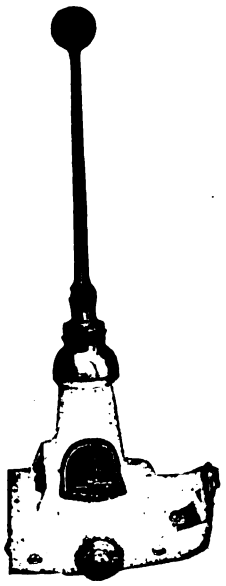
will seal punctures from the most minute size, even those that cannot be detected by immersion in a tub of water, to those of larger size, according to the rigidity of the casing. It is also claimed that it contains mineral preservatives of rubber and fabric which maintain the rubber of tubes in the same condition as when applied.

Manufactured by the Tubo Manufacturing Co., 611 N. Vandeventer Avenue, St. Louis, Mo. Price $5 per package, which makes three quarts of liquid.

The Johnson Automobile Lock for Pleasure Cars. The Johnson Automobile Lock is primarily a gear lock for pleasure cars having sliding gear shifts, consists of a locking lever that is substituted for and is exactly the same shape as the shifting lever originally used. It has but one moving part, the steel plunger that rides up and down on the lower portion of the shifting lever, within the transmission case.

When the car is to be locked a turn of a Yale key forces this steel plunger downward between the gear shifting forks. The locking device is entirely concealed. To steal a car equipped with a Johnson lock the thief must remove the transmission cover and substitute another shifter lever, is the claim of the manufacturer.

The lever, including the lock, is constructed from best grade open-hearth steel, drop forged and finished in nickel. Breaking the lever or any part of the locking device is impossible. Each lock



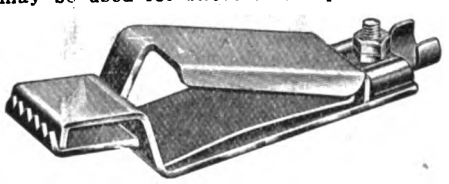
is carefully tested before shipment, and is sold with a broad guarantee.

The lock is installed by removing the shifting lever and replacing it with the Johnson lever, which is then locked in the transmission case. The entire locking device is a permanent part of the car, and the use of an electric drill and other shop equipment is necessary before it can be removed.

From a mechanical standpoint the manufacturer claims the locks are absolutely "trouble proof," and the roughest handling cannot in any way effect their utility.

Sold by the Edwards Sales Co., St. Louis, Mo. Prices and literature on application.

The No. 11-A Universal Battery Clip is made of copper, lead coated. The manufacturer claims that this clip is capable of carrying 100 amperes for a full day without getting too hot to handle, and may be used for short tests up to 200 or



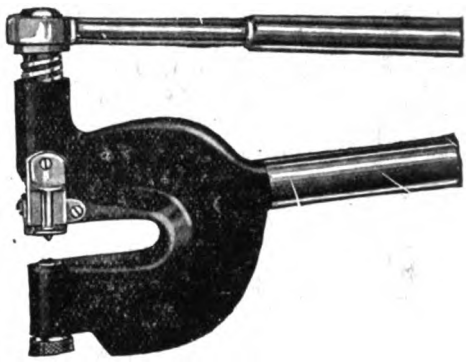
300 amperes and is therefore suitable for use in making the so-called "battery discharge test."

The clip has a jaw opening of one inch and a cleat at the rear, by means of which a comparatively heavy cable may be attached.

Manufactured by R. S. Mueller & Co., 423-425 High Ave., Cleveland, O. Prices on application.

"Jiffy" Speed Punch for the Tool Kit or Shop. The "Jiffy" Speed Punch is of powerful, compact type for punching holes in sheet metal up to 10 gauge thickness. It weighs five pounds and is 9½ inches long. It works in small space and will punch holes as follows: 5-32, 3-16, 7-32, 9-32 and ¼ inch, requires little oiling and no adjusting.

The punch is held and operated by hand,

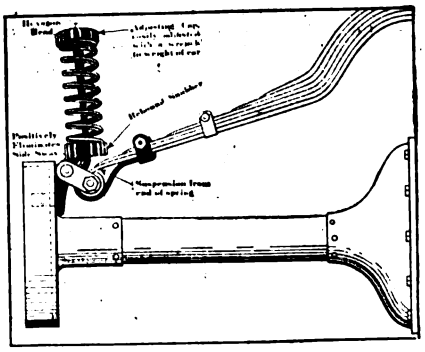


is very compact and is easily carried from job to job, or may be fastened in a vise. Punches are crowned, of the floating type, directing the power to the center. That the punch will not twist or turn while in operation and will not leave a burr on the metal after the hole is made is a claim of the manufacturer.

The Jiffy Punch, the manufacturer claims, will not tire the mechanic operating it, as the handles are short and the operator is close to the work. A half turn of the lever only is required to drive the punch through the metal. Punches and dies are easily changed from one size to the next. "Jiffy" Punches are fully guaranteed. Jiffy Speed Cutter for cutting holes in metal is also manufactured.

Manufactured by Paul W. Koch & Co., 19 South Wells St., Chicago, Ill. Price, $15. Punches, 5-32, 3-16, 7-32, ¼ inch, each, 35 cents; dies, 5-32, 3-16, 7-32 and ¼ inch, each, 35 cents. One punch and die furnished with each tool. Specify size wanted, otherwise 3-16 inch will be sent.

The Lanshield Shock Absorbers for Ford Cars are of a coiled spring type, mounted on special spring perches that replace the Ford perches. The absorber springs are seated on the perches and guide rods, clipped to the spring ends, pass through the spring shackles and extend upward

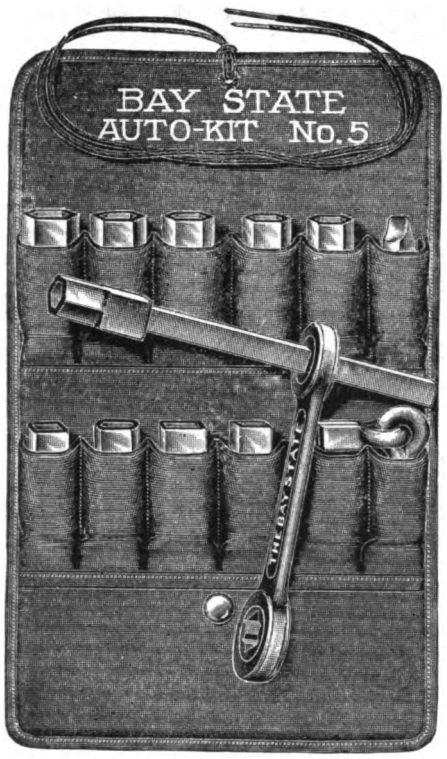


through the springs, the upper ends passing through caps secured with nuts.

The deflection of the main spring is taken by the seats in the spring perches, and claim is made that the reflection is absorbed by the coiled springs, the tension of which is adjusted by the nuts that retain the caps on the guide rods. The absorber is easy to install as there are no holes to drill.

Manufactured by the Lanshield Manufacturing Co., 510 First Ave., West Haven, Conn. Price, per set of four, $12.50. Unconditionally guaranteed that if customer is not satisfied the purchase price will be returned.

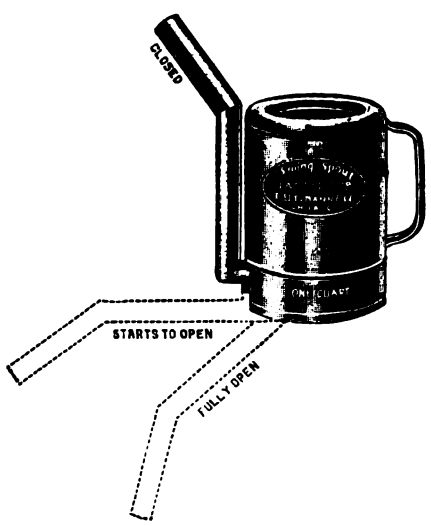
Digitized by Google



The Bay State "Autokit" Socket Wrench Set No. 5 consists of 10 heavy gauge steel sockets, case hardened, as strong and tough as it is possible to make them. The hexagon, square and oval are especially adapted for use on the Ford car, but are carefully selected so as to be available for any car. The set comprises a hardened steel screw driver, finely finished; a universal joint to reach the hard places, a seven-inch steel extension bar and a double end ratchet wrench which fits both the sockets and the bar and is reversible. The set is contained in a black cloth roll made of heavy drilling, not pantosote. The pockets in the roll are made to stand open when empty so that the insertion of parts is quick and easy.

Manufactured by the Bay State Pump Co., 100 Purchase St., Boston, Mass. Price, $5.

The Swing Spout Oil Measure consists of an oil can with a patented spout that closes and stops the flow of oil when in a vertical position, and when in a down or

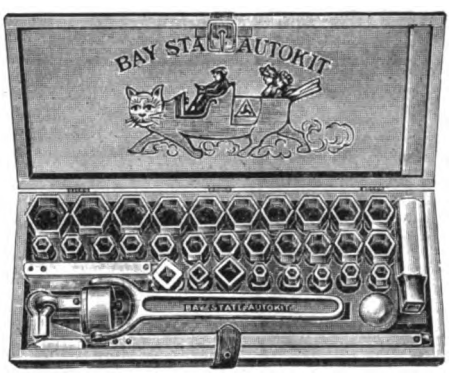


partially down position allows the oil to flow freely. It is made in one and two-quart sizes, of heavy material that will stand up under hard abuse. The spout has a patented shut off or valve with a ground fitting so that oil cannot leak, and is the proper length for supplying oil to such cars as the Buick, Mitchell, etc., and other cars where the filling spout is difficult to reach.

The Swing-Spout oil measure is guaranteed to the jobber in that if he buys a reasonable quantity and cannot sell them within 90 days, at the expiration of that time he may return them and receive his money back.

Manufactured by E. Edelmann & Co., Chicago and New York City. Prices on application.

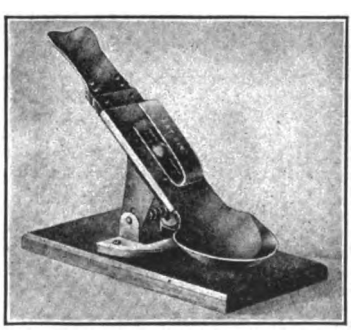
The Bay State "Autokit" Socket Wrench Set No. 1 consists of 31 socket wrenches, with swiveling reversible ratchet handle, several extension shanks, a universal joint and a heavy screw driver. By means of the various combinations of which these parts are susceptible it is easy to remove any one of the many nuts and cap



screws on a car by a ratcheting motion. One long socket fits the spark plugs, which can in this way be removed without danger of breakage. The set is packed in a neat wooden box with hinged cover, easily carried in the tool box of the car or truck and occupies but little space.

Manufactured by the Bay State Pump Co., 100 Purchase Street, Boston, Mass. Price, $12.

The Universal Accelerator Foot Rest consists of an appliance that is attached to the floor of the car, resting on the accelerator button. The foot rest is adjustable in four ways, height, length, distance from heel to instep, and the end of



the rest can be bent up or down to accommodate the foot. It is designed to accommodate all sizes of feet and may be attached to the accelerator pedal quickly. The device is made of high-grade pressed steel, polished and nickel plated.

Manufactured by the Joseph Pollak Tool and Stamping Co., 81-85 Freeport Street, Boston, Mass. (Dorchester District). Sold by Malton Specialty Co., 213 Columbus Avenue, Boston, Mass. Price, $2.

Van Briggle Carburetors. A new carburetor for Ford, Dodge and Maxwell cars employs what is termed an airplane principle in the method of carburetion. By this method, instead of sucking in more fuel at higher speeds of the engine, this carburetor actually decreases the fuel supply; in other words, the faster the car travels the less gasoline used, is the claim of the manufacturer.

There is only one adjustment, no venturi tube, no by-passes, no auxiliary air valves and no weights. The maker claims that the principle of the model P-F carburetor for Ford cars is such that an increased velocity of the air through the carburetor automatically decreases the gasoline coming out of the nozzle, and that vaporization is more complete owing to the whirl in the mixing, which breaks up the gas into minute particles. It is easily installed by any mechanic in a few minutes time without special tools. Satisfaction is guaranteed within 30 days or money will be refunded.

Manufactured by the Van Briggle Motor Devices Co., Indianapolis, Ind. Price, Ford, model P-F, $10; model P-D for Dodge, $18; model P-T for Maxwell, $15.

The Corbin-Brown Ford Special Speedometer consists of an instrument combining a speedometer with a maximum speed hand that indicates the highest speed attained during a trip and which is set back to zero by means of a tripping device, a luminous dial for night driving that plainly illuminates the dial, and total and trip mileage. The maker states that the material used in the construction of this instrument is of the best, no white metal

or die cast parts being employed. It is claimed that this device for Ford owners is accurate, simple in construction and may be installed by anyone in a few moments.

Manufactured by the Corbin Screw Corporation, New Britain, Conn. Prices and literature on application.

THE MAKING OF A SPARK PLUG

Highly Developed Engineering and Scientific Methods of Production Insure Exceptional Efficiency from Red Head Products

PRIMARILY automobile vehicle propulsion depends upon two factors, the quality of the fuel and the manner of burning it. This statement may be applied to all internal explosion engines. The fuel is supplied through the carburetor and it is burned by igniting it with an electric spark generated in each engine cylinder.

Putting the Electrodes into the Insulating Cores and Filling the Bores with a Vitrifying Cement at 50 Pounds Air Pressure.

This statement may appear so elemental as to cause the reader to wonder why it has been made, but the object is to emphasize that acceptance of a fact does not mean that it is understood. For instance, the driver of an automobile may know nothing of automotive mechanics; he may have some theoretical knowledge or some practical experience with which he determines engine or vehicle operation with reference to his standard, but he may be incapable of making a trifling adjustment accurately.

Power Losses by Heat and Friction.

The carburetor and the magneto, timer or distributor are generally believed to be the sources or origin of the combustible gas and the electric spark that ignites it, and that upon them the efficiency of the engine and the vehicle depends. Both are carefully designed and perfected instruments that can be adjusted with reference to each other so that an experienced driver will be reasonably certain of obtaining dependable engine operation.

Engine Functioning Depends on Plugs.

But rarely does any motorist realize that the functioning of both the carburetor and the source of ignition depends upon the spark plug, which as a matter of fact is the only means of energizing the engine. The spark plug may appear to be extremely simple in design, in construction, in adjustment, and yet it is quite as important as the carburetor or the magneto. Because automobile owners and drivers assume they know is the principal reason why the spark plug and its relation to engine efficiency is ignored or disregarded.

Were spark plugs better understood there would be far greater fuel and lubricant economy, engines and vehicles would afford much more satisfaction, and there would be a surprising saving in bills that are incurred for "adjustments" that are absolutely unnecessary.

With reference to fuel consumption. Taking an engine that is "normal" on the testing stand, not one that has been more or less reduced in capacity because of neglect or ignorance, which applies to the engine found in the car or truck in ordinary daily use, a surprisingly small ratio of useful energy is produced when measured by the full value of the fuel. Without considering the possibilities of loss of energy other than those that are believed to be inherent in automotive practise, the best authorities are agreed upon these approximations of loss with reference to diffusion of heat—and the internal explosion engine is essentially a heat engine, which are shown in an accompanying tabulation.

Cooling Water	35.8	
Exhaust gas, direct radiation	35.6	
Exhaust pipes	1.0	
Muffler	1.2	
Total	73.6	73.6
The losses by friction are as follows:		
Engine friction	5.6	
Transmission friction	2.9	
Total	8.5	8.5
Losses in wheels and tires:		
Rear tires	3.7	
Front tires	1.1	
Front wheels	0.6	
Total	5.4	5.4
Total		87.5

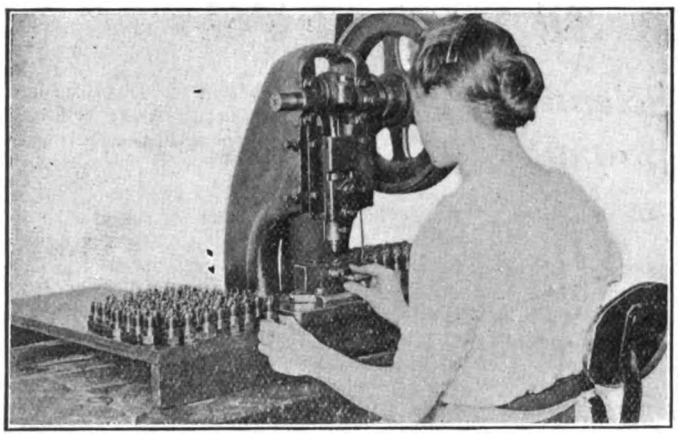
Accepting these figures there is a total loss of 87.5 per cent. of the energy value of the fuel in delivering power at the rear wheels, and of the 12.5 per cent. that is delivered 7.1 per cent. is necessary to compensate for air resistance. This leaves 5.4 power available for crossing surfaces where the traction is poor or heavy and for climbing hills.

Obviously there is vital need of obtaining the largest practical degree of combustion in the cylinders of the engine, and this is not obtainable unless the spark plugs are perfectly set so that the ignition will take place at the time when the expansive force will most effectually develop power. Each spark plug creates a spark in a cylinder when the electric circuit is made and the current "jumps" or arcs at the points of the electrodes. The electrical energy originates in the magneto or battery and it is distributed to the different cylinders at the times when the pistons are at a certain position in them, the position depending upon a number of factors, including engine speed, the type of ignition system, the fuel and the temperature and volume of moisture in the air.

Combustion of fuel in the engine cylinders will take place with almost inconceivable rapidity. High speed engines have been driven to nearly 4000 revolutions a minute. Single-cylinder engines have been built in France that have maximum speed in excess of 3600 revolutions, which means more than 1800 separate piston impulses a minute or 30 a

The Electrodes and Insulators, After Drying, Are Placed in Ovens and Exposed to High Temperature to Bake the Cement, That Retains the Electrodes in the Bores.

Digitized by Google



"Staking-In" the Fish Hook-Shaped Shell Electrodes Into the Spark Plug Shells—A Single Operation on a Specially Designed Power Press.

second, and there is probability that this number could be exceeded. This applies to a single cylinder, and as the number of cylinders is increased the number of impulses a minute for the engine increases in ratio.

This will be better determined by reference to the following tabulation:

No. Cyl.	Engine R.P.M.	Power Impulses a Minute	Ignition Sparks a Minute a Cylinder	Ignition Sparks a Minute an Engine	Ignition Sparks a Second a Cylinder	Ignition Sparks a Second an Engine
1	1000	500	500	500	8.33	8.33
2	1000	1000	500	1000	8.33	16.66
4	1000	2000	500	2000	8.33	33.33
6	1000	3000	500	3000	8.33	50.00
8	1000	4000	500	4000	8.33	66.66
12	1000	6000	500	6000	8.33	100.00

Combustion Heat Is Intense.

The heat generated in the cylinder at the instant of combustion is intense. The temperatures will vary from 3000 to perhaps 4000 degrees Fahrenheit, which intensity is illustrated by comparing the heat at which steel fuses, or about 2550 Fahrenheit. The mean temperature of the cylinder is much lower because it is reduced as the piston descends for the power stroke, is cooled somewhat by the exhaust stroke, and is cooled decidedly during the intake or suction stroke and to some degree while the cool fuel gas is being compressed.

While the engine is in motion these cycles are repeated. The tabulation shows that with engine speed of 1000 revolutions there will be an average of 500 power impulses for each cylinder, and an average of 8.33 ignition sparks created a second. This may appear to be comparatively slow, but from 1800 to 2400 revolutions a minute is not uncommon with standard automobile engines, and from 3000 to 3600 is sometimes reached with racing car engines. The maximum stated would be approximately 29 power impulses a second to a cylinder.

Great Rapidity of Combustion.

But the term power impulses does not represent the rapidity of the consumption of the fuel in the cylinder. Considering the period of combustion, if the engine is running 1000 revolutions a minute and each cylinder has 500 power impulses the time for each impulse revolution is slightly more than 1/6 second and if the spark is made 15 degrees advanced or before top center, and with 360 degrees for a revolution, the time for ignition would be 15/360, which allows 1/24 of the time for one revolution, or 1/144th of a second, for the gas to burn and create the expansive force within the cylinder. This is so brief a period that it is not possible to make comparison. Yet in that time the electric spark must create a flame that will spread through every part of the combustion head.

If the combustion chamber is irregular the flame will not be uniform in its progress in all directions from the electrodes of the spark plug, which is held to be the reason why L and T-head cylinder engines are either slower in action or develop less power than engines with valves in the heads of the cylinders.

What a Perfect Plug Will Do.

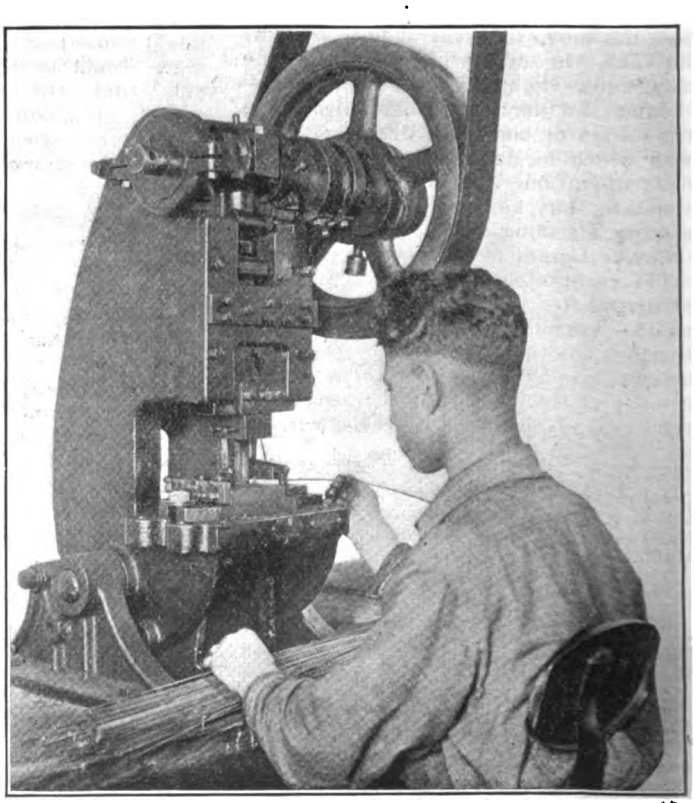
The functioning of the spark plug may be dependent upon numerous conditions. A perfect plug must be so constructed that it will deliver the full voltage developed by the magneto, the coil or the combination of the two at its electrodes. The electrodes must be so set that the spark created when the current "arcs" between them will have sufficient intensity to ignite the gas. It must be perfectly insulated. It must be so formed that oil will not accumulate on the shell and the insulation of the center electrode and, when baked or carbonized, will not cause a short circuit. It must not leak either at the bushing or the shell, for leakage will lessen compression and cause loss of power, carbonization and necessitate greater consumption of fuel. The insulation of the center electrode must be such a nature that it will not absorb oil and short circuits, will not crack under the extreme variations of heat and it should be so assembled that it may be cleaned readily.

General Spark Plug Construction.

The spark plug is usually constructed with a shell, so-called, which is either steel or brass or bronze, that is shaped at the upper section to seat a wrench. There may be other forms, but it ordinarily is hexagonal. The lower part of the outside of the shell is threaded to screw into the tapped bore in the cylinder head. Through the center of the shell is a bore, the lower part of which is smaller than the upper, and there is a shoulder surrounding the smaller bore on which is seated the insulation of the center electrode, which may be stone, porcelain, mica or other material that is not a conductor of electric current.

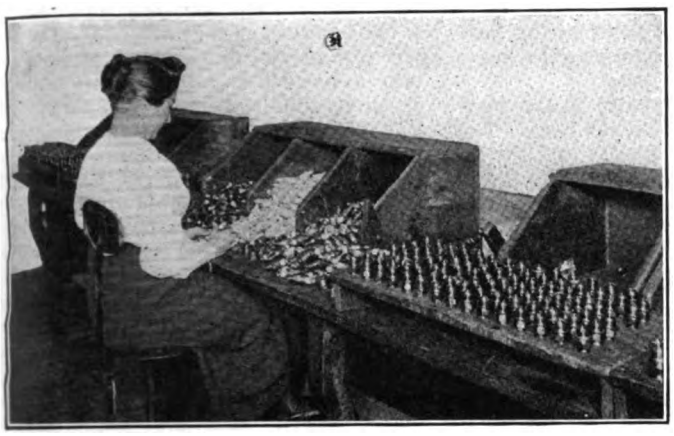
The bushing is either brass or steel and is a short section with a hexagonal collar that is a seat for a wrench, with the external length below it threaded to screw into the larger internal bore of the shell, and the bore of the bushing is such that it is a loose fit for the upper end of the insulation of the center electrode. The insulator of the center electrode is shaped to have a central collar at a point usually below the middle and at either side of this collar is placed a packing that seats against the shell and the bushing, so that when the bushing is screwed into the shell and seated there shall be no leakage past the gaskets of either air or gas.

The center electrode extends through the insulation, the upper end being threaded and the lower end either straight or shaped. On the upper end



Cutting the Center Electrodes from Nickel-Manganese Steel Wire, These Being in Two Types and Two Sizes of Stock, on a Special Press.

Digitized by Google



Assembling the Bushing, Shell, Insulator or Core Complete and the Gaskets After the Tests of the Different Parts to Insure Against Defects.

is generally placed a binding nut with a milled edge that is screwed tightly against the insulation. There is a small lock washer and a knurled nut that serves to retain the terminal of the cable or wire securely against the binding nut and the electrode. The shell electrode is a piece of round metal anchored into a bore or secured in a manner that will insure electric conductivity that can be adjusted with relation to the center electrode, so that the gap or space between them may be from 1/32 inch for battery current or from 1/50 to 1/64 inch for magneto current.

Many Types and Designs for Plugs.

What has been stated with reference to design and construction applies generally to any spark plug. There are, of course, many different types and the dimensions of the several members of the plugs will vary, and the materials will differ. There are special designs that are intended to meet the requirements of certain engines. As a rule manufacturers produce spark plugs to S. A. E. dimensions and special types and sizes which demand may justify.

The spark plug that will endure, that will have high electrical efficiency, will afford the greatest fuel economy, because it will cause the fullest consumption and produce the largest degree of power from a given volume. It will contribute to the satisfaction of the owner because with adequate power he will have ease of acceleration, flexibility of operation and smoothness of power delivery that will be superior to cars not so well equipped.

Again, there is the insurance against defects of ignition that are regarded as inseparable from electric systems, which cause annoyance and inconvenience and discomfort. There is material reduction of expense for adjustments and repairs of the car that originate frequently and require expert examination to determine.

Exclusive Qualities of Red Head Plugs.

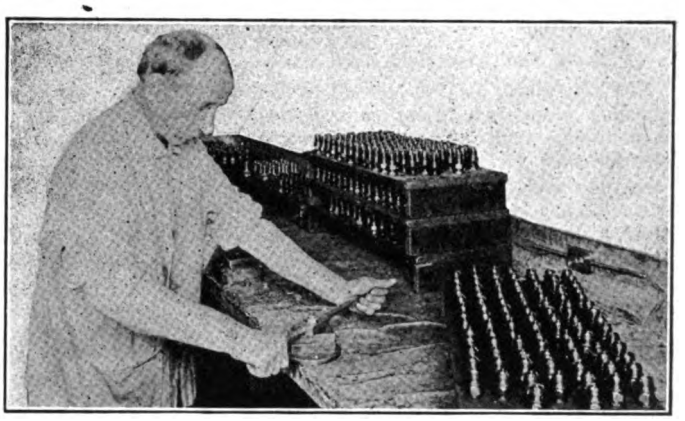
What is claimed to be a superior spark plug because of exclusive qualities of design and construction is produced by the Red Head Spark Plug Corporation, with offices at 261 Broadway, New York City, and factories in New York and at Newtown, Pa. This concern acquired the patent rights, material and general assets of the concern that formerly manufactured Red Head spark plugs.

In the production of this plug exceptional care is taken that it will measure up to mechanical and electrical standards, and the parts and the assembled plugs are subjected to inspections and tests that are regarded as being certain to detect defects of materials and faults of workmanship.

The corporation was organized to take over the business after very close examination had been made of the company's patents and the quality of the products that were practically productive under them had been established. The concern planned to largely increase the manufacturing facilities and better develop the processes of production, and to broaden and increase the scope of its sales department.

The company now operates two factories, that at New York City being given over to the production of plugs from materials manufactured in it, and the other at Newtown, Pa., where the insulation cores that carry the central electrodes are produced. The cores or insulators are made from a combination of clays imported from France, England and Belgium, and these materials are combined in proportions that have been found by innumerable experiments to have qualities that are claimed to be superior to any other type that is made. The insulators are maintained to be a synthetic stone that has a structure that differs entirely with that of porcelain and will endure the very wide changes of temperature and the vibratory stresses of the engine without fracture. The insulator material is known as Vitristone and the name is registered in the United States patent office.

Statement is made that this insulator is greatly superior to any other and that its endurance is far greater than any porcelain insulator made; that because of this endurance the life of these spark plugs is measured by years and a defective insulator is almost unknown because of the methods of manufacture and the care taken in testing and inspecting them.



Seating the Gaskets Between the Core and the Shell and Bushing—This Is Done by Hand to Obtain a Perfect Seat Without Stressing the Gaskets.

How Plug Insulators Are Made.

The process of producing these insulators is very interesting. The clays are mixed and in the slip house the mixture is passed between a series of magnets of such strength that all particles of iron are drawn from it, so that it is perfectly free of what might be conductors of electricity. The mixture of clays is then taken to the "throwing up house," where it is formed into what are known as "biscuits," which are pieces of the compound having cylindrical shape.

These "biscuits" are then given a rough turning in a machine that forms the collar or largest diameter and the two upper and lower diameters, and bores the hole through the center for the electrode. The pieces are then dried from 60 to 70 hours at room temperature, after which they are again turned in automatic machines that reduce the diameters to exact dimensions and finish the bores, and complete the "petticoat" or enlargement of the bore at the base of the insulator.

Kiln Firing a Long Process.

The pieces are again dried at room temperature for a considerable period

Inspecting the Plugs After Final Assembly and Test and Adjusting the Points of the Electrodes by Gauge to Be Certain of Positive Functioning.

Digitized by Google

and then are placed in "saggers," or carriers, and are put into the kiln. The kilns have capacity for about 40,000 insulators for each firing. When the insulators are put into the kiln from four to eight test pieces are placed in different openings and by the effect of the heat on the test pieces the progress of the firing is determined. The test pieces are in the form of cones and these will gradually assume shapes by which the firing is judged. The kilns are fired with a special coal and the temperature will reach 3800 degrees Fahrenheit. The firing must be carefully watched else the contents of the kiln may be destroyed and be reduced to what are known as "duds," or, if burned, to "nigger babies." From four to six days is required for a firing.

The insulators are removed from the kiln and after cooling are subject to the glazing process, the glazing material being sprayed on instead of dipping them into the compound. After the glazing the insulators are decorated, this being with red, and consists of the trade mark and a narrow band at the top. They are next placed in the decorating kiln and again fired, this setting the glaze and the decorations.

Tests for Electrical Defects.

Each insulator is then tested to detect possible electrical defects and carefully inspected to find cracks or porosity. The electric test is made with a temporary electrode and an extremely high voltage is used. Statement is made that no other manufacturer makes so thorough a test of insulators, most of them testing a few of each lot as it is going through the plants.

The insulator plant at Newtown is maintained to be the most complete and the best equipped of the kind in the country, and that it was constructed with the view of producing insulators for the Red Head Spark Plug Corporation, alone evidences the care taken to obtain quality. This plant is large enough to produce all insulators that can be utilized by the New York factory for a considerable period, and its capacity can be increased when necessary to meet any requirement.

At the factory in New York the insulators are again tested for breaks and porosity upon receipt, each being examined before work is done upon it. This is exclusive of test made of the spark plugs as they are later on assembled. The center electrodes are made of nickel manganese steel wire that is made to specification and is in two sizes, .075-inch for the standard sizes and types of plugs and .125-inch for the "Big Boy" plugs, the latter being designed for specially high powered engines.

Making the Central Electrodes.

The wire is cut into lengths and is threaded at one end for the standard sizes, but the wire for the "Big Boy" plugs is not threaded. Instead, at one end a short piece of steel wire of larger diameter is electrically welded, this shorter section being threaded. Where the two pieces are joined a collar or flange is formed that serves to anchor the electrode in the bore of the insulator and also seats at a point in the bore that locates it with reference to exact projection beyond the ends.

The electrodes are placed in the insulators and they loosely fit the bores. The space between the electrodes and the internal bores of the insulators is filled with a thick paste formed principally of pulverized flint and silicon soda. The paste is forced into the bores under a pressure of 50 pounds, the locations of the electrodes being determined by the operative, those of the "Big Boy" plugs being forced into the bores until the collars of the electrodes seat. The threaded portions of the upper ends of the electrodes extend into the bores and that part within the bores is covered with the paste. This forms a firm anchorage for the electrode.

The insulators are then dried at room temperature for from three to seven hours and they are then placed in racks and put into gas heated ovens in which they are baked for 24 hours, when the paste has become as hard and as enduring as the insulator, adhering to both the electrode and the insulator.

Shells, Bushings and Shell Electrodes.

Both the shell and the bushing are automatic screw machine products, being very carefully produced and submitted to double inspection to determine accuracy of workmanship, the requirements being very exact. The single shell electrodes of standard types and the three shell electrodes of the "Big Boy" plugs are what is known as a "fish hook" design, having a straight shank that is fitted into a bore in the shell and extending downward and curving upward somewhat in the form of a fish hook, the bend being considerably below the firing point. Claim is made that should oil be thrown upon the electrode it will drain to the lowest part and will not accumulate where it will close the circuit and prevent the "arcing" of the current between the two electrodes.

The shell electrodes are nickel manganese steel wire and are the same diameter for all plugs, .055-inch diameter. The electrodes of this type are formed and cut at one operation and the shells are drilled by jigs of a special type. The electrodes are fitted to the bores in the shells so they may be seated in them by hand. The assembly is by jigs and the electrodes are "staked in" in punch presses that so constrict the bores that there is positive metallic contact and the electrodes are firmly anchored. The cutting and forming of the electrodes and the "staking in" are all automatic operations.

Gaskets a Special Type.

The gaskets, top and bottom, are copper asbestos of special construction, being the French or enclosed type. In assembling the binding nut is screwed on to the center electrode, a soft lead composition washer holding it firm, and in turn the lock washer and the knurled nut. Then the insulator and the gaskets are placed in the shells and the bushings are seated loosely by hand. The plugs are then taken to benches in racks and each in turn is placed in a fixture and the bushing is seated by hand with a two-handled special wrench. The object of hand fitting the bushing is to obtain a perfect gas tight seat without crushing and destroying the gaskets, and this has been found only certain with hand work. The expert operator can determine precisely when the bushing and gaskets have been seated by the "feel" of the lever, which obviously is not possible when assembly is in any other manner. The bushing and shell will expand in ratio to the heat to which they are subjected and the insulator will vary but little with varying temperatures. The gaskets must be sufficiently elastic to contract and expand and maintain the perfect contact that will insure against leakage, no matter what the pressure.

Tests for Service Qualities.

The insulators are all tested for electrical conductivity and resistance to excessive voltage, and in the final inspection the perfect concentricity of the insulator to the bushing and shell is determined, after the complete plug has been tested for leakage with 150 pounds air pressure, for upon this depends very largely the endurance of the plug. The adjustment of the electrodes is to gauge, so that the spark gap will be uniform. All details of construction are up to the United States specifications.

When the plugs have been finally passed upon they are packed in cartons, a carton containing 10 plugs or 100 plugs, the metric count being adopted because of its greater convenience in keeping stock.

Statement is made that the company now has four times the space that was occupied by the factory of the Emil Grossman Manufacturing Co., which produced Red Head plugs and from which the patents covering the manufacture of these plugs was purchased.

The Red Head Spark Plug Corporation has no connection with the former manufacturer, but is a new organization that will specialize spark plugs only Because of its factory equipment and facilities it can make deliveries immediately. This is a fact of considerable importance to buyers.

HART-PARR DISTRIBUTORS.

A. H. Grover and Byron Snyder have opened a distributing house at Dallas Tex. They were formerly connected with the Northern Hart-Parr Co., Minneapolis Recently they sold their interest to M Warner, the third partner, and contracted for southern Oklahoma and the State of Texas, excepting the panhandle and the extreme southwest. Mr. Grover will directing the sales at the Northern Hart Parr Co. and Mr. Snyder the office. The Texas Hart-Parr Co., as the new firm has been named, has leased a good location at Main and Houston streets, in the machinery section of Dallas, and already has tractors on the ground. As there are many old Hart-Parr 60's in Texas, the new firm will not find the name Hart Parr unknown.

It is understood that Fiat is making arrangements to manufacture or assemble in America for the American market

NEW CONCERNS RECENTLY INCORPORATED

Monthly Record of New Business Houses for which Charters Have Been Issued in the Various States and Classified According To Nature of Business.

NEWLY ORGANIZED MANUFACTURERS OF CARS, TRUCKS AND TRACTORS.

Wilmington, Del.; Bethlehem Motors Corporation; $13,000,000; to manufacture, sell and deal in automobiles.

Wilmington, Del.; South Bend Motor Co.; $1,500,000; L. M. Horty, M. C. Kelly, J. D Frock.

Chicago, Ill.; Liberty Auto Truck Co.; $200,000; Samuel C. Sood, Arthur M. Brody, L. B. Phillips.

Ipswich, Mass.; Boulais Tractor Co.; $50,000; Wilfred Boulais, Edward J. Macorelle, Ovela H. Rathe.

St. Louis, Mo.; Von Arx Automobile Co.; $15,000; to manufacture and deal in automobiles, gas engines and accessories; Victor A. Von Arx, Oscar G. Roeder, Charles H. Diel.

Buffalo, N. Y.; Commercial Aeroplane Co., Inc.; $100,000; general commission merchants, selling agents business; Idaho Hamilton, Eugene N. Hickey, Glenn W. Simpson.

Columbus, O.; Columbus Oldsmobile Co.; $150,000.

New York, N. Y.; Kell Motor Co.; $300,000; Max Kell, Isadore Kell, Samuel Jacoby.

New York, N. Y.; Supreme Auto Trucking Co.; $5000; D. Nachman, B. Nathan, E. Nathan.

New York, N. Y.; Tube Motor Corporation; $500,000; James J. Flannery, L. S. Dumnesil, H. D. Benner.

Syracuse, N. Y.; Onondaga Truck Sales Co.; $12,000; L. Meadvin, J. Crimmin, O. E. Hermen.

PARTS AND FITTINGS MAKERS.

Birmingham, Ala.; U. & J. Carburetor Sales Co.; $12,000; J. M. Hughes, L. B. Gammill, Cranshaw Chamberlain.

Dover, Del.; Electro-Lyte Storage Battery Co.; $200,000; R. F. Hansell, E. M. MacFarland, J. Vernon Plimm.

Dover, Del.; Liberty Auto Lock Co.; $200,000; to manufacture automobile locks and safety devices; T. L. Croteau, P. B. Drew, H. E. Knox.

Dover, Del.; Tantburetto Rim Wheel Co.; $1,000,000; M. L. Horty, M. C. Kelly, S. L. Mackey.

Petersburg, Ill.; The Cornell Motors Corporation; $20,000; to manufacture gas and steam engines; C. W. Shopley, W. J. Ramsey, H. S. Haughton, George C. Power. C. L. Nollis, F. A. Golden, S. A. Thompson.

Indianapolis, Ind.; Collapsible Auto Rim Adjustable Tool Manufacturing Co.; $100,000; Edward D. Bauman, Dave Yover, Paul P. Scharffin.

Boston, Mass.; American Spark Plug Co.; $150,000; to deal in spark plugs; Albert L. Cole, Elizabeth F. Uniac, Richard W. Hall.

Rutherford, N. J.; Standard Auto Parts Co. of America; $1,000,000; general manufacturing business, engineering.

Brooklyn, N. Y.; Better Auto Service, Inc.; $1000; to manufacture engines and other machinery; William P. Willetts, C. Willetts, Charles N. Dauphin.

Buffalo, N. Y.; Class Auto Top Corporation; $50,000; J. Amick, C. P. Amick, J. W. Bradley.

Fort Worth, Tex.; Packard Auto Livery Co.; $25,000; J. L. Johnson, E. M. North, A. P. Mitchell.

Richmond, Va.; Automobile Safety Lock Co. Inc.; to manufacture and sell automobile safety locks; W. F. Jenkins, Frank Merano.

Fond du Lac, Wis.; Engel-Romaine Co.; $20,000; to deal in farm tools, automobiles, tractors and trucks; H. L. Engel, L. W. Romaine, Henry Habak.

ACCESSORIES, EQUIPMENT AND SUPPLIES.

Birmingham, Ala.; Murphy-Jones Auto Supply Co.; $15,000; W. E. Murphy, C. V. Jones.

Dover, Del.; Logan Tire Co. of America, Inc.; $500,000; E. R. Hansel, E. M. MacFarland, J. Vernon Pimm.

Macon, Ga.; The Hamilton Motor Sales Co.; $100,000; to handle accessories and automobiles; W. L. Harvey, L. B. Hamilton.

Macon, Ga.; Square Deal Garage Co.; $2000; to conduct a general automobile repairing business; H. D. Washburn; J. E. Cunningham.

Chicago, Ill.; Decatur Tire Corporation; $3000; Charles K. Schwarts, Ulysses S. Schwarts.

Chicago, Ill.; Midco Tire Co., Inc.; $10,000; Edward H. Trocst, Henry Trocst, Clara Dorstewitz.

Chicago, Ill.; Perfection Auto Repair and Supply Co.; $10,000; Frank J. Nichols, Frederick Y. Nichols, Adolph W. Winkel.

Chicago, Ill.; Sagless Auto Seat Co.; $2500; George R. Duce, Gustave E. Beerly, Mae Gilseram.

Peoria, Ill.; Faultless Tire Manufaoturing Co.; $2500; Charles William Stumptner, Henry Bartholomew, S. Samuels.

Peoria, Ill.; The Reardon Co.; $25,000; to manufacture automobile accessories; W. L. Reardon, A. W. Lewis, H. D. Morgan.

Ft. Wayne, Ind.; Roussey-Centivre Rubber Co.; $100,000; to deal in automobile tires and tubes; A. J. Roussey, Carl Centivre, Charles Centivre.

Indianapolis, Ind.; Charles C. Phillips Co.; $10,000; to deal in automobile accessories; Charles C. Phillips, Elizabeth R. Baer, Harry A. Groff.

Boston, Mass.; Eagle Auto Supply Co.; W. Halpern, Moses B. Gilbert, B. Gilbert.

Cedar Rapids, Ia.; The Cedar Rapids Tire and Rubber Co.; $1,010,000; H. D. Ferguson, C. B. Klopfenstine, A. L. Archer, R. B. Carberry, O. C. Brinker.

Buffalo, N. Y.; Add-a-Tire and Supply Corporation; $100,000; S. J. Ciacluch, W. Miskonia, C. Johnson.

New York, N. Y.; Mercer Tire Corporation; $50,000; C. Dantin, F. C. Doehler, J. W. Mercer.

New York, N. Y.; Northwestern Tire Corporation; $25,000; J. Jacobs, S. Bernheim, W. Loewenthal.

New York, N. Y.; Triplex Tire Corporation; $260,000; J. Martin, G. Martin, J. E. Ankus.

Rochester, N. Y.; Roadmaster Motors, Inc.; $25,000; to deal in automobiles, supplies and accessories; A. Holley, A. J. Tischer, R. K. Chase.

Cleveland, O.; Durable Tire and Rubber Co.; $10,000; John F. Singleton, E. G. Guthery, B. J. Guthery, H. M. Kodet, R A. Lammers.

Cleveland, O.; Great Northern Tire and Rubber Co.; $1000; L. M. Sewell.

Cleveland, O.; Knox Tire and Rubber Co.; $1000; L. M. Sewell.

Toledo, O.; Ever Tire Co.; $5000; Herman Saxon, James M. Latham.

Harrisburg, Pa.; Dauphin Tire Service Co.; $10,000.

Pittsburgh, Pa.; Bigelow Tire Co.; $10,000; M. B. Schiller.

Memphis, Tenn.; Memphis Service Garage; James W. Lyle, H. S. Harrison, W. E. Graves, O. K. Steuwer, A. J. Calhoun.

Roscoe, Tenn.; The Roscoe Auto and Supply Co.; $20,000; Joseph H. Underwood.

Houston, Tex.; Savage Tire Co.; $15,000; W. S. Curtis, W. H. Crawford, Gus Dreyling.

Sugarland, Tex.; Republic Tire Co.; $25,000; G. E. Blohm, F. W. Stepleton, D. R. Viel.

GARAGES AND REPAIR SHOPS.

Washington, D. C.; N. and J. Carburetor Sales Co.; $20,000; John L. Newbold, Ernest Zimmerman, Charles H. Beck.

Chicago, Ill.; Public Service Garage and Motor Co.; $10,000; Sherman W. Griselle, Hargrave A. Long, Emmett J. McCarthy.

St. Louis, Mo.; United States Auto Repair Co.; $10,000; Henry Obermeyer, Charles Palazzolo, Mike Martio, Roy C. Kayes.

Newark, N. J.; Lindeman Garage, Inc.; $10,000; Frank Lindeman, Bernard Ryan, Harry Lindeman.

Newark, N. J.; The Unique Garage; $25,000; to conduct a general garage and automobile business.

Passaic, N. J.; The Passaic Individual Garage Co.; $50,000; to operate garages.

Brooklyn, N. Y.; Guilfoil's Garage, Inc.; $50,000; Merritt C. Guilford, Rodney T. Martinsen, Alice F. Guilfoil.

Brooklyn, N. Y.; Robinson Street Garage, Inc.; $6000; H. C. Gorrfried, O. Scheer, H. Olson.

New York, N. Y.; Cosmopolitan Garage Corporation; $500,000; F. A. Weber, Jr., H. H. Brandeth, J. Brandeth.

New York, N. Y.; East 54th Street Garage; $10,000; P. O. Shapiro, G. Levy, W. E. Goldman.

New York, N. Y.; Giant Garage, Inc.; $25,000; M. Albert, S. Albert, M. S. Albert.

New York, N. Y.; Gray Motor Garage Corporation; $17,000; J. P. McCann, T. A. Cooke, Sr., T. A. Cooke, Jr.

New York, N. Y.; Junction Motor Car and Repair Co.; $10,000; F. Miano, N. Miano, J. Miano, G. S. Miano.

Waxhaw, N. C.; The Sims Motor Co.; $25,000; to conduct a garage business.

Akron, O.; Beeman Garage Door Co.; $50,000; C. J. Beeman.

Pittsburgh, Pa.; Grant Garage and Service Co.; $50,000; G. A. Yeager.

La Crosse, Wash.; La Crosse Motor Co.; $25,000; to conduct a garage and general automobile business; Victor Dessert, J. C. Johnson.

DEALERS IN AUTOMOBILES, MOTOR TRUCKS AND TRACTORS.

Birmingham, Ala.; Automotive Corporation; $2000; J. S. Lewis, W. W. Stillson.

Dover, Del.; Bafue-Eustice Co.; $10,000; to deal in automobiles; C. L. Rimlinger, P. B. Drew, H. E. Knox.

Dover, Del.; Consolidated Motor Manufacturing Co.; $250,000; to deal in automobiles and parts; William F. O'Keefe, George C. Steigler, J. H. Dodell.

Dover, Del.; Cole Motor Car Sales Co.; $25,000; Harrison W. Howell, Clarence H. Ratledge, M. M. Toner.

Georgetown, Del.; Georgetown Auto Co.; $50,000; to manufacture and repair automobiles.

Dover, Del.; United States Automotive Corporation; $35,000,000; Frank B. Anted, Frederick I. Barrows, Leroy Hanson.

Wilmington, Del.; Arcadia Auto Service, Inc.; $25,000; to establish and maintain an automobile service business.

Chicago, Ill.; Kedzie Auto Sales Co.; $2500; Lillian Dreifus, Anna Andalman, Fred H. Shapiro.

Chicago, Ill.; Illinois Motor Co.; $250,000; Walter Morross, Ludwig W. Harjes, Harry C. Kinne.

Chicago, Ill.; Petroleum Motor Co.; Glen B. Graves, John H. Cross, Terrence G. Jackson.

Chicago, Ill.; West Side Motor Car Co.; $15,000; Jewett G. Massey, Wiley D. Reid, Eugene E. Gaertner.

Springfield, Ill.; Automobile Sales Corporation; $4000; Irwin H. Wystone, Michael Eckstein, Frank Oppleman.

Brooklyn, N. Y.; Lipschitz & Zimmer; $10,000; David Lipschitz, William Zimmer, Nathan Rodner.

Buffalo, N. Y.; Ellicott Motor Service Corporation; $200,000; R. R. Mitchell, A. W. Lytle, F. J. Maguire.

Buffalo, N. Y.; Olympian Motor Sales Co., Inc.; $10,000; to deal in motor vehicles; Jacob Nusbaum, John R. Golt, Edward F. Peterman.

New York, N. Y.; Club Motors, Inc.; $10,000; to deal in automobiles; M. J. Moon, F. O. Beattle, A. K. Strasser.

New York, N. Y.; W. J. Maxwell, Inc.; $20,000; to deal in automobiles; W. J. Maxwell, Charles Kriser.

New York, N. Y.; Standard Taxicab Co.; $5000; C. J. Campbell, J. F. Vail, M. Winburn.

Rochester, N. Y.; Auto Quip Manufacturing Co.; $60,000; J. Woerne, R. Wirth, C. E. Wirth, E. R. Wirth.

Troy, N. Y.; Laporte & Voelxen, Inc.; $10,000; to deal in motor vehicles; Joseph A. Laporte, Marie K. Laporte, James J. McGulgan.

Troy, N. Y.; Motor Inc.; $25,000; J. C. Caldwell, L. W. Houston, E. A. Coons.

Charlotte, N. C.; The Southern Motor Co.; $50,000; to conduct a general automobile business.

Smithfield, N. C.; Scotten Motor Co.; $100,000; to conduct a general automobile business.

Akron, O; Community Auto Co.; $25,000; C. W. Mather.

Cleveland, O.; Auto-Motive Engineers Co.; $8000; I. F. Schreck, Anton O. Pfister, Clarence C. Wedge, Wallace E. Cole, Z. S. Hammond.

Cleveland, O.; Re Vere Motor Sales Co.; $20,000; J. A. Elden.

Toledo, O.; The Abbott Motor Co.; $10,000; A. M. Abbott.

Youngstown, O.; Youngstown Motor and Service Co.; $10,000; Paul S. Clark, John W. McMinn, John E. Wirt, Frank R. Quirk, B. F. Wirt.

Zanesville, O.; Zanesville Taxicab and Sales Co.; $5000; I. A. Souders.

Charleston, S. C.; The Motor Accessory Co.; $25,000; to conduct an automobile business.

Greenville, S. C.; Greenville Nash Sales Co.; $25,000; to conduct a general automobile business.

Mullins, S. C.; The Mullins Motor Car Co.; $25,000; to conduct a general automobile business.

Winston-Salem, S. C.; Southside Motor Co.; $100,000.

Greeleyville, S. D.; The Enterprise Mercantile Co.; $21,000.

Kirbyville, Tex.; Kirbyville Auto Co.; $15,000; George Markley, Garland Smith, W. B. Powell.

Houston, Tex.; Dwight-Means Motor Co.; $12,000; Ben H. Dwight, R. B. Means, J. B. Thomas.

Houston, Tex.; McDill-Elmer-Ransom Co.; $15,000; to deal in automobiles; H. McDill, G. D. Elmer, R. J. Ransom.

Newton, Tex.; Newton Auto Co.; $15,000; George C. Markley, N. G. Allbeitton, W. B. Powell.

Palacios, Tex.; Palacios Auto Co.; $20,000; G. M. Booth, D. W. Cooley, J. L. Koerber.

Memphis, Tenn.; Chicamauga Motor Co.; $50,000; W. L. Huntley, Jr., C. W. Goyer, R. H. Peoples, Fred H. Peoples, James M. Buch, Jr.

Memphis, Tenn.; Service Motor Co.; $10,000; T. J. Harwell, Fannie Lee Harwell, J. B. Whitman, B. J. Mason, G. F. Anderson.

Galveston, Tex.; Excelsior Motor Car Co.; $20,000; L. R. Jones, O. R. Jones, R. E. Jones.

Palacios, Tex.; Palacios Auto Co.; $20,000; J. J. Booth, D. W. Cooley, J. J. Koerber.

Falls Church, Va.; Falls Church Auto Corporation; $50,000; to conduct an automobile business; George B. Fadely, Carrell V. Shreve.

Fredericksburg, Va.; Fredericksburg & Northern Neck Motor Transportation Co.; $25,000; K. Sweetzer, S. M. Janney, F. L. W. Green, J. B. Debnam.

Norfolk, Va.; Lennon-Wright Corporation; $10,000; to conduct a general automobile business; Thomas B. Wright, Bryant S. Lennon.

Portsmouth, Va.; Morse Motor Supply Co.; $25,000; to conduct a general automobile business; W. Wry Morse, C. S. Morse.

Chetek, Wis.; Chetek Auto Co.; $10,000.

RECORD OF BUILDING OPERATIONS FOR AUGUST

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Tuscaloosa, Ala.; W. F. Fitss & Son; one-story fireproof garage, 115x117.

Ft. Smith, Ark.; Armbruster & Co.; one-story garage, 52x140.

Ft. Smith, Ark.; Texas Oil Co.; one-story brick filling station; $6000.

Murfreesboro, Ark.; Wallace Garage; one-story garage, 40x100; $25,000.

Bakersfield, Cal.; W. F. Hubbard; one-story garage and repair shop; $30,000.

Bakersfield, Cal.; J. L. Bruce; one-story garage; $30,000.

Fresno, Cal.; H. A. Seller Co.; one-story garage and salesroom, 80x150; $30,000.

Fresno, Cal.; Don Lee Automobile Co.; one-story garage and sales room; $160,000.

Richmond, Cal.; Charles G. Baron; one-story garage; $25,000.

Sacramento, Cal.; J. D. Laupe; two-story garage; $19,900.

Stockton, Cal.; Joseph Losekann; one-story garage, 100x150; $16,000.

Denver, Col.; Stanton & Son; one-story garage, 50x185.

Durango, Col.; C. E. Moore; one-story garage, 65x75.

STUDEBAKER.

Studebaker Corporation earned over $4,200,000 net before taxes in the six months ended June 30. Production for the six months was approximately 17,000 cars. The production schedule calls for 40,000 cars in the current year. The company has earned $400,000 more in the first half of this year than for the full year 1918.

KEYSTONE TIRE.

In the six months ended June 30 the Keystone Tire and Rubber Co. reported gross sales of $5,570,120, against $3,000,672 in the same period in 1918. Profits for the period before taxes were $725,935, against $442,404 in 1918.

GLOBE TIRE.

Stockholders of the Globe Rubber Tire Manufacturing Co. have over-subscribed a new issue of $250,000 of common stock, which was offered to the junior stockholders on the basis of one-third of their present holdings. The proceeds of the financing will be used to expand the company's facilities to keep pace with increased sales.

These photographs show the great change in freight traffic on Brooklyn Bridge during the past fifteen years—a change that is coincident with the great developments in automobile tire manufacture, and the better service delivered by the dependable tires of today.

THE fact that Fisk Over-Size Cord Truck Tires are going onto more business trucks every day is a significant commentary on their durability, their long mileage and low upkeep cost.

Tires to Re-tire? Buy Fisk!

Tires on trucks are subject to accurate cost accounting—and business men buy those tires which serve them best.

Fisk Over-Size Truck Cords are massive with remarkable wear resistance and long life built into them by the maker.

Everywhere Fisk sales are growing.

MOTOR AND ACCESSORY MAKERS TO HOLD MEETING.

An important meeting of the Motor and Accessory Manufacturers' Association will be held at Buffalo Sept. 11 and 12, at the Hotel Lafayette. The meeting will be primarily a Credit Managers' Convention, but general executives of the various companies of the association are expected to attend, as subjects of direct and vital importance to business in general and the automotive industry in particular will be discussed.

In announcing the convention, M. L. Heminway, general manager of the association, said:

"In addition to strictly credit matters, business conditions in the automotive industry in general will be discussed by representative speakers who hold commanding positions in their particular branches of the industry. The names of the speakers and other details will be announced shortly. The paramount problems now facing the American business as a whole, and especially the automotive industry, will be discussed, and for this reason we urge that the chief executives of member companies make special effort to attend the convention.

"This is not to be regarded as a perfunctory or routine meeting. It will be a thought stimulating get-together convention. In view of the acute and pressing problems brought about by the readjustment to peace conditions, a large and representative attendance is desirable."

VULCANIZERS ARE TRAINED AT SCHOOL IN AKRON.

One of the natural results of the tremendous increase in the number of motor cars is the insistent demand for expert vulcanizers to carry on the tire repair business which has followed in the automobile's wake. Among the tire repair schools that have set about to relieve this condition by training men in the craft of repairing tires, with a big degree of success, is the one which is being operated by the Goodyear Rubber Co., Akron, O. Individual instruction is given to each man. The course covers two weeks' work.

ELLIS-SMITH TOWING TRUCK LIST IS $40.

In the July number of this publication the list price of the Towing Truck of the Ellis-Smith Manufacturing Co., Inc., was incorrectly stated as $32.50, whereby the price really is $40. The company has moved its plant from Buffalo, N. Y., to Elmira, N. Y., where it has its own foundry and is building its jack complete from the raw iron and steel product to the completed jack.

THE LEADER.

The Leader, the official organ of the Automotive Equipment Association, is always an interesting publication, and there is no doubt that the members of the association derive much benefit from its timely articles.

Service Station Men Are Organized In New York City

As a result of several meetings which have been held recently by the heads of many large automobile service stations in New York City, the Automotive Service Association has been formed, and will hold its first regular meeting on Sept. 3 at the National Automobile Chamber of Commerce, 7 East Forty-second street. The association had its inception in the desire of many of the managers and technical directors of the large service and repair shops to provide some method to improve the status of automobile mechanics. In this direction the service managers and department heads will endeavor to work out a plan whereby motor mechanics may be classified according to their several abilities by a process of examination.

The temporary officers recently elected, who will hold office until the annual meeting in January, are R. C. Rognan, president; J. W. Watt, vice president; J. Howard Pile, secretary, and E. V. Dirks, treasurer. The directors include E. Hunn, Jr., J. H. Lange, J. M. Grant, F. W. Lowe, H. M. Holt and Al Rawson.

The chief objects of the association are to promote the education of automotive mechanics and service station employees and to discuss the problems pertaining to more efficient automobile repair work in the service stations and shops. The offices of the organization, for the present, will be at the National Automobile Chamber of Commerce.

"There are many serious problems," explained Mr. Rognan, who is manager of a large truck service station, "relative to the efficient rendering of service to the public throughout the United States which, we believe, can be solved to good advantage by the association of those directly connected with this branch of the industry."

ILLINOIS MANUFACTURERS.

The Illinois Manufacturers' Association will hold an "Our Country First" conference in Chicago, Sept. 8 and 9.

Advance Dealer Help.

PANOL MAKES FINE POLISH CLEANER FOR AUTOMOBILES.

Car owners and garagemen who have not tried Panol, the polish cleaner, are invited to write to the maker, the Panvar Co., Inc., Bulletin building, Philadelphia, for a sample, which will be furnished for 25 cents. The company is so confident regarding the merit of its product that it has adopted the slogan, "A Try Means a Buy." The sample is liberal enough to permit a thorough test and a comparison with other polish cleaners on the market.

Panol, when used on automobiles, is a splendid dry wash, leaving a rich gloss free from dust-catching grease or oil. It makes scratches disappear and keeps the windshield clear. It is, as the maker states, "the soapless, greaseless way to keep your car everlastingly new."

Panol removes all grease and grime down to the original finish, and restores the original factory luster. The producer promises that Panol will leave "a clear surface; smooth as glass and dry as bone; no greasy surface; no milky smear." It is also claimed that Panol lengthens the life of woodwork.

Panol is also intended for use in households, offices, hotels and restaurants. The retail price is $1 per quart, $3 per gallon. It is applied with a soft cloth. On large surfaces a sprayer may be used. Panol contains no wax, no acids or alkali. It is known as "the oil with a thousand uses."

OVERLAND FOUR $845.

It is rumored that the price of the new Overland Four, which it is understood will be announced in the near future, will be $845.

ADVANCE ANNOUNCES NEW DEALER HELPS.

The Advance Automobile Accessories Corporation, Chicago, maker of White Stripe and Advance Cork Insert Linings, has just brought out three new and attractive "dealer helps."

The card shown in illustration is for Advance Cork Insert. It is 9x13 in size effectively lithographed in red and black. The hand holds an actual piece of Advance Cork Insert Lining. This display is unusually effective, for it not only attracts the eye, but also gives the prospective purchaser an accurate idea of what this famous lining looks like. The card is made so as to hang from a nail or to be stood on counters.

An equally effective card is out for White Stripe Lining. The carton and lining are well displayed. The White Stripe card is printed in three colors, and is immensely popular with dealers.

A new window display is the third item. It is a gigantic carton of Advance Cork Insert Lining—four feet high and three feet wide, lithographed in three colors—showing the lining and corks in natural colors.

This large display is mounted on very heavy stock and has substantial easels. Any of these cards are supplied to dealers free of charge.

National Distribution

An Advertisement *by* Barney Oldfield

When we made our first plans for the Oldfield Tire Company, we set aside a full year for the securing of national distribution.

No other tire manufacturer had ever done it in less than five years, but no other tire manufacturer had ever had Oldfield Tires to sell.

We believed in the Tire Merchants of America—that they knew a good proposition when they saw it, and that they would meet us half-way.

Now Read Carefully

We have used up five of our allotted twelve months. We have signed contracts with distributors in nearly all the big trading centers of the country. Through them we also supply today nearly 4,700 Tire Merchants in the smaller cities and towns.

And how those Merchants are whizzing the Oldfield Tire across the counters!

Their original stocks melted away in the first few days. Their re-orders have kept us so busy that we have found difficulty in accumulating reserve stocks for our warehouses in New York, Chicago, Kansas City, Los Angeles, San Francisco, Atlanta and Dallas.

Record-Breaking!

Our production is right up to schedule. It's a big one, too—a record-breaker for a first year, and getting bigger every month.

We are closing new contracts every day.

In the next seven months we expect to close the territory that still remains open, complete our reserve stocks, and be set for 1920 when, to Oldfield quality, we'll add a big quantity production that will put Oldfield Tires in every town, village and cross-roads in America, to say nothing of our fast-growing export trade.

A Winner For You

These are facts, Mr. Merchant. I am giving them to you for you to use in your business.

The Merchant with Oldfield Tires in his racks today has the first call on business in his territory. And he's lined up with a manufacturer who has broken record after record in the tire business—a winner.

Make the Oldfield Tire a winner for you!

Profits, Permanence

Stock tires you can get behind and really sell—tires that have a sales story and that make that sales story good by the way they stand up in actual service.

Don't let a competitor beat you to this opportunity to increase the profits and establish the permanence of your business.

Apply for that Oldfield franchise and send your application straight to me, at The Oldfield Tire Company, Cleveland, Ohio. I will see that it is promptly taken care of.

You know me,

Barney Oldfield

FORD GETS SMALL DAMAGES IN LIBEL SUIT

THE automobile industry and trade followed with interest the suit for $1,000,000 brought by Henry Ford against the Chicago Tribune, which ended in a verdict of six cents and costs for Ford. Under the Michigan law, costs of not more than $50 can be assessed when the jury awards nominal damages. It is believed that the total expenses connected with the great legal battle will cost Ford $250,000 and the Tribune close to $400,000.

The suit was based on an editorial which appeared in the Tribune June 23, 1916, under the heading, "Ford Is an Anarchist." On the Sunday previous President Wilson issued an order for the mobilization of the National Guard on the Mexican border for duty in case the situation raised by Pancho Villa's raids and President Carranza's attitude toward the American punitive expedition required its service.

The Tribune, which favored intervention in Mexico, sought to encourage enlistments in the National Guard by obtaining assurances from employers that they would hold jobs open for men in the service while away or care for their dependents.

The paper wired its Detroit correspondent, P. W. Williams, to obtain a statement from officials of the Ford Motor Co. as to what the company would do in this regard. According to his testimony he obtained his information from Frank L. Klingensmith, vice president and secretary, to the effect that the company would do nothing either for its enlisted employees or their dependents, and that on their return the men would be considered as new applicants for employment. The dispatch was printed under the head, "Flivver Patriotism."

Henry Ford.

The possibility that the attitude of one of the country's greatest employers might have a deterrent effect on the movement espoused by the Tribune, led to a scatching editorial declaring Mr. Ford an enemy of the government. The editorial was written by Clifford Raymond, approved by Tiffany Blake, chief editorial writer, and by Major McCormick.

While Mr. Ford's views had brought him into much criticism from newspapers and public speakers advocating a more vigorous military policy for the United States, this was the editorial which roused him to action.

Probably the most interesting witness called was Mr. Ford himself. He was subjected to a severe cross-examination, which brought out his lack of familiarity with important historical facts and also with the use of simple words. Even his ability to read was questioned. Ford testified that he hired a newspaperman to write the newspaper and magazine articles that had appeared as having been written by Ford himself.

COLLINS MOTORS FORMED TO BUILD CUSTOM CARS.

"Hand tailored" automobiles will be made by the Collins Motors, Inc., recently incorporated at Albany, N. Y. The general offices and factory will be at Huntington, L. I., with metropolitan sales and export offices in New York.

"It has been my ambition," said Mr. Collins, "to demonstrate to the wealthy purchasers of foreign-made cars that it is not necessary to go abroad to secure a motor car with all the refinements and distinctive features that are supposed to be found only in foreign-made cars. All bodies on our cars will be hand-made and built to the measure of the individual purchaser, and his own ideas of upholstery, paint and trimmings are furnished to his order. It is our aim to give each buyer the unusual satisfaction of owning a motor car that combines all the special features in which he is particularly interested.

"A '120' chassis, built only as our 'Country Club' roadster, merges characteristically both speed and smart design. This car is built especially for the club man or amateur sportsman who expects the most from his car in speed, quality and appearance and for which the cost is his least consideration. This model is the outgrowth of an idea developed through years of experience in the manufacture and sale of high grade motor cars.

"Every chassis is tested for speed and ability on the famous Vanderbilt Cup Speedway and a certificate guaranteeing its performance is furnished with every individual car.

"Another longer chassis is designed to support the touring, town and other special hand-made bodies built to satisfy milady's most fastidious notions, bodies whose finish introduce luxurious upholstery and appointments in keeping with these times when traditional charm is the supreme evidence of luxury and perfect taste."

A four-acre factory site located on the Long Island railroad has been purchased and a modern plant of steel and glass will be erected at once. The capitalization of the company is $400,000, with the following officers and directors: President, Albert H. Collins, formerly vice president of the New R. C. H. Corporation, Detroit; vice president, William B. Brewster, New York; treasurer, Spencer C. Smith, East Orange, N. J.; secretary and general counsel, Charles H. Stoll, New York; Henry S. Brush, Huntington, L. I.

DAILY CAR PRODUCTION RECORDS.

Daily car production records for July follow: Buick, 500; Briscoe, 75; Barley, 10; Cadillac, 70; Chalmers, 65; Chandler, 90; Chevrolet, 730; Columbia, 30; Dodge, 375; Dort, 100; Ford, 3000; Hudson, 110; Hupp, 75; King, 15; Liberty, 40; Maxwell, 200; Oakland, 250; Olympian, 15; Oldsmobile, 140; Overland, 200; Packard, 25; Paige, 75; Paterson, 15; Jordan, 15; Maibohm, 15; Reo, 125; Saxon, 30; Scripps-Booth, 55; Studebaker, 165; Peerless, 12; Winton, 12; Essex, 110; Grant, 40.

NEW PLAN TO CUT CAR THEFT INSURANCE RATES.

A real solution of the motor car theft problem and a reduction on theft insurance rates of at least 50 per cent. is the promise of the Automobile Abstract and Title Co., a million dollar Detroit and Chicago corporation, which proposes to issue abstracts of title for automobiles.

The company believes that no more feasible plan has been advanced for the complete and absolute elimination of the automobile thief and that it will be quite as impossible to steal and sell a motor car so protected as it would be in the case of real estate. In fact, the automobile abstract finds an exact parallel in the abstract issued for real estate—to prove ownership and guarantee title.

From the motorist's point of view the immediate and most important results will be a material reduction in theft rates, which, in many parts of the country are now prohibitive. In addition, the abstract will serve a number of other worthy purposes such as providing information of mortgages, liens and similar legal claims which may exist against a car.

The automobile abstract is the best thought in motor car protection and the company considers it the only logical business like manner in which $5,550,000,000 of motor car wealth can be adequately protected.

New prices for the Franklin follow: Touring, $2750; brougham, $3700; sedan, $3750; four-passenger roadster, $2750; two-passenger roadster, $2700.

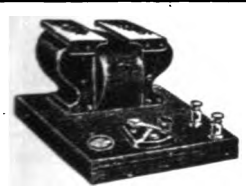
232 E. Ohio Street, Chicago, Ill.

Niehoff Laminated Magnetizer



This is the most scientific and practical Magnetizer ever constructed. It will magnetize any size magnet from a Ford to all the various other magnets used on the different cars today. Due to the fact that it generates an enormous amount of magnetism, with a pulling power of about 75 pounds, you can more quickly remagnetize a magnet, and, therefore save much current. All magnetizers are subject to considerable wear. The faces will wear down according to their use. The top pieces of our Magnetizer are especially hardened and also detachable so that when worn down they may be replaced at a very small expense. We have two types: one for 6 volt storage battery and another for 110 volt D. C. current. Write for further information.

TRADE OUTLET

Accessories Salesman Wanted

to carry a complete line of Ignition repair parts, Platinum, Tungsten Contacts, Motor and Generator Brushes, Coils, Condensers, etc., by reliable concern guaranteeing all products; every garage, magneto shop, accessory dealer a good prospect; our prices and high discounts beat competition everywhere. Sold from catalog with small sample case. Good side line or main line. Previous experience preferred, but not essential as our first letter suffices to enable you to talk intelligently. Liberal commission, exclusive territory to real hustlers. State experience, territory wanted, etc., in first letter, addressing Box XX, Accessory and Garage Journal.

Every Ford Owner Should Read "TRANSFORMING THE FORD." Tells how to secure smooth, positive brake action that no car can excel. A little "transforming" and your car will glide to a quiet, quick stop without the annoying, irritating clatter that you now experience. It will go into low or reverse without jumping or jerking and you can pick up speed with all the smoothness and ease of a high-priced car. All accomplished without additional expense and the result is a clear saving of 75 per cent. in one direction alone. "TRANSFORMING THE FORD" tells how it's done. Send for your copy this very minute. IT IS FREE. **Cormack & Co., 500 Fifth Ave., New York City.**

DUNTLEY
MAGNETO BREAK
TIMER

FOR ALL FORD CARS

Guaranteed to Deliver 50,000 Miles of Efficient Service

The Duntley Magneto Break Timer Eliminates Ignition Troubles and Insures Maximum Motor Efficiency and Economy.

Perfect ignition can be attained only through positive contact and a clean break. In the Duntley, the electrical current is closed by Tungsten points in positive contact, not through a greasy roller jumping and skipping across a metal segment.

The only parts in motion sufficient to cause wear are the rollers riding on the operating cam and they are made of a special fine grain, hard pressed fiber that is oil and water proof and practically everlasting.

FOR FORDSON TRACTORS

The following letter from a satisfied user shows how the Duntley delivers 100% on the Fordson.

"The timer you sent . . . . is all you claim for it. It certainly gives the tractor twice the power it had before and also is a saver of fuel." Name on request.

SOLD ON AN ABSOLUTE MONEY BACK GUARANTEE

DEALERS: To any reputable dealer who writes, mentioning the name of his jobber, we will send a Duntley for a 10 day trial.

DEALERS
Write for a sample of DURACORD

A better, stronger extension lamp with a different kind of cord

USERS of portable hand lamps have suffered so long from the necessity of using poor lamp-cord that they have come to accept it as inevitable—like death and taxes.

Surely the cord is of the utmost importance when danger of fire from short circuit and of accident from electric shock is considered.

You can now get this complete Duracord Extension Lamp all wired up ready for use. Everything except the bulb.

Duracord has a heavy *woven* covering like a piece of fire hose that will outlast ordinary cords several times. It is gripped in the handle by a patented "holdfast" fitting—no strain on the wires or the terminals.

Each lamp in an individual box, complete. See them at your dealer's.

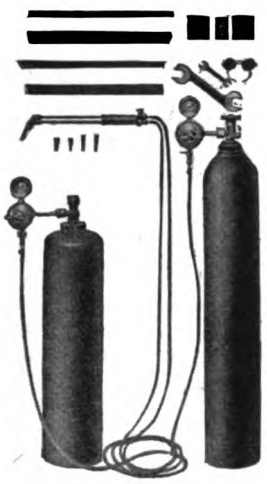
GET A WATERHOUSE WELDING OUTFIT AND WATCH YOUR BUSINESS GROW



Boost your profits—Swing the big profitable welding business to your shop. Thousands of repairers are doing it and most of them use a Waterhouse outfit.

Time is money and a Waterhouse Welding Outfit saves the time as well as labor. It affords utility great enough to meet any shop requirement, yet no shop is too small to own one.

The great difference in welding outfits is all in favor of the Waterhouse. That means quality, utility, long service life, simplicity, dependability, low first cost and the best and most complete welding apparatus ever offered to the trade.

Write for descriptive catalogue, or better still, tell us your requirements. Do it today. We can supply the exact outfit for your needs.

All Waterhouse outfits are guaranteed.

WATERHOUSE WELDING COMPANY, 3 PELHAM STREET, BOSTON, - MASS.

FREE AIR COSTS MONEY

when the customers for whose convenience you provide an air station forget to turn off the flow after they have filled their tires.

Guard against this waste by attaching a

Schrader Universal Inflating Valve

to your air hose.

Thanks to this appliance your bottled air locks itself into the tank the minute it is taken off the tire-valve. You turn on the air by pressing the nozzle of the inflating valve against the tire-valve and you turn it off by removing the device from the tire-valve.

Made to fit any diameter of hose from ¼ in. to ⅝ in.

PRICE $1.50 in U. S. A.

Manufactured by **A. SCHRADER'S SON, Inc.**
800 Atlantic Avenue, Brooklyn, N. Y.

Schrader products were awarded a Grand Prize and two Gold Medals at the Panama Pacific International Exposition. "There's a Reason."

THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive.

For Any Make or Type of Truck.

A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

Write for complete information.

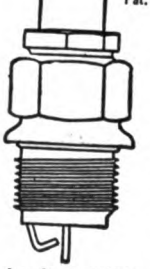
UNIVERSAL AND MARVEL SPARK PLUG INTENSIFIERS

Pat. 3-19-'18.

Attached to Plug Stops all Spark Plug Troubles



The spark is always visible. It is a window in the cylinder.
It will make a plug fouled with grease or carbon or that has a broken porcelain, fire perfectly.
When the magneto is not working properly, a wire short circuited or broken, or the battery is out of order, the Intensifier will prove it at a glance and it can be adjusted to overcome almost any ignition weakness.
No more guess work or testing with screw driver or pinchers. The Intensifier shows it all at a glance and what causes it, whether no spark, a loose or broken wire, poor connection or shorted. It will increase the voltage and the spark and make starting easy. Eliminates carbon, adds to power, saves the gas and oil, preserves plugs and will last indefinitely. Almost instantly attached to any screw terminal plug.

Jobbers—Dealers—Distributors

It is a wonder worker, a time, trouble and money saver. Sells at a glance. Thousands in use. It is the original and proven Intensifier. Sold with a money back guarantee if it fails in any particular or to afford perfect satisfaction.

For Ford Cars

IT ABSORBS THE REBOUND OR UPTHROW

By installing Beckman Springs the original spring on a Ford is lowered 2½ inches automatically. This action reduces the equivalent amount of spread on each side of the lower spring as well as the play in the steering. In other words, it improves the steering.

Completely absorbs all shocks. Controls the rebound, side sway and all chance of springs breaking.

It stops the squeaks and rattles. These springs cannot dent or bump the body. Easy to clean and will last longer than the car. Our trial offer money back iron clad guarantee goes with every sale.

Easy to apply as any shock absorber. Anyone can do the work. 100% protection for Ford pleasure cars or trucks.

The double action of springs is controlled by the opposite arch and suspension. Practical equipment that is guaranteed to afford full satisfaction in any service, not to break and made of the best alloy spring steel.

It greatly improves the appearance and makes the Ford look like a high priced car. For comfort, safety and efficiency it adds 100% to the service value and life of any passenger car or truck.

JOBBERS AND DEALERS:

This is car equipment of the highest quality, efficiency and service. Sells right and will prove to be a leader with you.

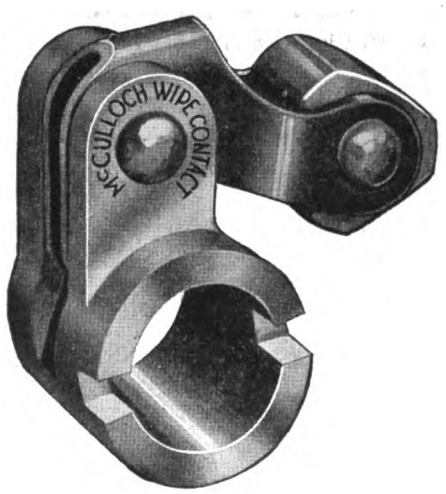
For Ford Cars

McCulloch Wipe Contact

For Fordson, and Ford Trucks



The McCulloch Wipe Contact will absolutely do away with the abnormal wear on the roller of a Ford car, Fordson or Ford truck timer, and is guaranteed for the severe life of any timer used on Ford products.

It operates similar to the old style roller, but instead of rolling around the timer ring in the timer case, it slides till an obstruction is reached, turning over to a new surface, on which the contact is continued. This action taking place as often as an obstruction is encountered.

The old style roller contact, attached to the camshaft, revolved at one-half the crankshaft speed, and this is approximately 625 R. P. M. The wipe contact, turning at a much slower rate of speed, due to its triangular shape, wears the timer ring and Wipe Contact equally and smoothly, but will also keep the points of contact clean, assuring long life, small amount of wear and perfect ignition.

The Wipe Contact is made of high carbon steel that is not affected by the sliding motion of contact with the distributor points or fiber. There is not a chance of a misfire.

List Price but $ .60. Sold by all dealers or direct.

What Garagemen Think About "TRIPLEXD"

Extract No. 8

Gasoline Proof

(Another Testimonial)

"...WE had a number of complaints regarding dirt, etc., in the gas. The gas had deteriorated the rubber hose—and the black substance which I had had removed from various carburetors was rubber lining from the hose. I immediately removed the hose from my two tank pumps and had installed in each pump 12 ft. of "Triplexd" Gasoline Hose, which I have been using for over a year and a half, and I have not removed the same for cleaning during that time or had any complaints whatsoever from dirt in the gas. This statement can be verified at any time by calling at the above address."

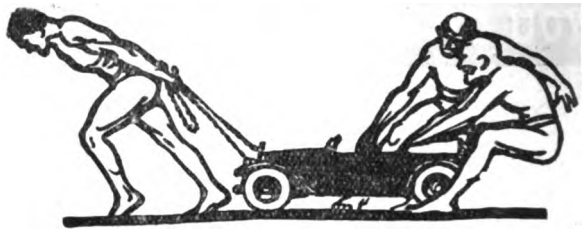
10-16 LOCK STREET BUFFALO, N. Y.



TAKE CARE OF THE GO-BETWEENS

Transmissions and differentials are the go-betweens in the constant fight of **Power** against **Resistance.** Here the battle takes place—where the two forces meet.

DIXON'S GRAPHITE Transmission and Differential LUBRICANT

is made specially to meet a difficult lubricating problem like that.

It stands to its post under the tremendous pressure that must be met and conquers in this grueling work.

It stays on the gears as faithfully when they are **not** moving as when they are in action.

They will build better lubricating business for you and satisfy your customers.

Reflex equipped White Truck speeding up building by bringing up material;—

—no delays due to ignition trouble mean continuous and fast work here

Reflex Spark Plugs NOW "Bring up Supplies" in Construction Work

—and with the same dependability as they held trucks to rigid schedules bringing up war supplies to the front line fighters.

For Reflex equipped White—and other—Trucks promote rapid construction by keeping the workers supplied with building materials. Downright trouble-proof ignition is assured by the sturdy Reflex regardless of how continuous the work—the same result your customers get when you sell them this plug for their car or truck.

It is the cromite war-service porcelain and non-pit electrode construction of Reflex Plugs which enables them to force these supply trucks through all kinds of roads. Every Reflex Spark Plug you sell gives your trade, too, unfailing ignition under even the most trying emergency conditions of excessive heat and lubrication.

Sell Reflex Plugs because of what they have done and are doing in cars and trucks—and what they have done for dealers everywhere. And you can sell a Reflex for any engine. Order from your jobber—or write us direct if he is not supplied.

STOP THAT NOISE!

caused by loose action of push rods and rocker arms in

BUICK CHEVROLET

and other valve-in-head motors with

K H K Valve in Head MOTOR SILENCERS

This attachment is guaranteed to eliminate from 75% to 90% of the noise in the valve action of Buicks and Chevrolets; takes up the play in the push rods and rocker arms and holds the cam rollers snugly against the camshaft.

Nothing Else Like It

K H K Motor Silencers have successfully solved the problem of stopping that clicking noise in valve-in-head motors. There's no other attachment of this kind on the market. Every owner of a Buick or Chevrolet motor appreciates the value of this attachment the moment they see it.

Satisfaction of Money Back

A written guarantee that K H K Motor Silencers will eliminate from 75% to 90% of the noise caused by loose valve action in Buick or Chevrolet motors goes with each set. K H K Motor Silencers are further guaranteed against breakage for six months.

Notice to Dealers

The overwhelming demand for K H K Motor Silencers tells the true story of their success. They sell on sight. We've got a very attractive proposition for the right kind of dealers. List prices—for Buick 6, **$3.00**; Buick 4 and Chevrolet, **$2.25**. Liberal dealers' discount. Sample sent C. O. D. on request.

GILL

The Perfect One Piece Piston Ring

This is a picture of "Mac." He is a corking good mechanic and a great booster for the Gill Piston Ring. "Mac" says you only have to show a motorist a Gill Ring to sell it and thousands of dealers all over the country have found this true to the advantage of their business.

What is the reason for this "Gill Enthusiasm"?

Look at the double step, interlocking joint and you will see for yourself. It allows an expansion of from 1/8" to 3/16" before any loss of compression occurs. In addition Gill Rings are made from single piece castings of special fine gray iron and machined to absolute accuracy. The easiest ring on the market to install, the easiest ring on the market to sell.

Send for the new Gill Piston Ring Size Directory, complete, convenient and full of just the information you need. It is free to the trade.

BRUNNER

Have You an Air Service Problem?

The Brunner Compressor either motor or belt driven --any one of the many sizes and combinations---together with a Brunner open hearth steel tank---Resistoil air hose and Brunner fittings is the answer to the air service problem---the last word.

Every piece or part entering into the Brunner product is made in the Brunner plant not just picked up here and there and assembled.

The embodiment of sound engineering knowledge and good design is as essential in an air compressor as in an automobile. There are certain principles in air compressor design and construction that are fundamental and certain principles of pneumatics that cannot be changed successfully.

We will fit your needs with a well engineered product whatever your special requirements may be.

Tell us your needs and the name of your jobber. Get our illustrated folder showing the largest line of Garage air compressors on the market.

PEERLESS
AUTOMOBILE SPECIALTIES
Make old cars look like new

Peerless Automobile Specialties produce durable and lasting results that please every owner for their quality, giving dealers repeat orders and good profit on each can sold.

Put up in attractive lithographed can with friction tops, that can be pried off and put back on when through using, preventing any possibility of deterioration.

PEERLESS MOHAIR TOP DRESSING—
A waterproof dressing which also dyes tops with one application.

PEERLESS LEATHER TOP DRESSING—
Renews and softens leather, rubber and pantasote tops—adds months to life of tops.

PEERLESS LINING DYE—
Dyes all dirty and spotted linings a black, uniform color, improving the entire appearance of the car.

PEERLESS CUSHION DRESSING—
Brightens and renews the finish of leather seats and cushions.

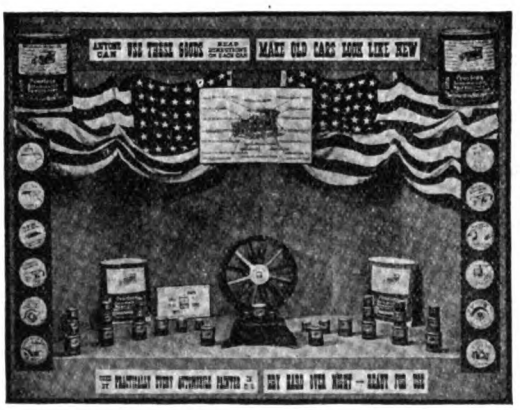
PEERLESS CYLINDER ENAMELS—
Heavy bodied enamels that will resist heat, grease and gasoline. Black and Gray.

PEERLESS LAMP ENAMELS—
A rich enamel finish for lamps and kindred parts which will cover solid with one coat. Gloss and dull.

PEERLESS JET BLACK FENDER JAPAN—
An air drying enamel which gives a rich finish similar to a baked job.

PEERLESS BODY POLISH
A fine product for dull varnished surfaces. It brightens with a finish that is lasting.

PEERLESS GASKET SHELLAC—
A high grade alcohol product. Heavy bodied for gasket work and is not affected by gasoline.



PEERLESS TOUCH-UP BLACK—
A quick drying product for touching up various metal and wooden parts about a car.

PEERLESS TIRE PAINT—
A waterproof dressing, that protects and improves the appearance of your tires. Made in Black, Gray and White.

PEERLESS BATTERY BOX BLACK—
An acid resisting enamel for coating wood and metal that comes in contact with acid and fumes from battery boxes.

PEERLESS MIRROROID—
A clear varnish if applied before the paint and color have perished will make a finish like a new varnished job.

PEERLESS CARBON REMOVER—
A liquid preparation that will remove deposits of carbon from cylinders and keep your motor always active and full of life.

PEERLESS LIQUID WAX—
A wax polish in liquid form that is easy to apply with a light, even coat, that will stand many washings without dulling the finish.

PEERLESS RIM PAINT—
A coating that prevents the rusting of rims. It does not chip off and is absolutely waterproof.

PEERLESS EXTRA FINE BLACK JAPAN—
A fine black gloss product for touching up and all around use on wood, metal and old painted and enameled surfaces.

PEERLESS FORD TOP DRESSINGS—
Made especially for Ford cars and will protect the top from the ravages of inclement weather.

PEERLESS COLOR FINISHINGS—
Made so that you can paint the body chassis and wheels of your car your favorite color. Made with a finishing varnish to stand wear and may be used without an undercoat. Dries over night. Made in eight colors: Straw Color, Red, Yellow, Blue, Green, Gray, Black and White.

Prices on all items except color finishings are:
1 gallon, $5.00; ½ gallon, $2.60; quart, $1.60; pint, .75

Prices on Coloring Finishings are:
1 gallon, $5.50; ½ gallon, $3.00; quart, $1.60; pint, .90; ½ pint, .50

Used By Over 8000 of the Leading Automobile Painters for Quality

DEALERS: Order these products from your jobber, who has stocks of Peerless Automobile Specialties. If you are already selling these items get catalogs, window display (see cut in center of page), inserts and other advertising matter. If he cannot supply you write to us direct.

HAYWOOD'S LATEST INVENTION

SILVUR LINED RE-TREAD MOLD

Here It Is:

A new machine that will earn from $100.00 to $150.00 per week in any well established tire repair shop. More than one year of constant experimenting and development work was required to complete it.

Statistics say there will be **One Billion Dollars** worth of tires worn out this year. The insistent demand for re-treaded tires that would add 3,000 to 4,000 more miles of wear is growing. A new and better machine than had so far been produced was needed.

Two actual photographs of One Tire

BEFORE and AFTER

being repaired and retreaded on a silvur-lined mold.

HAYWOOD'S Silvur Lined MOLD

meets the need Made of white metal—die cast—absolutely free from blemishes and smooth as glass. It is truly a wonderful machine.

Old tires retreaded on this machine closely imitate the runner, **cord type**, and are, smooth, classy, bright. All 4,000 owners of Haywood Tire Repair plants will **want** this new Haywood invention. Owners of other plants should have one.

Pays for Itself in a Week

Will earn from $100.00 to $150.00 weekly. Are you an auto tire repairman? If you are not, why not enter this profitable business? Tire Repairmen earn **$2,500 to $4,000 Per Year.** Many are doing better; some up to $6,000 and $7,000 per year. If you have a tire repair shop, you need this Haywood Silvur-Lined Retread Mold. You should write us at once and get the details. It will pay for itself in a week. Every week thereafter you should make $100.00 or more extra profit.

FREE BOOK I have an interesting book to send you that tells about tire repairmen and the Haywood method. It tells about automobile tires—it gives inside facts that you should know about profits. When you write tell me if you have a tire repair shop, or, if you want facts about the tire repair business. Address

M. HAYWOOD,
Haywood Tire & Equipment Co.
955 No. Capitol Ave., Indianapolis, Ind.

WRITE ME!

I will tell you how to start in business as an expert tire repairman and earn $2,500 to $4,000 per year. Sounds too good to be true. But it is true, every word of it.

M. HAYWOOD,
Haywood Tire and Equipment Co.
955 No. Capitol Ave., Indianapolis, Ind.

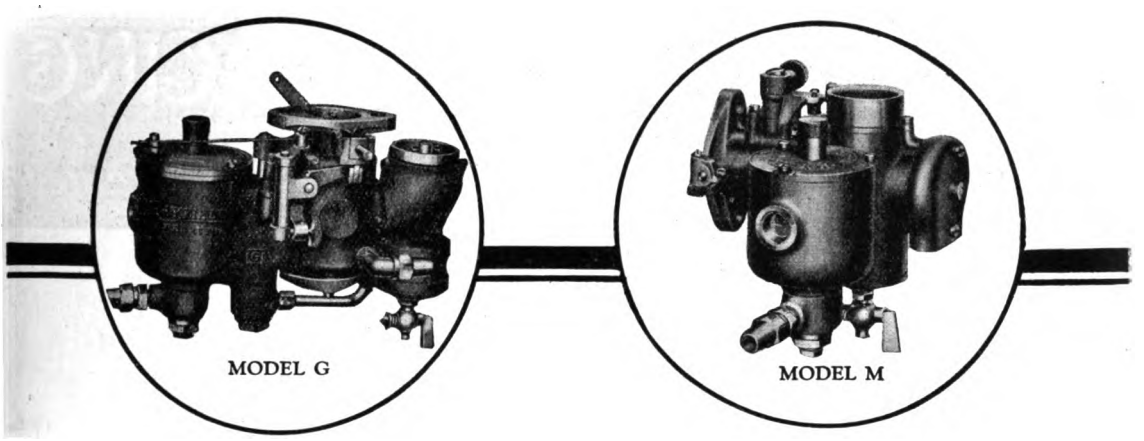
The Carburetor Makes the Motor Respond



When you step on the accelerator in an emergency and your car leaps ahead, it is the carburetor that makes the engine respond quickly.

The instant response of Rayfield carburetors can be depended upon at all times. There is no hesitating and no faltering.

This is a factor of safety just as important as the strength of the axle or the reliability of the transmission.

Rayfield response is due, first, to the superiority of its design. But the design would be of little use if it were not for the nicety of construction of each part, and the exactness with which they are assembled.

Naturally it costs more to build so good a carburetor. Motorists have found, however, that the greater cost is repaid many times by the absolute surety of their cars' performance.

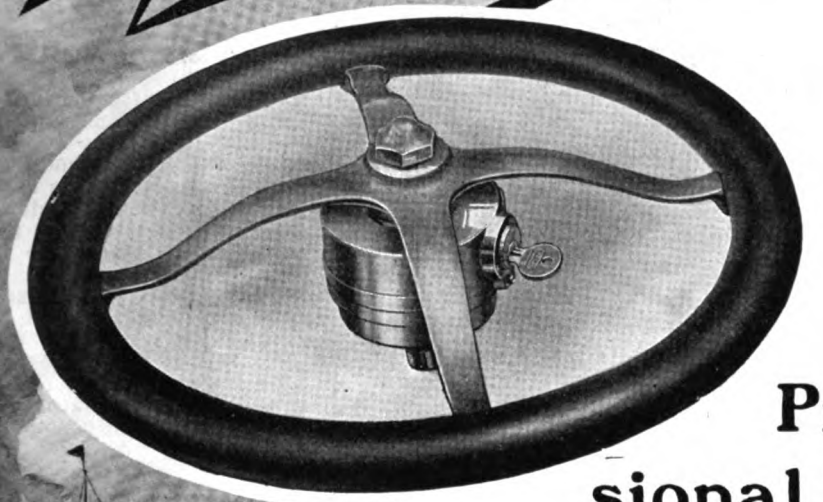
AUTOMOTIVE ACCESSORIES



It Foils the Profes=sional Thief

FORD owners don't need to be told that the Ford is the most easily stolen car in America. Every time it is left, even for a few minutes, it is at the mercy of joy riders and thieves. Insurance is good, but it won't bring back a stolen car.

But the Ford can be locked. It's easy to safeguard it with a

Masters
Steal-Proof Lock

This lock clamps the steering apparatus so that the front wheels cannot be used for steering. It's neat, convenient, cannot be picked, cannot be broken. You sell it over the counter. Easily installed by anyone. It can't lock accidentally for the locking bolt **rises** into mesh.

Sells for $6.50

Dealers write at once for terms, sample and literature. Thousands of Fords will be made safe for owners by this lock.

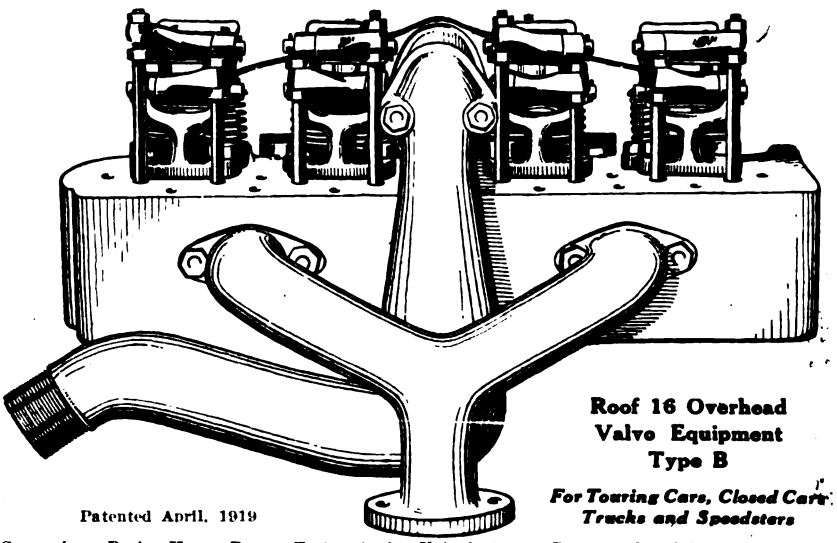
POWER and SPEED

Roof 16 Overhead Valve Equipment

FOR FORD MOTORS



Patented April, 1919

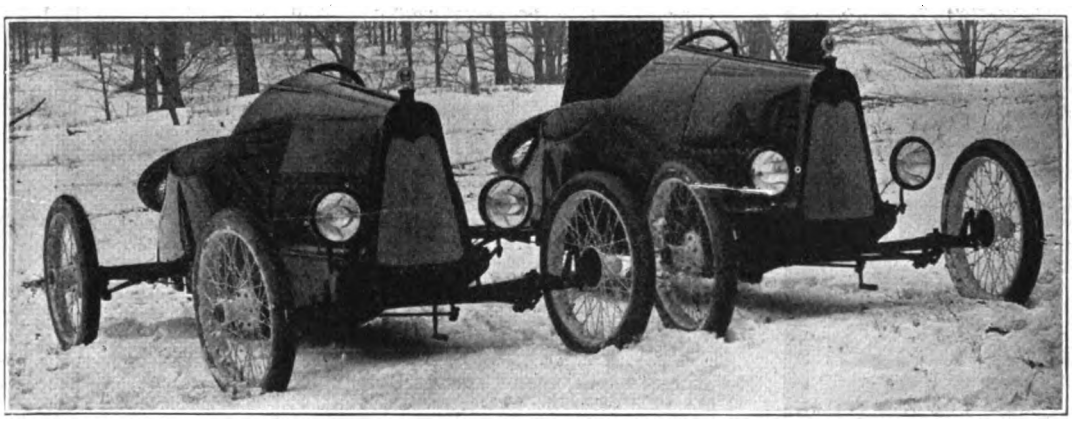
Roof 16 Overhead Valve Equipment Type B

For Touring Cars, Closed Cars, Trucks and Speedsters

The Most Remarkable Power Device, Even in This Inventive Age

Hill climbing for touring cars—pulling power through sand and mud—doubles the hauling capacity of converted Ford truck-speed for mile and half-mile tracks to rival the fastest cars built. Ford racing cars with our Cylinder Head Equipment and special racing parts have attained speeds from 80 to 100 miles per hour. Hill climbing and pulling power for touring cars, closed cars and trucks. Price, complete, $115.00 f. o. b. factory. Nothing extra to buy. Cylinder head equipment all ready for installation. It takes the place of the regular Ford Cylinder Head. Any mechanic can easily and quickly install it.

Comparison Brake Horse Power Tests at the United States Bureau of Standards gave Standard Ford motor with regulation carburetor 18.7 Horse Power. The same motor with 16 Valve Head and regulation carburetor 22.4 Horse Power. The same motor with 16 Valve Head and Special carburetor 29.7 Horse Power. Recent tests at Bureau of Standards with Type B gave 32 Horse Power. We are Manufacturers and Distributors of speed and other specialties for Ford cars; 3 to 1 gears, high speed camshafts, aluminite, light grey iron pistons, lynite pistons, aluminite connecting rods, racing spark plugs, racing carburetors, roller bearings, counterbalances, wire wheels, multiple speed transmission, high tension magnetos, special oiling system, special worm and gear, steering gear, racing tires, racing bodies, hood and radiator, parts for underslinging chassis. Tell us what you want. We can supply it. Racing quality. Lowest prices. Send for our Complete Literature on how to build fast cars and double the value of your converted Ford Truck and descriptive circular on Speed and other Specialties for Fords.



Our Famous De Luxe Racing Cars Price $1500

Ford Racing Car Speed Kings

From the hundreds of fast Ford car drivers we mention the names of a few of those who have won laurels through the use of our equipment and some with speed records approaching that of the highest priced racing cars in the world, ranging from 70 to 97 miles per hour, and who on mile and half-mile tracks have closely approached the world's record with their speed cars:

A New McCaskey Feature

Can you see what your customers owe you at any time at just one glance? Have you any means whereby at one look you can correct errors made during the day's business? Is there any way by which you can tell daily, within a few seconds, which of your clerks has been careless in handling charge accounts?

A McCaskey System of Accounts, equipped with the new Audit Clip Spring, will give you every one of these services.

The new Audit Clip Spring shown above enables (1) the proprietor to see AT A GLANCE who bought goods on credit or paid on account during the day; (2) enables the proprietor, cashier, or bookkeeper to audit each day's credit business where duplicate sales books are used; (3) permits the correction of mistakes made during the day; (4) enables the proprietor to see daily who is careless in handling charge accounts.

This is only one of the many features that is enabling a McCaskey System of Accounts to make the conduct of a credit business a pleasure and easy for thousands of merchants in the United States.

Write us today for further information. You will incur no obligation by asking for it. Just send a postal with your name, address, business and number of charge accounts.

THE OLDFIELD TIRE CO.

BARNEY OLDFIELD
PRESIDENT
CLEVELAND, O.

TO THE TIRE MERCHANTS OF THE WORLD:-

This Company's plan has been, from the start, a Tire Merchant's plan.

It contains the details an experienced Tire Merchant needs to enable him TO MAKE MONEY.

And it has done this very thing.

Read this paragraph from a letter I received the other day from one of our big distributors:

> We take this opportunity of complimenting you in the way your organization has handled every detail and angle of merchandising this product. To be very frank with you, we think the whole outfit is made up of "Honest-to-God" business men. The whole proposition has been handled to our entire satisfaction.

Some of these days I'll enjoy getting a letter like this FROM YOU. Let's take the first step right away.

Write me for the application blank which, will put you in direct line for the money-making, Tire-Merchandising franchise of selling Oldfield Tires - "The Most Trustworthy Tires Built" - in your territory. I'll do my best to help you put it over.

You Know Me,

BARNEY OLDFIELD.

Barney Oldfield

President.

EXCEL AUTO JACK

PATENTED JANUARY 14, 1913—PATENTED SEPTEMBER 8, 1914

RANFAC
BOSTON—U.S.A.

The Quickest and Strongest Garage Jack Made—as well as the Handiest

Main Jack lifts from 10½ inches to 24½ inches. Toe Extension lifts from 4½ inches to 15 inches. A Time-Saver and a Back-Saver in Garages, Service Stations, Paint Shops and wherever there is need for a Jack that will do heavy duty and stand up under it. Will lift under Springs, Axle or Hub. Will reach under Bumpers, Low Gasoline tanks, trunk racks and other hard-to-get-at places. One sweep of the 5-foot handle does the trick.

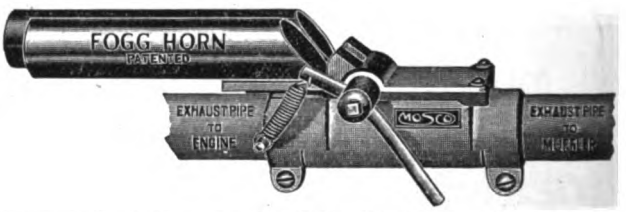
Excel Jacks, ready to ship, List Price $25.00

Liberal Discounts to the Trade.

Consumers will confer a favor by ordering through their Jobbers.

Jericho-Fogg Horn

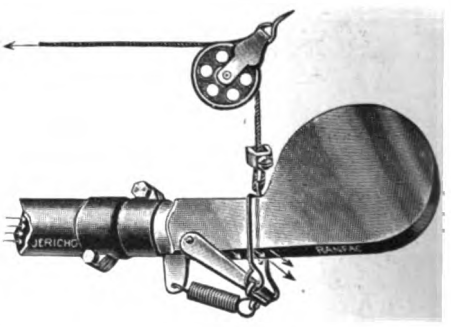
The BEST SIGNAL FOR FORD CARS



It does away with the Tail Pipe Problem because it is attached between the Engine and the Muffler. And so it makes no difference whether the FORD is of the Vintage of 1912 with **long tail pipe**—or a 1919 model with **no tail pipe.** The JERICHO-FOGG HORN blows loudly even when motor is running slowly. It throws the Sound **ahead of the car**—where its warning is most needed and where it can do the **most good.**

One size only—List Price $5.00—complete with all attaching accessories

Jerichos and Jubilees for Trucks



The Regulation JERICHO (Single Tone) and the JUBILEE Chime have the indorsement of careful drivers—because of dependability and performance.
Attached to Rear of Muffler. Operated by the Exhaust.

All sizes—List Price $5.00

Complete with attaching accessories

DO YOU get full measure of Gasoline Mr Ford Owner?

JOHN D. DEMANDS FULL MEASURE OF GASOLINE

Portsmouth, N. H., July 18.—[Special.]—John D. Rockefeller questioned the accuracy of a gasoline filling machine and the proprietor of a garage measured a sample gallon at his request, it became known here today, following the departure of Mr. Rockefeller and party for Tarrytown, N. Y.

When the four automobiles reached the motor mart last night Mr. Rockefeller ordered five gallons put into the tank of each. He watched the filling process, then summoned Mrs. R. C. Dickey, proprietress of the garage, and said:

"Madam, are you sure your pump delivers a full gallon to the stroke?"

"Absolutely," replied Mrs. Dickey.

"It does not look so to me," insisted Mr. Rockefeller. "Would you mind having it tested for me?"

"Not in the least," responded Mrs. Dickey, and, summoning a helper with a sealed measure, she directed him to measure the gallon delivered at each stroke of the pump. Mr. Rockefeller gave close attention, and noted that the pump delivered an exact gallon at each stroke. He smiled as he said:

"It's the first pump I've seen which is accurate for several days. Thank you."

WIFE CONFIRMS

The STANDEX Gasoline Gauge INSURES IT!

¶And this Infallible Gauge does more than check overcharge for gasoline;

—It checks your Gasoline-Mileage.

—Checks performance of your engine.

—Tells you, instantly and always, how much "Gas" you have in your tank to run on to where you want to go. Only pay attention to the dial——in plain sight alongside filling-hole of your gasoline tank—and never again need you stall on the road with an empty tank, and then hike weary miles to get a quart or so.

¶This Sure and Certain Fuel-Meter is unique in its absolute accuracy.

—Unique in being graduated to contour of cylindrical tank (NOT merely to depth).

—Installed in a moment, good for years of service.

—Fits into filling-hole; never need be removed.

¶If your dealer is not a STANDEX DEALER, send us his name with your order, and Gauge will be shipped prepaid.

¶ Try it 30 days. If it is not absolutely satisfactory, return it. Money will be refunded.

Only $2.50 complete

Omar Tires

EVERYWHERE

Longest Service When Measured by the Price You Pay

OMAR and LIBERTY tires are made and sold to a defiinite policy—highest quality obtainable and a guarantee of service.

It means absolute satisfaction to users. OMAR and LIBERTY tire dealers will advise you that these tires will deliver full service mileage and the purchaser will receive full value.

There is no condition, no uncertainty. The tires must afford 100 per cent. service.

Measured by first cost and by mileage guarantee OMAR and LIBERTY tires are unequaled; the saving in any event is such they are the most economical tires to use.

Back of this guarantee is the manufacturer. Unless the tires satisfy he is the loser. Only by maintenance of the highest quality can his prestige and the business of his distributor endure.

Compare these tires and the prices with all others. Contrast the guarantees. Consider the service of each. Then you will equip with either OMAR or LIBERTY tires.

Then you'll understand fully what you get for what you pay and what a positive guarantee means to you.

DEALERS: OMAR and LIBERTY production is rapidly increasing. We can offer a limited number of splendid dealer contracts. The trade discounts are liberal. You can meet any competition and make more than good profits.

Correspondence invited. Full information at request.

The Oro Connecting Rods for Fords

have proved that they are the very best that can be made. They stand the hardest service—never letting go. They are made from the best grade of steel—30 to 40 point carbon, drop forged. The babbitt is a scientific combination, requiring the least amount of lubrication and giving the maximum amount of wear. You'll make satisfied customers with these connecting rods. Others may cost slightly less, but the difference in quality is so apparent that business judgment dictates your using the Oro.

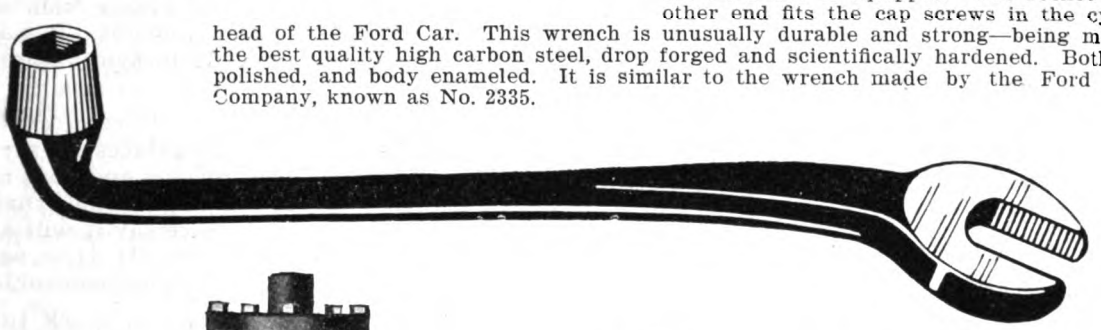
Oro

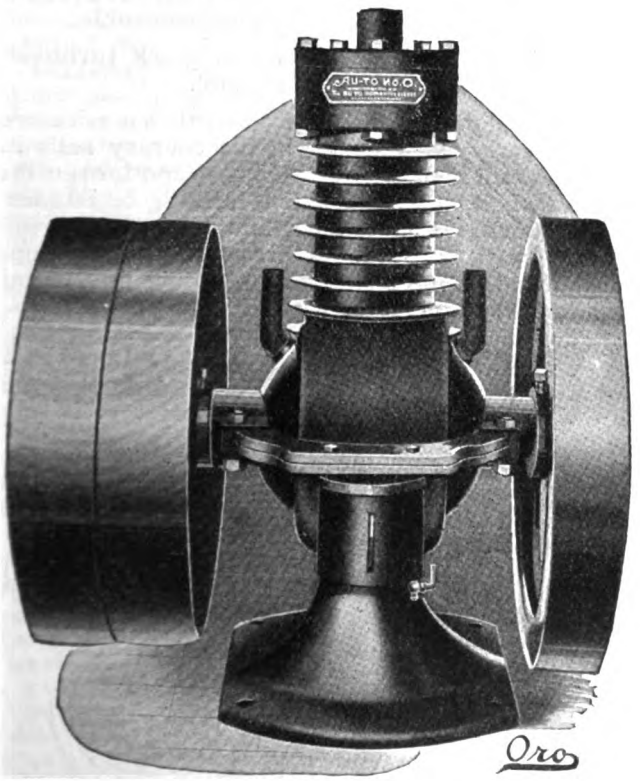
GOOD as GOLD

Oro Combination Wrench

For Spark Plugs and Cylinder Head Bolts

Fits the Champion X Spark Plugs, with which the Ford Car is equipped. The socket at the other end fits the cap screws in the cylinder head of the Ford Car. This wrench is unusually durable and strong—being made of the best quality high carbon steel, drop forged and scientifically hardened. Both ends polished, and body enameled. It is similar to the wrench made by the Ford Motor Company, known as No. 2335.





10 Years of Success Back of this Sturdy, Reliable Compressor

This is No. 0 Au-to Compressor, one of the most popular of the world famous line of Au-to Compressors. No. 0 is designed especially for automobile garages, and will produce 6½ cubic feet of air a minute, at 300 pounds pressure. It is simplicity itself—requires practically no attention—and has nothing to get out of order. Ten years of satisfaction prove its high quality. Au-to Air Compressors are known everywhere as the best—and this is one of the most popular because of its suitability for use in the ordinary sized garage.

Write us for information regarding the complete line of Oro Automobile Accessories. They all are leaders—money makers for you!

Tarr-Gon
REGISTERED

The *Perfect*
Tar and Asphalt Remover
for Automobiles

Dealers! Tarr-Gon is as big a money maker for You as Tasgon, our other famous product

TARR-GON and TASGON are prolific sellers. Everybody who uses them becomes an enthusiastic user and buyer. We stand behind every claim made for these remarkable products. Tarr-Gon and Tasgon are indispensable—when once used they mean repeat orders, quick turnovers, continuous profits. Write us for our terms. It will pay you to do so. Write today.

TARR-GON is a miracle worker. It quickly removes tar, asphalt, grease and stains from automobile bodies, mudguards and tires.

TARR-GON cleans, brightens and preserves leather cushions, straps and tops, linoleums, rubber and metal running boards. It softens leather and does not leave it sticky.

TARR-GON cleans windshields, headlights and reflectors. It will remove tar and grease from carpets, rugs, upholstery, shoes, clothing, metals. It makes all polished woodwork like new. It does not injure finish, fabric or texture.

TARR-GON saves depreciation. It eradicates blemishes and disfigurements on all surfaces. Only a few drops are necessary. It dries quickly and does not collect dust. We have hundreds of testimonials that Tarr-Gon will do all and more than we say it will and not damage the most delicate surface. It is a saver of labor, money and annoyance. It is indispensable.

TARR-GON means repeat orders—a quick turnover. It will bring customers into your store.

TASGON is another Polygon product that is a record breaker. Nearly every dealer in the country sells it. A few drops will instantly dissolve rust and loosen the rustiest nut, bolt, coupling, union, bushing or connection of any kind. It saves labor and material. It will clean any rusty surface. It prevents carbon, stops squeaks, primes motors, and will not injure any metal. It has a hundred invaluable uses.

VOL. IX. PAWTUCKET, R. I., SEPTEMBER, 1919 No. 5

Jewett Sees Fine Outlook For Industry

Believes Big Export Demand Will Keep Auto Plants Here Very Busy.

H. M. JEWETT, president of Paige-Detroit Motor Car Co., is a firm believer in the future prosperity of the automobile industry. He thinks that in addition to enormous domestic business which will keep the automobile manufacturers of this country busy for at least a year, large export demand will develop which they cannot attempt to handle. In line with his beliefs, Paige-Detroit is building an additional plant at Detroit, which, it is estimated, will permit the doubling of this year's output in 1920. The company also plans to increase its output of trucks.

In an interview, President Jewett points out that demand for cars in many instances was five times the ability of the manufacturers to make deliveries. This does not take into account demand from foreign countries. "While I concede that there is today a marked discrimination, particularly in France, England, Belgium and Italy, against American cars, I believe that it is only a question of time when the pressure of the demand for automobiles which foreign manufacturers cannot supply will overcome this prejudice, and our product will be admitted into Europe on more favorable terms," he said. "The war has demonstrated the necessity of the automobile to Europe and it wants thousands of cars. Machinery purchased by Europe for making sheets is in most cases not practical for production of cars."

Can't Handle Exports.

Mr. Jewett emphasized that as yet American manufacturers are not in a position to take advantage of foreign business, but are simply shipping a small amount of cars abroad to maintain their agencies and for advertising purposes. "Only last week," he said, "we received from England a single order which exceeds our estimate of what our English

(Continued on Page 22.)

Motorists Are Robbed At Many "Gas" Pumps In New York State

Survey Shows Nearly Half of Measuring Devicec for Gasoline to Be Inaccurate.

SHORT MEASURE delivered by gasoline measuring pumps causes a considerable loss daily to thousands of automobilists in New York State, according to a report made public by Commissioner Eugene H. Porter, of the Division of Foods and Markets, at Albany, following a Statewide survey carried on by the Bureau of Weights and Measures in conjunction with city and county sealers. Out of 1,100 gasoline measuring devices tested, 535 indicated shortages ranging from one-half pint to one quart on a five gallon delivery, and in a few instances sealers found shortages running from two quarts to as high as two gallons.

Machinery Unreliable.

In a large majority of short deliveries there was no apparent intent on the part of pump owners to defraud, the report says. Rather the shortage is ascribed to carelessness or unreliable machinery. Carelessness may be evidenced in various ways, but interest in the transaction on the part of the motorist will do much to establish better and more uniform service. To insure himself against shortage, the motorist should watch the operator to see that he makes a full stroke when operating the pump. If the machine bears an indicator showing the quantity as delivered, this also should be closely observed. The delivery hose should in all cases be drained since it is likely to contain from one to two quarts of gas.

Responsibility rests with the pump owner for maintaining his machine in a state of accuracy. In many cases a pump may be inspected by a weights and measures official and found to be operating correctly, but upon his return within a month it may show a shortage and prove to be wholly undependable. In one instance investigation was made on complaint of a tourist, who asserted he had received four gallons of gasoline instead of five. When the facts of the

(Continued on Page 22.)

Steel Strike May Close Auto Plants

Manufacturers Have Limited Reserves—Equipment Shops Hard Hit.

JUST what effect the steel strike will have on the automobile industry and trade is not yet known, but fear is expressed that it will only tend to add to the present shortage of cars. One close observer predicts that for every week the strike lasts there will be two and perhaps three weeks delay in the output of the motor car factories when, the coming winter, they should be at the peak of their production.

The motor vehicle industry is most intimately associated with the steel industry and is wholly dependent upon it, because no car or truck can be manufactured without steel, and modern methods of production cannot be carried on for any length of time without a most abundant supply of the finest grades of steel.

Even though an automobile factory may have a fair supply of steel on hand, it cannot continue very long without encountering trouble because of the shortage of supply of some accessory or equipment manufacturer. This fact was clearly demonstrated some months ago during strikes in equipment and accessory factories.

Pessimistic Reports.

Reports coming from automobile centers indicate that some automobile manufacturers face the steel strike with a totally inadequate supply of steel on hand. Reserves are said to be so low in many factories that if the strike of the steel workers continues for many weeks these factories will have to shut down altogether. A few plants have enough material to last them 60 days, but most of them are not provided with over a month's supply.

At the time of the armistice in November passenger car manufacturers had practically discontinued their normal work and were prepared to enter exclusively upon the production of war supplies. The truck factories were produc-

Digitized by Google

ing very few vehicles except for the government. Peace came at just about the time that the automobile industry usually places its orders for steel for the next season's production.

Steel would, under ordinary conditions, have been bought last January for the cars and trucks to be built this fall and winter. But prices were very high then and there was a prospect that the government would fix a lower scale, so purchases were not made.

Unable to Get Surplus.

The automobile industry waited until May and June for the reduced prices of steel. Then contracts were made, but the demand for motor vehicles has been so large and supply of steel so restricted that the automobile industry has been able for the last two months or so to obtain only enough material to keep the factories going and has been unable to accumulate a surplus.

The precipitation of the steel strike, therefore, found the automobile and the parts and accessory makers wholly unprepared and when the present supply they have in the warehouses is exhausted there cannot be any further production of passenger cars and trucks. Even if the steel strike does not last very long or does not assume sufficient proportions to prevent making of some steel, the automobile industry will feel the effects in curtailed construction of vehicles during the winter months, when a supply should be accumulating to take care of the spring demand.

It is the consensus of opinion that the steel strike has put off for another season the anticipated catching up of the automobile industry with the demand. The circumstances will make for further advances in the prices, it is believed, and many are looking forward to higher lists on the models that will be offered for the spring trade than the existing lists, most of which have been boosted since last winter.

APPEAL FOR FREIGHT CARS.

The National Automobile Dealers' Association has appealed to Walter D. Hines, director general of railroads, to aid car manufacturers in getting freight cars. "Reports indicate serious loss to automobile dealers because manufacturers are unable to get freight cars," states a telegram sent to him. "Great hardship is being occasioned to thousands of dealers whose expenses can only be met by delivering automobiles."

WINTER BODIES SCARCE.

Winter bodies for automobiles are mighty hard to get. Through strikes and high wages the bodies will cost a great deal more than formerly. Everything that goes into the manufacture of closed bodies is said to be months behind.

SPARE PARTS WARNING.

Because of the steel strike, service and garage men are cautioned to get in whatever supplies of spare parts they may need for the next few months.

Jewett Sees Splendid Future For Industry

(Continued from Page 21.)

business would amount to for a full year."

The new plant now in course of construction at Detroit will be ready for operation about Jan. 1, and covers 47 acres of ground. With this plant in operation, Mr. Jewett estimates the company in 1920 will turn out from 33,000 to 35,000 cars, exclusive of trucks, or double the output of this year. In an earlier estimate of 1919 output, officials of the company placed the production at about 17,000 cars, but Mr. Jewett now figures that, barring any tying up of the industry due to the steel strike or other causes, this estimate can be bettered by from 1500 to 2000 cars. This would bring 1919 production close to 19,000 cars, compared with 15,000 in its banner year 1915.

Effect of Steel Strike.

Mr. Jewett does not expect the steel strike will affect the automobile industry to any extent unless it is prolonged and shut down of the mills for two months or more develops. He pointed out that automobile companies on an average carry three months' supplies of raw materials on hand. Paige-Detroit is stocked with raw materials sufficient to carry it for 90 days.

Paige-Detroit is planning to turn out trucks on a large scale. Preparations made under government supervision to manufacture trucks for the army just before the ending of the war place the company in good position to extend this profitable end of the business. Last October the company had an order for 20,000 trucks from the government on its books, but this was cancelled on the signing of the armistice. Mr. Jewett believes motor trucks will eventually carry a good part of the short haul freight, being in a position to carry it cheaper than the railroads can.

Pumps Inaccurate

(Continued from Page 21.)

case were brought out it was found that the pump had been previously run into by a truck, yet the owner had continued its use without testing or readjustment. Other cases of neglect, the statement says, often result in an equally unfair deal for the motorist.

It has been found, for example, that if the gas pump stands idle for any length of time, its first delivery is invariably short, due to the gasoline's leaking back through the check valve into the supply tank. This condition can be noticed by one not familiar with the operation of the pump by watching the operator. If a nearly complete stroke is made before gas begins to flow into the auto tank, it is evident that short measure is being delivered. Again, short delivery of gasoline is likely to occur if operators continue to operate the pump when gas is low in the supply tank. In this case the pump delivers air instead of gas, and the practise is easily noted by the sound.

It is altogether possible that the operator is frequently unaware of the vagaries of his apparatus, and it is certainly true that he pays too little attention to its accuracy. It is the purpose of the Bureau of Weights and Measures, however, Commissioner Porter says, to undertake a vigorous campaign for impressing pump owners throughout the state with their responsibility, and to insist that they shall test their dispensers at least once every day. To do this, owners must supply themselves with a standard five gallon measure—a smaller measure is impracticable since differences are minimized on a lesser quantity. The operator who tests each day is living up to his responsibility, and motorists patronizing him can therefore place some confidence in his measurements.

It is estimated that there are approximately 3,500 gasoline measuring devices in the State of New York, excluding New York City. It is a physical impossibility for the local sealers of weights and measures to watch every transaction that takes place. Automobile owners must therefore assist in watching the gasoline pump operator if the general standards of gas measuring practice are to be raised and the motorists' rights upheld. Incidentally this will mean protection to the scrupulous pump operator in his competition with those who have fallen into careless methods.

All complaints registered either with local sealers or with Dr. Eugene H. Porter, State Division of Foods and Markets, Albany, will be duly investigated.

RAISE PRICES OF FORDS WITH EXTRA EQUIPMENT.

The Ford Motor Co. has raised the prices for the sedan and coupe $100 each to cover the self-starters and demountable rims as standard equipment, making the sedan price $875 and the coupe $750. On the touring car and roadster the starter and demountable rims are optional and without them the prices remain the same—$525 for the touring and $500 for the roadster. For the starter $75 extra is charged and for the rims $25.

RAILROAD CAR SHORTAGE BOOSTS SALES OF TRUCKS.

Railroad car shortage has had a favorable effect on motor truck sales. In August the sales of Mack trucks increased 64 per cent. over those for July and big gains were also made for September. Other truck makers also reported increased sales.

RECORD FOR CHANDLER.

Chandler Motor in the third week of this month made its record shipment of 701 cars. This is at the annual rate of nearly 36,500 cars.

BOOM FOR USED CARS.

The steel strike is expected to prove a big boom for the used car, because of the probability that there will be a greater shortage of new cars than ever.

THIS DEALER LOOKS UPON BUYERS OF AUTOMOBILES AS "CLIENTS" AND NOT AS "CUSTOMERS."

A Massachusetts dealer who has been in business several years says:

"We regard those who buy cars from our company as 'clients'—not as mere 'customers.' Our interest in them is not only when they are buying, but throughout the entire year. We want to keep in close touch with them so that when they are ready to buy a new model they will not think of going anywhere else to place the order.

"When we sell a car we make certain that the buyer gets all the information possible about the operation and upkeep of the vehicle. We impress upon him that if anything goes wrong he should notify us immediately. If we do not hear from him we send him quarterly circulars politely inquiring how the car is running.

"If we can do him any little favor we are only too glad to do so. We give him the maximum of service to which he is entitled. Our experience has been that they do not impose upon us. If the car breaks down due to their own fault they never complain at paying a reasonable bill for the repairs in our service station.

"Give the car owner a square deal and he will reciprocate. It pays mighty well to deserve confidence."

ALLEN MOTOR CO. PUTS PEP INTO NEW CATALOGUE.

The Allen Motor Co. is very progressive in its advertising policy. It has issued a new advertising catalogue that is a through and through offset job in five colors—quite a departure from the regular method of printing automobile catalogues by the letter-press process. By employing the offset process of printing the company is able to use a very durable stock. This catalogue will wear for months and months without any breaking of the paper, as is the case of enameled stock, where unsightly white seams show in the color work at the folds. The envelope in which the catalogue comes carries a new kink in the window in back. The opening permits the dealer to stamp his name and address on the catalogue without having to remove it from the envelope. Dealers the country over are complimenting the completeness of this catalogue.

Dealers Should Use Advertising Helps

Many small accessory dealers put a few articles into the window and let them stay there for an indefinite time. They never bother to change the display. The handsome "Dealer Helps" that come from the manufacturers and jobbers are tossed into the back room.

These dealers make a big mistake. The manufacturers spend great sums in having these "Dealers Helps" made, and they would not go to this expense if they were not satisfied that the helps would prove of real value to the dealer.

The helps, both for window and counter displays, should be utilized, as they will bring in much business, besides adding to the general attractiveness of the store.

PROGRESSIVE DEALERS KNOW THE VALUE OF TRADE ADVERTISING.

The live wire dealer or garage man reads all of the advertisements in the automobile trade journals.

When he sees something advertised that he believes he can handle at a good profit he writes to the advertiser for his proposition.

In this way he keeps fully informed of all the new offerings of the manufacturers and jobbers and manages to get in the new goods before his competitor wakes up.

If you see something advertised that appeals to you, sit down and write for further details. Don't wait for your competitor to get it ahead of you.

PLENTY OF BUSINESS.

If business isn't good with you, find out why. Motorists are spending vast sums of money for accessories these days, and you ought to get your share of this business. See what the other accessory dealers in your town are doing. Never mind worrying about high prices, for people have plenty of money and are spending it liberally. Car owners never spent more than they are now putting out for accessories and equipment.

COLUMBUS VARNISH CO. PROVIDES DEALERS WITH SALES HELPS THAT MOVE GOODS.

The Columbus Varnish Co., Columbus, O., goes the limit in extending cooperation to the dealer. The company, besides being a progressive advertiser, provides many decidedly attractive "Dealers' Helps." One of its latest offerings is a very neat window sign in seven colors, 16½ by 25, showing half of a wheel with the spokes colored to show the different colors of varnish. Other helps include two cut-out reproductions of the lithographed can, 14 by 21; four reader streamers, 6 by 42; two side streamers showing use of goods, size 10 by 10, and a center design, 26 by 40 inches. These helps will fit into any window display and will command attention. Any dealer handling the Peerless Automobile Specialties should take advantage of the company's offer to send these. The company impresses upon the dealer these selling points: "Highest quality possible to make," "Sold in attractive lithographed cans," "Each can has friction top," "Convenient," "Sold by garages, dealers, jobbers throughout the world."

"LOTAPEP" IS GOOD PROPOSITION FOR JOBBERS AND DEALERS.

"LotApep" is the name of a powerful gas energizer produced by the Panvar Co., Bulletin building, Philadelphia, and dealers and jobbers who have taken it on report that it is producing splendid returns. "LotApep" is for automobiles, trucks, tractors, motorcycles, motor boats, aeroplanes or engines, and the maker claims that it "puts back into the gas pep the refinery took out." The product is guaranteed to contain no insoluble matter or clogging sediment. It sells for $2.50 a quart. Jobbers and dealers who are interested should write to the Panvar company for its attractive proposition.

"THE LITTLE SALESMAN."

"The Little Salesman," a dealer's confidential illustrated net price list for automobile and truck supplies, is issued by the New England Mills Co., 1219-1221 Michigan Boulevard, Chicago. This is a publication that is crowded with pep and dealers who receive it appreciate its worth. Write for a copy.

Space For Jobbers' Exhibition Is Over-Subscribed

Commissioner Webster Announces That Every Indication Points to Show Being Most Successful and Interesting Ever Held

INTEREST in the exhibit to be held under the auspices of the Automotive Equipment Association in the Temple in Chicago, Nov. 3 to 8, has already passed the most sanguine expectations of the committee in charge of arrangements, and there is every indication that the affair will be the most interesting one of its kind ever held.

The space in the Temple has been largely over-subscribed, and it is a matter of regret that the Temple has not a greater capacity in order that applications for space still coming in might be taken care of. The committee has been forced to open up the space on the stage to care for the earlier of the late applicants, although this space was not to be utilized under the original plan.

"This exhibit seems to have struck a popular chord and to have met a long felt want," announces Commissioner William M. Webster in behalf of the committee. "The financial success of the enterpraise has long since been assured beyond any doubt; in fact, that phase was never in doubt for a moment. But the pluck, spirit and enterprise which the manufacturers have entered in this matter and in taking hold of the project reflects great credit on them and is one typical of the wide-awake and progressive industry that they are engaged in.

"All that now remains is the staging of the exhibit by the Atlantic Decorating Co., whose reputation for unique accomplishment in this matter is too well known to need comment, so that when the great doors of the Temple swing open on Nov. 3 all that will be left to crown this initial movement and exhibit with the wonderful success it so largely deserves is to have the jobbers come forward and lend it their support and encouragement.

"Present advice and indications are that they will not be wanting, and when the curtain rings down on this magnificent setting on the day of the final adjournment, in the spirit of good fellowship and on the throne of success, the manufacturer and the jobber each may say to the other, 'Well done, thou good and faithful friend, and as we have met with such great success and in the midst of plenty, may we hope for greater success in 1920.'"

The Congress Hotel has been selected as headquarters for the delegates attending the convention. The hotel management has promised to take care of the entire delegation, providing reservations are made with as little delay as possible with John Burke, manager.

The following will have exhibits in the Temple:

Victor Manufacturing and Gasket Co., Chicago; Auto Metal Parts, Co., Des Moines, Ia.; Edison Lamp Works of General Electric Co., Harrison, N. J.; Higgins Spring and Axle Co., Racine, Wis.; Advance Automobile Accessories Corporation, Chicago; Marvel Accessories Manufacturing Co., Cleveland, O.; Hall-Thompson Co., Hartford, Conn.; Shurnuff Manufacturing Co., St. Louis, Mo.; Perkins-Campbell Co., Cincinnati, O.; Columbus Varnish Co., Columbus, O.; Albertson & Co., Sioux City, Ia.; B. & W. Manufacturing Co., Chicago; Hawthorne Co., Bridgeport, Conn.; Black & Decker Manufacturing Co., Baltimore,

WILLIAM M. WEBSTER.
Commissioner of the Automotive Equipment Association.

How The Accessory Dealer May Win Trade

Effective Ways of Overcoming Competition from the Department Stores and Mail Order Houses—Importance of Window Display in Success of Business

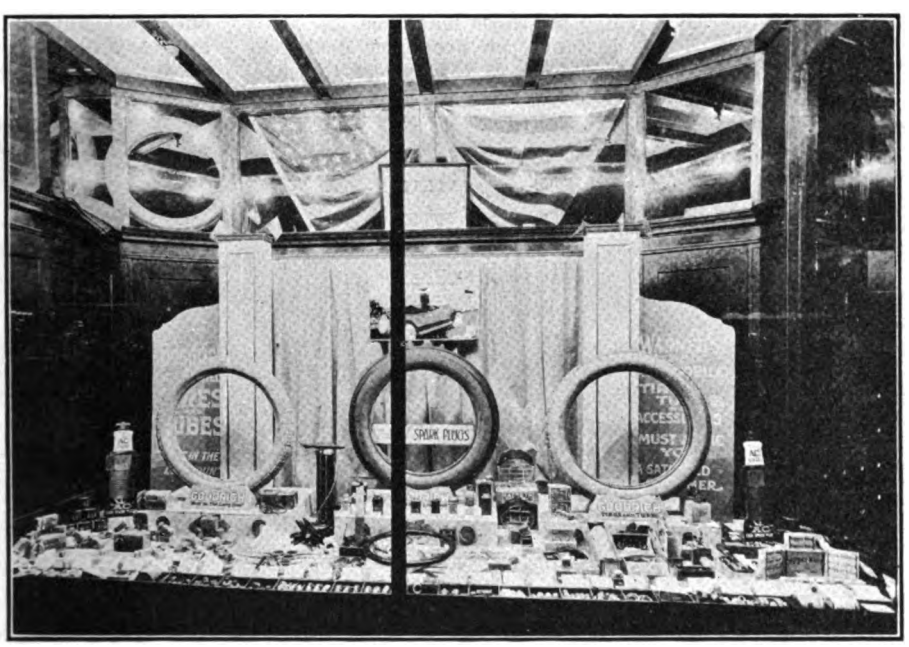
By WALTER ENGARD.

THERE are only two really important problems which confront the retail merchant and these are buying and selling. The success of any business depends very largely upon these two phases and each is of great importance. It is a question just which is of the more importance at the present time.

Some view buying as the most important factor in successful merchandising, arguing that the stock that goes into the store is the food upon which the business strength is built, and that the methods of selling, important as they are, only go to dispose of that which is purchased. This is true. Buying is the very first requisite of a successful business and no merchant can hope to overcome the handicap of poor buying sufficiently to operate his business under the present conditions with even moderate success.

It is, therefore, important that the merchant be a good buyer. Without belittling the importance of good buying, I sometimes think that buying is usually overstressed under the delusion created by that old adage that "goods well bought are half sold." But what of the other half of the sales operation that remains? Goods half sold are no better than goods unsold if sale is not completed.

The buying of the goods is merely the first half of the transaction, and, important as it is, it does not complete the transaction. The half that remains, that of actually selling the goods, is by far the more important part of the transaction. And while there is much truth in that old maxim that "goods well bought are half sold," it should go without saying that "goods all sold were well bought." The mere fact that the goods were well bought does not sell them, although goods well bought are much easier sold.



This Window Display Resulted in Many Sales Being Made.

Almost any merchant who has provided his business with a proper system of buying records can buy goods if he has the market or outlet for them, but not so with the selling end of the business. Selling covers a multitude of activities and many a good buyer has gone down to ruin because he could not cover the selling end of the game.

The main problem before the accessory dealer during these days of keen competition is to sell, not merely to have on hand those articles for which his customers may call, but he must put up a strenuous fight for business, not because business does not exist, but in order that he may get his full share of the business.

There never was a field which offered such opportunities for building up a large and successful business as does the accessory trade. The automobile is just coming into its own. Every year will see a big increase in the use of the automobile and motor truck. The demand for automobiles is larger than the supply.

It is not that business does not exist that the accessory dealer must make a strenuous fight for business, but because of the increasing competition that is making it so imperative for him to put up a vigorous fight for trade. Almost every hardware store in the land is installing an accessory department, and in some of these stores this department is becoming the leading department of the business.

Mail order houses are going after this accessory business with a vim and energy that should make the accessory dealer sit up and take notice. Only recently two of the largest mail order houses located in Chicago mailed out several million copies of catalogues listing some 50 pages of accessories.

One New York mail order house mailed out a catalogue with more than 60 pages of accessories. The large city department stores are opening an accessory department and they are making great headway into the sales of accessories. Only the wideawake accessory dealer is going to be able to meet this competition.

The local accessory dealer has many advantages over the mail order house. He is in close touch with his prospective customers all the time. By watching his operating expense he should keep his cost of doing business down to such a point where he can successfully meet the mail order house prices. It is not necessary for the local dealer to set his prices on an equality with the mail order house, as he should take into consideration the transportation charges and interest that is lost on money paid in advance.

If the dealer will install a proper system of handling charge accounts and extending credit he may well encourage charge accounts. This may be a bold statement, yet it is true. Another advantage the local dealer has over the mail order house, and one that the dealer may use to his benefit, is the delay the

Digitized by Google

customer experiences very often in receiving goods from mail order houses. The dealer who finds that a great deal of the accessory business of his community is going to the mail order house cannot do better than emphasize this point strongly in his advertising.

Another point the local dealer should emphasize is the advantage of examining merchandise previous to purchasing, something which is impossible in the mail order business. There are plenty of other arguments that the local dealer might use, but, unless the mail order houses are making great inroads in the community, it is best to ignore them altogether, especially in general advertising.

How to Proceed.

The best plan is to try to line up the names and addresses of the car owners in the community who are patronizing the mail order house and send them a personal letter touching upon the various advantages of buying at home and asking them for the opportunity of figuring on their next orders for accessories. Never "knock" the mail order house in your advertising or in your sales talk. When you "knock" you get people thinking that there may be something in buying from the mail order house after all, or you would not be squealing. It is enough to realize that the mail order house is coming into your territory, that it is one of your real competitors and that you must go after the business with renewed energy.

If you are located in a small town you will probably find that the mail order house is your stiffest competitor, but if you are in one of the larger centers you will find the hardware store and the department stores are even more antagonistic. The energy of every store is being turned toward the selling end of the business and you must not be outdone in this respect.

Winning trade is, in other words, "getting people into your store." This is a big job. You should consider every possible means of attracting the attention of the public and arousing their interest in the particular store exploited. The very first thing that should receive your consideration is the stock of merchandise. If you are to meet competition successfully you must have in stock every item of merchandise for which there is a demand.

What to Have in Stock.

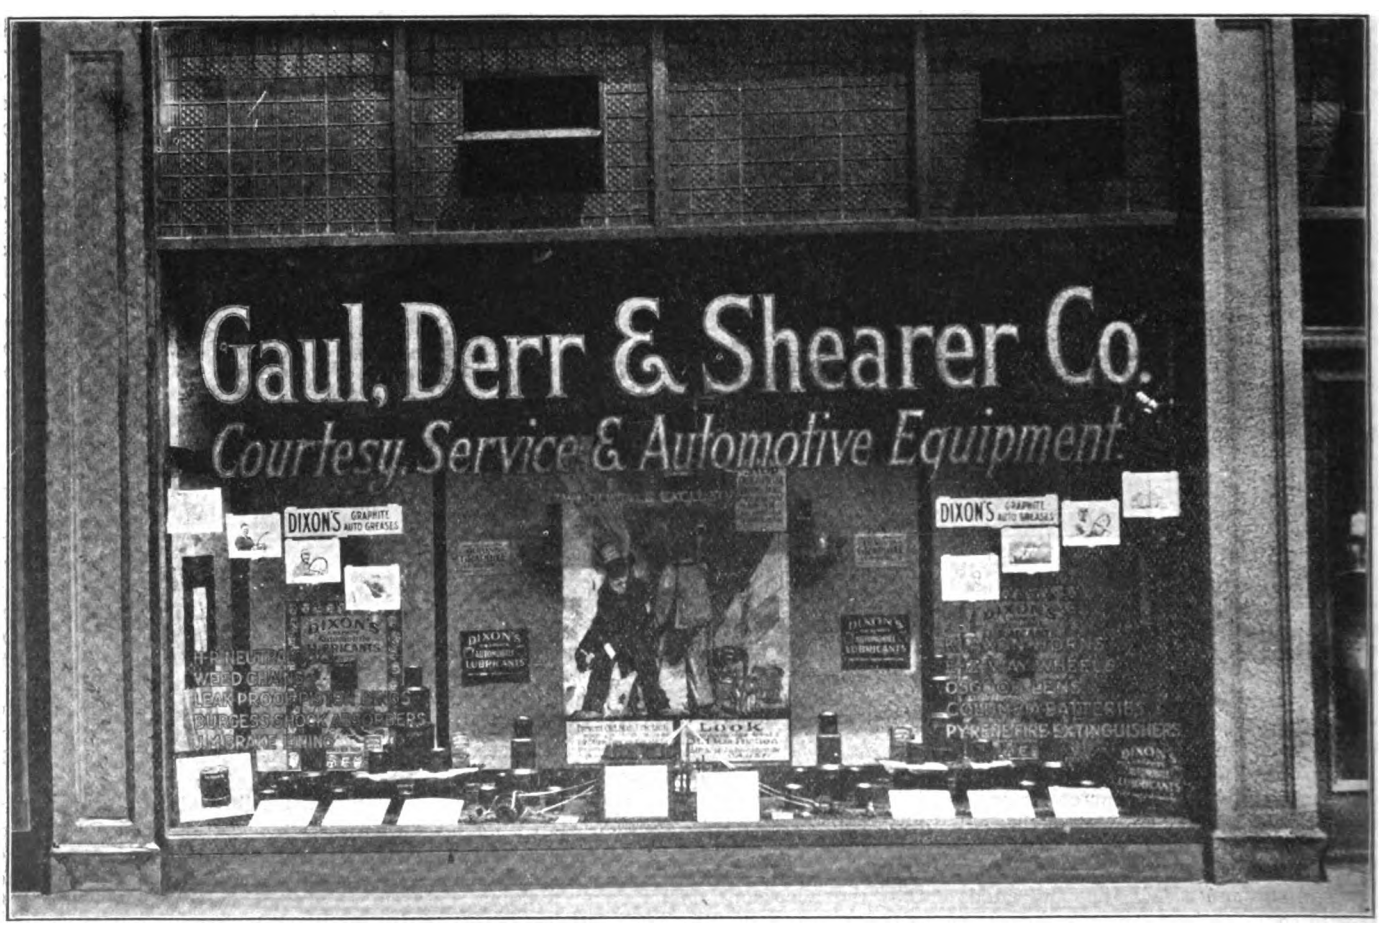
Such items as tires, tubes, spark plugs, jacks, tire tools, patches, tape, lace-on boots, etc., are standard articles of stock and will be found in any accessory store or any store catering to the auto trade. But in every locality there is demand for certain articles peculiar to that particular locality and it is up to the individual dealer to carry these in stock. The best way to determine what line of accessories is the most likely to be in demand is to know the makes of automobiles that are the most popular in your locality and then stock a line of accessories especially adapted for those machines.

For instance, an accessory dealer located in a town of 4500 where the most popular machines sold are the Buick, Dodge, Overland, Ford and Essex, and possibly an occasional Hudson, Packard and Cadillac, would want a stock of accessories for these lines of cars, holding the lines especially adapted to the three last named down to a limited supply. He would not want to stock an extensive line of accessories for Stutz, Premiers, Elcars, Empires, Bush and other cars which had a very limited distribution in his community. The city dealer may handle a much greater variety of accessories because of the larger number of various makes of autos sold in his community.

A successful accessory dealer has adopted a plan whereby he can determine what line of accessories he should stock. He has a printed "Lost Sale" slip and whenever he has a call for any article he does not carry in stock he requires that the salesmen fill out one of these slips, entering the name of the article, the possible amount of the sale, the reason the sale was lost, name and address of party calling for the article and also whether the party wishes to be notified when the store has that particular item in stock.

Check on "Lost Sales."

These slips furnish him with a complete history of lost sales and through them he is able to know the number of sales lost on any one item. They not only post him upon articles for which there is a demand that he does not carry in stock, but they also show him the



The Manufacturers Are Always Ready to Aid the Dealers in Their Window Displays. The Above Shows How Dixon's Products Were Blended in an Enticing Window Attraction.

Digitized by Google

number of sales he loses because of insufficient stock.

For instance, he had never carried a stock of wheel lugs. He merely had a sample of the various designs and when a customer called for wheel lugs he would show him the samples and order them for the customer. This caused several days delay, often for weeks. After installing this "Lost Sale" slip he found that he was losing a large number of sales on these articles simply because he did not carry them in stock. During one week he lost sales amounting to more than $14 on this one item. It did not take him long to place an order for wheel lugs and thereafter he had them in stock.

Trouble lamps proved another item upon which he found he was losing a large number of sales because he did not have these in stock. With this slip he now knows whether there is sufficient demand for an accessory to justify his stocking it and he has, thereby, almost entirely eliminated "Lost Sales."

There is nothing that will ruin the prestige of an accessory store so quickly as that of being out of the very thing the customer wants, or not having on hand the items which a customer desires. If you want to successfully meet competition, make sure your stock is complete and up to date.

The next thing which should receive the consideration of the progressive accessory dealer is the window display. Hardware stores and the department store are keeping their stocks of accessories before the public all the time through the medium of the show window and the accessory dealer will find the window display a great aid in his fight for more business.

Importance of Window Display.

Whether you are retailing in a small country community or in a large city, your display window possesses real dollar compelling power. The show window is a form of salesmanship which you can keep within arm's reach of every person who passes your store every hour of the day. The real value of the window display rests in the fact that it offers a remedy the minute it suggests a want. When a passerby's attention is called to your window display and he sees some article which he desires, whether the display creates the desire or merely reminds him of it, he is right on the spot and can step in and make the purchase.

Not only does the good window display attract attention to itself and create a desire for some article displayed, but it draws attention to the store itself. The dealer should bear in mind that the show window is in reality the "Mirror of the Store." It usually reflects the kind of a store the passerby will find on the inside when he has crossed the threshold.

The new customers, the ones every accessory dealer is constantly trying to win, are usually influenced by the character of the window display. Not being familiar with the interior of the store, they always gain their first impressions of the store from the exterior, and the window display will have a lot to do with these.

The Above Is Part of a Newspaper Advertisement of a Boston Department Store That Has Installed an Automobile Accessories Department. This Advertisement Mentioned Dozens of Accessories Offered Supposedly at Bargain Prices.

First impressions are always the most lasting and it is up to the dealer to see to it that his displays make the right kind of an impression. The window display will either make a favorable or an unfavorable impression. It is the outward appearance that counts most with the prospective customer.

Purpose of Display.

The aim of the commercial window is to sell goods. In order to do this it must perform certain functions necessary in the process of making a sale. The rules for successful window trimming are almost identical with those for successful personal salesmanship. Window selling is salesmanship and, like personal salesmanship, it requires organized action if it is to be successful.

It must involve the human equation. It must follow largely the same line of action as employed in personal salesmanship. It must first attract attention, arouse an interest, create a desire and, finally, produce action. Thus you will see the successful display has four functions to perform, and each function is of vital importance to the success of the display. No display can hope to sell goods unless it first attracts attention. It must also arouse an interest in the goods displayed before there can be a desire created.

There can be no hard and fast rules for window trimming. The main thing is for the man who has charge of the window trimming to be surcharged with enthusiasm and individuality. The man who keeps his brain busy will find that new ideas for window displays will germinate faster than he can take care of them.

The very first requisite of a good window is the attention getting power. The display must attract attention if it is to sell goods. There are various methods for attracting attention. Motion, demonstrations, attractive designs, color, etc., all have this power. Above all the display should possess individuality and originality. If you trim a window in the same manner as your competitor your window will lack individuality.

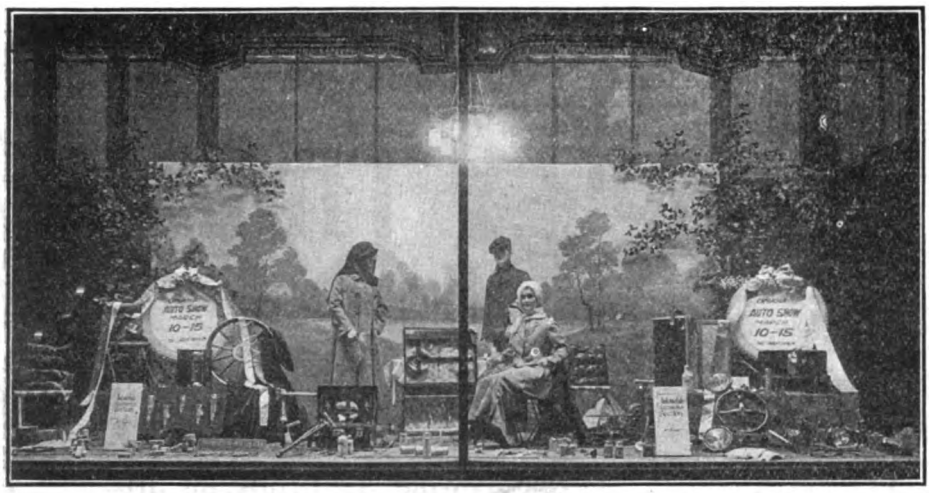
You should endeavor to put forth your goods in some manner unfamiliar to the public. A well trimmed window will always attract attention, although there is nothing particularly out of the ordinary in it. A moving object in your display will always create interest and is one of the best means of attracting attention. Color is another way and when you cannot get motion in the display you can almost always count on color getting the attention.

Arousing Interest.

The second function of the display is to arouse an interest in the goods displayed. This function, as well as the remaining functions, those creating a desire and producing action, can best be performed through the use of show cards.

Of all the mistakes made in window dressing none equals the inexcusable mistake of leaving the show card out of

Digitized by Google



This Display Proved a Magnet for Attracting Unusual Interest.

the calculations. Good show cards are the making of many a window. They put pep, snap and ginger into the display. Often common articles in stock are so unattractive to the display man that it is thought they have no display value, and if displayed by themselves they would not make a single sale. But if the trimmer will dig and keep his thoughts busy and show along with the display suitable show cards, many sales will result.

For illustration, an accessory dealer put in a display of grease in his windows and for three days it was left in the window without a single sale. At the suggestion of one of his employees he took out the window display and built another, again using grease. In the background the dealer placed a barrel full of old auto parts, with a few extra parts on the floor of the window. At both ends of the window he arranged a neat display of lubricants and in the center of the display he placed a show card reading:

> POOR LUBRICANTS
> Filled
> This Barrel.
> Every Bearing Placed Under a
> Microscope Shows the Tiny
> Teeth of Friction.
> Insist That
> You Get BLANK'S—Blank's
> Lubricants Prevent Friction.

He used two smaller cards reading:

> There's No "In Between."
> Specify BLANK'S.

> May We Help You
> Dixonize Your Car?

This display was in a week and it sold the goods.

The display would not have aroused any interest without the show cards. It would probably have attracted much attention because of the oddity of the display, but the show cards supplied the pep and snap and created the interest.

Another dealer made a window display of the "Warner Lenz." The display of itself was attractive, but the display of "Warner Lenz" was not enough to arouse an interest, so in the center of the display he placed a large show card reading:

> John Doe Was Fined $50.00.
> The New State Law in Effect July
> 27 Will John Doe You if YOU Fail
> to Equip Your Car with a
> Sure-Lite-Lenz.

Smaller cards read:

> Sure-Lite Lenz Gives You Man-
> Made Daylight for Night Driving.

> Sure-Lite-Lenz Produces a Diffused
> Light That Is Safe and Sane to You
> and Other Motorists.

If you can link your displays with current events you are almost sure to attract attention and create an interest. New auto laws are events which autoists "cuss and discuss" on the street corners and you are sure to attract their attention if you can connect the display up with such events. Local accidents afford the accessory dealer a good subject around which to build his display. A local news item telling of the theft of some local party's auto makes a good setting for a locking device. A picture of a burning automobile makes an excellent setting for the display of fire extinguishers.

One of the leading features of a good show card is to have it in different colors, with the most important phrases in large letters. The show card should carry good argument for the purchase of the article displayed. Even in the wording of the show card the display man will want to use individuality and originality.

Should Display Price Tickets.

Not every dealer will believe it alvisable to have a price ticket on the goods displayed, but personally I do not think a display complete unless the price ticket is included. In countless thousands of cases it has meant the difference between a sale and no sale. Most persons like to know what a thing costs and they don't like to go inside and inquire the price. They are afraid the price may be more than they care to pay and they don't like to refuse to buy after they price an article. For that reason they hesitate to go inside and ask the price. The chances are that if the price were displayed it would not have proven too high and a sale would have resulted. Even a wealthy person wishes to know the price.

Never overcrowd the window space; it is better to display one article and display it well than to have a dozen articles half displayed. A good display of one line will usually prove more effective than a window full of various articles. It centers the attention of the onlooker on the one article and makes an impression that is not easily forgotten, and although he may not be in the market for the article at that time, some time later if he should need such an article a mental picture of that display will come and your store will get the sale.

AUTOMOTIVE ENGINEERS DISCUSS SCREW THREAD PRACTISE.

The Society of Automotive Engineers recently held a meeting for the purpose of securing the best and most comprehensible information as to what is most desirable to be recommended in regard to screw thread practise in the automotive industry of this country. The attendance was representative of the various branches of this and allied industries. Reports were made on the work of the National Screw Thread commission, recently created by Congress, and the data, secured during the recent visit of the commission to Great Britain and France, were submitted.

It was decided that, in order to accomplish the most of value to the automotive industry and to secure the best consensus of opinion for the consideration of the National Screw Thread commission or any other similar body, the best procedure would be to gather from representative manufacturers, in practical shop form, definite information as to present practise.

The Society of Automotive Engineers is assured of the support of the manufacturers in its field, and has enlisted the services of men of excellent training and long practical experience in screw thread and shop work to act as its committee to direct the collection of the industrial data mentioned. The personnel of the committee is as follows: Chairman, Paul W. Abbott, Lincoln Motor Co. R. P. Smith, Packard Motor Car Co. Lyle K. Snell, Willys-Overland Co.; Alexander Taub, General Motors Co., and W. K. Jamison, Domestic Engineering Co.

The Chinese now have a motorcycle police squad in Peking. Pictures show them on machines that appear to have been in service throughout the war.

Transforms Ford Auto Into Attractive Racing Car

TRANSFORMING a Ford into a racing car, the new Roof 16 Overhead Valve Equipment for Ford motors has made the automobile world sit up and take notice. This equipment is made by the Laurel Motors Corporation, Anderson, Ind., and the company points with pride to laurels won by Ford car drivers through the use of its equipment.

Among these is Loren Darst, Eureka, Ill., who, it is announced, has made a record for one-mile dirt track in 50 seconds flat. His best straightaway is 92 miles.

Mr. Darst's car was equipped with the new Roof 16 Overhead Valve Equipment. with lightweight grey iron pistons, aluminite connecting rods and a high-tension Dixie magneto. The car has disc wheels. with roller bearings in the front wheels. It had the Laurel underslung parts with a drop of four inches, a special 1¼-inch carburetor, three to one gears and carried a special oiling system.

The entire equipment was furnished to him by the Laurel Motors Corporation.

The Roof 16 Overhead Valve Equipment for Ford motors is for touring cars, closed cars, trucks and speedsters. It is a great aid for hill climbing for touring cars and increases the pulling power through sand and mud. The company announces that Ford racing cars with its equipment have attained speeds from 80 to 100 miles per hour. The price, complete, is $115 f. o. b. factory. There is nothing extra to buy. The cylinder head equipment is all ready for installation, and it takes the place of the regular Ford cylinder head. The installation is simple for any mechanic.

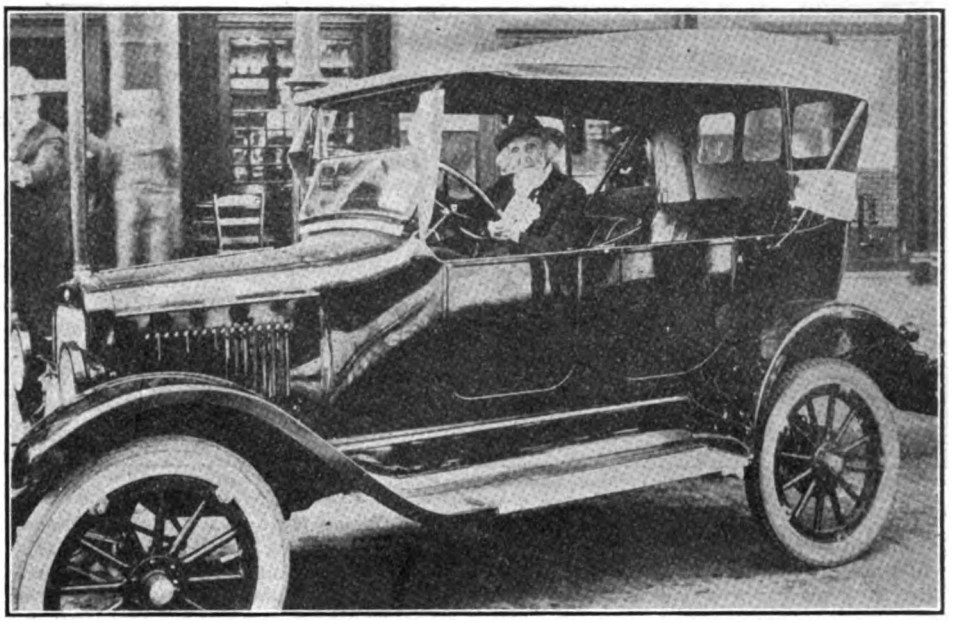
The manufacturer states that comparison brake horsepower tests of the United States Bureau of Standards gave the standard Ford motor with regulation carburetor 18.7 horsepower; the same motor with 16 valve head and regulation carburetor 22.4 horsepower, and the same motor with 16 valve head and special carburetor 29.7 horsepower. Recent tests at the Bureau of Standards with type B of the Roof 16 Overhead Valve Equipment, the company states, gave 32 horsepower.

The Laurel Motors Corporation is manufacturer and distributor of speed and other specialties for Ford cars, three to one gears, high speed camshafts, aluminite light grey iron pistons, aluminite connecting rods, racing spark plugs, racing carburetors, roller bearings, counterbalances, wire wheels, multiple speed transmission, high-tension magnetos, special oiling system, special worm and gear, steering gear, racing tires, racing bodies, hood and radiator, and parts for underslinging chassis.

Attractive agency terms are offered and the company is prepared to send upon request complete literature on how to build fast cars and double the value of the converted Ford truck and descriptive circular on speed and other specialties for Fords.

Loren Darst in Ford Equipped with Roof 16 Overhead Valve Equipment.

OLDEST MAN IN WORLD ENJOYS RIDE IN AUTO AND AEROPLANE



John Shell, Lexington, Ky., 131 Years Old Driving Overland 4.

JOHN SHELL of Lexington, Ky., 131 years old, said to be the oldest man in the world, was one of the features at the Kentucky State Fair at Louisville this month. His daughter, 97 years old, watched him with almost motherly care. He had a ride in an aeroplane and liked it at an altitude of 600 feet. After that he had a ride in an Overland 4, the new light weight car which the Willys-Overland company is putting on the market this season.

"I have ridden in a lot of automobiles," this man who has lived in three centuries said, after his ride in Overland 4, "but I do not think I have ever been in an easier riding car."

The picture shows Mr. Shell at the wheel of an Overland 4.

FOREIGN PROSPECTS GOOD.

Franc D. Mayer, president of the Essenkay Products Co.. Chicago, manufacturer of Essenkay, the tire filler, was a passenger in a recent airplane trip from London to Paris. He is abroad on an extensive business trip. He reports prospects for American business in Europe as most promising.

NORWESCO IRON CEMENT.

A new "chemically correct" product, Norwesco Iron Cement, which the maker says, will permanently repair cracks, blemishes and leaks in radiators, boilers, steam, hot and cold water pipes, threaded joints, etc., has been placed on the market by the Northwestern Chemical Co., Marietta, O.

Norwesco Iron Cement is made in powder form and manufactured under strict laboratory supervision, which insures a standard quality that will give the desired results. It was used extensively by the United States government during the war.

For the consumer's convenience Norwesco Iron Cement is put up in cans of three sizes, six ounces, one pound and five pounds.

VALUE OF EXPORTS FOR YEAR ENDED JUNE 30.

The total value, including both passenger cars and trucks of American automobile exports during the fiscal year ended June 30 was $79,047,767, while exports of parts and tires amounted to $25,650,810.

WANT U. S. CARS.

Consul North Winship, Milan, reports that the consulate is receiving letters from concerns desirous of selling American automobiles.

CAMPBELL IN CHARGE.

Chester I. Campbell, will be in charge of the automobile accessory exhibits at the Boston Fair at Readville Park, Sept. 25-27.

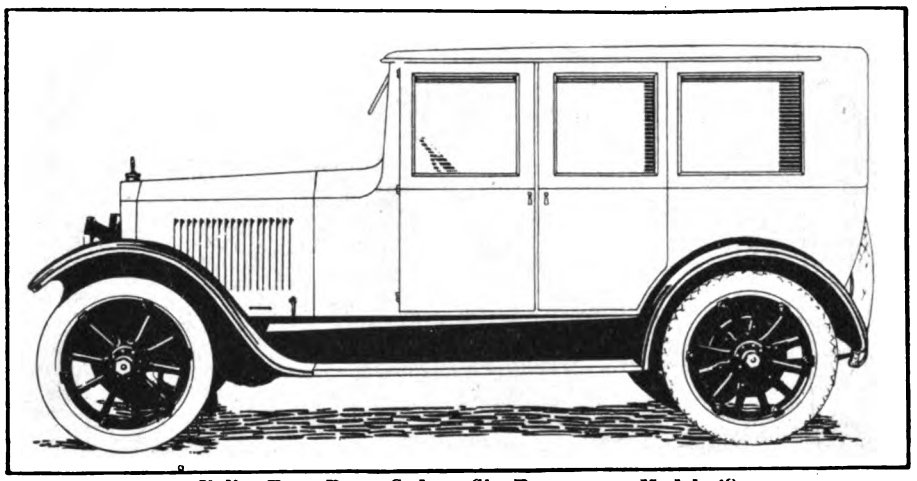
News of the Passenger Car Industry



Velie Four-Door Sedan, Six-Passenger, Model 48.

The Willys Corporation, recently formed to market the new Willys six, and which is a consolidation of the Auto-Lite, the New Process Gear and the Duesenberg Motors Corporation, will enlarge the Duesenberg plant at Elizabeth, N. J., to six times its present size, so it will have 1,200,000 square feet of floor space. All of the units are expected to be ready by March 1. Virtually a complete manufacturing plant for cars will be constructed, so that early next year a daily production of from 400 to 500 machines might be run out of the new plant. The Elizabeth plant will be known as the Duesenberg unit. The other large units will be the Process Gear Corporation at Syracuse, N. Y., and the Electric Auto-Lite Corporation at Toledo. The gear company will make transmissions, axles and similar parts for the Willys car, and the Toledo concern will supply electrical equipment. J. R. Harbeck, vice president of the American Can Co., will be vice president and general manager of the Willys Corporation.

The Nash Motors Co. announces that B. W. Twyman, formerly head of the Inter-State Motor Co., Muncie, Ind., has been appointed general manager of the new Milwaukee plant, which will produce four-cylinder cars at the rate of 100 a day by March 1, 1920.

The Maibohm Motors Co., Sandusky, O., anounces that its production schedule for 1920 calls for 7500 Maibohm sixes. This is at a daily rate of 25 cars, which is well within the capacity of the new Maibohm factory. The moving from the company's present quarters into the new works will be accomplished gradually without any break in daily production.

The Haynes Automobile Co., Kokomo, Ind., will increase the capacity output of its plant to 15,000 cars annually. Directors have voted to erect a factory and forge shop and to increase the capital stock from $3,500,000 to $5,000,000.

The Chandler Motor Co.'s directors have fixed the quarterly dividend rate at $6. Recapitalization is planned whereby the present 100.000 shares of a par value of $100 each will be changed into 300,000 shares of no par value.

The Barley Motor Car Co., Kalamazoo, Mich., is equipping a special body department and will manufacture all special bodies for its roadsters.

The Anderson Motor Co., Rock Hill, S. C., has increased its capitalization from $2,625,000 to $3,625,000, and is erecting a new steel and concrete building, 250 by 340, equipped with new machinery. Contracts have been awarded amounting to $200,000. It is expected that the new factory building will permit a material increase in the production of Anderson Six motor cars.

The General Motors Corporation, which recently purchased the plant of the old Interstate Automobile Co. and 40 adjoining acres, announces that it will spend in Muncie, within the next 18 months, between $4,000,000 and $5,000,000 in building and extensions and within two years will employ between 6000 and 8000 men.

The Jackson Motors Corporation, Jackson, Mich., recently organized with $5,000,000 paid in capital to take over the Jackson Motor and Manufacturing Co. and the United Four-Wheel Drive Truck Corporation of Chicago and Port Jefferson, N. Y., is working on an output of 4000 passenger cars and 1250 trucks for the coming year. The company also has a contract for 10,000 sedan and coupe bodies for the General Motors Corporation. The plant of the company here is being enlarged, following the dismantling of the plants at Chicago and Port Jefferson. Employment is to be provided for 1000 additional workers.

The Cole Motor Car Co. expects a total production of 6500 cars this year. The present cutput is twice that of any other year.

The Hupp Motor Car Corporation produced 9129 cars during the first half of this year. The annual report shows a surplus of $45,572 after preferred dividends amounting to $79,030. The net profit is estimated at $535,602.

The Stutz Motor Car Co. will increase its capital stock from 75,000 to 100,000 shares with no par value.

The Burford Motor Car Co., Fremont, O., has been purchased by interests headed by H. M. Hackett, Detroit.

The Pierce-Arrow Motor Car Co. announces the appointment of Floyd Smith as manager of purchases and Otto Utz assistant manager of purchases. Mr. Smith was formerly assistant purchasing agent of the Maxwell Motor Car Co. and thereafter director of purchases of the Wright-Martin Aircraft Corporation.

Truck Makers

The American Motor Truck Co., Newark, O., has appointed four new divisional sales managers—W. F. Lehman, Wright Gillies, M. A. Wiltenstein and W. D. Paine.

The Triangle Truck Co., St. Johns, Mich., is planning to enlarge its plant so as to double capacity. A new 3½-ton model truck may be offered soon.

The Traffic Motor Truck Corporation, with Vice President T. C. Brandle as the official host, recently entertained members of the production and sales departments on an evening boat ride. A series of entertainments is being planned to bring the two departments into closer cooperation.

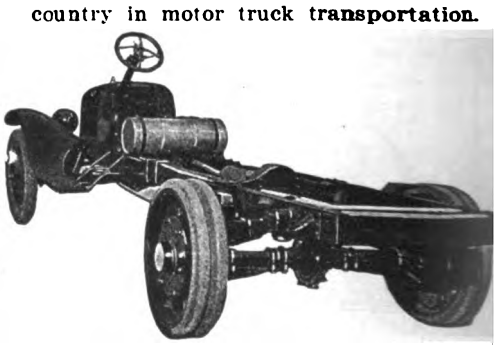
The Traylor Engineering Co., Allentown, Pa., will begin the manufacture of trucks in addition to an increased production of tractors.

The Garford Motor Truck Co., Lima, O., has appointed S. A. Taylor foreign representative. He is leaving on a trip to Africa and the Far East.

The O. Armleder Co., Cincinnati, has discontinued the horse drawn vehicle business in order to concentrate on motor trucks. Facilities are being installed to permit of a production of 20 trucks daily.

The Parker Motor Truck Co., Milwaukee, announces the appointment of C. C. Newburn as assistant sales manager. He has been identified with the company for nearly a year and was formerly with Morgan and Wright before they amalgamated. His work in the truck line has been with the sales department of Service, Diamond T, Corliss, Panhard and Traffic trucks.

The Martin-Parry Corporation, builder of commercial bodies for automobiles, states that the outlook for the motor truck industry looks very bright, at least for a period of 12 months, especially because of the interest throughout the country in motor truck transportation.



Olson Two-Ton Truck, Claimed to Be the Lowest Priced Unit of This Capacity Sold

Miscellaneous News of the Auto Industry and Trade

Indianapolis—Increasing business has made it necessary for the Automobile Equipment Department of the Westinghouse Electric and Manufacturing Co. to reopen its Indianapolis office, which was closed during the war. The office is located at 1003 City Trust building and is in charge of Knox Easterling.

Detroit—At a recent meeting of the board of directors of the Timken-Detroit Axle Co. the resignation of Frederick C. Gilbert, vice president and director, was accepted. P. W. Hood, assistant secretary, has been made sales manager and will be assisted by Frank H. Sim, who will also remain advertising manager. C. G. Rowlette, assistant treasurer, has been elected treasurer to succeed C. W. Dickerson, who will continue as secretary and credit manager.

Philadelphia—The Hudson Motor Specialties Co. announces the appointment of Charles C. Howison as New England representative.

Memphis, Tenn.—The Engler-Stotz Auto Supply Co. has applied for a charter to conduct a general wholesale and retail automobile business, with $25,000 capitalization. The incorporators are Joseph Engler, Jr., W. J. Stotz, Bertha Stotz, H. A. Stotz and A. J. Calhoun.

Cleveland—The Lindale Auto Co. has been incorporated by Francis E. Young and others with $10,000 capitalization.

Rochester, N. Y.—The Central Motors, Inc., has been incorporated with $25,000 capitalization by G. E. Wyinkoop and C. E. and T. S. Addison, Rochester.

Cleveland—Charles G. Reed, for 15 years an automobile editor and writer, has joined the Dunlap-Ward Advertising Co. He will handle publicity and sales promotion work for large automobile and accessory firms who are clients of the Dunlap-Ward organization.

Chicago—Edgar C. Guthard, for the past five years part owner and general manager of the Northwestern Auto Supply Co., accessory jobber at Billings and Gt. Falls, Mon., and Pocatello, Ida., has sold his interests in that concern in order to devote his time exclusively to his new business, the Edgar C. Guthard Co., Chicago, manufacturer of Billmont Master Wrenches. Dan Cheerier, who for two years has been manager of the Great Falls branch of the Northwestern Supply Co., likewise leaves this month to become middle west representative for the Guthard line.

New York—The Schebler Carburetor Co., a newly incorporated company for the purpose of distributing the Schebler Carburetor in the New York territory, and now located at 1777 Broadway, has completed arrangements for larger quarters at 58-60 West 65th street, at Broadway. W. J. Connell is president.

Philadelphia—Harry M. Giles has been appointed general superintendent of the South Philadelphia works of the Westinghouse Electric and Manufacturing Co. Mr. Giles, who succeeds the late Oscar Otto, who was killed in an automobile accident last month, has risen from the ranks in the Westinghouse organization. For a number of years he has been superintendent of marine erection.

Columbus, O.—The contract has been let for a large factory building here for the Timken Roller Bearing Co. The plant will cover four acres.

Columbus, O.—After seven years' continuous connection with the local Packard sales organization, Albert E. Jones entered the manufacturing business when he purchased the Perry Auto Top Co.

New York—The Fort Lee Ferry Garage Co., Inc., Henry Friedman president, has leased a three-story building at 619 West 129th street for 21 years at an aggregate rental of about $175,000. The structure will be remodeled into a modern garage.

Newark, N. J.—A public garage will be erected at 221 Plane street for the Superior Garage Co., of which George Murphy and William S. Dunn are members. The structure will be one story, 60 by 100.

Newark, N. J.—The store at 278 Washington street has been leased by the M. & T. Machinery Co., which makes a specialty of transmissions and general automobile parts.

Newark, N. J.—The three-story property at 971 Broad street has been leased for a long term of years for the occupancy of the Pash Order Supply Co., dealer in automobile accessories.

Bridgeport, Conn.—The largest subscription received in some time for the American Legion club house fund was $250, which was sent in by the Locomobile Co.

Wilmington, Del.—The Pen-Clay Motor Sales Co. now owns the garage property at Pennsylvania avenue and Clayton street, and the firm name is taken from the first syllables of those thoroughfare names. The company has taken on the Jordan line.

Chehalis, Wash.—J. P. Kortz has leased G. W. Glover's Tower avenue garage in Centralia and will soon open a branch store in that city.

Pittsburgh, Pa.—In order to better serve its many patrons, the Rapid Motor Transit and Storage Co. has enlarged its service and is now located in the old Scarborough building at 1027 East Ohio street. The building has space for two gas and oil filling stations and accommodations for 18 cars.

Providence, R. I.—The Franklin Auto Supply Co. recently held its first outing at Crescent Park. Miss Marion Cohn was a guest of honor.

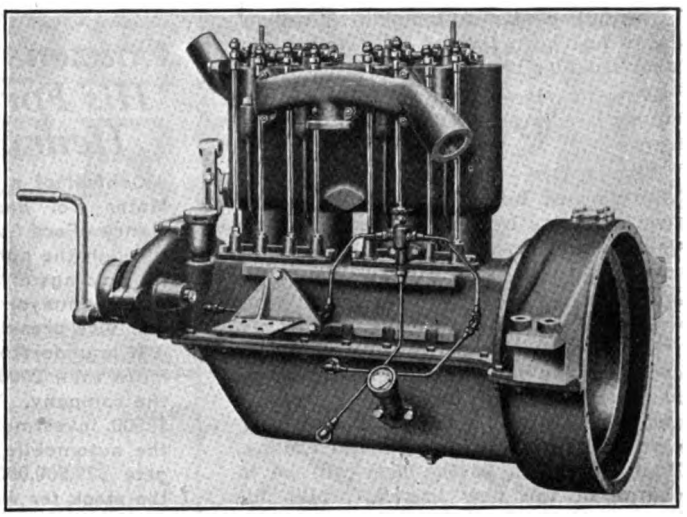
Chicago—E. Edelman & Co., manufacturer of automobile accessories, has purchased the southwest corner at Crawford and Shubert avenues for $80,000. Plans have been prepared for buildings to cost $250,000.

Scranton, Pa.—Following army service in France, Russell Ohoro has secured the agency for the Oakland in Lackawanna county, Wyoming county and part of Wayne county, including Honesdale and Hawley. He has been selling Oaklands since they were introduced in Scranton.

New York—The Sidney B. Bowman Automobile Co. has secured the Kissel franchise for distributing Kissel cars and trucks in Greater New York, eastern New York, including Albany, Troy and Schenectady; western Connecticut and northern New Jersey.

NEW GRAY "VICTORY MOTOR"

A SMALL heavy duty type engine, which is claimed by the maker to be equally well adapted for car, truck and tractor propulsion, is now being produced by the Gray Motor Co., Detroit, and is known as the "Victory Motor." The engine is unusually accessible, and all moving parts are protected against the influence of abrasives. It is a four-cylinder, water cooled, four-cycle, vertical, I head type, 3½x5, the S. A. E. formula giving 19.60 horsepower and the maker claiming 34.60 horsepower at 1900 revolutions per minute. The cylinders are cast en bloc with the water jacket and the upper half of the crankcase integral from a high grade of seasoned gray iron, and the cylinder block head is a separate unit. In reality the engine is four sections, the valve cover, the cylinder block head, the cylinder block and upper section of the crankcase and the lower crankcase section. The design of the block head is unusual in that it is so cored for two intake passages that there are two "hot spots" that are intended to heat the fuel gas and produce high efficiency and economy.



Left or Valve Side of "Victory Motor" with Rocker Arm Cover Removed.

NOTES OF THE INDUSTRY AND TRADE

Milwaukee—An Automobile Workers' Union has been formed here and minor labor troubles have followed.

Waterloo, Ia.—The Cramer Motor Co. is now handling the Oldsmobile cars and trucks.

Albany, Ore.—The Day Motor Co. has been formed here to handle Nash and Overland cars by Earl R. Day, Kenneth Carter and Clarence Collins.

Portland, Ore.—S. D. Bornstein has opened the Bornstein service station, with O. S. Peabody as manager.

Minneapolis—Torgerson Brothers, Anaconda, owner of the Main Street Garage, has purchased the Lourance Vulcanizer and Tire Co., Billings, the largest concern of its kind in the Midland Empire. Emil Torgerson of the firm will be in charge of the new branch, while his brother, Alfred C., will remain in charge at Anaconda.

Hartford, Conn.—The Colton-Johnson-Wester Co., distributor of the Dort and Moline-Knight cars, recently gave a dinner for the 12 members of the organization in recognition of the successful start made by the company.

Dover, Del.—The General Top Co., to manufacture tops for automobiles, etc., has been chartered here, with $1,000,000 capitalization, by L. B. Phillips and M. S. Anderson, Dover.

New York—Arraignment in the Long Island court of two garage owners and three sales clerks of the Packard Motor Car Co. plant at Long Island City was the climax of a year's investigation of the theft of automobile parts and accessories at the plant.

Worcester, Mass.—Construction of the $250,000 factory building for Walden-Worcester, Inc., manufacturer of wire handle socket wrenches, has been started. The building will be on Shrewsbury street, between Aitchison street and the junction of the private way of the Worcester Consolidated Street Railway Co. The factory will be of four stories, 333 by 60 feet. It will be of reinforced concrete construction throughout. The width of the building will be divided into three parts by columns supporting 20-foot spans. The structure will represent the extreme example of daylight steel sash construction yet erected in Worcester, and will be a particularly good example of modern factory construction in this respect. General and private offices will be located in the top floor, occupying 10,000 feet of floor space. The offices will be reached from a separate administrative entrance. Employees' service rooms, including the plant hospital, will also be located on the top floor. The company has been seriously inconvenienced for lack of suitable quarters for some time. The business is the personal creation of Warren S. Bellows, general manager, who acquired some of the basic patents on the manufacture of wire handle socket wrenches, and a shop employing six men engaged in their manufacture in 1907. The business has grown under his direction until it now employs 160 hands and will require 250 employees when housed in the new quarters.

Couzens Sells All His Ford Stock to Henry and Son

Control of all stock in the Ford Motor Co. has been secured by Henry Ford and his son, Edsel, through the purchase of the minority holdings of James Couzens, millionaire mayor of Detroit and former vice president of the company.

It is understood Mr. Couzens had more than 2000 shares of stock in the company. Years ago he took a $2500 investment in the brains of the automobile genius and now he gets $29,500,000 as a result. For the stock for which he paid a little over a dollar a share he gets thousands per share.

Interests of other minority stockholders were purchased by Henry and Edsel Ford early in July for a sum said to be close to $100,000,000. Mr. Couzens refused to sell his holdings at that time.

He left the Ford organization early in the war because of Henry Ford's views on preparedness and pacificism. Up to almost the end of 1915 he had geen general manager and treasurer of the Ford concern.

ROLLS-ROYCE WILL ESTABLISH AMERICAN BRANCH SOON.

An American branch of the Rolls-Royce Co. of Derby, England, will be established within a short time, according to announcement made by Claude Johnson, managing director of the Rolls-Royce Co. Although no site for the factory has thus far been selected, the financial arrangements for establishing American company are practically completed.

It is understood that Aldred & Co., banker, New York City, will provide the capital for the undertaking, as under the present British war acts it is not permitted to transfer British capital for industrial purposes here. The stock issue will probably be $7,000,000.

The new venture is being undertaken because of the growing demand in this country for Rolls-Royce cars and other products. The parent company in England is unable to fill this demand, its capacity having been booked for the next year and a half. The chassis for the American Rolls-Royce will be identical in every detail with that turned out by the English plants. The Rolls-Royce chassis sells in this country for $10,000.

J. E. F. SPARK PLUG CO. IS VIKTRY MANUFACTURING CO.

The J. E. F. Spark Plug Co., Milwaukee, has changed its corporate style to the Viktry Manufacturing Co. and the name of its principal product will be the Viktry disc or V. D. spark plug. A new $50,000 plant has been built.

New York—The Warren-Nash Motor Corporation, heretofore exclusively wholesale distributor of Nash products, has taken over the retail sales and service of Nash passenger cars and trucks for Manhattan, the Bronx and Staten Island.

New York—George L. Riess and J. Herbert Carpenter, Jr., both of whom saw service in France, announce the formation of the firm of Riess & Carpenter to handle the sales of the Columbia Six in the metropolitan territory, for which the Charles E. Riess Co. is the eastern wholesale distributor.

New York—Henry G. McComb, 1790 Broadway, has been made New York representative of the Weidely Motors Co. He is one of the pioneers of the automobile industry and is an engineer. With his engineering ability he is well qualified to show the good points of Weidely design.

Brooklyn, N. Y.—M. C. Manship, formerly manager of the Maxwell-Chalmers branch here, has been appointed supervisor of District No. 4 of this company, with headquarters in the Union building, Cleveland.

Brooklyn, N. Y.—Charles Edwin, 42 years old, of 563 East Fourth street, manager and one of the directors of the Stewart Products Co., dealer in automobile supplies, died recently from injuries suffered in an automobile accident that occurred 10 years ago.

Baltimore—Benedict S. Berman has been appointed sales manager of the new organization that is to handle the Cleveland car. H. S. Block, 1014 Morton street, local Chandler distributor, will also represent the Cleveland in this territory, with a separate organization for each car.

Baltimore—The Maccar Motors Co., 1010 West North avenue, has been appointed distributor for Westcott cars and Maccar trucks. The Westcott franchise covers all of Maryland, while the Maccar zone embraces Maryland, West Virginia and the District of Columbia.

Ashtabula, O.—The Pearce Tire and Rubber Co. is to effect a merger with the Ideal Tire and Rubber Co., Cleveland. The business at both plants will be conducted under the name, Ideal Tire and Rubber Co. Two thousand tires will be made daily. Ideal interests are capitalized at $5,000,000.

Cleveland, O.—The Vita Manufacturing Co. has purchased a site at West 117th street and Madison avenue and will erect a modern plant for the manufacture of Rogers magnetos. The building will be 252 by 132, of modern, fireproof construction with front of velvet faced brick. A garage will be constructed in the rear for officials' cars. The new plant, it is announced, will be one of the most completely equipped magneto producing factories in the country and equipped with automatic precision machinery. Production of the Rogers magneto will be under the personal supervision of George D. Rogers, its inventor and designer. The Rogers magneto is adaptable to internal combustion motors of from two to 16 cylinders.

Talks to Pacific Coast Auto Dealers

The Motor Car Dealers' Association of Los Angeles recently had F. W. A. Vesper as a guest. He told the members that selling automobiles is not a "game," but a serious business. He emphasized the fact that cars are no longer considered as a luxury, but as a necessity. "At the present time," he said, "the automobile industry is the third largest in the United States. Steel and cloth manufacturing are the only ones that lead it. Nineteen years ago motor car fans who predicted a giant industry were laughed at. That gives you simply a small idea of the rapid growth of the automobile business." Ralph Hamlin, president of the Los Angeles association, presided. Mr. Rose of the Pasadena Automobile Dealers' Association, Mr. Farles of the Auto Club and P. H. Greer made brief addresses.

The San Antonio, Tex., Automobile Trades Association at a special meeting decided to make a test case of the use of demonstration license numbers Sundays by dealers who get out for a ride with their families. It has been held by peace officers in Bexar county that the dealers' demonstration numbers could not be put to personal use on Sundays. To test this contention a member of the association will submit to arrest and the association will prosecute the case. It was the consensus of opinion that the rules governing the use of automobile licenses were in a chaotic state, and the matter of driving cars from the railroad to the shops without licenses will be taken up with the attorney general and highway commission at Austin for opinions.

The Brooklyn Commercial Car Dealers' Association was recently organized. It was unanimously voted to incorporate the association. An initiation fee of $50 was decided upon. W. R. Couch, president of the Couch-Haas Co.; Charles Ohlmann, president of the Kelly-Springfield Sales Co., and Walter A. Scott of the Scott Motor Truck Co. were selected to secure the necessary corporation papers from Albany. A. S. Rampell of the L. A. D. Motors Corporation was unanimously elected temporary president. E. G. Scott of the Maxson-Richardson Corporation secretary, and W. R. Couch treasurer.

BOSTON AUTO DEALERS AND SALESMEN ACT AS TRAFFIC COPS DURING STRIKE OF POLICEMEN.

When Boston policemen went on strike there was no one to direct traffic at congested street intersections. An appeal was made to Chester I. Campbell, who recruited a small army of automobile dealers and salesmen to serve as volunteer "traffic cops." These men did the

work so well that there was not a single serious accident and no more minor ones than usual. They remained on the job for more than a week, when they were relieved by State Guardsmen.

AUTO BOOSTERS' OUTING.

The Automobile Boosters, an organization without any organization or aim in life other than to have a good time at least once a year on "Wag's farm, Smithtown, L. I., and composed entirely of men doing business on Automobile Row, New York City, and its subsidiaries, recently celebrated their 10th annual outing. There were more than 300 present. Dario Resta and Ralph De Palma were in the merry party. A ball game between "Bill" Poertner's National Sea Lions and Frank Hill's Liberty Republic Sheriffs, was a feature. Frank is a candidate for sheriff of Nassau county. Bill's boys walloped the sheriffs. Even the motor millionaires on Automobile Row were present. Everybody had a ripping good time.

N. A. D. A. Establishes Boston Office

The National Automobile Dealers' Association has appointed Charles F. Cole of Boston northeastern secretary, with headquarters at 5 Park square, Boston, where a general information and service bureau will be maintained for dealers and the motoring public.

The Ohio Automobile Trade Association will hold its third annual meeting the three days beginning Dec. 3 at Cleveland.

The Houston Automobile Trades Association of Texas is considering the advisability of adopting a standardized service and establishing a used car bureau.

The Indianapolis Automobile Trade Association recently staged the largest automobile show ever held in the city. It was held in the new Manufacturers' building at the State Fair grounds with 98 exhibitors of passenger cars, trucks and accessories. John B. Orman was manager. The show was opened with an address by President Jordan of the Jordan Motor Car Co., Cleveland.

The Dealers' Motor Car Association of Oregon will hold a passenger car and truck show in connection with the Oregon State Fair at Salem, Sept. 21-27. The committee in charge is composed of A. B. Manley, chairman; C. M. Menzies, secretary; H. H. Eling, treasurer; Howard M. Covel and M. O. Wilkins. The show manager is Mr. Wilkins.

The Minneapolis Automobile Trade Association held its annual automobile and tractor show in connection with the Minnesota State Fair. Walter Wilmot was manager. The space allotted in the building devoted to automotive industries was inadequate to accommodate all who desired space and some exhibits had to be shown in other buildings.

The Louisiana Automotive Trades Association has opened headquarters at 712 Peydras street. There are bureaus for passenger cars, trucks, tractors and equipment, each in charge of a vice president.

The Ford Dealers' Association, Philadelphia, which will establish an exchange system for Ford automobiles, has been incorporated with $5000 capitalization by E. M. MacFarland, J. Vernon Pimm and E. R. Hansel.

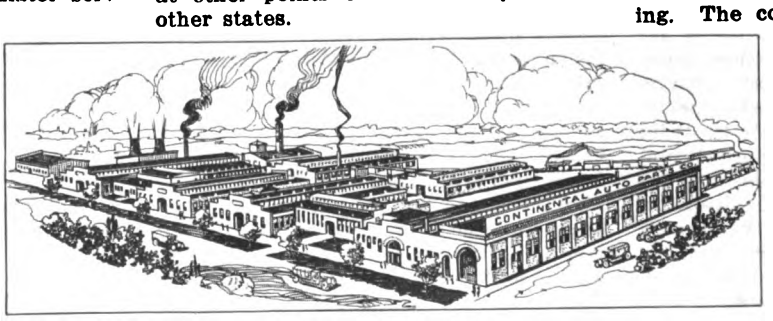
United Motors Service, the authorized service department of Delco, Klaxon and Remy, with general offices in Detroit, has opened a branch in Buffalo at 1127-33 Main street, where in addition to giving official factory service on all motor car electrical equipment, it will operate a special retail department, selling for the present the following equipment: Formost cord ties, Formost inner tubes, A. C. spark plugs, Klaxon warning signals, Jorgenson vapor primers, Jaxon rims, Weston ammeters, miniature lamps. It is not the purpose of the company in operating this retail department to handle a complete line of accessories, as found in the average accessory store. Instead, it will devote its energies to this special line of equipment, carrying out its established policy of direct factory representation on certain special lines, in order that the customer may have the advantages of purchasing his material from a direct representative of the manufacturer. United Motors Service maintains a country wide, amply equipped and efficient organization of expert factory trained workmen, giving service on the starting, lighting and ignition equipment of the Delco and Remy systems and on the warning signal equipment of the Klaxon company. This specialized selling of accessories, operated in conjunction with its electrical equipment service department, is the first of its kind established in any of the 16 branches of United Motors Service Inc. The company plans, however, to install this new service in its other branches as rapidly as possible. The first of these stores was established in Buffalo, coincident with the establishment of its branch, because the company felt that Buffalo was particularly in need of this kind of service and because Buffalo is the leading touring center of the United States. Later this nation wide line of stores will add to its line oils, tires, radiator service and Boice motometers.

The Continental Auto Parts, Co., Knightstown, states that it is being moved to Columbus, where six times the present floor space is provided in the plant formerly occupied by the Janey Manufacturing Co., builder of agricultural implements. Practically the entire personnel of the Continental organization moves to Columbus, where an almost immediate increase in production is planned to enable the firm to catch up with orders and develop several new lines. The Continental Auto Parts Co. has been building a well known line of shop equipment such as motor stands, axle stands, radiator stands, welding and assembly tables, industrial trucks, jacks, hoists, wrecking trucks, creepers, bushing presses, crankshaft straightening presses and burning in machines. This line has been in such demand that for the past two years the factory has been four to five months behind in filling orders. According to J. H. Staley, who is the originator of Continental Shop Equipment, the new Columbus plant provides the necessary space and equipment to permit an almost immediate increase in production. Seventy-five thousand square feet of floor space is available. The new quarters are completely equipped with a foundry, blacksmith shop, wood working department, paint shop, machine shops and a large warehouse with railroad connections and car level shipping platform.

The Advance Auto Service Co., which will have its principal offices in Newark, N. J., has been incorporated by Walter H. Shutt, Charles R. Hulley and others. Mr. Shutt, who has been closely identified with the H. J. Koehler Motors Corporation, Newark, for a number of years, has severed his connection with that firm to devote his time to the new company. The Advance Auto Service Co. will conduct engineering and special service departments in addition to rendering a repair, reconstruction and manufacturing service. Offices and shops of the new corporation are at 20 Orange street, Newark. It is planned to establish branches at other points of New Jersey and in other states.



New Plant of Continental Auto Parts Co. at Columbus, Ind.

The Higgins Spring and Axle Co., Racine, Wis., announces that incorrect reports have been published to the effect that it has disposed of its business, equipment and material to a new corporation formed at Edgerton, Wis., by the name of the Continental Axle Co. The real fact is that the Higgins firm sold to the new company the machinery and stock of only one department. In this department, which was organized a year ago, were manufactured motor truck, trailer and tractor axles. The Higgins company will continue to do business as heretofore, except on a larger scale in the other departments in the manufacture of springs of all kinds for passenger cars, motor trucks, trailers, tractors and replacements, as well as springs of all kinds for horse drawn vehicles. The company will also continue the manufacture of axles for horse drawn vehicles, just as it has done for many years. The Continental Axle Co. was formed to produce axles only for motor trucks, trailers and tractors on a large scale and will have nothing to do with springs for such vehicles. This new corporation is being backed by prominent men with sufficient capital for its promotion. The Higgins Spring and Axle Co. is installing the latest type of machinery to handle its present departments, which have brought great prestige to the company for the last 36 years. These departments will be greatly enlarged in every respect to meet the present demands for the high grade goods they are now producing.

The Plaza Products Co., with offices at 1777 Broadway, New York, seller of the well known Plazine brand of lubricating oil and grease, announces that it places at the disposal of the tractor or truck user its entire experience for the solution of lubrication difficulties and for the selection of the correct grade of lubricant for the particular motor or bearing. The company points out that the motor oil is, in a large majority of cases, responsible for the scored cylinder walls and bearings and also for any large carbon deposits. The proper grade of oil will greatly alleviate these conditions and save the tractor or truck user many dollars each year in repairs.

TIRE INDUSTRY AND TRADE

The Goodyear Tire and Rubber Co., Akron, O., is meeting with success in its week-end traveling school for salesmen of its various branch offices throughout the country. Formerly it has been the custom to assemble the salesmen for instruction into one large class at the main offices at Akron for instruction, but as pressure of business made it inadvisable to follow out this plan further, because of the loss of time entailed while away from their territory, the plan of instructing these men in their own branch offices by capable instructors was adopted. Under the supervision of Lake Jones, director of sales instruction, these week-end schools are now operated in several of the Goodyear branches. "One of the advantages of this new plan," said Mr. Jones, "is that we can include the credit men, service men and office managers, along with the salesmen, and are able to give them all instruction concerning credits, policies, product and salesmanship in their own particular field, without disturbing to any appreciable extent the transaction of business."

The Pennsylvania Rubber Co., Jeannette, Pa., has purchased 120 acres immediately south of the plant upon which it is erecting modern homes for its employees. These homes are not of the type commonly known as "factory homes," but are modern, commodious residences of stucco and brick. Twelve have already been built, and they are now occupied. Thirty-three more are in the course of construction. Streets are being graded and improved and it is planned to continue until a minimum colony of 600 houses has been completed.

The Fisk Rubber Co. announces that George L. Sullivan, for three years advertising manager, has resigned to go with the J. Walter Thompson Co., New York. Miss M. G. Webber, who has been a member of the advertising department for a number of years, and who for the last three years has had charge of the outdoor advertising of the company, assumes the position of advertising manager.

The Pennsylvania Rubber Co. announces the appointment of Dan McAvoy as manager of the Omaha branch, succeeding O. A. Olson.

LAKE JONES.

Director of Goodyear Week-End Traveling School Which Is Being Successfully Conducted for the Salesmen of Its Various Branches Throughout the Entire Country.

The J. & D. Tire Co., Charlotte, N. C., announces the election of H. L. McClaren as president and active general manager. Mr. McClaren recently resigned as president and general manager of the Ajax and Racine rubber companies. He ranks as one of the most capable and experienced men in the rubber industry, and the fact that he has dropped all other interests in order to center his efforts in developing the J. & D. plant indicates that big plans are under way to make this company an important factor in the tire industry. William F. Smith resigned the presidency in favor of Mr. McClaren.

The Pennsylvania Rubber Co., Jeannette, Pa., announces that E. T. Peterson, who was formerly district sales manager for the Commercial Car Unit Co., Philadelphia, has accepted a position as manager of the Buffalo branch of the Pennsylvania Rubber Co. Mr. Peterson has a wide experience in the tire field and comes to the Buffalo branch fully equipped to look after the increasing business of the Pennsylvania.

The Standard Rubber Co. is having machinery delivered to its new plant at Newark, N. J. Already installation is under way with a complete Southwark Standard Heater Press, one of the great battery of vulcanizers to be used on Stanwood cords, also double and single opening presses and inner tube stripping machines. The latest addition to the force of experts which this new tire firm is gathering is C. O. Corey, Rochester, N. Y., who will have direct charge of all engineering operations under the supervision of Edward Hutchens, vice president and engineer.

The Zenith Tire and Rubber Co., Cleveland, O., has been organized with $10,000,000 capital. Major Alfred W. Harris, manufacturer, who served in the war as an aviator, is president. Plans of the company are to have small plants in various parts of the United States, catering to district service and product demands. The main plant will be located near Willoughby, a short distance from Cleveland. It is understood that negotiations are already under way for the purchase of one rubber company.

The Keystone Tire and Rubber Co. declared a stock dividend of 15 per cent. payable to shareholders Sept. 15. This is an evidence of the continued prosperity of the company. The company has more than 141 stores. The report states: "There is no foundation to the rumor that this company is loaded with 'seconds,' for the reason that we are continually in search for more 'seconds,' the demand being greater than the supply."

The Kelly-Springfield Tire Co. announces that work on the new Maryland factory has been in progress for some weeks and if all goes well it should be turning out tires by June 1, 1920. The effect of this production should be to give Kelly-Springfield in 1920 gross sales 70 per cent. greater than in the fiscal year to Dec. 31, 1918.

The Portage Rubber Co., Akron, announces that at a special directors' meeting at Barberton, O., a quarterly dividend of 1¾ per cent. was declared on all outstanding preferred stock of record Sept. 20, payable Oct. 1.

Oppose Special Tariff On Auto Imports In England

A CABLE dispatch from England states that Sir Auckland Geddes held out no hope to a deputation of British commercial motor manufacturers that the government would impose a special tariff on foreign commercial motors and agricultural tractors. The manufacturers declared that American competition would seriously damage the motor industry of the country.

The president of the Board of Trade said that he could not understand the demand for a special tariff to afford home industry a special measure of protection. At the present moment, he added, there was in England a much greater measure of protection than was ever dreamed of before the war.

In the case of private cars the existing duty added to the freight charges, cost of packing, insurance and loss on exchange, meant in the case of America, he said, an actual rate of protection of over 88 per cent, while in the case of commercial cars the difference of exchange, high freights, insurance, etc., gave a protection to the industry of at least 45 per cent.

The government, he said, could not agree to impose an additional 33 per cent. on American lorries. It was unthinkable.

Dealing with the possibility of competition from America, Sir Auckland said that for some time they had little to fear from such competition.

"Unless America takes more goods from us," he said, "there is not likely to be any flood of imports from America. Exchange is against that for one thing."

AUTO CENSUS ABROAD.

An automobile census of foreign countries has been compiled as of July 30, 1919, by the American Exporter, as follows:

Algeria, 5,000; Argentina, 25,000; Australia, 25,000; Austria, 19,300; Barbadoes, 700; Belgium, 12,000; Bolivia, 500; Brazil, 10,000; British East Africa, 900; British Honduras, 50; British South Africa, 11,500; British Guiana, 700; Bulgaria, 1000; Canada, 300,000; Ceylon, 3500; Chile, 8500; China, 1500; Cochin-China, 950; Colombia, 1000; Costa Rica, 350; Cuba, 20,000; Curacao, 150; Denmark, 7500; Dominican Republic, 1000; Dutch East Indies, 12,000; Dutch Guiana, 100; Ecuador, 400; Egypt, 1500; Finland, 2000; France, 200,000; French Guiana, 100; Germany, 75,000; Great Britain, 415,000; Greece, 1000; Guadaloupe, 300; Guatemala, 300; Haiti, 265; Hawaiian Islands, 6340; Honduras, 110; India, 4500; Italy, 35,500; Jamaica, 1500; Japan, 3000; Martinique, 540; Mexico, 15,000; Morocco, 1000; Netherlands, 20,000; Newfoundland, 500; New Zealand, 14,665; Nicaragua, 150; Norway, 3500; Panama, 560; Paraguay, 100; Peru, 1500; Philippine Islands, 9220; Porta Rico, 5085; Portugal, 5000; Portuguese East Africa, 150; Roumania, 2500; Russia, 15,000; Salvador, 100; Siam, 1300; Spain, 14,000; Straits Settlements, 3200; Sweden, 10,000; Switzerland, 6140; Trinidad, 825; Tripoli, 700; Tunis, 500; Turkey, 500; Uruguay, 5000; Venezuela, 1500; miscellaneous, Asia and Africa, 1000; total, 1,384,250.

GETS CONTRACTS ABROAD.

E. E. Bloom, export manager of the Haynes Automobile Co., has returned from a two months' trip to Europe. Haynes dealers are now located in the larger cities of Norway, Sweden, Denmark, Holland, France, Belgium, England, Spain and Italy. Mr. Bloom closed many dealer contracts.

FOREIGN TRADE OPPORTUNITIES.

(Reserved addresses may be obtained from the Bureau of Foreign and Domestic Commerce, Washington, D. C., or from district or co-operative offices.)

30,555—A firm in Norway desires to secure agencies for lightweight and also large, heavyweight trucks, and lightweight and heavy automobiles. Correspondence may be in English.

30,546—An automobile sales company with repair shops and garage in Czechoslovakia desires to purchase and secure an agency for the sale of motor trucks, automobiles, accessories and tires. Payment to be in United States currency. Reference.

30,541—A commercial agent in Spain desires to secure an agency for the sale of paper, automobiles, hardware, etc. References.

30,538—An agency is desired by a man in France for the sale of automobiles, agricultural implements, general merchandise, etc. Reference.

30,514—An agency is desired by a man in Rumania for the sale of agricultural machinery, tractors, etc.

30,571—A corporation in Poland, establishing a taxi service, requires low priced cars, 50 landaulet bodies, 30 limousine bodies and 20 torpedo bodies, with taxi meters. It is requested that quotations be cabled c. i. f. Danzig, with time of delivery. Payment, half on shipment and half on arrival at Danzig. Inquirers willing to pay cable charges should send offers through the Office of the Foreign Trade Advisers, State Department, for transmission to consul.

30,626—A business man in the north of France has established a commission and export house for purchasing and selling of all industrial articles, engines, leathers, motor cars, industrial oils, motors, gasoline, etc., for firms not already represented, and now desires to secure agencies from such firms. Correspondence may be in English. Reference.

30,589—A dealer in France desires to purchase or to handle on commission or consignment, automobiles, motorcycles, tires and accessories. Reference.

30,590—The American office of a firm in Sweden desires to be placed in communication with manufacturers with a view to securing agencies for the sale in the Scandinavian countries of agricultural machinery, belting, technical and industrial machinery, motor trucks, engines, etc. References.

30,620—A business man in Egypt desires to secure an agency for the sale of tools, machinery, hardware, automobiles, bicycles, leather and all general merchandise.

30,592—An American export corporation is soon to send a representative to Europe and invites immediate offers from manufacturers of iron and steel articles, hardware, machinery, farming implements, medium priced automobiles, tires and rubber goods. Catalogues in duplicate and price lists, subject to confirmation, are requested. Reference.

30,617—An agency is desired by a man in England for the sale in that country and Switzerland of machinery of all kinds, motor cars and also an agency for an engineering firm. Reference.

Sane Optimism Is Keynote At M. A. M. A Session

Convention Proves Most Successful and One of Most Important Ever Held By the Association

ALTHOUGH the two-day business session at the third annual credit convention of the Motor and Accessory Manufacturers' Association in Buffalo, N. Y., were devoted primarily to credit subjects, general conditions in the business world, and particularly the automotive industry, were discussed from all angles.

Sane optimism was the keynote and this attitude was unanimously reflected by the attendance of approximately 150 representative executives of the industry, including credit managers and general officers of leading automotive equipment companies throughout the country.

Charles E. Thompson, president of the association, made this statement concerning the convention:

"The automobile industry was never in healthier condition than it is today. The paramount problem before us is to maintain this health and safeguard this prosperity. Optimism is, of course, desirable and warranted, but it is likely to prove a snare and a delusion unless it is built firmly on sound business principles, and qualified by caution and prudence.

"Sane optimism is the predominate keynote among the leaders of the automotive industry today. This attitude was reflected in all the addresses and discussions at our convention.

"We had with us at this convention approximately 150 credit managers, credit assistants and other executives. Nothing could be more valuable in determining the present condition of the automobile industry than the report of such a gathering of men.

"Business interests in general and particularly men in the automobile industry, should take keen gratification on the sane, constructive and forward looking note of optimism sounded at this convention.

Safety Valve of Industry.

"We are looking not through rose-tinted spectacles, but through far-seeing, unblurred glasses. We appreciate the unprecedented prosperity of the present, but we are constantly endeavoring to prepare for the future.

"The wise credit man is the safety valve of the industry; but he is not merely a negative force—he is a producer, an organizer and a stimulator of sales and activity as well.

"For these reasons I feel safe in saying that the convention just closed was not only the most successful convention yet held by the association, but in a real sense, one of the most important get-together meetings in the recent history of the automobile industry." . .

L. M. Wainwright, treasurer of the association and president of the Diamond Chain and Manufacturing Co., Indianapolis, said:

"I am an optimist as to business generally, and the automobile industry in particular. The obstructionists, whether Bolshevists, I. W. W.'s, or similar class distinctionists, will fail in their purpose. I believe in and have an abiding faith in the independent thought and initiative of the vast silent majority of true American citizens. Their vote is sealed, but not yet delivered. Trust the silent majority."

Business interests in general and particularly men in the automobile industry, should take keen gratification on the sane, constructive and forward look of optimism sounded at this convention. We are looking not through rose-tinted spectacles, but through far-seeing, unblurred glasses. We appreciate the unprecedented prosperity of the present, but we are constantly endeavoring to prepare for the future. —Charles E. Thompson, president of the Motor and Accessory Manufacturers' Association.

S. S. Meyers, general counsel, said:

"The Motor and Accessory Manufacturers' Association has sounded the keynote not only for itself and the automobile industry, but for the business world as a whole, by its clarion call for optimism, not mere optimism based upon day dreams and the belief in miracles, but constructive optimism, substantial optimism and an optimism based firmly upon sound commercial and industrial principles. The dominant figures in the automobile industry do not believe in miracles, but rather in a strong structure built by the careful and prudent use of brick and mortar. We are living in an era of extraordinary prosperity today, but at the same time by viewing that prosperity in a forward looking manner, are laying the foundation for continued prosperity and further progress on the high roads of industry. The achievements of today should act as an incentive for the advancement of tomorrow."

To Enlarge Credit Service.

Important plans for the further enlargement and expansion of the credit service of the association were outlined by C. A. Burrell, manager of the association's credit department. In the informal discussion that followed most of the addresses, many of the members present exchanged their viewpoints and ideas on the general usefulness of the association in cooperative work, as well as on its specific service to the membership in matters affecting credit, railroad transportation, legislation, the administration of the excise tax and the broad field of other activities vital to the industry.

The proposed standing creditors' committee of the association was outlined by E. R. Ailes, treasurer of the Detroit Steel Products Co. This proposed committee involves an important and extremely valuable extension of the association's activities, and provoked considerable discussion.

The viewpoint of the National Association of Credit Men, with respect to the proposed standing creditors' committee of the association, was stated by E. B. Moran, manager of the Credit Interchange Bureau of the National Association of Credit Men. The referee's viewpoint was expressed by C. D. Friebolin, referee in bankruptcy of Cleveland; the bankers' viewpoint by Joseph A. Bower, vice president of the Liberty National Bank of New York, and the members' viewpoint by J. M. McComb, assistant treasurer of the Crucible Steel Co. of America.

Other important phases of the credit work of the association were discussed by F. R. Wilhelmy, assistant treasurer of the Standards Parts Co., Cleveland, and M. C. Dittmann, vice president and general manager of the American Bronze Corporation, Berwyn, Pa.

M. L. Heminway, general manager of the association, and C. A. Burrell, manager of the credit department, expressed keen gratification over the success of the convention. An informal banquet was held Thursday evening and Saturday was devoted to a golf tournament and a trip to Niagara Falls.

FACTORY RADIATOR SERVICE.

The United Motors Service, Inc., has inaugurated at its New York City branch, 239-41 West 56th street, Harrison factory service on all types of radiators in addition to service on Delco, Remy and Klaxon electrical equipment. J. L. Elwood, general manager of the branch, states that there has been practically no radiator service, neither the radiator or power vehicle manufacturers giving this the attention that is believed necessary, for there is general recognition of the possibilities for radiator damage and there is no doubt the cooling sections wear more quickly than the other units of the assemblies.

PRACTICAL SUGGESTIONS FOR AUTO MECHANICS

SPINDLE ARM BUSHING FOR FORD TIE ROD.

On practically all Ford machines the tie rod connecting the steering arms of the front wheels will rattle. This is due primarily to wear and if owners knew just how easily this could be prevented they would surely make the necessary change. An old spindle body bushing can be forced into the spindle arm and the shoulder of the bushing will make a longer bearing surface for the steering arm connecting rod.

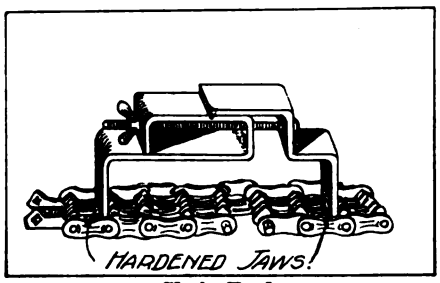
The shoulder of the bushing should be placed at the top, so that it will carry the weight of the steering arm connecting rod. About one-sixteenth of an inch, or even a little more, should be filed off each side of the steering arm. This will afford more room for the shoulder, or flange of the bushing. After driving in the bushing file off any part of it which may project through the spindle arm. Now file off the flange of the bushing to a snug fit with the yoke of the steering arm connecting rod.

FORD IGNITION SYSTEM.

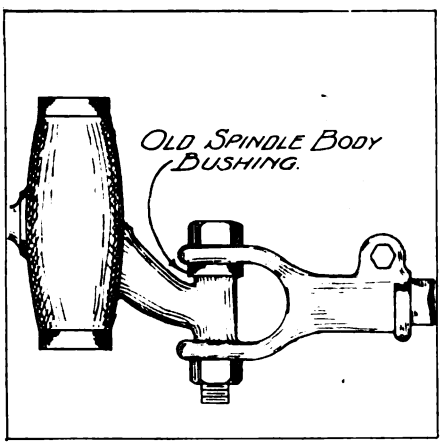
The Ford ignition, starting and lighting system is of the two-unit type, having a separate generator and starting motor. A wiring diagram is shown on this page. The generator is gear driven from the timer gears. It is of the standard six-volt capacity and is supplemented by an 80 ampere-hour storage battery that is carried on the left running board of the car.

The starting unit is equipped with Bendix drive that engages the gear teeth cut on the rim of the flywheel. A suitable instrument board to accommodate the coil switch, ammeter, primer, etc., is provided for these electrically equipped models.

It is not possible to apply this equipment to older Ford models because of the difference in form of the castings necessary for the "built in" equipment.



Chain Tool.



Spindle Arm Bushing.

TESTING VENT PIPES.

It is well in filling the radiator of a car to allow enough water to pass in to bring the level over the end of the vent pipe. If this pipe is clear, as it always should be, the fact will be indicated by the overflowing of the water through it. If it is not clear the water will overflow through the filter cap and not the vent pipe, and it should be attended to at once.

CHAIN TOOL FOR REMOVING LOCK LINK OF MOTOR CHAINS.

Removal or replacement of the lock link of motor chains, such as used for driving the generator, is greatly facilitated by the use of a tool that will hold the chain together while the work is being done. This tool is simple in construction and is well worth the trouble of making.

The tool comprises two steel hooks that may be caught into the links at each side of the lock link and contracted by a thumb screw and bolt. In order to insure durability it is advisable to have the steel jaws case hardened.

ARMATURE TESTING STAND.

The armature testing stand is an adjustable stand used in testing open or short circuits in an armature after it has been removed from the frame. It consists of two wooden rests notched to hold the armature shaft. One rest is adjustable and may be locked in any position, so that practically any armature may be accommodated. Attached to the binding posts on the sliding rest are two copper wire brushes, so bent that they rest on opposite sides of the commutator.

In making the test a single dry cell is attached to these binding posts. Leads are then taken from the telephone receiver and placed in rotation on adjacent bearings of the commutator, and the commutator slowly rotated. Absence of a buzzing sound indicates a short circuit; a large buzz indicates an open circuit.

A three scale voltmeter could be used in a similar manner instead of the receiver. In the absence of a lathe these rests may be used as a support in refinishing the commutator surface, drive being effected through a belt placed over the armature winding.

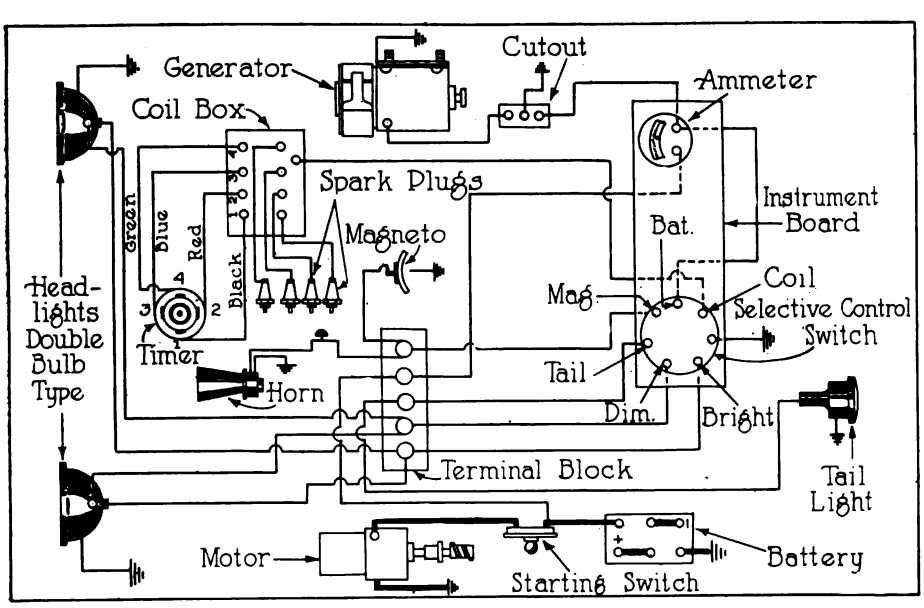


Diagram Showing the Wiring in the Ignition, Starting and Lighting System Employed in the Ford Sedan and Coupe 1919-20.

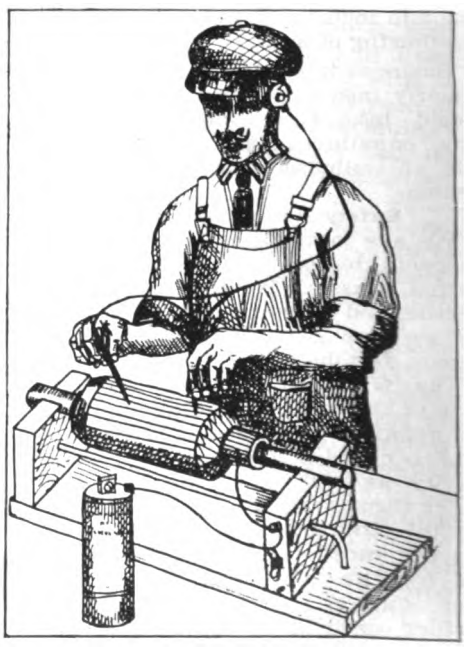

Armature Testing Stand.

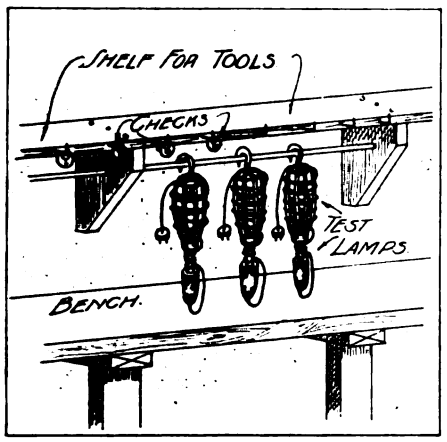
Mechanical Suggestions for Garage Men



Inspection Lamp System.

INSPECTION LAMP SYSTEM.

One of the great losses in the repair shop is through breakage and theft of drop lights, or inspection lights as they are sometimes called. This loss may be reduced by only issuing inspection lamps to the workmen on the receipt of a tool check, and requiring each workman to return the lamps each night. The lamps may be kept in the tool room suspended on a steel wire fastened along the wall, and the workmen's checks, on the lamps that are out, may be placed on hooks above the lamps. Jacks, pumps, etc., may be issued in the same manner.

PNEUMATIC DOOR OPENER.

Much time is lost in opening and closing garage doors not fitted with door openers. In winter heat is lost through leaving the door open. A mechanical door opener will soon pay for itself. The door opener illustrated herewith is operated by compressed air. It consists of a piston operating in a metal cylinder and connected to a system of levers attached to the door. Air pressure applied to the piston forces it down the cylinder, pulling the door open through action of the levers. The door is closed by the action of a weight, attached to the door by a rope running over a pulley when the pressure is released from the piston. The valves for admitting the air to the cylinder may be placed in any convenient point in the building, preferably in the office. At the sound of a horn at the door the door is opened by opening a valve in the office, admitting air to the cylinder.

HOISTING RIG.

Handling tires in a shop can only be done with good equipment if economy of time and labor is a factor. The wheels of trucks will weigh up to 1500 pounds and these must be taken from and put on to the axles, and they must be lifted to and removed from the tire press. Chain hoists are usually used to raise and lower tires, and with these two men are generally needed to handle the heavy wheels.

In one shop where tires are handled in large numbers, each press is equipped with a ring with which one man can hoist or lower or place any wheel or tire, no matter how heavy, quickly and easily. The rig may cost from $15 to $20, but this will practically save the wage of one man, will insure against danger that might impend when lowering and swinging a wheel with an ordinary chain hoist, and greatly lessen the work for the man making the tire changes.

A chain hoist is hung directly above the side member of a press frame, the only requirement being that there shall be sufficient height for the rig. One or two guides that may be U shape are bolted on the edge of the press frame. The ends of the side members of the guides are drilled for two or three heavy bolts. The width of the guides may be from two to four inches, with the U having 2¼ inches clearance inside.

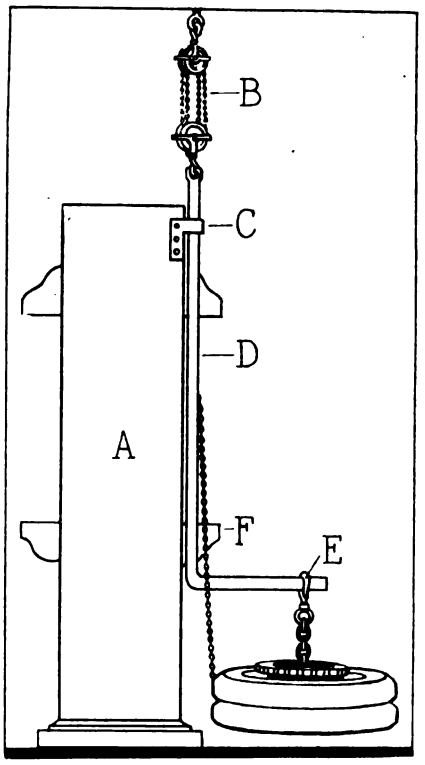


Diagram of Hoisting Rig: A, Tire Press; B, Chain Hoist; C, Guide on Press Frame; D, Steel Shaft Bent at Right Angle; E, Chain Sling for Lifting Wheels; F, Tire Press Table.

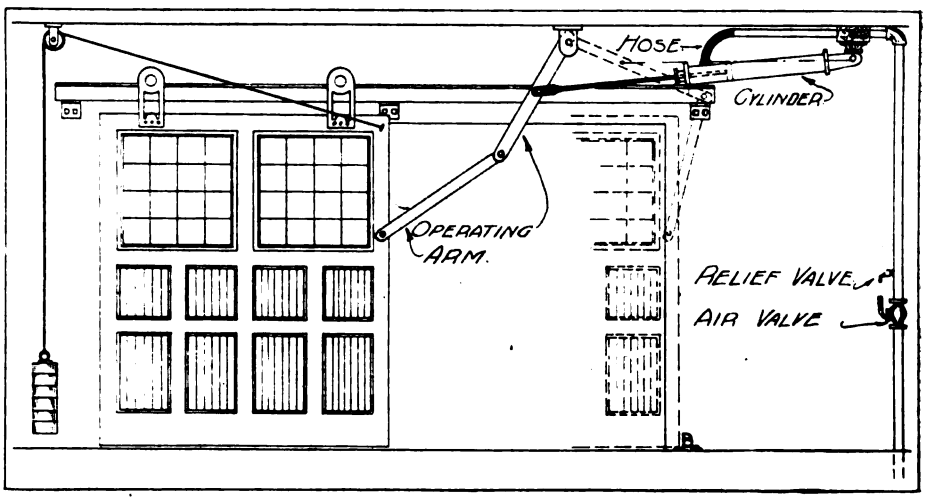
A piece of two-inch steel shafting, approximately the same length as the height of the press frame, should have one end bent at right angle to form an arm that will extend four to six inches beyond the center of the press table when the long end of the shaft is parallel with the edge of the press frame.

The ends of the shaft should be drilled with half-inch holes in which should be heavy welded rings that will take the hook of the chain hoist and the hooks of a short chain sling.

The edge of the press frame should be drilled for the bolts of the guides at such heights that the shaft can be raised so that the arm, which is the lower end, the short chain sling and the wheel, will swing clear of the press table, and the shaft can be lowered so that the wheel can be placed on the floor. The chain hoist ring at the upper end of the shaft should clear the upper guide. With this rig, which is illustrated by diagram, one man can do practically any work with the largest sized wheel. The shaft will slide in the guides freely and it may be swung the greater part of a circle. It can be positioned wherever desired with reference to the table.

A wheel can be placed on the floor near the press so that a chain sling through the center can be carried to the ring in the end of the shaft arm. With the hoist the shaft can be drawn to such height that the wheel will clear the press table and press bands, when these are used, and then swung to position the wheel on the bands. Tires can be handled with the same equipment, and when the work has been completed the wheel can be placed on the floor as quickly and conveniently.



Pneumatic Door Opener.

Underinflation is injurious to tubes. When the underinflated tire passes over a stone both casing and tube are jolted against the rim and sooner or later a leak will develop.

Digitized by Google

COMBINATION SERVICE STATION

A Concrete Fireproof Single Story Building with Exceptionally Large and Attractive Show Room and Ample Facilities for Storage.

IN THE layout accompanying is presented an idea that may be incorporated in a building if the locality is suitable, and it should produce good results for the owner. The problem of housing both trucks and passenger cars is never determined for any locality, so that the natural tendency is to erect buildings that will meet the requirements of vehicle owners. Of course, care, judgment and thought must be exercised in deciding just what type of construction is to be followed and the relation, or arrangement of the units of which the edifice is composed.

Compactness of the layout of the different departments and their relative positions to each other not only provides large storage area, but also affords the maximum of efficiency, making possible better workmanship with contentment prevailing among those who must have to do with the operation of these departments. The sketch shows a structure one story high, covering an area of 100 by 140 feet, totaling 14,000 square feet in all.

As will be seen from the plan, the greater part of this space is devoted to storage; in fact, four-fifths of it. Yet there is ample room to devote to the show room, repair departments, etc. The truck section has the greatest space, owing to the size of some of the larger trucks. A clear span is shown, eliminating posts that might cause more or less care in placing or moving a machine into or from a given position.

Entrance is made from two streets, with the car entrance and show room fronting on the main thoroughfare, while the truck entrance is located in the side street or lane.

At the front of the building is the large show room, which as planned is 80 feet long and 33 feet wide, having two entrances from the street and three from the garage, which is designed to make possible an unusually complete show of cars and trucks. The room may be made extremely attractive by treatment of the walls with simple but impressive color schemes and decorations. The floor can be tile, with tile inlays or borders, in whatever design might be approved, with white cement mortar joints for dark faced tile and black cement mortar for light tile. The wall panels could be plaster with battens or of wood. The ceiling could be beamed and columns and pilasters used. The walls could be hard plaster or a rough sand finish. The color treatment would be to individual taste. The office adjoins the show room with entrance to it and the garage, and off the office is the women's toilet. The men's toilet is off the show room.

At the rear of the garage proper is a machine shop, a repair section, an oil and stock room, a wash stand, a toilet and wash room. A stairway leads from the toilet and wash room to a boiler room, situated underneath the machine shop. The space devoted to this need not be any larger than required to house a boiler of ample capacity, with storage for at least 10 tons of coal.

The machine shop is about 20 by 25 feet, lighted by a large skylight as shown, and should be fully equipped to handle work of any nature. The repair section is in the open, ample room being afforded for all sizes of cars and trucks. Work benches are along the walls of this section, sufficient in size to meet demands. The lighting is by a huge skylight. The toilet with wash room, combined as shown, is sufficient in size for the number of employees who would be engaged in a plant of this size.

Brick, concrete and steel are the elements that have been incorporated into this structure. Its nature is one of those called fireproof, having little or no combustible material in it.

The foundation is of concrete, 16 inches thick, or in compliance with the laws of the locality. The mixture should be fairly good, especially in the colder climates, so that suggested is as follows: 1-3-5. An extra good one is 1-2-4. Brick comprises the main walls throughout, having 12-inch panels and 16-inch piers, at least three feet wide.

The roof is supported by steel trusses at the truck section and I beams in the remainder, having steel purlins with wood cushions or plates to receive planking of roof. Plank should be of a good quality, hard pine, at least three inches thick, not spanning over 10-foot lengths. As a finish, tar and gravel should be applied.

The floor should have a good granolithic finish, one inch thick on at least five inches of rough concrete with a cinder bed. Drains should be placed as shown, ample to insure dryness at all times.

Windows are of steel sash type with wired glass. Doors are of wood or metal covered if law requires. Plumbing should be of a good standard make, as this will insure perfect satisfaction at all times.

Heating is by steam with wall radiation, this proving the most satisfactory method for this type of work. The gas pump is located on the street in a position convenient to all, enabling the handling of transient trade at all times.

The approximate cost of a structure of this type would range from $15,000 to $18,000. Any further information desired may be had upon application to the Architectural Department of this publication.

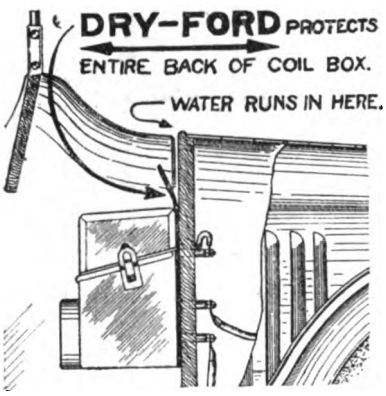
ACCESSORIES, EQUIPMENT AND TOOLS FOR THE GARAGE AND REPAIR SHOP

The Dry-Ford is a coil protector for Ford cars to prevent the water during rain from running down into the coil box and damaging the ignition. The protector is made of rubber and is placed between the back of the coil box and the dash, the porcelain terminals extending through

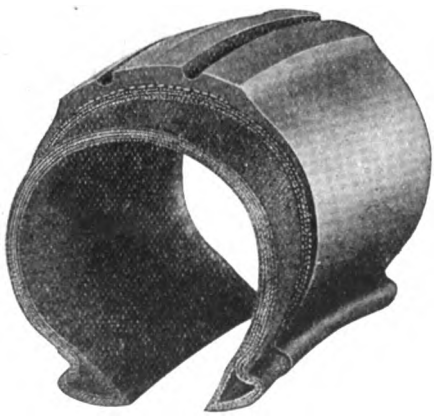


the rubber, which fits very tight around them. The top lays out slightly over the top of the coil box and all the water runs between the rubber and the dash so that the coils and coil box are kept dry. This device has been tested under severe conditions and has proved its merits the manufacturer claims. It is easily attached.

Manufactured by Peter Gray & Sons, Inc., Boston, Mass. Price, 75 cents.

Ever Last Retread. One of the biggest items of expense in maintaining a car is that of tire repairs. Very often this expense is equal to the cost of fuel and car depreciation. The main reason why most car owners have such large tire expenses is because they discard the tires before they are fully worn out.

Large percentages of tires are never really destroyed through use. The costly

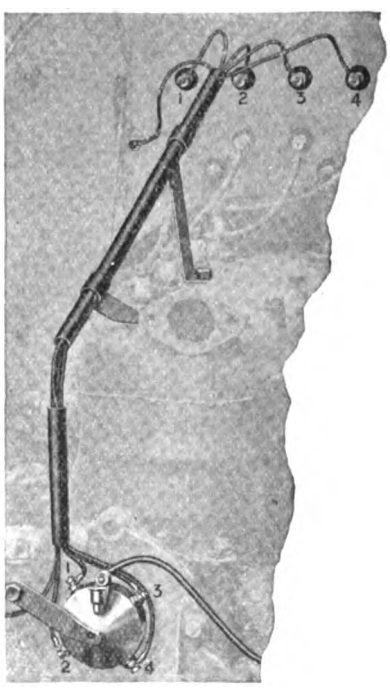


part of the shoe, the body, or carcass as it is termed, is usually in condition when the tire is thrown into the junk heap. It stands to reason, therefore, that a new tread can be put upon the old carcass and the resulting tire will last and give practically as good service as when new.

The Ever Last Tread Co., Inc., 126-128 E. New York St., Indianapolis, Ind., makes a specialty of furnishing treads for worn out shoes. These treads are fully cured and need but be applied to the old carcass. The treads are built in exactly the same manner as the original treads on the tires, that is, they have side walls, a breaker strip and surface tread. The garage man can apply these treads, make a sizable profit and do the work at about one-half the price of a new tire. This means that the automobilist can obtain practically a new tire at half price. Garage men should write to obtain the company's proposition.

Manufactured by the Ever Last Tread Co., Inc., 126-128 E. New York St., Indianapolis, Ind. Write for prices and other information.

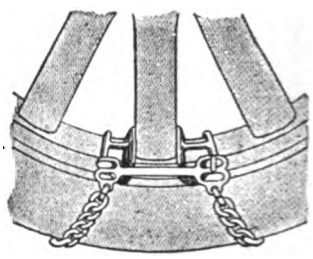
The Midway Overhead Wiring Assembly for Ford Cars consists of a wire grouping arrangement for the placing of the necessary ignition and lighting wiring of the Ford in a position where it will be high and dry and not affected by either oil or water. The wiring is enclosed in a suitable insulated tubing, supported at two points on the engine head and by a tub-



ing that fits the wiring loosely where it passes down the front of the engine to the timer. This construction makes the wiring easily accessible and as each wire is a different color it is easily traced from the coil and switch to the timer and lights.

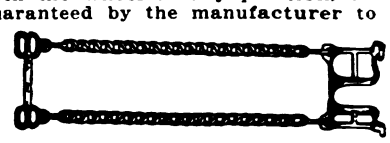
Manufactured by the Midway Mechanical Co., St. Paul, Minn. Price, $1.50.

Bear Quick Detachable Non-Skids for the motorist or truck owner comprise a simple chain device for preventing the rear wheels from slipping either in mud or on icy pavements. It consists of a suitable fastening device that passes around the spokes of the wheel, having two chains attached that pass over the tread of the tire. The chain castings are made



of malleable iron and if too loose to fit around the spoke may be placed in a vise and bent in till a fit is obtained. The chain is of a quality to withstand wear and is allowed to fit the tire loosely.

The chains may be placed on the tire with the wheel in any position, and are guaranteed by the manufacturer to give

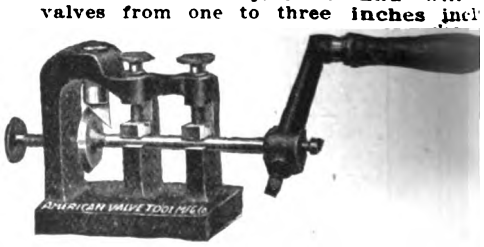


traction under all conditions. A set of eight is considered a full set, or four for each wheel.

Manufactured by the Bear Manufacturing Co., Rock Island, Ill. Prices for passenger cars, complete for set of eight sections, from $8 for three-inch casings to $15 for 5½-inch casings; for trucks, from $12.50 to $18.

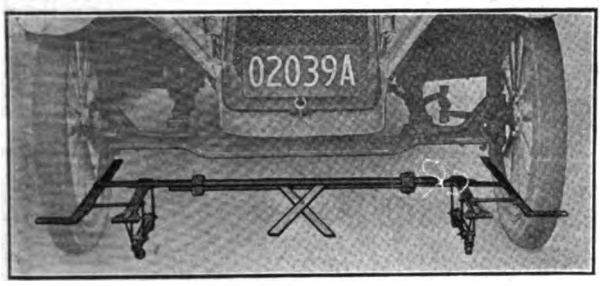
American Adjustable Valve Grinding Tools consist of two tools, one for refacing the seat of the valve and the other for trueing the valve face.

Each tool is adjustable and will fit valves from one to three inches inclusive. The valve facer is a bench tool that occupies a small space on the bench, is operated by hand and does its work with a precision of a higher priced machine, smoothing off the face, preparing the valve for grinding and insuring a perfect fitting valve, the maker states. The valve seating tool cuts off all unevenness of the valve seat, preparing it for the grinding and reception of the valve, insuring a perfect tight fit after grinding.



Manufactured by the American Valve Tool Manufacturing Co., 354 West 51st street, New York. Prices on application.

Digitized by Google



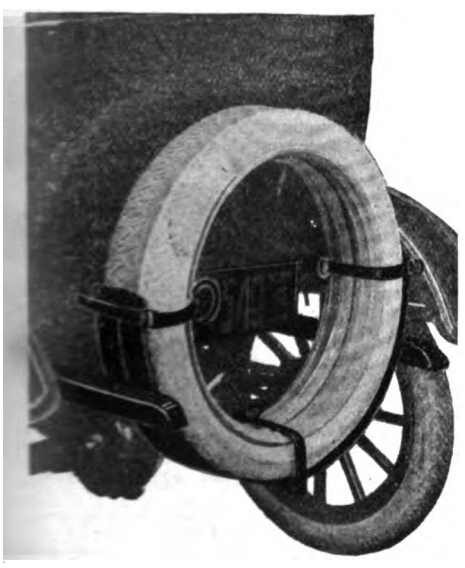
Duby's Wheel Gauge consists of a metal gauge on casters that is placed on the floor of the garage between the two front wheels of a car or truck and by means of suitable indicators shows the alignment of the front wheels either at the front or back or both. Arms at the side in the form of a tri-square fit across the front of the tire and pass back along the inside of the wheel.

The arms are manipulated by two crossed levers at the center that are positioned by hand. Two metal rods connect the arms with the center levers, being held in place by clamps, the rods are allowed to slide loosely in the clamps. It is claimed by the manufacturer that this device is a time and labor saver in the service station and that it will show the alignment of several cars during the time taken to show one by some of the old methods.

Manufactured by J. F. Duby, 1357 Blue Hill Ave., Mattapan, Mass. Price, $15.

Yankee Combination Tire Holder and Rear Guard for Ford Cars is an unusually heavy, well braced tire carrier that is fastened at the rear of either the Ford roadster or touring car and acts as a rear guard or bumper, as well as a tire carrier equipped for carrying two tires.

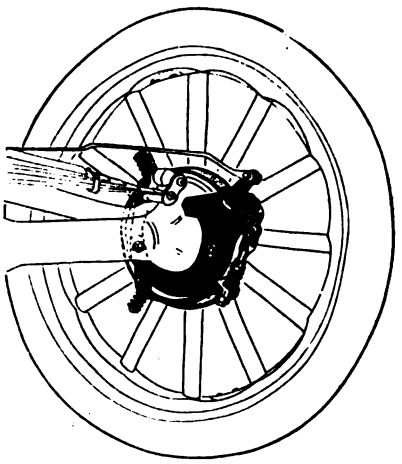
The construction of the carrier is steel throughout, providing ample strength for travel over rough roads. The cradle is rib reinforced and is further supported by a firmly riveted cross brace, which also makes a secure fastening, and a protected position for the license tag and rear lamp. The side arms are of steel, pressed into



angle shape, of unusual strength. Shoulders are provided on the arms which butt up against the cross member of the frame, allowing great strength when acting as a rear guard. Two lag screws fasten the carrier to the body, holding it in place securely by means of the screws and shoulders. Special fixtures are provided where wire wheels are to be carried.

Manufactured by the International Metal Manufacturing Co., Philadelphia. Price, $11.85.

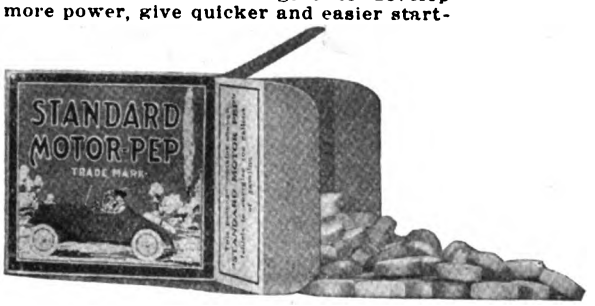
P'a-Safe Brake for Ford Cars is a brake shoe that fits over the brake drum of the Ford rear wheel and takes the place of the regular emergency brake. The band to which the lining is fastened is of steel, supported in such a manner that the shoe will not drag on the drum. The manufacturer claims that the shoe will not rattle or ride the drum. Suitable toggle joints are provided for the action and release of the shoe and also provides for fastening



the shoe to the axle flange. The usual emergency brake lever is connected to the shoes in much the same manner as when used with the regular brake. The device is made throughout of the best of material and is easily attached by anyone handy with tools. The claim is made that the brake is positive in action and will hold the car on the steepest grades.

Manufactured by the Pia-Safe Brake Co., Brookville, Pa. Price, $12.50 per set.

Standard Motor-Pep is a chemical compound in tablet form that is dissolved in the gasoline and energizes it. The manufacturer claims that its use will cut the fuel bills, enable the engine to develop more power, give quicker and easier start-



ing, snappier pick up and one-eighth more mileage on the gasoline consumed.

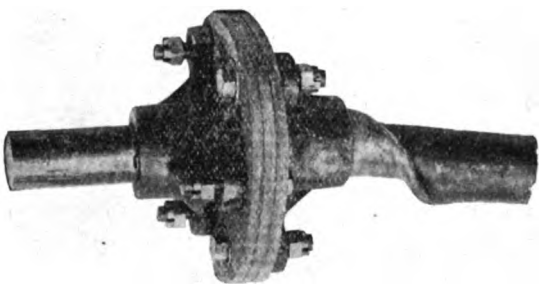
Manufactured by the Utilities Co., Cleveland, O. Price, 50 cents per box. Jobbing trade solicited.

The Hamilton Strictly High Grade Heavy Red Antimony Inner Tube is an unusually heavy red tube that the manufacturer claims is heat resisting, conforms readily to the casing, will not leak at splice or valve, is durable and economical from a service standpoint and is fully guaranteed.

This tube is particularly a jobbing house or accessory supply store proposition and the company manufacturing it

wishes to hear from this class of trade, as it has a particularly interesting offer.

Manufactured by the Hamilton Rubber Manufacturing Co., Trenton, N. J. Prices and literature on application.



Thermoid-Hardy Joints are composed of three sections, each made of several thicknesses or sheets of fabric and rubber placed fanwise to each other so that the layers of cotton fabric overlap one another, giving great strength. After the layer is completed, holes are made, spaced the proper distance apart and reinforced with fluted steel washers. The three layers are placed side by side and bolted to the joint ends by bolts and castillated nuts, the nuts being securely held in place by cotter pins.

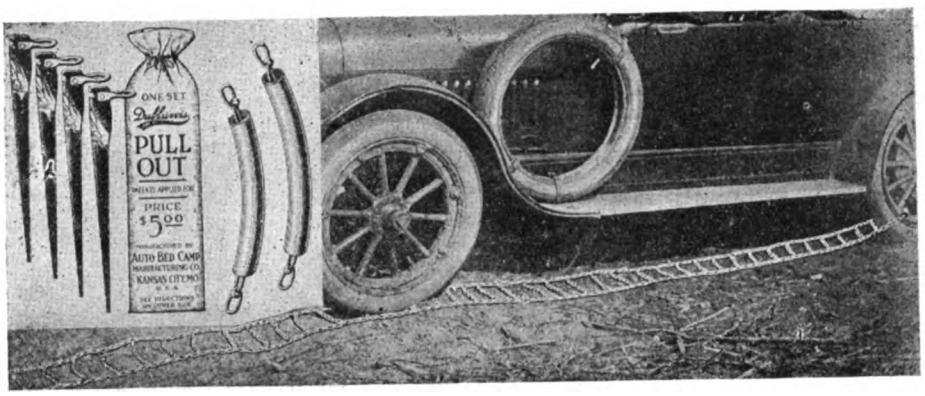
The Thermoid-Hardy Joints are used for universal connections on the drive shaft of trucks, passenger cars and tractors and during the war were used on the tanks.

The manufacturer claims that their use

causes a saving in wear and tear on the gears in the transmission case and rear system, allowing the car or truck to start with a more gradual application of power, thereby reducing the strain and shock to the car. The flexible discs are so elastic that when the clutch is thrown in and the forward end of the propeller shaft can revolve five degrees or more before the axle is forced to turn. The result, the maker states, is a smooth, gradual application of power with no shock or vibration.

Manufactured by the Thermoid Rubber Co., Trenton, N. J. Prices on application.

Digitized by Google



The A-B-C Dubliservis Pull Out is a device to be used by the motorist when the rear drive wheel of a car is in the mud, its use providing traction in such a manner that the car is able to move out of the mud under its own power. It consists of four steel stakes and two pieces of chain with rubber sleeves.

The chain is laid out on the ground either ahead of the wheel or back according to the direction in which the driver wishes to go. The ends are securely fastened around a spoke and the felloe of the wheel. The forward end of the chain is fastened by the stakes driven into the ground, with the notches of the stakes in the forward position or against the pull.

The manufacturer states that the stakes should be forced into the ground in a vertical direction and not on a slant. In very soft ground it is simply necessary to force the stake into the ground lightly, the friction of the chain upon the surface of the ground being sufficient to hold the chain tight. In very soft stretches of sand or mud two mud chains should be joined together and spread out forward under tread of the front tire.

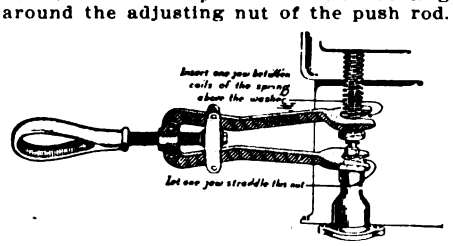
Manufactured by the Auto Bed Camp Manufacturing Co., 554 10th Avenue, New York and 1504 Grand Avenue, Kansas City, Mo. Prices on application.

The Raybestos Attaching Kit consists of a supply of the proper size rivets and the necessary tools, instructions, etc., for attaching Raybestos lining to the brake shoes of automobiles and trucks. The kit

is supplied in a neat wooden box, having each article in a separate compartment. The instructions are very explicit and besides showing each step in applying the lining, tells which tool to use and how to use it in completing the operation.

Manufactured by the Raybestos Co., Bridgeport, Conn. Price, $3.75.

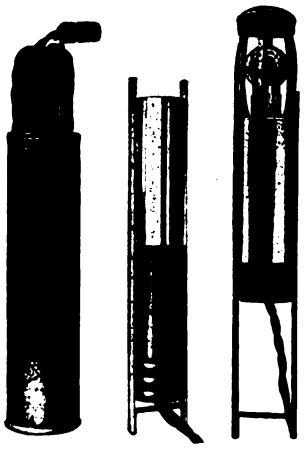
The Vichek Valve Lifter is a tool for compressing the valve springs while removing the key or pin at the bottom of the stem. It consists of two forked arms fastened at the top by means of hinged joints to a center plate. The bolt that operates the tool passes through a threaded opening in the plate to a center cross plate that is movable on the forked arms. To operate the tool the forks are placed one at the bottom of the spring and the other over the push rod and resting around the adjusting nut of the push rod.



Turning the bolt forces the center plate carrying the end of the bolt to slide toward the hinged joint of the arms, compressing the spring and allowing the pin in the end of the stem to be removed. Loosening the bolt allows the tool to be removed and placed in position for compressing the next spring. The device is a drop forging, guaranteed against breakage, is quick in action and has a very powerful lift.

Manufactured by the Vichek Tool Co., Cleveland, O. Price, per dozen, $15.

The Extension Night Lamp consists of a black enameled wood handle fitted with an Ediswan type socket, 10 foot cord and hard rubber plug connector. The bulb is protected against breakage while in use by a spring nickel guard, projecting from the socket mounting. A brass tube fitted over the handle slides over guard and bulb. By sliding the tube either a general illumination or a concentrated light may be obtained. A brass frame is attached

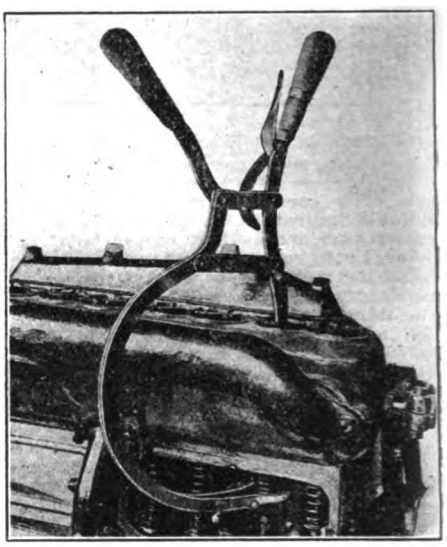


to sliding tube and serves as a reel for winding up the cord when the lamp is not in use. The sliding tube and reel frame are finished in a rubberoid black enamel, all other parts being nickel plated.

The type CB is equipped with concentrated bulls eye and is convenient for reading road signs, house numbers, etc. Dimensions of lamps are 1¼ inches diameter by eight inches long. Each lamp is packed in a substantial screw cap tube.

Manufactured by the Cuno Engineering Corporation, Meriden, Conn. Prices, type C, single and double wire, each, $2.20; type CB, bulls eye, single and double wire, $2.40.

Mapson's "Perfection" Valve Lifter is a device for compressing the valve springs on L and T-head engines and which exerts a powerful pressure with little effort on the part of the operator. The fork is adjustable for any size stem. It consists of a long arm that passes out and around the engine to the top, where it is securely held by two hinged joints, the upper end terminating in a suitable handle. The other arm has a pointed end that centers in the head of the valve, the upper end joining the first member by the hinged fastenings and terminating at the top in a handle. A ratchet and release are provided so that the operator may hold the spring in the compressed position as long as desired. Releasing the ratchet frees the arm and allows the spring to assume its natural position. The device is heavy and powerful enough to compress the



springs on heavy truck engines as well as the springs on the lighter passenger c engines. The manufacturer also makes a lighter compressor for the Ford car on the same principle.

Manufactured by the Mapson Manufacturing Co., 622 E. Eighth Street, Los Angeles, Cal. Price, $15. Ford size, $2.50.

The Se-Co Roller Bearing for Fords and Chevrolet 490 Cars is designed to replace the front bearings of the Ford and Chevrolet 490 cars with a permanent roller bearing. It consists of an outer race with a tapered bore and an inner race tapered on the outside. Between the inner and outer races are inserted rolls which are held in line by a suitable cage. The rolls are tapered to conform with the tapers of the two races and all tapers converge at one point on the axis of the journal.

The Se-Co roller bearing is constructed from chrome steel of about .60 carbon. The races are hardened all through and are machine tooled rough and finished by grinding to an accurate limit by a gauge, both for size and angularity. The roller

is made from soft steel and case hardened. The manufacturer states that the hardening process does not distort the roller even to the extent of .00025 of an inch. This roller is machined, before hardening to within .0005 of an inch, and polished after the hardening process. By this method, it is claimed, a uniform case is obtained, the soft center of the roller giving the maximum amount of resistance against breakage.

The retaining cages for these rollers are pressed out of cold rolled steel, with the depression to receive the conical end of the rollers struck at the same time, thus leaving sufficient clearance between the roller and the cage to allow for the free action of the rollers to align themselves properly with the tapered axis of the bearing.

It is claimed that this method of construction eliminates all excess friction usually found in bearings of this type. All bearings are thoroughly tested before leaving the factory by a special testing apparatus with "go" and "no go" gauges.

Manufactured by the Stacks Engineering Co., 216-218-220 West Ontario St., Chicago. Prices and literature on application.

Ammeters, Voltmeters and Volt-Ammeters. The "Handy" pocket, portable, direct current ammeters, voltmeters and volt-ammeters are a newly designed line for the use of the garage and service station repairer and the motorist. The "Handy" is small, compact and light. The line comprises milli-ammeters and ammeters up to 50 amperes; milli-voltmeters and voltmeters up to 150 volts and volt-ammeters up to 50 amperes and 150 volts, all self-contained. The ranges are increased beyond that by the use of appropriate shunts and multipliers.

Mechanism is of the permanent magnet, moving coil type, insuring uniform scale divisions and dead beat indications. Magnets are two in number, well aged and of high grade tungsten steel. The moving coil is light and very rigid. Jewels are carefully selected Ceylon sapphires. Pivots are hardened steel, accurately ground and pointed. The staff is solid, preventing friction troubles. Springs are accurately ground and well aged. The entire mechanism is mounted on one base.

The dial is pure white bristol board with easily readable figures, and is so attached to the dial pan as to prevent buckling. The pointer is light, but rigid aluminum and is of the knife edge type, enabling close readings. All instruments are individually calibrated and guaranteed accurate within one per cent. of full scale value. The scale is 2¾ inches long.

The case is drawn brass and has a black rubberoid finish. The base is of selected, close grained wood, which will not warp and being a non-conductor the instrument may be laid on top of the battery without short-circuiting it. Terminals are of the non-removable top type.

Manufactured by the Roller-Smith Co., 233 Broadway, New York. Prices on application.

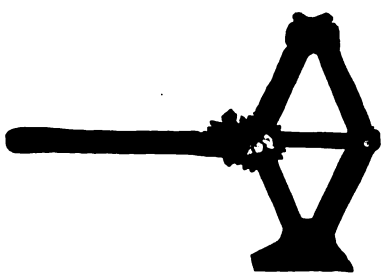
The Hi-lo Jack employs a somewhat different principle from that usually followed in jack construction. It is unique in design and has many advantages not usually found in the ordinary jack.

The construction is based on the toggle principle. As a result of tests made by the manufacturer and by users it is claimed that the jack is able to operate in places where it would be impossible to use the ordinary jack. For instance, when a truck or passenger car becomes mired in the mud the jack may be placed under the axle of the truck and the vehicle raised out of the mud.

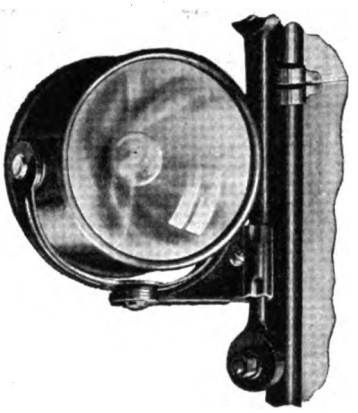
When folded the jack occupies little space in the tool box, being only five inches long when in this position. It will start to lift at six inches and has a range from six to 17 inches, and the higher it is extended the greater the lifting power.

Hi-lo jacks are made in six different sizes for passenger cars and the heaviest trucks. They are constructed from a combination of drop forgings, high grade malleable castings and cold rolled steel, so made that they have a large margin of safety over rated capacity.

Manufactured by the Rowe Calk and Chain Co., Plantsville, Conn. Prices and literature on application.



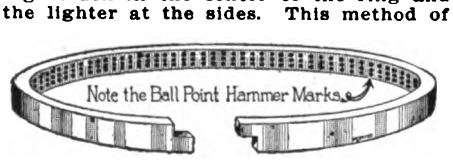
The Stewart-V-Ray Searchlight is made throughout of the best material and is nicely finished in black enamel baked on. It is suspended from the side of the windshield by suitable brackets of the clamp type and may be turned either to the side, inverted or turned to the ground. At the rear of the lamp is a mirror that enables the motorist to see traffic at the rear.



The reflector is deep and is fitted with a high power lamp that enables the driver to see the road without difficulty. The lamp is supported by trunnions at the side and a swivel joint at the top, allowing a wide range in which the light may be turned.

Manufactured by the Stewart-Warner Speedometer Corporation, Chicago, Ill. Price, $6.

American Hammered Piston Rings are made by a process different from that usually employed in the manufacture of oil proof piston rings. Each ring is cast separately so as to insure proper cooling. The rings are turned in a lathe and the interior of each is then treated to a hammering process, the heavier blows being struck in the center of the ring and the lighter at the sides. This method of



enlargement makes it possible for the ring to fit the wall of the cylinder perfectly and as the ring is the same thickness all around it fits the grooves of the piston evenly.

The maker states that carbon formations in the piston grooves are prevented and that oil from the base will not work up by the rings and cannot form on the head of the piston and in the combustion chamber. The rings have a tendency to increase the compression of the engine cylinders and increase the power of the engine. They are especially adapted to Ford engines.

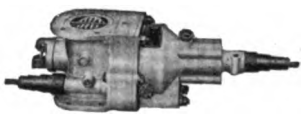
Manufactured by the American Hammered Piston Ring Co., Newark, N. J. Prices and literature on application.

The Cone-Denser is fastened to the radiator cap of the automobile and serves the double purpose of giving an alarm when overheating of the engine occurs, either through lack of lubrication or water, by giving a whistling sound, caused by the steam pressure in the radiator, that is easily heard by the driver. It also condenses the cooling medium when alcohol is used with the water during the winter months, returning it to the radiator to be used over again. By this method, the manufacturer claims, the waste of alcohol is eliminated and the cooling medium is kept at its proper strength at all times.

The device consists of a series of baffle plates having a large amount of cooling surface. As the steam or vapor rises it collects in the cone-denser, is cooled and the liquid returned to the radiator in a liquid state. It also prevents evaporation of the non-freeze alcohol solution.

Manufactured by the Cone-Denser Manufacturing Co. 116 Plymouth Bldg., Minneapolis, Minn. Price, $6.

The Duplex Universal Governor for Ford Cars is simple in construction and is easily attached to any Ford engine. The governor proper is attached to the engine manifold between the carburetor and the engine. The power to operate the governor is obtained from the timing gear case in the Ford, and in other types of cars, such as use a sliding gear transmission, a double drive system is used.



Power for this system is obtained from the transmission and the end of the camshaft at the rear of the engine, each drive using a separate cable, with both cables centering at the governor. The shutter of the governor differs from the shutter ordinarily used in that a grid construction is employed.

The manufacturer claims that this construction allows the gas to enter slowly and has a tendency to break up the gas before entering the combustion chamber,

TRADE MARK
NONE OTHER

allowing the engine to operate to better advantage. The action of the shutter is positive and easy, and racing of the engine is prevented by taking the drive from the engine timing gears, it is also claimed.

Manufactured by the Duplex Engine Governor Co., Inc., 36 Flatbush Ave. Extension, Brooklyn, N. Y. Price and literature on application.

Digitized by Google

The Stewart Hub Odometer for Ford Trucks is easily attached to the front hub by removing three bolts and fitting the odometer in place. The driving mechanism receives its power from a suitable connection on the axle. The odometer is guaranteed by the manufacturer, who claims that by its use one can check the number of miles traveled and get an ac-

curate account of the gasoline and oil consumed. From these figures it is possible to tell what it costs per mile to operate the truck. It is also possible to keep track of the mileage made by the tires.

The odometer is fitted with an oil plug and the spindle and bearings may be lubricated without removing the hub cap. A cap screws into the end of the hub cap, covering the face of the odometer, keeping it clean and readable. It is easily attached in a few moments without extra tools.

Manufactured by the Stewart-Warner Speedometer Corporation, Chicago, Ill. Price for Fords, $12.

Rayfinish for Passenger Cars is a chemical product for brightening the painted surface. It consists of a liquid that is applied to the surface to be cleaned with a piece of cheese cloth and after drying slightly is removed with a clean piece of cheese cloth or other soft cloth material, leaving the painted surface in a polished state.

The manufacturer claims that by its use cars that have first been washed and thoroughly dried may be gone over with

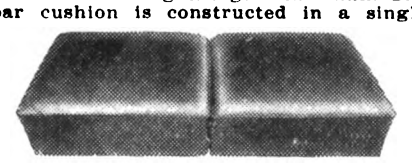
RAYFINISH
AUTO PASTE POLISH

Rayfinish, removing all stains, dullness, tarnish, oil and grease spots. Polishing with the dry cloth will restore the luster to the finish that will save the expense of repainting. Rayfinish is easy to apply and requires very little rubbing.

Manufactured by the Ray Chemical Co., New York, N. Y., and Newark, N. J. Prices on application.

The All-Wanta Ford Seat Cushions for the Ford car are different from the cushions ordinarily used in the Ford. They are constructed of better material, have longer and better springs and are covered with a better grade of leatherette.

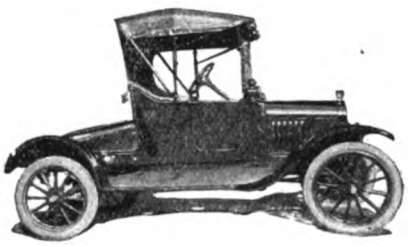
The cushion for the front seat is divided, allowing one-half the cushion to be lifted when filling the gasoline tank. The rear cushion is constructed in a single



section. The All-Wanta seat cushion is made with a steel frame construction, electrically welded, and has 32 high tempered coil springs securely fastened to the steel frame.

Manufactured by the Fort Pitt Bedding Co., Liverpool and Preble Avenue, N. S., Pittsburgh, Pa. Price, $10.

The Utility Disappearing Truck for Fords consists of a box made of heavy gauge steel and finished in black baked enamel to match the finish of the Ford. No rivets or bolts are used in its construction, as all joints and seams are ace-



tylene welded. It is placed at the rear of the Ford roadster and when not in use slides in and is covered by the turtle deck of the Ford. It is easily installed by anyone with a hammer and wrench in one hour the manufacturer claims.

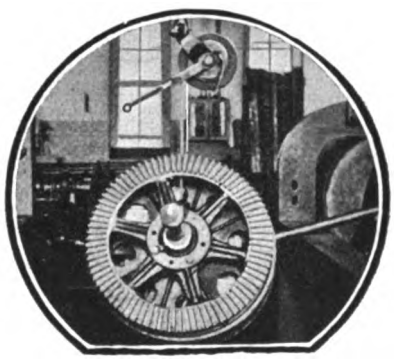
By its use the Ford may be used for a passenger car with no suggestion of the

truck showing. When called upon for truck work the deck is lifted, the box slides out, forming a body that is capable of carrying 1000 pounds.

Manufactured by the Hill Pump Valve Co., Archer Avenue, Canal and 23rd Streets, Chicago. Price, $38.50.

The Bickley Power Puller consists of a a pulling device operated by hand by which the power of the pull is multiplied many times. The manufacturer claims that the ratio of pulling is adjustable from 90.1 to 150.1, which makes it possible for one man to exert a draw bar pull up to a ton easily.

The pulley is enclosed in an oil tight case operating on roller bearings and lubricated with graphite, as are also the

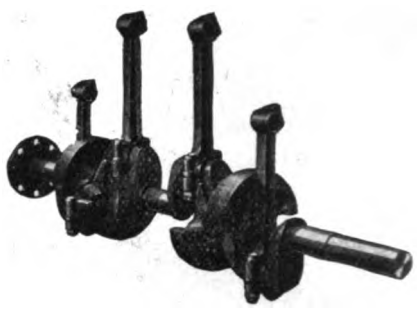


gears by which the reduction is gained. The pulley is operated by a short lever. When in use a wire rope is fastened to the eye of the pulley and passed around some stationary object, like a post, beam or tree. The tow line is then fastened to the object to be towed and by working the lever forward and back the towed article is easily moved.

The maker recommends this device to automobilists, as it may be easily carried in the tool box for emergency use as when stuck in the mud or fording streams. The device weighs 12 pounds and packs into a box 8¼ by 7¼ by 3½ inches. The cable supplied is one-quarter inch steel and enough lengths are furnished to make up 23 feet total.

Manufactured by Bickley Manufacturing Co., Philadelphia, Pa. Price, $19 complete. Guaranteed.

Dunn's Counterbalances for All Ford Cars consists of four weights that are attached to the crankshaft of the Ford engine at the oblique arms between the connecting rod bearings. Each is composed of two weights fastened together by means of two bolts passing through their centers. The object of their use is to steady the motion of the crankshaft



and in a measure eliminate vibration, allowing engine to operate smoothly. The weights are easily installed by a mechanic, an hour usually being sufficient, and once in place they become a permanent part of the car.

Manufactured by the Dunn Counterbalance Co., 115 North 15th Street, Clarinda, Ia. Price, per set, $12.

The McCaskey Safe Register System is a system of account keeping that is suitable for the service station and garage owner who wishes to have his accounts in such shape that he may refer to any account at a moment's notice.

The outfit consists of a cabinet, suitably indexed and equipped with clips for each account, and trays for holding the accounts. The outfit is only limited to

the number of accounts so kept and occupies but little space in the garage or service station office.

By its use the manufacturer claims it is possible for the customer to see at the time the transaction takes place, and while the details are fresh in his mind, whether or not his account is correct after the charge has been added or a credit deducted. It enables the customer to know at all times what he owes, so that he can provide to meet it.

The McCaskey system enables the garage or service station owner to realize fully on his credit, and, in addition, to handle all charge transactions; make the original entry, post and balance the account with a statement to date for the customer, with but one writing, the original entry. In doing this every safeguard is thrown around the account both with regard to errors and possible loss by fire.

Manufactured by the McCaskey Register Co., Commercial Department, Alliance, O. Prices and literature on application.

Digitized by Google

The Rhodes Shaper and Slotters comprise a complete line for the service station machine shop and the garage repair shop, with several sizes in both power and electric motor driven machines.

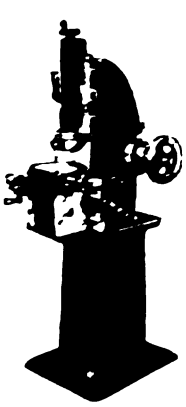
In the Rhodes shapers the column is of unusual length, giving a longer and wider bearing to the ram. The main gear is attached close to the side of the column so that in making heavy cuts there can be no springing of the walls of the column. The cone pulley is mounted on a bearing fastened rigidly to the column, which receives all strain from the tension of the

belt. The base is designed to afford a rigid foundation.

The ram is heavy and has a long, wide bearing in the column, obtaining the maximum wearing surface. The ram has a quick return and is provided with felt oilers, which keep the bearings lubricated. The position of the ram in relation to the work and the length of the stroke can be changed instantly. The ram is equipped with a gib extending the whole length of the column and has an adjustment for taking up wear.

The driving cone has three large diameter steps, arranged in regular progression, by which it is possible to obtain the necessary cutting speeds on all metal from soft brass to hard steel. The cone is mounted on a sleeve bearing, which insures proper meshing of the driving pinion and adds life to the running parts. The driving pinion and driving shaft are made of one piece steel, making a rigid construction. The cross rail is strongly gibbed to the column by a square gib on one side and an angular gib on the opposite side, which assures perfect alignment, and the gibs are adjustable to allow for taking up wear. The tool head is graduated and swivels to any angle through an arc of 90 degrees. The down feed screw has a graduated collar, reading to .001. The tool post screw is made of special steel and hardened, as is also the tool rest.

The table is of standard box form with T slot on top and V slot on the side, and the side of the table is drilled to allow the clamping of work in any desired position. The table is of ample size for supporting and strapping down a large variety of work when the vise is removed, and is equipped with a taper gib for taking up wear. The vise is of strong construction and is graduated to 90 degrees either side of 0. The jaws are made of tool steel, hardened and ground. The vise is equipped with swivel jaw.



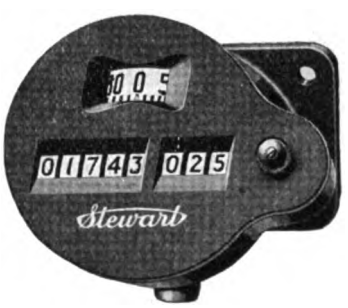
The cross feed is equipped with a lifting and turning pawl, which is used for engaging or disengaging feed. It adjusts itself automatically for any position of the cross rail and does not require loosening or tightening of set screws to adjust. The cross feed screw is equipped with a graduated collar reading to .001.

The regular equipment of the seven-inch horizontal shaper includes swivel vise, wrenches and counter shaft. This size is the one usually recommended for the service station machine shop and answers practically all purposes where a shaper is required. However, for those who wish to combine the horizontal and vertical shaper in one machine, the company manufactures a second machine for this type of work, having a vertical head. The specifications for this latter machine are similar to those of the horizontal type and the heads are interchangeable. One may purchase the two heads for the one machine, making use of the single base. Where it is required to drive such a machine with an independent motor, the Rhodes company is prepared to furnish either style with the motor drive.

Manufactured by the Rhodes Manufacturing Co., Hartford, Conn. Prices and literature on application.

The Stewart Truck Speedometer differs from the passenger car speedometer and is of heavier construction to stand the strain and vibration of truck service. It is built as carefully as the passenger car type and of the same materials.

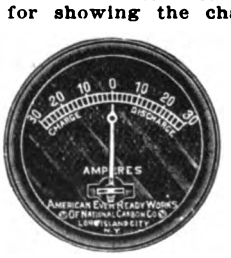
Instead of setting flush with the dash the truck speedometer is held away from the dash by a suitable mounting. The unit is bolted to the dash by four bolts.



The speed registers from 0 to 50 miles, the trip to 100 and the total to 100,000 miles. The trip may be set back to zero from any point up to 100 miles by a knurled nut at the side.

Manufactured by the Stewart-Warner Speedometer Corporation, Chicago, Ill. Price, $35.

Eveready Pocket Meters and Dash Board Instruments. Eveready Pocket Meters for testing dry cells and dash board instruments are for showing the charge and



discharge of a generator and storage battery outfit in a car. The pocket meters are of a handy size and the cases are built of brass, heavily nickel plated and polished. The dials are of metal, etched in black with raised figures on dull silver background and are accurately scaled. Each meter is supplied with a 10-inch lead fitted with proper terminals. The instruments are "dead beat," giving a correct reading instantly and regardless of whether the meter-terminal is placed on the positive or negative pole of the battery. No permanent magnet is employed.

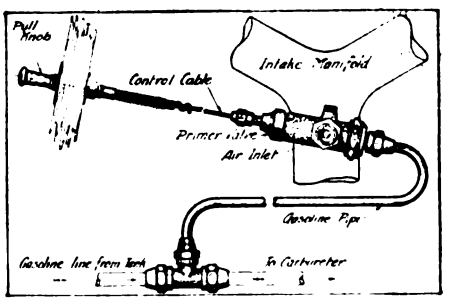
The dash instrument is simple and rugged in construction, dust and water proof. Movement of the pointer is "dead beat" through the use of an aluminum vane moving in a partially closed air chamber. The moving element is light and is supported on hardened steel pivots. The pointer will instantly follow the smallest change of current flow, and, as the torque produced by the magnetic field is very high, the vibration of the car will

not affect the reading. Regularly finished in dull black enamel with black dial, but may be furnished in polished nickel with silver finish dial if desired.

Manufactured by the American Ever Ready Works, Atlanta, San Francisco, Long Island City, N. Y., and Chicago. Price, pocket meters, No. 1002, 0-35-amps., $1; No. 1003, 0-35-amps., $1.30; No. 1005, 0-10-volts, $1.10. Dashboard instruments, $3.50 each.

The Copley Primer may be attached to practically any car or truck and greatly facilitates the starting of the engine, especially during cold weather. It consists of a priming wire located on the dash, a pump fastened to the inlet manifold by a threaded connection and a short length of copper tubing connecting the pump with the gasoline line.

Gas is drawn from the gasoline feed line into the pump by the suction of the pistons in the cylinders. By pulling out the rod in the dash and allowing it to spring back, raw gasoline is injected into the intake manifold of the engine for starting. The manufacturer claims that the primer

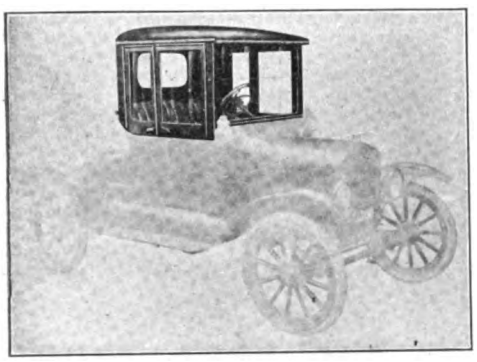


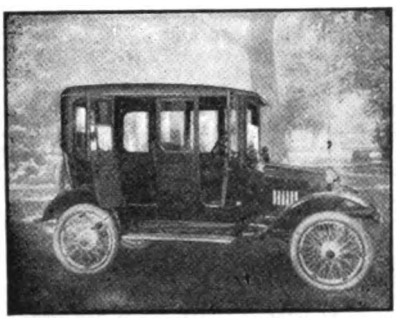
is so made that it is possible to operate the engine after the initial start for several minutes by means of the primer without depending upon the carburetor. At the side of the pump chamber a small air inlet is located and this opening, which is governed by a check valve, allows a predetermined amount of air to enter with the gas, giving the engine the proper mixture for operating a short time.

The gasoline, in passing from the pump chamber, passes through a choke chamber, entering the manifold at a high velocity. The gasoline is thoroughly atomized and broken into a mist before reaching the combustion chamber.

Manufactured by the Bay State Pump Co., 100 Purchase St., Boston, Mass. Price, $5.

Digitized by Google

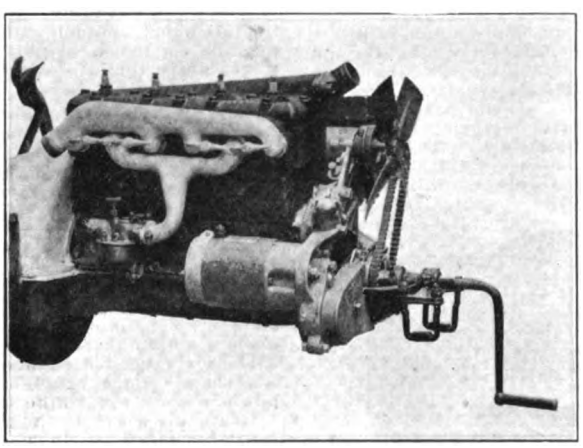




Miller All-Season Top for Ford Cars. The maker states that this is an unusually well made convertible top for the Ford owner, the top being made from the best of material throughout, and having heavy glass panels at the side and rear. The covering is of "Neverleak" material, with metal troughs along the sides to allow the water to be carried away. The inside is lined with a mohair material having a spotted effect. The sides are removable, allowing the car to be used during the warm months with comfort.

The glass in the rear doors is in two sections so that the upper section may be lowered for ventilation. Curtains may be purchased for summer driving if desired, as they are not included with the top, many owners preferring to refit their old curtains. A patented device facilitates the opening of the doors and the glass above from either the inside or outside. The top is made for either the roadster or touring car.

Manufactured by the Miller Auto and Body Manufacturing Co., Caro, Mich. Prices, Ford roadster, $80; touring car, $107.50 f. o. b. Caro.



A. B. C. Starter for Ford Cars. The A. B. C. system of starting and lighting for Ford cars consists of a motor mounted on the upper section of the Ford engine base and connected to the crankshaft by reduction gears, a silent drive chain and sprockets. The sprocket on the crankshaft has an automatic release, allowing the motor to stop after the engine has been started. The generator is securely fastened to the opposite side of the engine cylinder block and connected to the crankshaft by a silent chain. The sprocket on the crankshaft that drives the generator is keyed to the shaft. The hand starting crank is left in its usual position and is ready for instant use.

The chain from the motor to the crankshaft is enclosed partially by a housing to keep the dust from entering the gear case of the motor. A dash set is included with the unit, having an ammeter, dash light and switch for the control of the lights. The ignition is obtained from the magneto of the Ford in the usual manner. A storage battery is included and may be placed in a box on the running board. The fan is driven by a grooved pulley on the generator shaft and is adjusted in the usual manner.

The clutch of the motor has been redesigned. The manufacturer claims that it is quiet and smooth in operation, requires no attention and is entirely free from the engine after engine starts. The starter turns the engine rapidly, insuring starting in cold weather.

Manufactured by the A. B. C. Starter Co., Detroit, Mich. Price $115 f. o. b. Detroit.

The Kramer Valve Spring Releaser and Retainer not only releases the spring but also retains the valve spring, leaving both hands free. It holds the spring until ready to replace, or the spring may be removed and afterwards replaced in the tool and compressed ready for inserting. The releaser and retainer consists of two jaws hinged at the upper end and joined by a hinged bar in the rear of the jaws, the upper end of this hinge being fastened to a center rod forming a bolt at the top. The jaws are operated by a winged nut fitting the threaded bolt. Turning the nut to the right forces the jaws together, compressing the valve spring, while turning the nut to the left releases the spring. The jaws are adjustable sideways to fit around the different sizes of valve stems from 9/16 to 1¼ inches. With each tool is included a complete set of instructions for the grinding of valves.

THE KRAEMER RELEASER & RETAINER
WITH ADJUSTABLE JAW

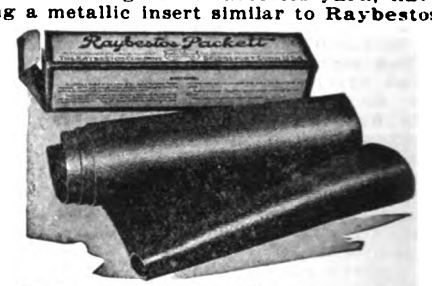
Manufactured by the U. S. Compass Co., Cedarburg, Wis. Prices on application.

The Gardner Thermostat Carburetor is of the puddle type for the Ford car. It is made to handle the later heavier fuel and makes use of a thermostat control that allows a heavy flow of fuel at the start, and when the engine warms the fuel is automatically cut down. One setting of the needle valve is all that is necessary, and the manufacturer claims that this adjustment will not change or need changing, as the carburetor is entirely automatic and will adjust itself to climatic changes due to the thermostatic control.

A point that the manufacturer emphasizes is that the carburetor is so constructed that the gasoline before entering the combustion chamber is thoroughly vaporized and enters as a fine mist, causing complete combustion.

Manufactured by the Gardner Carburetor and Brass Works, Detroit. Prices on application.

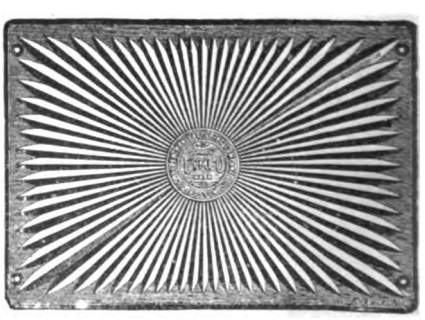
Raybestos Packett consists of a roll of asbestos packing, weighing 1½ pounds, 40 inches long and 10 inches wide. It is a woven sheet of very close weave to insure strength and the material is made of the finest grade of asbestos yarn, having a metallic insert similar to Raybestos brake lining. The packing is graphited on one side so that it may be easily removed and many times used again.



Raybestos Packett is intended for use on gasoline or steam engines where packing is subject to great heat and high pressure, and is especially adapted for use on cylinder and manifold gaskets on gasoline engines, the manufacturer claims.

Manufactured by the Raybestos Co., Bridgeport, Conn. Price, $2.50.

The Tyler Safety Step Plate for the running board of the passenger car is made of heavy canvas backing faced with rubber on each side, the top or wearing surface ribbed to take the wear. Type C is in one color, while type D is manufactured with a colored center or medallion having the manufacturer's name and trade mark plainly stamped upon it.



Manufactured by the Tyler Manufacturing Co., 64 Pearl Street, Boston, Mass. Price, type C, $1.50; type D, $1.75.

The Hamilton Multometer is a new recording device for passenger cars and enables the motorist to know the mileage of each tire. It records gasoline mileage for the season or trip and tells if the engine is running at full efficiency. It gives warning for carburetor adjustments or for cleaning the engine by checking on the fuel used, registers the amount of oil consumed on each trip or for the season and also shows whether the engine is using too much oil.

The manufacturer for years has been manufacturing watches and other instruments requiring accuracy, and this instrument is in the same class as the firm's other products.

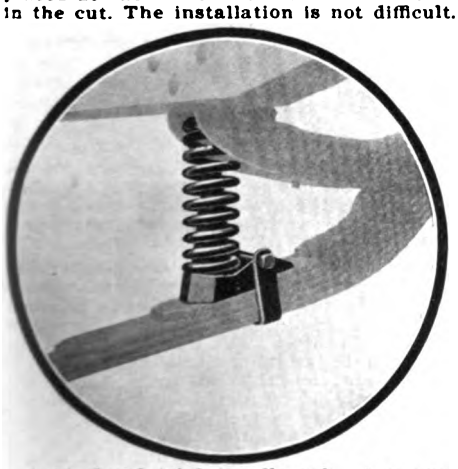
The instrument is placed in the dash of the car and operates similar to a

speedometer by a flexible shaft to gearing on the front wheel hub. The dial, besides showing the speed of the car on a rolling dial, also shows across the center of the main dial the mileage of any tire from one to six. To get the reading of any tire, turn the knurled nut at the right of the dial which operates the large ring surrounding the dial until the record of the tire desired comes opposite the knurled nut and the reading of that tire mileage will be shown.

The device covers the four tires used on the car and also two extras carried at the rear of the car on the tire carrier. Gasoline and oil mileage is obtained in the same manner. Adjustment instruction is given for the carburetor when the car has been driven 500 and 1000 miles, speed is shown from one to 75 miles an hour, with trip mileage to 1000 miles and season mileage to 100,000 miles.

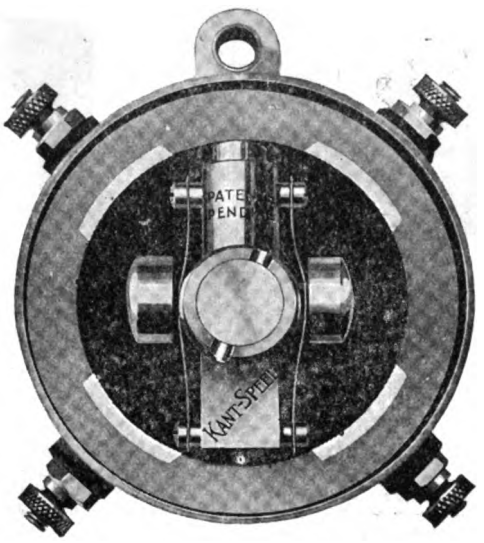
Manufactured by the Hamilton Corporation, Lancaster, Pa. Price f. o. b. Lancaster, $60.

The Double Duty Spring Support for the Ford Truck or Sedan gives to the light Ford truck double carrying capacity, the manufacturer claims. It is attached to the rear spring of the Ford light truck or sedan (not the ton truck) midway of the spring, between the end and center, with the top of the coil bearing against the cross member of the frame. The support consists of two heavy coil springs, one placed at each side of the center as shown in the cut. The installation is not difficult.



A 10 days' trial is allowed. Any part that is found defective within one year from date of purchase will be replaced by the factory free of charge when transportation has been prepaid both ways.

Manufactured by the Dotti Manufacturing Co., Madison, Wis. Price, $8 per set.

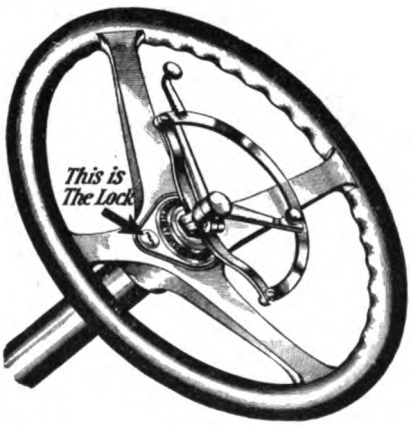


The Kant-Speed Governor for Ford Trucks, Passenger Cars and Taxicabs, consists of a timer cam that replaces the regular Ford cam in the timer case. When the speed of the Ford engine reaches 1400 to 1600 revolutions per minute, at which speed the engine reaches its rated horsepower (20 to 22½), the weights attached to the cam swing out as in a ball governor and cut out the ignition. Below that number of revolutions the balls swing in, the timer brush makes contact and the firing in the cylinders is resumed. It is easily attached.

The manufacturer claims that it cannot be tampered with, that it will prevent racing of the engine and will not impair the running qualities of the car. It is not connected with the flow of gas in any way and operates on the ignition alone.

Manufactured by the Autowar Corporation, Detroit, Mich. Price, $10.

Perry Locks for Fords are attached below the steering wheel and when locked with the Yale key and lock the wheel turns freely and it is impossible to steer the car. It consists of a hub having the top shaped similar to a hexagon nut. A second section fits over the hub and in use acts similar to a socket wrench fitting

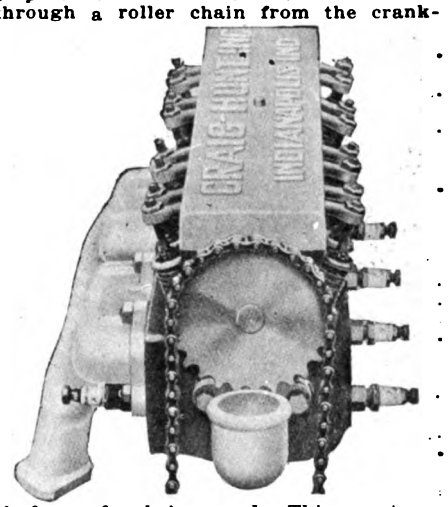


the hexagon nut. A nut having a perfectly smooth edge fits over the end of the steering rod and is covered with a lock washer which protects the nut and prevents it from being removed by a pipe wrench. The unit is fitted on top of the top of the steering housing in which are the planetary gears used in steering, and forms a suitable cover for the gears. Other sizes are manufactured for any car and include, beside the lock, the steering wheel and arms.

Manufactured by the Perry Auto-Lock Co., 2635 S. Michigan Ave., Chicago. Price for the Ford, $6 complete; claw type, No. 4, complete, $15; De Luxe type, No. 5, $20.

The Craig-Hunt 16-Valve Peugeot Type Racing Head for Fords was designed for use on racing speedsters and sport cars where speed and power is the chief requirement. It embodies all the well known features of the Peugeot and the 16-valve Stutz-Wisconsin racing engines, and is applicable to the Ford.

It consists of a detachable head to take the place of the regular Ford head, having 16 valves operated by a camshaft running the length of the head and driven by a sprocket at the front end. The drive is through a roller chain from the crank-

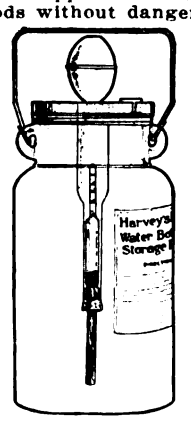


shaft, no fan being used. This construction allows four valves to each cylinder, two inlets and two exhausts. The valves are 1½ inches in diameter and are operated by rocker arms of the forked type. Each rocker arm is operated by the overhead camshaft, which runs on three ball bearings, all of which are enclosed in an oil contained aluminum housing. The cams are of the roller follower type, each of which dips in oil and lubricates the roller end of the rocker arm.

The special intake manifold furnished with the head is flanged for either 1½ inch or 1¼ inch carburetor. The head is amply water jacketed, each valve seat being entirely surrounded by water to prevent warping.

Manufactured by Craig-Hunt, Inc., Indianapolis, Ind. Price $150 f. o. b. Indianapolis.

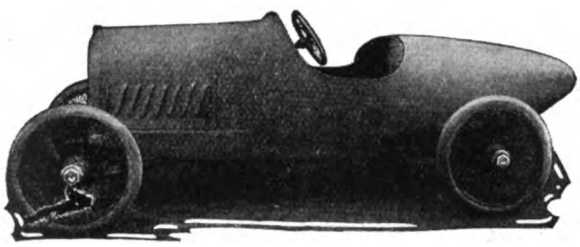
The Geneco Distilled Water Bottle and Storage Battery Filler consists of a two-quart water bottle containing distilled water, a hydrometer syringe for supplying the water to the cells of the battery and testing the electrolyte, and an indicator on the cover conveniently marked with the days of the month. There is an indicator at the side of the cover so that the operator may know when the battery was attended to last. By this method distilled water is supplied to the battery at regular periods without danger of outside



contamination. The outfit is patented under the Harvey patent.

Manufactured by the General Scientific Equipment Co., Inc., North Philadelphia, Pa. Price, $1.75; west of the Mississippi, $2.

Digitized by Google



The Craig-Hunt Speedway Bodies for Ford Cars are copied from the fastest foreign and American speed styles. The metal work is of 21 gauge auto steel and all important seams are welded and finished. The flared cowl has a tendency to direct air currents over the driver's head.

The body is heavily bound with round metal, which makes it rigid and free from vibration. All wood work is of oak, fastened together with glue and screws. The seating capacity is exceptionally comfortable for two persons, having ample leg room, and the cushions, which are 32 inches wide, are upholstered with a good grade of manufactured leather over curled hair and long coiled springs.

The hood is hinged top and sides with suitable catches. The tail is of the famous French Peugeot torpedo design. It is formed over a canoe type light wood frame and is exceptionally rigid, all seams being welded.

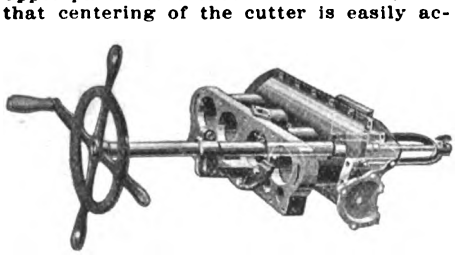
The radiator shell furnished with the body has a filler cap which screws into place in the regular Ford radiator, making it unnecessary to use another radiator, and entirely does away with the Ford appearance, the manufacturer claims.

The apron or drop is a permanent part of the body and is designed to give the car a lower appearance, covers the frame and assists in forming a streamline effect. Ample room is provided at the rear of the seat for carrying pump, jack and tools. The tool box is reached by unsnapping and removing the seat cushion. The Ford gasoline tank may be used in the tail by shortening the tank. Opening for filling the tank is on the right side in the rear of the mechanic's seat. The manufacturer states that the body is easily installed.

Manufactured by Craig-Hunt, Inc., Indianapolis, Ind. Price $150 f. o. b. Indianapolis. Bodies shipped with priming coat unless otherwise ordered. Price for color painting, $25 extra. Shipping weight, 250 pounds.

Heiser's Improved Cylinder Reboring Machine for the Ford Engine embodies new features for this class of work. The manufacturer claims that with the tool it is possible for a mechanic to turn out satisfactory reboring.

The tool is placed in the cylinder and fastened at each end by bolts passing through the top of the cylinder and the upper part of the base. The maker states that centering of the cutter is easily ac-



complished after a trial and once properly set does not have to be changed to rebore the others. Hand power is applied by a handle on the wheel for reboring and reversing the cutter. It is claimed that the cutter is self-sharpening. The tool weighs 45 pounds.

Manufactured by the Heiser Special Tool Co., Kingston, Mo. Price $42, cash with order. Over-size pistons, complete with rings, pins and bushings, .015, .031, $1.60; .045, $1.90.

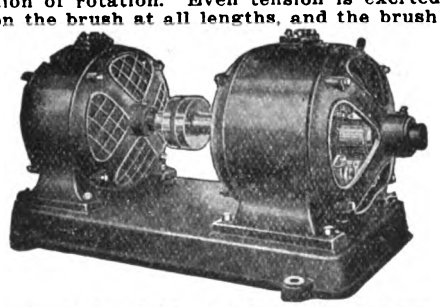
The Kantmar Autowash consists of a new substance for which the manufacturer makes many claims. In using, place a wine glassful in a pail of water and this amount, the maker claims, will be sufficient to cleanse thoroughly the dirtiest car. By its use the highly polished finish of the car is not damaged, the manufacturer states. Kantmar attacks both mud and grease with equal effectiveness, and is as cheap in price as the ordinary soaps sold for this purpose, according to the maker.

Manufactured and sold by the Woodtite Laboratories, Modesto, Cal. Prices on application. Sold to the trade in eight-ounce bottles and one-gallon cans.

The Eck Motor Generator Sets for Charging Storage Batteries, while not new to the trade, having been manufactured for the past 12 years, incorporate many novel features not generally known. They are usually wound for direct current where it is necessary to reduce the voltage from a higher to a lower voltage suitable for charging purposes. They may also be purchased for duty on alternating current such as is usually supplied in cities, transforming this current by means of the motor and generator to a direct current of suitable voltage for charging purposes.

The armature core is of thin sheet steel with slots accurately aligned, keyed to the shaft by projections in the punchings, and the windings are well insulated. The armature is baked, then dipped in armature varnish and again baked.

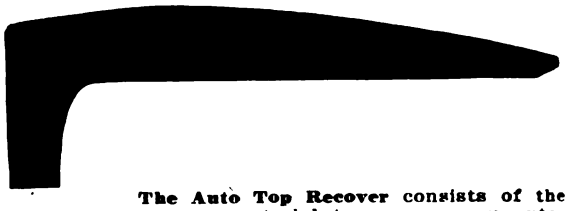
Brush holders are of an improved box type and are suitable for either direction of rotation. Even tension is exerted on the brush at all lengths, and the brush



is in plain sight and is easily removed when replacing new brush. Oiling is by means of a well located below the bearing and a ring over the shaft that brings the oil from the well, distributing it evenly over the bearing while the set is in operation.

A fan attached to the armature shaft supplies a current of air over the armature, keeping the interior of the motor cool. The temperature rise will not exceed 45 degrees C. All parts are standardized and are interchangeable. The usual guarantee is given by the manufacturer as to workmanship and material. Instruction books fully describe the operation of these sets.

Manufactured by the Eck Dynamo and Motor Co., Belleville, N. J. Prices and literature on application.



The Auto Top Recover consists of the necessary material to recover any automobile top, including the rear curtain, and a selection of the light to be used, either glass or celluloid.

In ordering, one should specify the name of the car, year, model and the type of light desired in the rear curtain. The recover is made at the factory with the roof and quarters sewed together and the rear curtain ready to apply to the car by the owner. Printed instructions accompany the recover, and the manufacturer claims that the recover and curtain are easily applied by anyone who can drive a car. The recover is furnished complete with all necessary fasteners, tacks and binding. A perfect fit is guaranteed when the correct name, year and model of the car are given.

Manufactured by the Liberty Top and Tire Co., Cincinnati, O. Prices and literature on application.

The Kobzy Signal for Passenger Cars has three swinging arms enclosed in a dust and dirt proof case extending from the rear number hanger and above the rear light. It is operated by a small lever located within easy reach of the driver. To operate it is not necessary to remove the hand from the wheel, as the signal is easily reached by the fingers. During the day the signal is plainly seen from the rear and at night it is illuminated by means of a special light enclosed in the top of the arm case. Current for this light is obtained from the storage battery of the car and, as the light required is small,

only a small amount of current is required. This device is especially desirable when operating a closed car. Three positions of the arms are shown, stop, left and right.

Installation is quickly and easily accomplished on any car without special tools. The signal arms are made of sheet aluminum, triple painted and varnished and self-cleaning. The lever box with the handy light attachment is adjustable to any height, length and angle to fit the convenience of the driver and is fastened solidly to the wheel post. The Kobzy Signal is guaranteed for one year and will be replaced or repaired during that length of time if it does not give satisfaction.

Manufactured by the Chicago Die and Specialty Co., 327 So. La Salle St., Chicago, Ill. Prices, East of Rocky Mountains, $17; West of the Rocky Mountains, $18.

Digitized by Google

Whittmann Storage Batteries are manufactured for replacement purposes and may be fitted to practically all cars by simply changing the battery terminals. They are made in five shapes and will easily fit the battery boxes of the cars for which they are intended. These batteries are standard size and in all cases they comply with the recommendations of the Society of Automotive Engineers, states the manufacturer.

Taper terminals are made to be used either as right or left outlet, as can also the lead end wire terminals. This policy of standardization greatly reduces the problems of the service station and the battery repairer and reduces the cost to the motorist.

Batteries are shipped with terminals detached so that the service station man may put on any style of terminal that his customer may wish, and in this manner any size of stock battery may be used for many different types of cars.

Taper terminals are made in five sizes, to fit all the different taper plugs in use. A, B and C terminals are tapered 3/16 inch to the inch, but the holes vary in size. D and E terminals are tapered ⅜ inch to the inch. The maker issues to the trade a neat booklet covering the line of batteries and the parts for them.

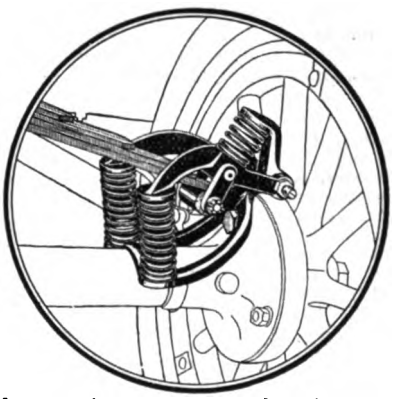
Manufactured by the Whittmann Batteries, 207-9 South 11th St., Lincoln, Neb. Prices and literature on application.

The New Hydrate Cell Tester, a device for testing storage battery cells, consists of two hex special steel prods three inches apart at the points with the upper ends assembled in a handle. A special patented nickel-chromium resistance of .01 ohm connects the prods. Suspended on props between the prods is located a voltmeter

with 2-0-2 volt scale. The patented resistance varies but imperceptibly with change in temperature and will not oxidize or rust, the manufacturer claims. The voltmeter is of the moving coil type of rugged construction.

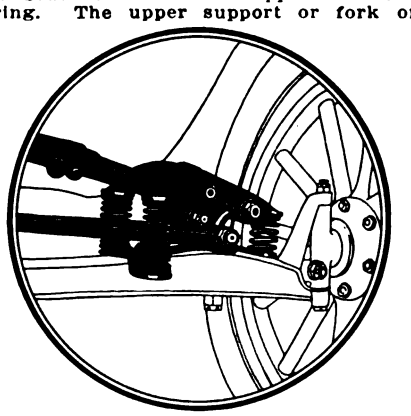
Manufactured by the Service Station Supply Co., Detroit, Mich. Price, $15.

The Float-A-Ford Absorber for Ford Cars, the maker announces, embodies a new principle in absorber construction. For installing on the front axle a special perch is supplied, accommodating the radius rods and supporting the absorber. The absorber consists of three springs, supported by suitable brackets, the lower bracket lying parallel with the axle and supporting the springs in cup-shaped holders at each side of the axle and the holders joining one another by a



bridge passing over the axle. An extension of the lower bracket passes back of the perch and supports the spring in a cup shaped base. From the top of the perch another bracket fastened to the perch passes forward, dividing into two arms, each arm forming the top support for the springs by means of suitable cup-shaped holders. This bracket also passes to the rear, forming a cup-shaped top support for the spring. A suitable shackle connects the end of the spring with the bearing point of the absorber.

The rear spring absorbers are attached in a different manner. The supporting bracket for the bottom of the springs fastens rigid to the flange of the axle housing, divides into two forks extending parallel with the axle housing and is supported on the housing by a cross band joining the two forks. The upper part of this bracket forms the support for the spring. The upper support or fork of

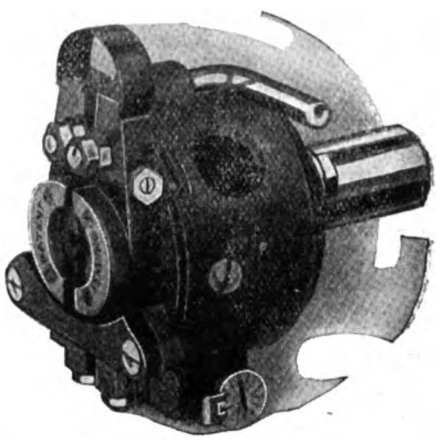


the absorber is fastened to the lower bracket at a point over the brake drum and passes forward over the spring end where it is shackled to the spring end by a short coupling or shackle, the bracket passing forward and dividing into two forks that form the upper support for the springs.

The manufacturer claims that this absorber will "float" a Ford over the rough spots in the road, that the device allows free spring action and does not disturb the chassis construction.

Manufactured by the Burpee-Johnson Co., 301-313 Kentucky Ave., Indianapolis, Ind. Prices on application.

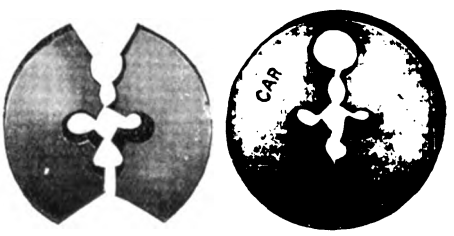
The Federal Self-Opening Die Head is a patented device for use within the turrets of hand or automatic screw machines, but may be used on a lathe. It consists of a



special head in which may be placed any of the standard button dies obtained from supply houses, and by splitting them and grinding off the rough corners they are adapted for use in the Federal Die Head. Chasers are not required for cleaning the thread after cutting, as the head may be opened and withdrawn, leaving the thread clean. The cutter or die is cleaned by slipping it from the head and immersing in gasoline.

By using the split form of die it is possible to sharpen it. The die is closed before starting the thread by pressing the button on top of the holder, or may be closed automatically by a lever device adapted to the turret of the machine on which it is used. For added ease of operation there is a self-alignment feature.

It is claimed that it will cut any thread that a button die can cut and with all the



accuracy for which button dies are famous. On Nos. 3 and 5, where one cut may not give the special refinement of product desired, an attachment to permit the operator to take both a roughing and finishing cut is supplied. The die opens automatically when the travel of the turret ends or at any point in the cut by stopping the turret slide. When the forward travel of the turrent is interrupted the rotation of the work draws the jaws ahead until they clear the jaw blocks and open in response to the action of the crown spring.

Made in sizes Nos. 1, 2, 3-A, 3 and 5; capacity, bolt threads from 3/32 to ⅞ of an inch.

Manufactured by the Federal Products Corporation, 393 Harris Ave., Providence, R. I. Price, with one button die, No. 1, $30; No. 2, $35; No. 3-A, $40; No. 3, $45; No. 5, $60. Literature on application.

RECORD OF BUILDING OPERATIONS FOR SEPTEMBER

Contracts Made and Plans Contemplated for Alterations or Erection of Garages, Repair Shops, Service Stations and New Plants.

CONTEMPLATED PLANS AND SPECIFICATIONS.

Birmingham, Ala.; John W. O'Neill; one-story brick garage, 80x100; cement floor, composition roof; $18,000.

Birmingham, Ala.; Atlanta Battery Service Co.; Atlanta, Ga.; one-story battery service station, 75x140.

Birmingham, Ala.; H. B. Odell, agent Packard Motor Car Co.; one-story garage, service and repair shop; 33,000 square feet floor space; $60,000.

Ensley, Ala.; Ensley Motor Car Co.; two-story brick garage site, 70x140; cement floor; $5000.

Earle, Ark.; L. L. Burham; one-story garage; $10,000.

Antioch, Cal.; A. D. Ports; one-story garage, 40x100.

Sacramento, Cal.; S. W. McKinn and C. E. Phipps; one-story garage; $10,500.

San Francisco, Cal.; Phillip B. Arnold; one-story garage; $10,000.

San Jose, Cal.; W. A. Platt; one-story garage; $9000.

Stockton, Cal.; Joseph Losekann; one-story garage, 100x150; $16,000.

Stamford, Conn.; Mrs. E. D. Smith; one-story frame garage, 21x22; $2500.

Washington, D. C.; Harry Wardman, 1430 K street; two-story garage, 80x100; $100,000.

Washington, D. C.; Mrs. Hayne Ellis; one-story garage; $10,000.

Washington, D. C.; Frank Myers, 1033 Park road; one-story garage, 25x95; $15,000.

Washington, D. C.; Hill & Tibbitts, 1407 H street, N. W.; three-story garage and show room, 100x100; brick and reinforced concrete, at 14th street and Ohio avenue; $15,000.

Miami, Fla.; J. C. Heepling, Chicago; one-story concrete garage; $5000.

Monroe, Fla.; W. L. Suelson; one-story garage; $30,000.

Augusta, Ga.; Johnson, Reynolds & Ferguson, 944 Ellis street; one-story brick garage, 40x136; concrete floor, standard truss roof; $8000.

Colquitt, Ga.; Clahoun; one-story garage, 50x100.

Statesboro, Ga.; Averitt Automobile Co.; one-story gasoline filling station, 60x60.

Chicago, Ill.; E. M. Newman, 30 N. La Salle street; one-story garage, 100x189; $20,000.

Chicago, Ill.; G. G. Rocky, 2718 Wentworth avenue; one-story brick garage, 100x125; $12,000.

Chicago, Ill.; Holton Seeley & Co., 140 South Dearborn street; two-story garage, 21x22, at 47th and Halsted streets; $35,000.

Clinton, Ill.; O. H. Clemous; one-story garage, 60x120.

Decatur, Ill.; J. J. Moran; one-story garage, 80x110; $7000.

Decatur, Ill.; Dr. George W. Weye, 225 Park place; one-story garage, 40x115; $15,000.

Decatur, Ill.; Dennis & Son, 611 N. Water street; 1½-story public garage, 80x100; $15,000.

Peoria, Ill.; J. Frye; one-story public garage, 50x85; $10,000.

East Chicago, Ind.; C. Steffler, 4314 Forsythe avenue; one-story garage, 100x140; $15,000.

Gary, Ind.; Garrett Verplank; one-story garage; $20,000.

Gary, Ind.; Broadway Garage and Machine Shop; one-story garage; $2000.

Indianapolis, Ind.; Hoosier Auto Hotel Co.; 10-story garage and auto storage building, 111x202; $600,000.

Indianapolis, Ind.; Standard Oil Co., Davidson and Lord streets; one-story garage and service station, 37x136; $30,000.

Rockport, Ind.; Parker & Montgomery; one-story garage, 82x135; for Richards & Kinkaid.

Royal Center, Ind.; Arthur Dunn; one-story concrete block public garage, 66x132; $20,000.

Rushville, Ind.; J. D. Case; one-story brick public garage, 80x100, at Perkins and Second streets; $18,000.

Waterloo, Ind.; William Reichart; one-story garage, 60x100.

Winchester, Ind.; Leslie Colvin, Motor and Hiawatha streets; one-story garage and salesroom, 80x160, for Hecker & Doyle; $35,000.

Des Moines, Ia.; Lisle Co.; one-story garage, 140x140; $40,000.

Manning, Ia.; F. D. Ross; one-story garage, 90x150; $20,000.

Oelwein, Ia.; Oelwein Auto Co.; one-story garage, 40x100; $60,000.

Oelwein, Ia.; Frank R. Kint; one-story garage; $45,000.

Rhodes, Ia.; B. F. Cummings; one-story garage, 60x140.

Tabor, Ia.; M. L. Lyman; one-story garage, 62x109; $15,000.

Tabor, Ia.; R. F. Weatherhead; one-story garage for Sherbourn & Williams; $14,000.

Truesdale, Ia.; Edward Spooner; one-story public garage and auto sales building, 50x100; $14,000.

Butler, Kan.; John and Paul Warner; one-story garage, 50x100.

Elkhart, Kan.; Liberty Motor Co.; one-story garage, 59x140; $25,000.

Iola, Kan.; New Buick Garage; one-story garage, 100x181; $16,000.

McPherson, Kan.; John Hohn; two-story garage, 80x120; $30,000.

Osage City, Kan.; Central Motor Sales Co.; one-story garage, 100x120; $12,000.

Salina, Kan.; G. L. Hudkins; one-story garage; $35,000.

Louisville, Ky.; H. M. Dunlop; one-story garage; $20,000.

Louisville, Ky.; Louisville Paint and Trimming Co., 728 Fourth street; one-story auto paint shop, 45x150.

Louisville, Ky.; A. G. Ronald, 537 South Seventh street; one-story garage; $15,000.

Maysville, Ky.; Caproni Brothers; two-story garage, 74x146, at Second and Sutton streets; $30,000.

Lake Charles, La.; B. F. Singleton; one-story garage and salesroom, 50x100; $10,000.

Baltimore, Md.; Fenway Apartment Co.; one-story public garage, 54x67 and 19x25; $18,000.

Baltimore, Md.; Mrs. M. A. Green, 1008 Pennsylvania avenue; one-story garage, 18x60; $5000.

Baltimore, Md.; H. S. Block; one-story garage, 45x100; $50,000.

Fedualsburg, Md.; Harry T. Eddington; one-story garage, 65x100.

Hagerstown, Md.; Lewis Meyers, 331 West Washington street; one and two-story public garage, 40x82; $40,000.

Boston, Mass.; William London, one-story garage; $75,000.

New Bedford, Mass.; Manuel Perry; one-story garage, 52x104.

Worcester, Mass.; E. T. Chapin, 340 Main street; one-story garage, 52x120; $12,000.

Detroit, Mich.; F. G. Brandt, 884 Michigan avenue, 1½-story public garage, 65x100.

Detroit, Mich.; J. C. Zajkowski, 1496 Joseph Campau avenue; one-story public garage, 30x101; $6500.

Detroit, Mich.; Frederick A. Evans, 70 Book building; one-story garage, machine shop and show room; $30,000.

Notes of the Trade and Industry

The Hyatt Roller Bearing Co., Chicago, has appointed H. G. Weaver to take charge of the sales promotion department for the Tractor Bearings Division During the past year he has been investigating the power farming machinery industry through farmers and dealers. George H. Woolley, Jr., will be a special representative of the department.

The Vita Manufacturing Co., Cleveland, producer of the Rogers magneto, is erecting at West 117th street, near Madison avenue, a large factory building 132 by 252 feet. This structure is only a unit for a much larger plant which will be built. The first unit will be two stories in height, of modern concrete, fireproof construction, with a front of velvet faced brick. The plant will be erected without partitions, and the initial unit will be of sufficient strength to permit the addition of other floors as needed.

The New Departure Manufacturng Co., Bristol, Conn., will employ approximately 1000 workmen in the new plant it has erected in Meriden, Conn. Later it will bring the working force up to 3000. Other buildings are planned. The ball bearing plant will be doubled and a forging plant will be built.

The Covert Gear Co., Inc., Lockport, N. Y., announces that Alwin A. Gloetzner, who has been vice president, has been elected president and general manager.

The Buda Co., Harvey, Ill., has opened offices at 33 West 42nd street, New York City, with L. H. Earle, eastern representative, in charge.

The McCord Manufacturing Co., Detroit, has designed and is now marketing a copper asbestos gasket for Ford intake and exhaust manifolds that replaces two parts ordinarily required. One side of the two-in-one gasket slides into the manifold while the other side slides into the cylinder port. The two-in-one replaces the inlet and exhaust pipe gasket and the inlet and exhaust pipe gland. It is made of sheet copper, encasing asbestos.

The Puritan Machine Co., Lafayette boulevard and 10th street, Detroit, has acquired from the General Motors Corporation the axle business of the Weston-Mott Co., Flint, Mich., one of the General company is moving this stock to its main Motors subsidiary plants. The Puritan plant at Detroit, from which point it will distribute service repair parts for Weston-Mott axles.

The Globe Rubber Tire Manufacturing Co. recently had a convention of its salesmen in New York. It was announced that the company plans to launch an active campaign in adding another number to its cord family in the 30x30½ size.

The Dreadnaught Sales Co., incorporated under Tennessee laws with $20,000 capitalization, has opened business at 11 South Third street, Memphis. The firm will sell Dreadnaught tires and tubes at wholesale, and will begin with three traveling men. L. C. Humes is president.

Leach-Biltwell Motor Co. Will Market New Car

The Leach Biltwell Motor Co. has been incorporated for $1,000,000 and has absorbed the Leach-Biltwell Co. The concern will manufacture a six-cylinder passenger car to be called the Leach Power Plus Six. The officers are M. A. Leach, president; L. G. Martin, vice president; E. P. Hughes, secretary and treasurer; R. A. Wilson, production manager; R. P. Pennock, superintendent; J. H. Faircloth, purchasing agent; C. N. Graves, eastern factory representative.

M. A. Leach was at one time in the lumber business and later established Pacific coast distributing connections for the Dort Motor Car Co., Flint, Mich. Afterward he formed the Leach Motor Car Co., operating in Los Angeles and San Francisco as motor car distributors. For the past year he has been turning out custom made motor cars.

C. N. Graves, making his headquarters with the Bradfield company, 910 Kresge building, Detroit, has already placed orders for material for 900 cars. The company will buy its units in the eastern market and ship them knocked down for assembly in the Los Angeles plant. The car will be built of standard units. The company will either have a display or representatives at both the New York and Chicago automobile shows. Plans for a new factory for the company will be announced soon.

STEWART-WARNER.

Stewart-Warner is lined up for a tremendous business this year. Its turnover will amount to considerably over $12,000,000 as compared with $9,800,000 in 1918. The automobile horn, vacuum feed system and speedometers are still the big lines, though certain comparatively new products, like the searchlight, are running over 100 per cent. ahead of a year ago.

The big Chicago company will ship this year over 1,000,000 vacuum tanks and 1,200,000 horns. Net earnings, based on nine months, results and orders firmly in hand should total nearly $25 a share, as against $15.94 a share last year. Stewart-Warner has for many months been in an enviable financial position, keeping independent of the banks entirely. It is a unique industry in these days of high inventory that can finance business expansion without borrowing.

ANDERSON HAS $1,000,000 INCREASE IN ITS CAPITAL.

The Anderson Motor Co., Rock Hill, S. C., has increased its capitalization from $2,625,000 to $3,625,000, and is erecting a new steel and concrete building, 340 by 250, equipped with new machinery. Contracts have been awarded amounting to $200,000. It is expected that this new factory building will permit a material increase in the production of Anderson Six motor cars.

Announcements By Tractor Makers

The General Harvester Corporation of America has been incorporated under Michigan laws with $100,000 capitalization, but, it is announced, the capitalization will be increased to $10,000,000, as needed. The corporation will acquire tractor and agricultural machinery plants and offer to the trade a complete line of implements. A large factory will be established in Port Huron. The general offices will be in Detroit and export offices in New York.

The Baker Tractor Corporation, Detroit, has been formed to produce a new three-wheel type of tractor, which will burn kerosene.

The Winnebago Tractor Co., Rochford, Ill., has been incorporated with $150,000 capitalization by George N. Whitford, L. E. Bement, G. S. Blanchard and Frank Schwartz. A contract has already been awarded for factory buildings.

The Hession Tiller and Tractor Co., Buffalo, N. Y., manufacturer of the wheat tractor, has gone into receivership, with Robert E. Powers temporary receiver. The firm is capitalized at $10,000,000, but the amount paid in is said to be only a fraction of that amount.

The Cleveland Tractor Co. will construct two additional buildings at a cost of $400,000. These will give the company 310,000 additional square feet of floor space.

The Beeman Garden Tractor Co., Minneapolis, has dropped the word "garden" from both the company name and the trade style of the tractor. The Beeman tractor now develops two to four horsepower and can be utilized with any implement which was formerly drawn by a horse. The original tractor was designed especially for truck gardens.

TRADE LITERATURE.

W. W. and C. F. Tucker, Hartford, Conn., manufacturer of patented oil hole covers and cups, Hercules shears and rod cutters, has issued a revised catalogue covering its complete line of oil hole covers and cups.

The Simms Magneto Co., East Orange, N. J., has issued a booklet entitled, "Why Magneto Ignition Makes a Good Engine Better." This booklet covers the subject in an interesting and convincing manner, and will prove valuable to all who are interested in automotive products.

S. F. Bowser & Co., Inc., Fort Wayne, Ind., has issued a little folder which illustrates and describes a Bowser battery storage system for lubricating oil. The folder can be arranged to show one, two or three outfits, or a battery of four tanks, so that the prospect may understand that he can buy as many units as he requires. The folder will show him how the units of any of the various capacities line up in uniform manner.

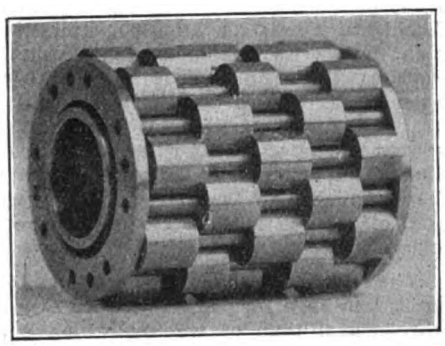
HART ROLLER BEARING A NEW DESIGN.

A new design or type is reflected in the bearings produced by the Hart Roller Bearing Co., Orange, N. J., which is



The New Hart Bearing with Staggered and Meshed Rolls.

claimed by the manufacturer to have distinct value. Instead of the usual rollers extending the length of the bearing, series of short rolls are assembled on shafts, so that two lengths of rolls may be used. The arrangement of the rolls is shown in the accompanying illustration, they being staggered and meshed so that the bearing is the entire length of the shaft and the race.

As will be noted, the series of rolls are placed on alignment shafts that are mounted at the ends to revolve free on retainer rings, which serve as separators and maintain the relation of the rolls and shafts to each other. Claim is made that the design reduces the bearing angle, that is, the angle included between radial lines drawn from the axis of bearing through the centers of the adjacent rollers, so that the bearing stresses are substantially lessened.

That the bearing will afford satisfactory results either in a vertical or horizontal plane, and that the end of any lightly loaded roller is free to rotate independently of the heavily loaded end, so that there will not be undue wear from eccentric loading, are two claims for the design. The movement of lubricant through the bearing is maintained to be extremely free. The bearings are constructed from a special chrome-vanadium steel and heat treated.

NEW RULING ON ACCESSORIES TAX.

Interpretations of the new ruling on the imposition of Federal taxes on accessories and parts have been announced by the National Automobile Chamber of Commerce and the Motor and Accessory Manufacturers' Association.

The new ruling modified the system of taxing accessories and parts, including tires and inner tubes, so that these parts may be sold to manufacturers without the payment of a tax. However, the parts thus sold must be utilized by the purchasing manufacturer in making a complete car or machine, the tax falling then upon the completed machine. On the other hand, the impost becomes due when the goods are sold to a dealer, person or firm who will not use the parts in manufacture. In this way the evil of double taxation is obviated.

UNSERVICEABLE CARS ARE BEING SOLD BY GOVERNMENT.

The first government sale of unserviceable automobiles took place at Camp Holabird, near Baltimore, Md. Nearly 4000 persons attended. Seventy-five cars were sold for a total of $25,000. The first car brought $130. A dealer bought a limousine for $650, the highest price. The average sale price was under $200. Practically all of the cars will have to be junked. A few of the bodies, especially the enclosed models, will provide the best profits.

Control of Fisher Body Acquired by General Motors

It is understood that General Motors has acquired control of the Fisher Body Corporation. The corporate name and management of the latter are to be changed, and business will be vigorously expanded. In all probability some $30,000,000 new money will be raised by Fisher Body under General Motors sponsorship, the proceeds of which will be used for the erection of two new body-making units at Cleveland and at Detroit. This will make Fisher Body a $50,000,000 concern. There is an under-capacity in the automobile body-building industry.

SERVICE BODY FORMALLY ORGANIZED.

The new Automotive Service Managers' Association was formally organized Sept. 3 at a meeting at the headquarters of the National Automobile Chamber of Commerce in New York. The following board of officers was elected to serve until the regular annual election in January:

President, Ralph C. Rognon, Vim Motor Truck Co.; vice president, J. W. Watt, Reo Motor Co. of New York; secretary, J. Howard Pile, Motor World; treasurer, E. V. Dirks, Buick Motor Co.; directors, E. Hunn, Packard Motor Car Co., chairman; J. H. Lange, Three-Point Truck Co.; J. M. Grant, White Co.; F. J. Lowe, Bronx County Auto Co.; H. M. Holt, Willys-Overland, Inc.; Al. Rawson, Reo Motor Co. of Newark.

The new service association has the hearty support of Alfred Reeves, general manager of the National Automobile Chamber of Commerce, and C. M. Brown, representing the Automobile Dealers' Association of New York.

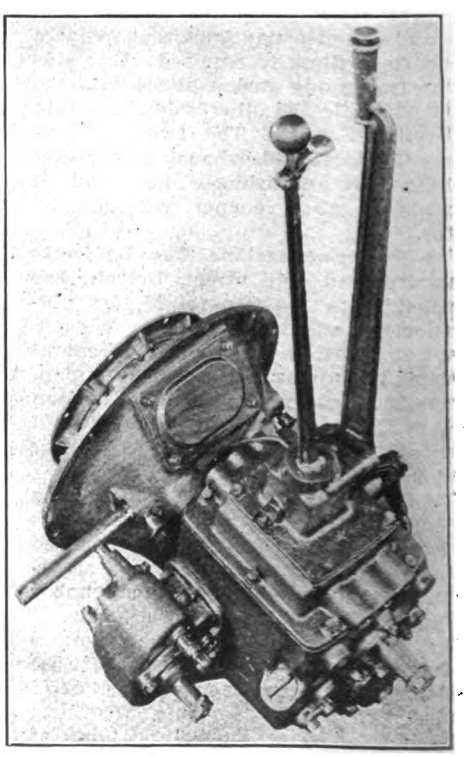
FULLER MODEL GU-5 TRANSMISSION GEARSET.

The Fuller & Sons Manufacturing Co., Kalamazoo, Mich., which is one of the best known concerns in the power vehicle construction unit industry, is specializing the production of transmission gearsets, the greater part of which are designed for truck building, although some of them may be used in passenger cars.

The model GU-5 gearset is combined with a clutch and is designed for unit mounting with four-cylinder engines up to 350 cubic inches piston displacement for trucks, and for larger engines for passenger car service. The clutch is a multiple disc type, the discs being hardened saw steel faced with woven asbestos fabric. The clutches are practically self-compensating, long springs automatically taking up whatever wear may develop with use.

The model G is the same size as the model GU-5, but it is an independent type, designed for mounting amidships in the chassis. Annular ball bearings of extra large size are used throughout all gearsets. The gears are 6-8 pitch. The main shafts are four-spline types, carefully heat treated and ground. The gears and shafts are 3½ per cent. nickel steel and are of large size to have an additional factor of safety. Special care is directed to hardening all parts that are subjected to wear.

The housing of the transmission gearsets is designed so that a power take-off may be fitted at either side, and on the model G units these may be installed with the drive shaft at either the front or the back as may be desired. The take-off has the standard 1⅛ inches S. A. E. taper connection.



Model GU-5 Fuller Combined Clutch and Transmission Gearset with a 2A Power Takeoff.

The Fisk Nine prove that good athletes make good workmen

FISK TIRES

The Fisk line is an unusual selling proposition—a *complete* line, no gaps, no fill-ins.

The Fisk Non-Skid, the Fisk Red-Top, the Fisk Cord. All good looking, all oversize, each to fill a particular place in the dealer's line.

Stand any one of these up alongside other tires of the same class and size and note the size, the care in every detail, the good looks of the Fisk Tires.

The ideal of the Fisk Rubber Company is to be the best concern in the world to work for and the squarest concern in existence to do business with.

Sold *direct* to dealers and manufacturers

STROMBERG CARBURETOR.

Stromberg Carburetor of America, it is expected, will receive between $500,000 and $1,000,000 in damages as a result of its suit against the Zenith Carburetor Co. for infringement of patent rights. Decision in favor of Stromberg was rendered some months ago and the court ordered an accounting and the payment of damages. Auditors of both companies have been at work and while Stromberg estimates that the Zenith company profited to the extent of well over $1,000,000 from the manufacturing of carburetors infringing Stromberg patents, the Zenith company claims its profits were not more than $500,000.

The discrepancy in these figures is traceable to the Zenith company's payment of royalties at the rate of $1 a carburetor, or about $625,000, to the original Zenith company in France. The royalty payment has been deducted as an expense by Zenith. Stromberg contends that such a deduction should not be made.

Stromberg is doing the greatest volume of business in its history. It is practically swamped with orders and finds itself unable to fill the immediate demand for its product despite the fact that production is now running at the rate of 30,000 to 35,000 carburetors a month. Work is being rushed on new factory buildings which will double the present capacity and it is estimated that before the end of the year close to 50,000 instruments a month will be turned out.

More than 60 per cent. of the motor trucks and about 45 per cent. of the passenger cars manufactured in the United States use Stromberg carburetors as standard equipment. Last year more than 80,000 Stromberg carburetors were sold to Ford owners alone.

NORTH & JUDD.

The North & Judd Manufacturing Co., New Britain, Conn., manufacturing automobile and other hardware, has declared a regular quarterly dividend of four per cent. and an extra of three per cent., an increase of one per cent., making the annual rate 16 per cent. regular and 12 per cent. extra. The directors have recommended a capital increase from $1,500,000 to $2,000,000, to aid the company's expansion, particularly in the purchase and equipment of the Fitch company's plant in New Haven, Conn., which will give the company tidewater trade facilities.

BUSHING MANUFACTURERS TO CONFER.

The Motor and Accessories Manufacturers' Association has called a conference of bushing manufacturers to be held at the Manufacturers' club, Philadelphia, Sept. 30, for the discussion of the standardization of bushings. All manufacturers of bushings have been invited to send representatives.

Dealers are being offered a bonus of $100 and more by buyers who seek early deliveries.

Record is Smashed in Spectacular Race at Sheepshead

Two brothers, Gaston and Louis Chevrolet, warm rivals in the automobile racing game, fought a great duel on the Sheepshead Bay Speedway Sept. 20 in a 150-mile race in which there were the unlucky number of 13 starters. First it was Louis, then it was Gaston who led the field, but just before the finish of the 110th mile, when the two brothers were racing neck and neck, with the field behind them lapped, Louis' car, a Frontenac special, the same as his brother's, burst into flames and he was lucky to escape with his life. It was only quick wit and consummate skill at the wheel that enabled Louis and his mechanician, Kenneth Goodson, to escape without a roasting. As it turned out both of them were well scorched about the arms and legs, particularly the latter.

It was a day of thrills for the 40,000 spectators who watched the cannonading cars go careening around the track. They not only saw the record for 150 miles sent into the discard by the winner, but what all automobile racing followers are keen to see, they witnessed a couple of hair raising escapes from what seemed almost certain death. In the third heat of the 10-mile race Ralph Mulford came within a hair's breadth of going west when he broke a tie rod in trying to straighten out in a desperate spurt around the last bank, skidded down into the infield and then bucked up straight across the track in front of Ralph De Palma, who had to do some mighty quick thinking to escape him. Mulford looked like a sure winner when the accident happened.

This mishap did not daunt Mulford from going into the long distance event, but the best that he could do was to finish seventh. The time of the winner was 1h. 22m. 34 1-5s. The old mark was 1h. 26m. 14 91-100s. made by Ralph Mulford at Chicago, June 16, 1917, in a Hudson special. The rate of speed maintained by the winner was close to 110 miles per hour. From the start it was a wild scramble with the man who couldn't make his car step along at 100 miles an hour, a mere selling plater, in the mad chase for the purse of $2500 which was hung at the end of the swirl around the two miles of pine boards.

From the start it was a family affair. Ralph De Palma, record holder par excellence, met with a mishap in the first heat of the 10-mile sprint when he broke a connecting rod on the third lap and was forced to retire. He dug up a White special in time for the third heat, but he never had a chance. The summary:

One Hundred and Fifty Mile Race—

	Driver	Car	H.	M.	S.
1,	Gaston Chevrolet,	Frontenac	1	22	34 1-5
2,	Joe Boyer,	Duesenberg	1	24	43 3-5
3,	Ira Vail,	Philbrin-Duesenberg	1	24	46
4,	Art Klein,	Peugeot	1	25	24
5,	Toland Nicholson,	Hudson	1	30	28 1-5
6,	Denney Hickey,	Stickel	1	31	35 1-5
7,	Ralph Mulford,	Duesenberg	1	33	06
7,	William Vetere,	Dusenberg	Called off		

10-mile special (three heats). First heat—Won by Louis Chevrolet; second, Joe Boyer; third, Gaston Chevrolet. Time, 5m. 30 4-5s.

Second heat—Won by Ralph Mulford; second, Louis Chevrolet; third, Gaston Chevrolet. Time, 5m. 24 1-5s.

Third heat—Won by Louis Chevrolet; second, Gaston Chevrolet; third, Joe Boyer. Time, 5m. 30 2-5s.

CALENDAR

Oct. 6-11—Detroit, Arena Gardens, closed car show; Detroit Dealers' Association.

Oct. 9-10—Jackson, Miss., second annual convention of Louisiana-Mississippi Association.

Oct. 15—New York, Grand Central Palace, opening of International Farm Tractor and Implement Exchange.

Oct. 15-17—Chicago, Congress Hotel, 26th annual convention of the National Implement and Vehicle Association.

Nov. 3-8—Chicago, Medinah Temple, exhibit of Automotive Equipment Association.

Nov. 7-8—Detroit, Hotel Statler, meeting of National Association of Motor Truck Sales Managers.

Nov. 16-23—New York, Hotel Commodore, Automobile Salon.

Dec. 3-5—Cleveland, annual convention of Automobile Trade Association.

Jan. 3-10—New York, Eighth Coast Artillery Armory, exhibition of commercial cars and accessories.

Jan. 3-10—New York, Grand Central Palace, passenger car show; National Automobile Chamber of Commerce.

GMC AND DELCO LIGHT MERGE.

The Domestic Engineering Co., Dayton, O., manufacturer of the "Delco-Light" and farm lighting systems, has been merged with the General Motors Corporation and hereafter will be operated as a branch of the latter. The business will be conducted under the present management. It is proposed greatly to extend the plant and the operations of the "Delco-Light," which during the last few years has been the great leader in farm and domestic lighting.

The Domestic Engineering Co. was incorporated in 1916 a with capitalization of $300,000 common, $500,000 preferred stock. In January, 1918, the capitalization was increased to $1,200,000 common and $2,300,000 preferred, which provided funds for additional plant capacity and working capital. The company has agencies established throughout the United States and in many parts of South America and Europe.

FITZGERALD AWARDED GMC ORDER FOR 500,000 HORNS.

General Motors has placed with the Fitzgerald Manufacturing Co., Torrington, Conn., an order for 500,000 auto horns. The Fitzgerald firm recently completed a two-story addition and is now planning a three-story addition.

Every Ford Owner Should Read "TRANSFORMING THE FORD." Tells how to secure smooth, positive brake action that no car can excel. A little "transforming" and your car will glide to a quiet, quick stop without the annoying, irritating clatter that you now experience. It will go into low or reverse without jumping or jerking and you can pick up speed with all the smoothness and ease of a high-priced car. All accomplished without additional expense and the result is a clear saving of 75 per cent. in one direction alone. "TRANSFORMING THE FORD" tells how it's done. Send for your copy this very minute. IT IS FREE. **Cormack & Co., 500 Fifth Ave., New York City.**

Rough Usage Won't Hurt the Cord on a

DURACORD EXTENSION LAMP

THE cord is Duracord, the same cord that is used on portable tools in shipyards, factories, etc. where the wear is much greater than you would ever give an extension lamp. Its strength is in the covering which is *woven* of heavy cotton yarn (not braided)—no metal to cut through the insulation or scratch polished surfaces as on a steel armored cable.

And you can jerk it around without fear of pulling the cord out of the handle. It's gripped by a patented holdfast fitting that hangs on like a bulldog.

Each lamp complete, all wired up with 20 feet of cord ready for use, packed in an individual box. Prices (excluding bulb)

Light weight $5
Heavy duty (as illustrated) $6
Vapor proof $8

SCOE

Formerly "Dave Buick" Carburetor

Puts "Pep" In Your Ford. Saves Its Cost In 60 Days.

Try This Carburetor Before You Sell It

THOUSANDS of dealers all over the country are building up a remarkable business with the Scoe Carburetor. The fact that the Scoe Carburetor does give greater gasoline mileage, more speed, quicker pick-up, perfect slow running, easy starting, and cleaner cylinders and spark plugs, makes it a ready seller.

We know that there is just one way to convince you of these facts, and that is by seeing them for yourself—in your own business.

Dealers' 30 Day Trial Plan

We want every automobile dealer and service station to know the Scoe—for to know it, is to sell it. There is a liberal discount to the trade.

Sign the trial order coupon and we will ship you a carburetor for thirty days' trial. Half the net you pay, balance in thirty days if satisfied. If not, return the carburetor and we will refund your payment without a question. Here is your opportunity to see the remarkable selling features of the Scoe at our expense.

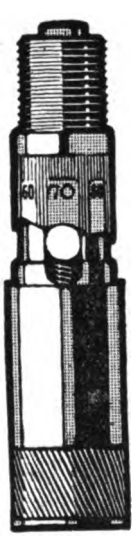
Like an Alarm Clock



Here it is, Screw it on

YOU can pin your faith to the Whistler. With it on your tires, there's never a chance of over-inflating which causes blowouts and give-outs.

Simply set it for the right amount of air. Turn on the supply. After a bit a cheery little whistle announces "enough."

That's saving time for you. And it's sure saving, too. The Whistler lengthens the life of a tire by from 60% to 75% and it saves gasoline, because the tires are evenly inflated.

How does that strike you? It's a proposition that car owners everywhere are getting enthusiastic over. We are creating and forwarding this desire by advertising. We offer you attractive window and counter signs to link up with our campaign and to help get the most of a big business that is certain to come to all of our dealers.

If you have not stocked Whistlers yet, ask your jobber or write us.

Ever Last Resoles

Ready to Apply to Tread Worn Tires

Cross Section of Ever Last Retread After Applied to an Old Tire

Any tire repair man can put an Ever Last resole on an old tire without any extra equipment. No expense whatever except an average cost of 35 cents for self-vulcanizing cement.

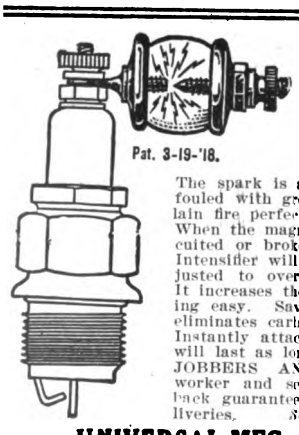
Ever Last Resoles are fully cured, all ready to put on tread worn tires. They are made from the very best rubber, fabric and breaker strip. These resoles will add 5000 to 7000 miles more service to an old tire at half the price of a new tire.

You can make big money selling these Resoles in your territory, as every car owner is a real live prospect for a full set. They make a wonderfully attractive tire and are practically puncture proof. You can sell hundreds of these Resoles. The profit is big. Write or wire today for the agency in your county.

Also write us for particulars on a special lot of slightly blemished resoles. There is real money in this if you act at once.

Ever Last Tread Co., Inc.

126-128 East New York Street
Indianapolis, Ind.



Pat. 3-19-'18.

It Finds Ignition Troubles

Attached to Any Plug
Stops All Spark Plug Trouble

Universal and Marvel Spark Plug Intensifiers

The spark is always visible. It will make a plug fouled with grease or carbon or with broken porcelain fire perfectly.

When the magneto is not working, a wire short circuited or broken, or the battery out of order, the Intensifier will prove it at a glance. It can be adjusted to overcome almost any ignition weakness. It increases the voltage and spark and makes starting easy. Saves in oil and gas. Adds to power, eliminates carbon and preserves plugs.

Instantly attached to any screw terminal plug and will last as long as the car.

DUNTLEY
MAGNETO BREAK
TIMER

FOR ALL FORD CARS

Guaranteed to Deliver 50,000 Miles of Efficient Service

The Duntley Magneto Break Timer Eliminates Ignition Troubles and Insures Maximum Motor Efficiency and Economy.

Perfect ignition can be attained only through positive contact and a clean break. In the Duntley, the electrical current is closed by Tungsten points in positive contact, not through a greasy roller jumping and skipping across a metal segment.

The only parts in motion sufficient to cause wear are the rollers riding on the operating cam and they are made of a special fine grain, hard pressed fiber that is oil and water proof and practically everlasting.

FOR FORDSON TRACTORS

The following letter from a satisfied user shows how the Duntley delivers 100% on the Fordson.

"The timer you sent . . . . . is all you claim for it. It certainly gives the tractor twice the power it had before and also is a saver of fuel." Name on request.

SOLD ON AN ABSOLUTE MONEY BACK GUARANTEE

DEALERS: To any reputable dealer who writes, mentioning the name of his jobber, we will send a Duntley for a 10 day trial.

J. W. DUNTLEY

1004-B Michigan Ave. **CHICAGO, U. S.**

Security Auto Lock

Affords every protection to Ford car owners that a perfectly designed and extremely well made lock can give. While neat and attractive it is built very strong. In operation it is positive and the car can be left with a feeling of confidence that no one but the owner can use it.

It is the original loose wheel lock for Fords.

It is approved by underwriters.

It will reduce insurance premiums 15%.

When locked the car cannot be towed.

List Price, $6.00

It makes the Ford thief-proof

Anyone can easily install the Security in ten minutes. No drilling, filing, sawing or chiseling necessary. It is made of solid brass. Nickel plated finish.

TO DISTRIBUTORS

When this lock is shown no other will satisfy Ford car owners. It sells at sight. Our trade discounts are liberal and our proposition will interest any one that can sell high grade car protection at a moderate price. ***Write for details today.***

CURTIS AIR FREE FROM OIL

MOTORISTS Have CONFIDENCE IN THIS SIGN

LET THEM FIND IT AT *YOUR* DOOR.

Curtis Air means more mileage, because Curtis is the only air compressor that can't flood cylinder with more oil than it can use. Oil is the enemy of rubber. It rots tires, causing blow-outs.

A Curtis Compressor Is Dependable

requires practically no attention, costs very little, quickly pays for itself, always delivers the kind of cool, clean air that makes tires last longer.

5 sizes and 125 combinations. Write for full particulars and let us tell you why the Curtis will prove to be your best investment. Ask your jobber for prices—but be sure and mention Curtis—the name is your protection against substitution

GENEROMETER

The new and practical generator testing instrument. It will locate shorts and grounds in generator armatures where most of the trouble is of a Lighting System. You will need this instrument if you want to be 100% efficient in your electrical repair work. Further particulars upon request.

PAUL G. NIEHOFF & CO., INC.

232 E. Ohio Street, Chicago, Ill.

Niehoff Laminated Magnetizer

This is the most scientific and practical Magnetizer ever constructed. It will magnetize any size magnet from a Ford to all the various other magnets used on the different cars today. Due to the fact that it generates an enormous amount of magnetism, with a pulling power of about 75 pounds, you can more quickly remagnetize a magnet, and, therefore save much current. All magnetizers are subject to considerable wear. The faces will wear down according to their use. The top pieces of our Magnetizer are especially hardened and also detachable so that when worn down they may be replaced at a very small expense. We have two types; one for 6 volt storage battery and another for 110 volt D. C. current. Write for further information.

GET A WATERHOUSE WELDING OUTFIT AND WATCH YOUR BUSINESS GROW

Boost your profits—Swing the big profitable welding business to your shop. Thousands of repairers are doing it and most of them use a Waterhouse outfit.

Time is money and a Waterhouse Welding Outfit saves the time as well as labor. It affords utility great enough to meet any shop requirement, yet no shop is too small to own one.

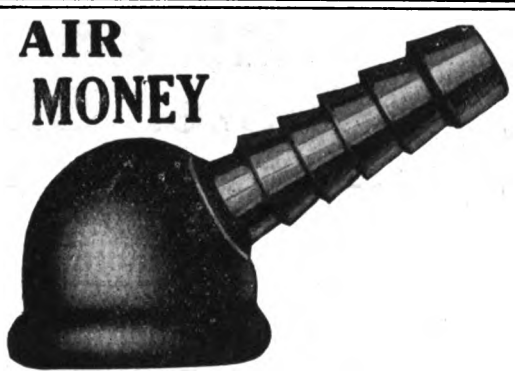
The great difference in welding outfits is all in favor of the Waterhouse. That means quality, utility, long service life, simplicity, dependability, low first cost and the best and most complete welding apparatus ever offered to the trade.

Write for descriptive catalogue, or better still, tell us your requirements. Do it today. We can supply the exact outfit for your needs.

All Waterhouse outfits are guaranteed.

WATERHOUSE WELDING COMPANY, 3 PELHAM STREET, BOSTON, - MASS.

FREE AIR COSTS MONEY



when the customers for whose convenience you provide an air station forget to turn off the flow after they have filled their tires.

Guard against this waste by attaching a

Schrader Universal Inflating Valve

to your air hose.

Thanks to this appliance your bottled air locks itself into the tank the minute it is taken off the tire-valve. You turn on the air by pressing the nozzle of the inflating valve against the tire-valve and you turn it off by removing the device from the tire-valve.

Made to fit any diameter of hose from ¼ in. to ⅝ in.

PRICE $1.50 in U. S. A.

Manufactured by **A. SCHRADER'S SON, Inc.**
800 Atlantic Avenue, Brooklyn, N. Y.

Schrader products were awarded a Grand Prize and two Gold Medals at the Panama Pacific International Exposition. "There's a Reason."

THE PEERLESS HAND HOIST

Single Cable Quadruple Worm Gear Drive.

For Any Make or Type of Truck.

A wonder in efficiency and speed. It will fit any chassis and body. Weighs but 200 pounds. Simple, fool proof, wholly dependable and will last for years in the hardest service.

Any one that can drive a truck can hoist the heaviest load to 30 or 50 degrees in the longest body in less than two minutes. The smaller the body and load the quicker the action.

But two gears are used, quadruple worm and gear (both machine cut) and housed to protect from dirt and dust. The single cable makes an even pull. Compact and can be installed without drilling holes in chassis frame. The body hitch is also furnished.

We specialize in building all-steel bodies for any need.

Write for complete information.

New York Automobile Replacement IGNITION COILS

TYPE D

New York Automobile Replacement Ignition Coils have actually put hundreds of the smaller Garages and Service Stations in business—and are today the most treasured line of the largest Service Stations throughout the U. S. The explanation is simple. Most drivers have learned that the best car and engine fitted with the highest grade carburetor and workmanship cannot deliver its full power, smoothness or service unless the Ignition Coil delivers more than "just a spark."

Weak, particularly broken down coils spoil owners' pleasure and temper, also your reputation, and the car's utility. A special New York Coil engineered to suit the exact requirements of each car manufactured—that will fire the poorest gas—that positively will not "miss" at highest engine speeds and rival magneto ignition is available.

They are installed with no trouble in ten minutes, as they positively fit each car. Fifteen years of successful coil building experienced by an organization of Ignition Specialists, is the reason a car owner always agrees when told he needs a New York Coil.

TYPE A

More real profit, less come backs and easier made sales than any article you ever handled.

NEW YORK COIL COMPANY

338-340 PEARL STREET **NEW YORK, N. Y.**

IMPROVED BEMUS BALL CONTACT TIMER

EASIER STARTING. Grease cannot prevent contact. Saves YOUR COIL POINTS.

SMOOTHER RUNNING. Contact is positive. LONGER LIFE. No fibre to wear humpy.

The BEMUS is an IDEAL TIMER for the FORD high speed, short stroke engine, because form of contact is the only one which is correct both electrically and mechanically.

MOUNTING is direct on the time shaft by means of an extension piece which is threaded onto shaft, and runs in ball bearings placed in recess of timer shell. This means that each of the balls is equi-distant from the brush. RESULT—absolute precision of timing.

CHEAPEST IN THE LONG RUN. For 27 cents you can replace all wearing parts and make timer as good as new.

Triangle Tire Patch Brings Repeat Orders

You only have to sell a customer one package of Triangle Tire Patch. The next time he comes in and 'hollers' for it.

That makes it a good patch for you to sell. Another reason why you should handle Triangle—there's more money in it. You buy direct from the factory, paying no toll to jobber or salesman.

The Triangle Tire Patch is a guaranteed product. The $1 package fixes 100 punctures and every dealer is authorized to refund the dollar if one patch comes off.

Let us tell you about the margin of profit. Clip and send the coupon now.

The McCulloch Timer Grinder

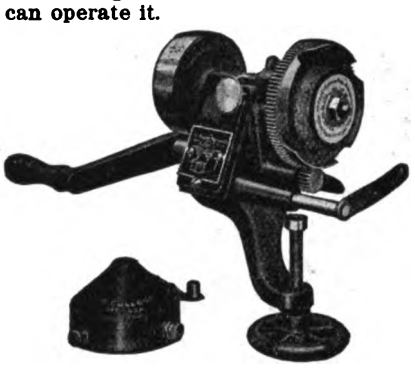
For Grinding the Contacts of Ford Timers

Essential and highly productive equipment in any garage, repair or machine shop.

Guaranteed to afford perfect results and lasting satisfaction.

In less than three minutes the oldest, most abused and worn timer can be ground with a surface like glass. Anyone can operate it.

List Price Complete $21.00 F. O. B. Boston



The McCulloch Timer Grinder has a special chuck which requires no skill in centering. The grinding stone revolves inside the timer at a high speed while the chuck and timer revolves very slowly around the stone.

When not in use the timer grinder can be instantly removed, and a large wheel fitted and used for grinding tools, twist drills, etc. It can be attached to any bench.

Just figure the saving in time, material and labor Then estimate the profits this equipment can earn for you.

McCulloch Wipe Contact

For Ford Cars. For Fordson and Ford Trucks.

List Price Sixty Cents.

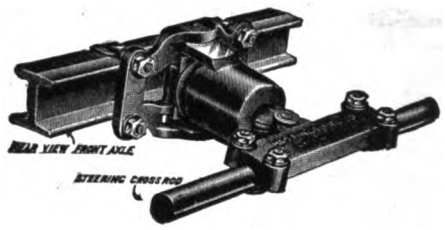
This contact absolutely does away with the abnormal wear on the roller of the timer. It is guaranteed for the service life of any timer used on Ford products. In operation instead of rolling around the timer ring, it slides. It wears the timer ring and wipe contact equally, and keeps the points of contact clean. This assures long life, minimum wear and perfect ignition. It is made of high carbon steel that is not affected by the sliding motion and eliminates all chance of misfire.

If your jobber and dealer cannot supply you promptly, order direct. Jobbers and dealers discounts at request.

A. P. McCULLOCH MACHINE COMPANY

216 High Street, Boston, Mass.

The Hastings Stabilizer



For Safe and Steady Steering of FORD Cars

MAKES all the difference in the world in the "feel" of the car under you.

Takes up all the lost motion and looseness of the steering mechanism. Makes long drives seem short—no aching arms and fatigue. Permits full sweep of the wheels.

Adds no appreciable weight to the car.

Out of sight and out of the way.

Easily attached to front axle and steering rod by bolted clamps. Any garage man can attach in a few moments.

Fully guaranteed.

Send for descriptive folder and discounts to Ford and Accessory Dealers.

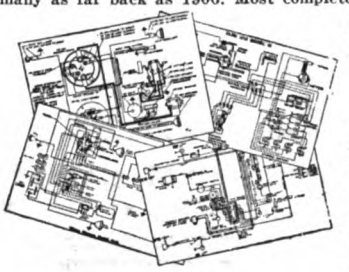
850 WIRING DIAGRAMS

In New Edition of Auto Electrician's Guide

Contains wiring diagrams for every car on the market, including the new 1919 Starting and Lighting Systems for Ford cars, also diagrams for Baker R & L and Detroit Electric and pipe connections for Stanley Steamers. Covers all kinds of systems from 1912 to 1919 and many as far back as 1906. Most complete diagram book on the market.



Highly Endorsed by Auto Manufacturers, Garages and Service Stations

No problem too puzzling if you have the Auto Electrician's Guide. ANY "OLD STICKER" QUICKLY SOLVED with the help of this book. Saves hours of time on both old and new jobs. Impossible for even experts to know all cars, but no car will "stick" you when you have this book.

A practical, easily understood "guide" that will simplify all auto-electric problems and make it possible for you to quickly overcome hundreds of starting, lighting and ignition troubles which otherwise would take hours to solve. Extensively used all over the country. Hundreds of auto experts and repair men depend on it to solve hardest problems. Dozens of letters received telling of its exceptional value.

A Loose Leaf Book

—easy to handle and easy to add new diagrams as issued. Convenient to slip into the coat or car pocket and invaluable as a constant companion to repairmen. Scores of trouble cases quickly and easily corrected with the help of this guide. Send today. Price $7.50 Postpaid. Remit by Postoffice Money Order or Bank Draft. Money refunded if not satisfactory.

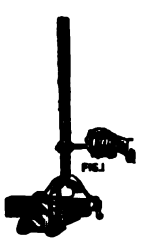
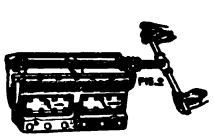
Main Bearing and Connecting Rod Aligning Reamer





30 Minutes to Fit Perfectly All Main Bearings and Connecting Rods.

"A DAY'S JOB DONE IN HALF AN HOUR."

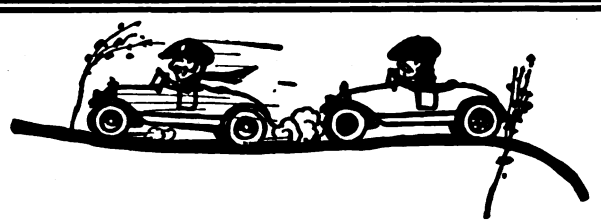
Pilots guide the reamer. No chance to make mistake. Far superior to any other known method. Motors put up this way can be started by hand. I have only a limited supply of this material on hand. Send your order promptly to avoid disappointment. One per cent discount if you mention this magazine. Send for catalogue of other special tools, reamers, etc.

Price $28.

I Make the BEST HONEYCOMB RADIATOR at any price.

K. R. WILSON

10-16 LOCK STREET BUFFALO, N. Y.



A GREATER COASTING RANGE

Shove a car using Dixon's Graphite Transmission and Differential Lubricant over the top of a decline and let it coast.

Shove another car of the same make, model and weight, but lubricated with ordinary grease, over the same decline, and let it coast—if it will.

The first car will outcoast the second one by a surprisingly large margin.

And so it is in actual driving. Ordinary grease permits frequent and ruinous metal-to-metal contact that sets up a dragging friction and soon wears out the moving parts.

DIXON'S GRAPHITE Transmission and Differential LUBRICANT

Dixon's Graphite Transmission and Differential Lubricant is sold by practically all good dealers and garage men.

This Reflex Spark Plug has given THREE YEARS SERVICE in a Hot Running Passenger Car Motor

—and is **still** producing, **without attention,** the same **hot, unfailing ignition** as the day it was purchased.

As the owner * writes, "I consider the performance record of my Reflex Plugs remarkable, especially this one in particular, because of my motor's high speed and tendency to run hot with a high oil consumption."

Dealers everywhere have found such testimony as the above very general. It is what Reflex Plugs **have done** and **are doing** that makes them fast sellers. In addition, you can sell a Reflex to every customer as there is a type of plug for every requirement—all guaranteed and money-makers for you. Remember, the exclusive cromite War-Service porcelain and High-duty electrode construction means, freedom from pitting and clogging at the points.

A card will bring some interesting details of the profitable Reflex proposition. Write!

TRADE APCO MARK

Metal Oil Gauge

Consists of a metal chamber containing a float to which is attached a rod with a white ball on the end. The distance between the ball and the top of the gauge indicates the height of the oil in the case. This height can be determined at night and no amount of dirt can obstruct the view or interfere with its operation. The installation is very simple. Remove the lower pet cock, thread the gauge in its place and screw the pet cock into the gauge. Each gauge packed in a box.

New Catalog Now Ready

It cannot break, it will not clog; it tells the truth about the oil at a glance in darkest night or broad daylight. As necessary to the car as hands to the clock.

Here, at last is an oil gauge you can recommend and sell at a profit 300 days a year.

Costs You $7.80 Per Dozen

EASY, QUICK, POSITIVE!

Here is a quick way to find the cause of any trouble in gasolene engine of any type. No more cranking a "dea engine; no need to run an engine idle while you gue what is wrong.

Suppose a customer drives up with an engine that is r working properly. Instead of a tryout on the near hill, open the hood, take out the spark-plugs and screw

Hempy-Cooper Motor Tester

in the place of one of them.

Bring the piston up to compression dead center, and the valve on the tester tells just what the compression is and how fast it leaks off. Now let the handle up and bring it down sharply. You can hear air hiss through a leaky inlet valve and out through the carburetor. If the exhaust valve leaks, you can hear the air rush through the manifold and into the cylinder that on exhaust cycle.

Other faults can be found w the Hempy-Cooper Tes Loose bearings, loose pis rings, piston slap, for e there is a positive indicat You can keep right on tes as you adjust.

A Hempy-Cooper Tester t guess work out of your tes —with it you can tell your

Filtered Air

A REAL service to motorists—a service that will bring them to your door—again and again—that will keep them your customers—that will build the utmost good-will for your business. That's what "FILTERED AIR" will mean. It will increase your business surprisingly. A "FILTERED AIR" sign above your door will keep you in constant touch with all classes of motorists, creating an obligation on their part to become your customers.

The No. 7 AU-TO AIR COMPRESSOR furnishes an abundance of perfectly filtered air. A special liquid takes out absolutely all dust and oil—the two worst enemies of tires. The air comes from the tank as pure and clean as from a mountain top.

This is a complete outfit in itself: motor, piping, valves, gauge, automatic unloader, automatic switch and tank—assembled and ready to run. The motor is only ½ horse power. This outfit requires no watching, no tinkering—the tank is kept full of filtered air, ready for motorists—day and night. This outfit furnishes a regular working pressure sufficient to handle the largest pneumatic truck tires.

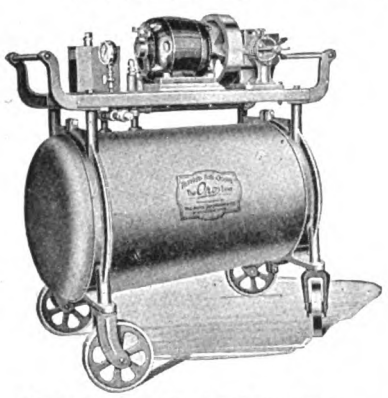
Only 3 Moving Parts!

In addition to the valves there are only 3 moving parts to the compressor mechanism. Such astonishing simplicity must mean durability and continuous satisfactory service. Of course, our regular guarantee of perfect service goes with this machine.

Ask your jobber, or write us, sending his name, if he cannot supply you. Now is the time to get this excellent business builder!

THE AU-TO COMPRESSOR CO.

303 S. Mulberry Street WILMINGTON, OHIO



Model No. 8 Au-To Air Compressor —same as No. 7, excepting that it has large wheel casters, which make it easy to move from place to place in the shop or garage.

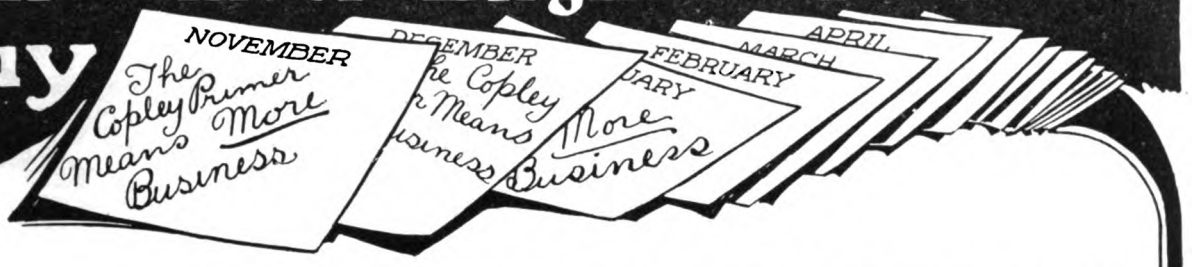
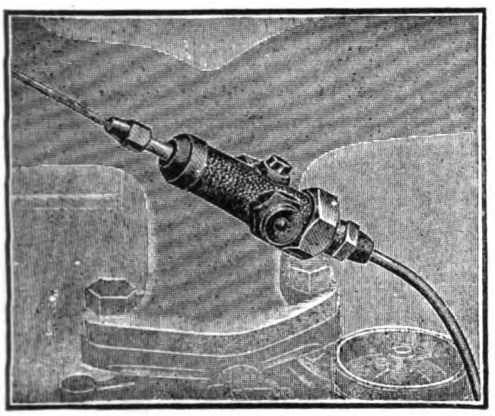
NOW MR. DEALER—

Your Customers Can Smile Their Winter Engine Troubles Away





COPLEY PRIMERS

Sell the year round—they are necessary and not seasonable car equipment.

They insure instant engine starting, no matter what the temperature or the quality of fuel, and they minimize the use of battery current for starting motors.

Every time a starter is used without the cylinders primed the battery is nearer exhaustion. Ten seconds draft on a battery requires 15 minutes' charging to restore.

The primer saves the battery, it economizes fuel and WILL ALWAYS START the engine.

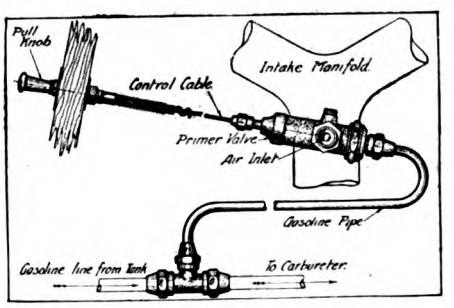
It adds to motoring pleasure, economizes fuel and battery expense.

COPLEY PRIMERS

Are extremely efficient. They are permanently attached to the engine and are operated from the instrument board. They inject finely atomized fuel into the cylinders so long as it is necessary, augmenting what is supplied through the carburetor.

The primer is attached to the intake manifold and connected with the gasoline supply. It is opened by a pull knob and it is closed automatically. It is the only primer having the carburetor action that atomizes gasoline with an air mixture.

Can be installed in less than an hour.



LIST PRICE $6.00

The Copley Primer Has True Carburetor Action.

Jobbers and Dealers—Copley Primers sell themselves. It is equipment that cold weather and low grade gasoline makes necessary. Make it your winter leader. Trade discounts will more than satisfy you. Order your stock today.

It is sold with a guarantee of refund of price if not satisfactory.

Bay State Pump Co.

100 Purchase St., Boston, Mass.

Performance vs. ?

In selecting a Compressor, what interests you most? Prices? No! Promises? No! Technical details? No! In the end, it is the cost of giving air service. You must have confidence in the concern that sells the outfit, confidence in the manufacture, and confidence in the future performance of the outfit.

Brunner Air Compressors have come to the front in the minds of the progressive garage men of the country. Brunner equipment has won and is holding national leadership as the undisputed standard.

No sales argument, no frenzy of advertising, no freak fixtures could win and hold that dominance. Brunner equipment has construction care that spells Performance. And, Performance merits leadership.

Brunner engineers use the laws of pneumatics ---they know the intricacies, complex problems and possibilities---after years of study and putting these laws into practice their resultant products give consistent economical Performance.

Write for illustrated folder, displaying all types and sizes.

PEERLESS AUTOMOBILE SPECIALTIES

MAKE OLD CARS LOOK LIKE NEW

The attractive package is a big selling point. Can has friction top so that the lid can be pried off and sealed again if desired. This style of can permits the goods to be used direct from original package, preventing any waste by emptying into another container.

PEERLESS MOHAIR TOP DRESSING.
A dressing that not only waterproofs, but dyes a mohair top with one application, making top look like new.

PEERLESS LEATHER TOP DRESSING.
An oil preparation which renews and softens the leather, rubber, pantasote and their imitations. Dries with a bright finish and wears indefinitely.

PEERLESS JET BLACK FENDER JAPAN.
A finishing for fenders, which will cover solid with one coat, making a jet black gloss enamel finish similar to a baked job.

PEERLESS CARBON REMOVER.
Will remove carbon from cylinders of automobile motors and keep them always active and full of life. Will eliminate the carbon knock and make driving a pleasure.

PEERLESS MIRRORROID.
Not a polish, but similar to a regular varnish, which will give a surface of a car where used a finish like a newly varnished job.

PEERLESS BATTERY BOX BLACK.
An acid-resisting enamel which will protect wood or metal parts of battery boxes, cases and racks which come in constant contact with acid from batteries from decay.

PEERLESS EXTRA FINE BLACK JAPAN.
A fine product for all around use on wood, metal and old enameled parts of an automobile. Will cover solid on any surface which is free from grease or dirt.

PEERLESS GASKET SHELLAC.
A high grade product cut in pure alcohol for gaskets, corks, carburetor floats and such parts of an automobile. Heavy bodied so that it makes a perfect seal on worn gaskets as well as new ones.

PEERLESS CYLINDER ENAMEL.
When cylinders and all metal parts of an automobile underneath the hood of an automobile are coated with this enamel they can always be kept clean and there is no danger from rusting. Made in Black and Gray.

PEERLESS TOUCH-UP BLACK.
A quick drying product for all around use in touching up all metal and wooden parts of an automobile, where finish is worn.

PEERLESS CUSHION DRESSING.
A dressing that can be relied upon to be perfectly safe to use as it does not wash or rub off and renews the appearance of old leather seats and cushions.

PEERLESS RIM PAINT.
Rims coated with this paint will not rust, thus preventing tires from sticking, which injures the casings. May be used on rubber mats as well as casings.

PEERLESS FORD TOP DRESSING.
Will restore original finish to leather material used on Ford cars. Where mohair is used on Ford cars use Peerless Mohair Top Dressing.

PEERLESS LAMP ENAMEL.
A gloss enamel which will stick on nickel, brass, iron or old enameled parts and is not affected by heat of gas lamps. Made in Gloss and Dull.

PEERLESS LIQUID WAX.
A hard drying Polish which is easy to apply with a light even coat, as it comes in liquid form. It is waterproof and will stand washings without dulling the finish.

PEERLESS TIRE PAINT.
A waterproof coating for tires to protect rubber from exposure to air, thereby saving rubber from deterioration and keeps tires looking like new. Made in Black, White and Gray.

PEERLESS AUTO BODY POLISH.
It is practically an oil varnish food, containing the necessary products that are needed by varnished surfaces that have become dull through service. Easily applied and ready for use at once.

PEERLESS LINING DYE.
A dye that will make all water-stained, grease spotted and faded linings of an automobile top a dark black uniform black color. Will not wash or rub off, neither will it stiffen or harden the cloth.

Prices on these PEERLESS AUTOMOBILE SPECIALTIES are as follows:
1 gal., $6.00. ½ gal., $3.15. Quart, $1.65. Pint, Pint, 90c. ½ pint, 50c.

PEERLESS COLOR FINISHINGS.
A line of eight colors so that an owner can select any combination of colors for wheels, chassis and body of his car. High grade colors made with a finishing varnish so that it is not necessary to finish over these colors. Made in following colors: RED, BLACK, WHITE, BLUE, GREEN, YELLOW, STRAW COLOR and GRAY.
1 gal., $7.00. ½ gal., $3.65. Quart, $1.90. Pint, $1.00. ½ pint, 55c.

PEERLESS AUTOMOBILE SPECIALTIES produce durable and lasting results that please every owner, giving dealers repeat orders and a good profit on each can sold.

Used by over 8,000 automobile painters because of their high qualities.

Dealers order these Peerless Automobile Specialties through your jobber, also get catalogs, window displays, inserts and other advertising matter. If his stock has not arrived, write us direct and we will see that you are supplied.

MR. FORD OWNER

THERE'S Your Trouble- "Leaky" Wires

HERE'S Your Cure

Brown's Timer Wiring System for FORD CARS

is a direct overhead connection between the coil box and the commutator and positively saves the usual 40% spark waste, delivering to the motor the FULL INTENSE HOT SPARK. Regular Ford Wiring becomes oil and water soaked, the insulation frays, the wires become exposed and broken, causing "leaks" and short circuits. Brown's Timer Wiring System "SAVES THE SPARK", assuring continuous combustion, eliminates carbon trouble, saves oil and gas and prevents rippling of the commutator.

One Piece
Instead of Three

HERE'S the new ONE Piece Ford Transmission lining that you can put on in LESS THAN THIRTY MINUTES.

The L & L One Piece Slip On

lining is made in one piece instead of three, and slips on in less than 1/3 the time required by all the old style three piece linings, without riveting or putting in new felt gaskets.

Those hours you save mean money—clear PROFIT FOR YOU. And this extra profit is yours every time you put on an L & L ONE Piece lining.

Dealers who handle the L & L will find that in a very short time it will be their biggest seller. The demand for a dependable Ford transmission lining that can be quickly and easily attached is enormous. Ford owners who do their own repairs will be most enthusiastic about the L & L. Once they use it, they will accept no other. Every Ford owner in your locality needs new transmission linings at regular intervals. L & L linings never fail to bring repeat orders.

NOW is the time to stock the new idea lining. Ford owners will start asking for them SOON. Be ready for the rush!

L & L AUTOMOBILE ACCESSORIES CORP.
Dept. 51—135 Church Street
HARTFORD, CONN.

$3

L & L ONE Piece linings are made of the very finest braking material ever manufactured. There is no wire in them to short circuit the magneto. They take ALL the chatter out of the transmission and insure a dependable foot brake at all times. Sell for the same as any other good lining, but are better and quicker to put in.

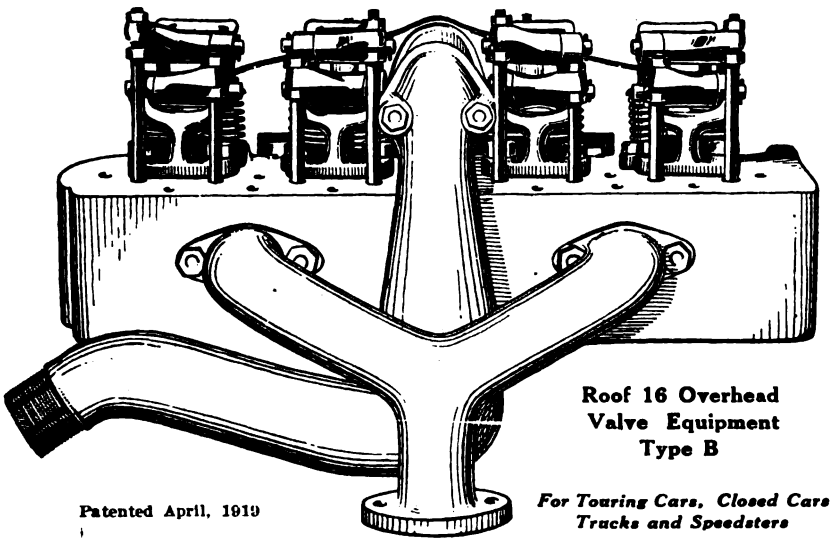
POWER and SPEED

Roof 16 Overhead Valve Equipment

FOR FORD MOTORS



Roof 16 Overhead Valve Equipment Type B

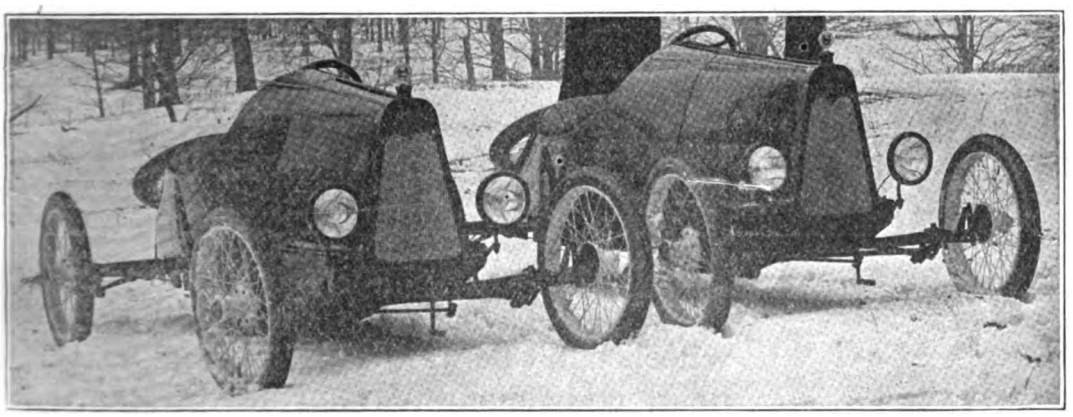
For Touring Cars, Closed Cars Trucks and Speedsters

Patented April, 1919

The Most Remarkable Power Device, Even in This Inventive Age

Hill climbing for touring cars—pulling power through sand and mud—doubles the hauling capacity of converted Ford truck-speed for mile and half-mile tracks to rival the fastest cars built. Ford racing cars with our Cylinder Head Equipment and special racing parts have attained speeds from 80 to 100 miles per hour. Hill climbing and pulling power for touring cars, closed cars and trucks. Price, complete, $115.00 f. o. b. factory. Nothing extra to buy. Cylinder head equipment all ready for installation. It takes the place of the regular Ford Cylinder Head. Any mechanic can easily and quickly install it.

Comparison Brake Horse Power Tests at the United States Bureau of Standards gave Standard Ford motor with regulation carburetor 18.7 Horse Power. The same motor with 16 Valve Head and regulation carburetor 22.4 Horse Power. The same motor with 16 Valve Head and Special carburetor 29.7 Horse Power. Recent tests at Bureau of Standards with Type B gave 32 Horse Power. We are Manufacturers and Distributors of speed and other specialties for Ford cars; 3 to 1 gears, high speed camshafts, aluminite, light grey iron pistons, lynite pistons, aluminite connecting rods, racing spark plugs, racing carburetors, roller bearings, counterbalances, wire wheels, multiple speed transmission, high tension magnetos, special oiling system, special worm and gear, steering gear, racing tires, racing bodies, hood and radiator, parts for underslinging chassis. Tell us what you want. We can supply it. Racing quality. Lowest prices. Send for our Complete Literature on how to build fast cars and double the value of your converted Ford Truck and descriptive circular on Speed and other Specialties for Fords.



Our Famous De Luxe Racing Cars Price $1500

Ford Racing Car Speed Kings

From the hundreds of fast Ford car drivers we mention the names of a few of those who have won laurels through the use of our equipment and some with speed records approaching that of the highest priced racing cars in the world, ranging from 70 to 97 miles per hour, and who on mile and half-mile tracks have closely approached the world's record with their speed cars:

Tarr-Gon
REGISTERED

The *Perfect* Tar and Asphalt Remover for Automobiles

The Product With a Hundred Uses

CLEANS

RADIATORS

LIGHTS REFLECTORS

TIRES

LEATHER CUSHIONS

BODIES

WIND SHIELDS

Every automobile owner in the country is a prospective purchaser of Tarr-Gon.

Once the remarkable properties of this product are experienced, no car owner is ever without it. Every car owner who uses it becomes enthusiastic.

Tarr-Gon quickly removes tar, asphalt, grease and stains from any part of a car, including the tires. Tarr-Gon cleans, brightens and preserves leather cushions, straps and tops, linoleum, rubber and metal, running boards, etc. It softens the leather and does not leave it sticky.

Tarr-Gon cleans windshields, headlights and reflectors—and tar or grease from the hands.

It is just as useful in the home. Tarr-Gon removes tar and grease from carpets, rugs, upholstery, shoes, clothing, metals, etc.

It will not injure the surface of any material. It is a miracle worker. The enemy of every annoying "tar or grease spot" it touches. We have hundreds of testimonial letters praising Tarr-Gon.

TASGON is another well-known Polygon product. It is a magic *fluid* for dissolving and removing rust without injury to parts. A few drops will remove the most tightly rusted nut, bolt, joint or connection. Tasgon removes rust from any rusted part. It prevents carbon. It primes motors. It stops squeaks. It has many valuable uses.

TARR-GON and **TASGON** are quick, continuous sellers. They will bring profit and goodwill to your store. They mean repeat orders. They are guaranteed to do all we say they will. Try them yourself and you will sell them. Write us for our attractive proposition. Write today.

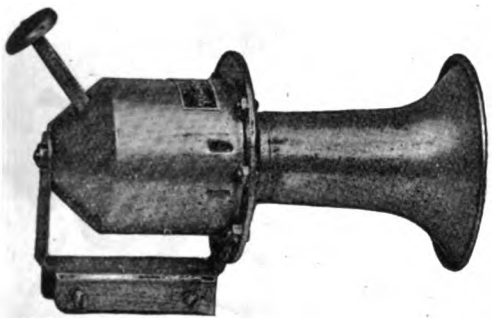
THE HORN WITH 6 EXCLUSIVE FEATURES

Adjustable to any desired tone



When your customer buys a STANDARD Auto Horn he has the choice of the exact tone he desires—long, short, or medium.

All that is necessary is a turn of the adjustment screw until the desired tone is reached. This screw is accessibly located back of and outside the housing—not inside the bell.

And just as important—the tone can be kept constant. Those of other horns necessarily become weak or unreliable with much use, because this tone adjustment feature is exclusive with the STANDARD. It always insures an instant, imperative warning the second the hand touches the plunger—a feature alone that has sold thousands of STANDARDS for dealers who believe in offering their customers only the best.

Finished in handsome baked black enamel and nickel trimmed.

Guaranteed to outwear any car to which it is attached.

For use on Ford cars a special clamp bracket is furnished without extra charge, by which the STANDARD can be attached in half a minute without punching holes or marring the body of the car.

Five Other Exclusive Features

1. Special Sound-Projecting Bell.
2. Can be operated with one finger.
3. All wear is taken up by adjusting screw.
4. Adjustable to six different positions on car.
5. Guaranteed to outlive the car.

LIST PRICE $4

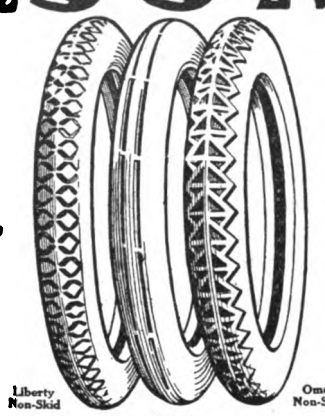
PRESSMAN

Omar Tires



EVERYWHERE

Longest Service When Measured by the Price You Pay

OMAR and LIBERTY tires are made and sold to a definite policy—highest quality obtainable and a guarantee of service.

It means absolute satisfaction to users. OMAR and LIBERTY tire dealers will advise you that these tires will deliver full service mileage and the purchaser will receive full value.

There is no condition, no uncertainty. The tires must afford 100 per cent. service.

Measured by first cost and by mileage guarantee OMAR and LIBERTY tires are unequaled; the saving in any event is such they are the most economical tires to use.

Back of this guarantee is the manufacturer. Unless the tires satisfy he is the loser. Only by maintenance of the highest quality can his prestige and the business of his distributor endure.

Compare these tires and the prices with all others. Contrast the guarantees. Consider the service of each. Then you will equip with either OMAR or LIBERTY tires.

Then you'll understand fully what you get for what you pay and what a positive guarantee means to you.

DEALERS: OMAR and LIBERTY production is rapidly increasing. We can offer a limited number of splendid dealer contracts. The trade discounts are liberal. You can meet any competition and make more than good profits.

Correspondence invited. Full information at request.

FOR EMERGENCY WORK

When Time is Money

ATSCO

PORTABLE · AIR · TANKS

For Garage and Road Repairs

Is the one sure short cut to service, insuring efficiency when quick work is necessary and saving time and labor when these run into money.

Roadside pumping is costly waste. The time saved will quickly pay for equipment that will always have splendid service value.

Are You For Shop Efficiency and Service

If so you want what will earn revenue without expensive upkeep. Fill your tank with air from the compressor system. Use it in the shop or for road work. It's always ready and it never fails.

Atsco Tanks are steel, copper brazed, equipped with standard tire filling valve and protection valve cap for filling from compressor system connections, with side handle for carrying.

They are good for 500 pounds test pressure and are intended for a working pressure of 250 pounds. These tanks will serve for years.

We specialize production of garage pressure tanks, and have in stock or build to specifications tanks of any size or pressure requirements. Our tanks are used by most of the producers of compressor and air storage systems.

These tanks are genuine copper brazed construction and the seams and joints are far stronger than the stock metal. They will not crystallize or crack and are guaranteed air tight.

We make pumps and pressure tanks for all purposes.

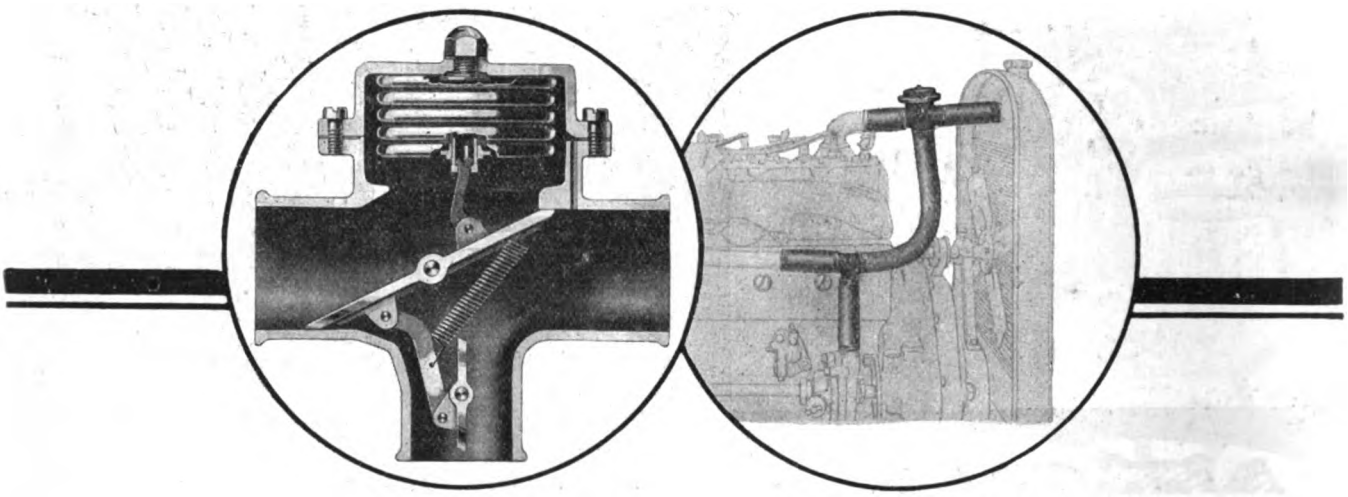
Rayfield Motor Thermostat for Cold Weather Driving



The Rayfield Motor Thermostat, by regulating the circulation of water through the cylinder block makes your motor "warm up" quickly in the coldest weather.

Because the motor does warm up quickly, the pistons and rings promptly expand to their proper fit, eliminating loss of compression (power) and consequent escape of raw gasoline past pistons into crank case where it will thin out the oil.

The Rayfield Motor Thermostat keeps your motor warm while car is standing, insuring a prompt start and conserving your storage battery.

It prevents scored cylinders, formation of carbon, fouling of plugs, and gives you a snappy, peppy full-powered motor in all weathers.

A motor necessity. Price installed, $12.50.

If you are unable to obtain a Rayfield Motor Thermostat at your local dealer's, write us and we will tell you where you can get one.

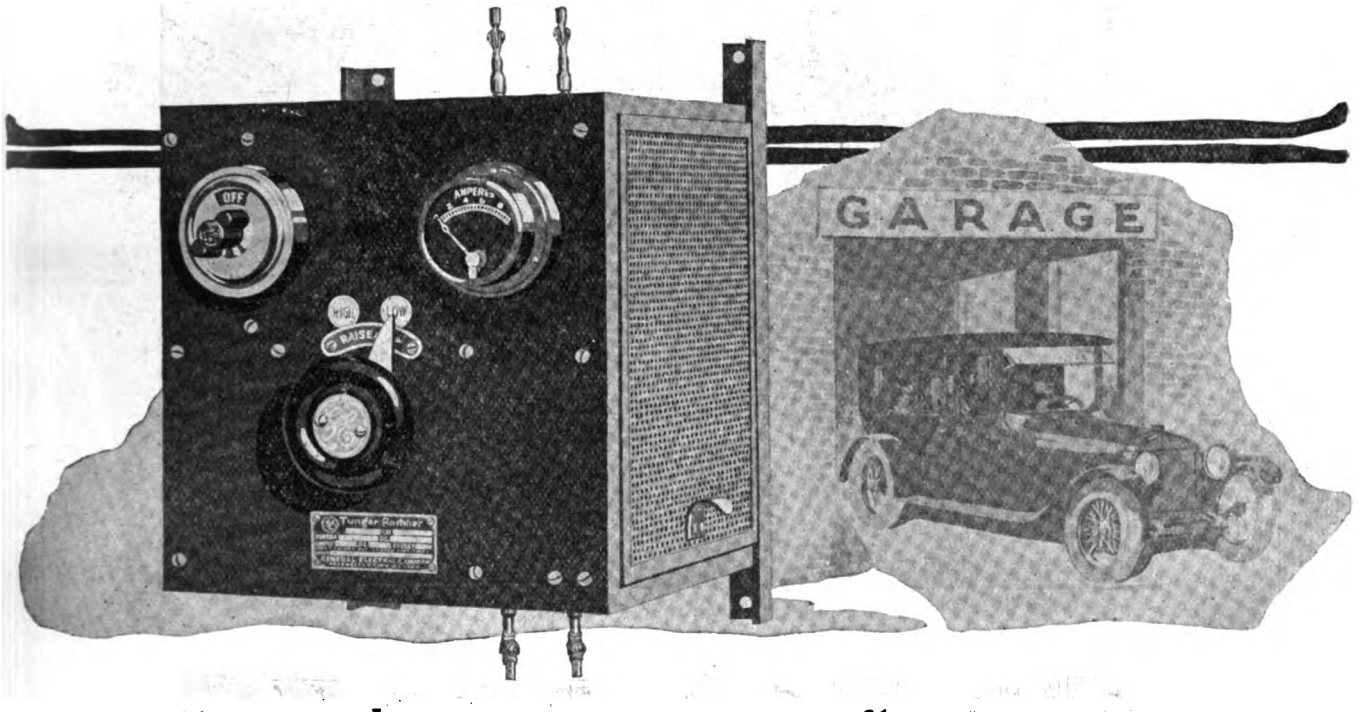
Batteries Need Special Care in Winter

Are You Prepared to Render This Service?



The ***complete*** garage must give 100% service. Battery charging, particularly in winter, is an important part of 100% service. Every garage, therefore, needs charging equipment—the right equipment will pay good profits.

The Tungar Rectifier exactly fills this need for it is a ***low cost,*** highly efficient battery charger. It is, in fact, the lowest priced ***reliable*** outfit of similar capacity and costs least to operate. It will charge from three to 30 cells of lead plate batteries at 6 or 7 amperes or less from ***alternating current.***

Two particularly good features of the Tungar are that it connects to any alternating current lighting circuit and that it may be run without attendance as it is self-starting and protected against over loads or reversal of current.

Tungar has put the Profit into Battery Charging.

It will pay you to send for bulletin T-63951

GILL

The Perfect One Piece Piston Ring

"Here is the ring I am going to put on your pistons. The Gill Piston Ring, the best made, and here is the reason why it is the best. Look at the joint."

The dealer or garage man does not have to ask the motorist to look at a Gill Ring twice for him to realize that he is getting the best on the market. You don't have to argue about the Gill Ring, one look at the double step interlocking joint is enough. You can see why it allows an expansion of from 1/8" to 3/16" before any loss of compression occurs. This allows the ring to adjust itself to worn, oversize or out of round cylinders within reasonable limits. If you don't carry the Gill Piston Ring now is a good time to get aboard the band wagon.

Send for the new Gill Piston Ring Size Directory, complete, convenient and full of just the information you need. It is free to the trade.

Each lamp complete with 20-foot cord and fittings (except bulb) as illustrated

The cord's the thing on an extension lamp

IT is the part which carries the electric current, which when worn through immediately becomes a fire hazard and a source of accident. It should therefore be the strongest part of an extension lamp. This is the case with the

DURACORD EXTENSION LAMP

This lamp is all wired up ready for use with genuine Duracord, the cord that was made expressly for hard service. It will outwear ordinary cords four to six times.

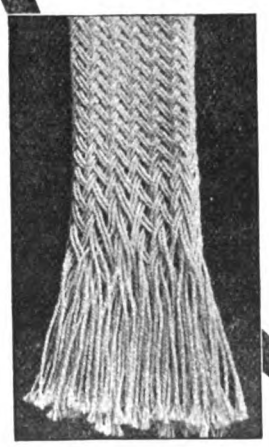
Duracord has none of the dangers of steel-armored cable, such as the metal cutting through to the wires, nor will it scratch polished surfaces.

It is gripped in the handle by a patented "holdfast" fitting that prevents it pulling out even under excessive strain.

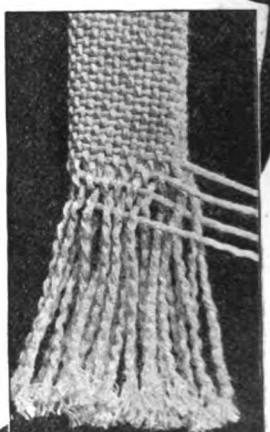
Each lamp complete, packed in an individual box. Prices:

Light weight	$5
Heavy duty (as illustrated)	6
Vapor proof	8

TUBULAR WOVEN FABRIC CO.
Pawtucket, R. I.



Here is the ordinary braided cable covering. Note the open and porous construction, easily cut, stretched or unraveled. Compare it with Duracord.



*This is Duracord. Thick, heavy strands, **woven like a** piece of fire hose, not braided. Picture shows outside covering only with impregnating compound removed.*

VOL. IX. PAWTUCKET, R. I., OCTOBER, 1919 No. 6

Great Interest in Jobbers' Show at Chicago

Representatives from All Over Country to Attend— Many New Devices Shown for First Time.

AS A preface to what is expected to prove the most successful year in the history of the automotive industry, the big exhibition and convention of the Automotive Equipment Association will be held in Medinah Temple, corner of Cass and Ohio streets, Chicago, the first week of November. More interest has been manifested than in any previous affair of this sort, and there is every reason to expect that the show and convention will be epoch-making from every angle.

Several hundred jobbers have promised to attend, and there will be a great influx of automobile men from all parts of the country. Weeks ago every inch of the space available for exhibition purposes was snapped up, and manufacturers are planning displays of unusual interest. Many brand new devices will be shown for the first time.

The first two days of the week, namely, Monday and Tuesday, Nov. 3 and 4, will be given over to the various meetings of the Board of Directors, Board of Governors and the committee meetings. The convention will open Wednesday at 9:30 a. m. and the sessions, on Thursday and Friday, will open at the same hour and close at 12:30. It is expected that the last session will be held Friday afternoon, but if an additional session is necessary it will be held Saturday morning at 9:30. The convention will take place in the auditorium.

In connection with, and on the first floor of the temple, on the same dates, namely, from Monday morning until noon time Saturday, the exhibition will be conducted. At this splendid show will be displayed the various types of accessories and the newest designs, models and inventions of automobile equipment.

The manufacturers will be prepared to supply their customers and the trade with lists, cuts and other information that will enable the jobbers to proceed immediately and arrange to have their catalogues out by Jan. 1, the great advantage of this being obvious to every jobber and dealer.

At the opening and closing of each session there will be an organ recital on the mammoth chime organ by Professor Kurzenknabe, the organist at the temple. At the adjournment of the convention at noon a substantial buffet luncheon will be served at the north end of the exhibit floor. The retailer or dealer will be admitted from 9:30 in the morning until noon.

New England jobbers have arranged to go to Chicago in two special cars, which will be attached to the Wolverine express, leaving Boston Saturday, Nov. 1, at 2 p. m., and which will arrive in Chicago at 3 p. m. Sunday. There will be about 55 from New England. This train will pick up many more jobbers at various points en route to Chicago. The New England party will be in charge of Thomas F. Wilson of the Apco Manufacturing Co., Provilence, R. I. Mr. Wilson also had charge of the party to the Hot Springs convention, and he made such a success of the affair that the New England jobbers insisted upon him taking charge of this one. The train carrying the jobbers will be known as the "Wilson Special."

Paul G. Niehoff & Co., Chicago, will exhibit its line of electrical testing instruments, one of which has never been on the market before and which is an elaborate and complete testing outfit. It will be known as the Niehoff Test Kart. This outfit will test electrical equipment of every description on the car without taking anything apart. The company will also display a full line of ignition repair parts and brushes.

The Black & Decker Manufacturing Co.'s exhibit will include a complete line of Black & Decker lectrofiater electric drills and electric valve grinders. Actual electric air compressors, electric drills and electric valve grinders, cut out to show their construction and operation, will be demonstrated.

Warning Signals.

The E. A. Laboratories, Inc., Brooklyn, N. Y., will be at booth 85, with a display of its warning signals. The company makes a complete line of E. A. and Handphone, Newtone signals for passenger cars, motor trucks, motorcycles, etc. The Challoner Co., Oshkosh, Wis., will have its entire line of standard truck wheels, including the Smith steel wheel and the Dayton steel wheel in solid and pneumatic tires, also standard wooden wheels, including Ford wheels equipped with pneumatic and solid tires. Special devices for cushion wheels will be shown in connection with the Sewell wheels.

The Macbeth-Evans Glass Co., Pittsburgh, will show several of its lighthouse lenses and possibly some of the 30-inch mirrors which the company furnished the government for use on searchlights on war ships. The L. H. Gilmer Co., Philadelphia, will have its entire line of the Gilmer automotive equipment, fan belts, rebound straps, radiator and hood laces, anti-squeak frame and body linings, etc. The exhibit of the Pyrene Manufacturing Co., New York, will include Pyrene fire extinguishers, the Pyrene safety cleaner, Gardene fire extinguishers and Pyrene five-gallon pump tanks.

Curtis Pneumatic.

The Curtis Pneumatic Machinery Co., St. Louis, will exhibit its line of garage air compressors. The company will show all five sizes of simple machines to give an idea of the range of sizes, and in the complete outfits will show at least one size in each style of mounting. Two new styles of outfits will be included. The display will include a cut-out or sectionalized compressor, showing all working and moving parts.

Officials of the company who will attend will include Walter C. Hecker, vice president; L. C. Blake, advertising manager; Joseph Macksey, John D. Lodwick, J. F. D. Howell and William G. Kuehnel, sales engineers.

The Zinke Co., Chicago, will display a complete line of automobile lamps, including several advanced designs in head lamps. The Walker Manufacturing Co., Racine, Wis., will display Walker Badger automobile and truck jacks. Walker screw type jacks, Walker garage jacks, Walker Steelbilt shock absorbers and auxiliary radius rods for Ford cars. Its garage jacks will be shown for the first

Shock Absorbers.

The H & D Co., Inc., Goodland, Ind., will have on hand the first set of shock absorbers of the H & D type, made in a blacksmith shop in Goodland. The various steps of development in the H & D shock absorbers, both single and twin arm style, reaching culmination in the new one-piece steel shock absorbers and the shock absorbers for Ford one-ton trucks, will be shown.

Many New Devices Have Their First Showing

Among the new devices that will be shown at the A. E. A. show for the first time are the following:

New Sparkite contact for the K-W coil, the K-W Ignition Co., Cleveland.

New "Eazy" bolt clipper, the Metal Stamping Co., Long Island City, N. Y.

New zinc nickel finish for bumpers, which is claimed to be rust proof and immersed in rubberized transparent lacquer, the New Era Spring & Specialty Co., Grand Rapids, Mich.

Special tool for quick and neat cutting of holes in cowl boards of the late Ford models for the installation of speedometers, the Van Sicklen Speedometer Co., Elgin, Ill.

The "Reelite," a new portable lamp for use around garages and machine shops, the Anderson Electric Specialty Co., Chicago.

New single action tire pump and two new grease guns, the Sunderland Manufacturing Co., Chicago.

Two new bumpers, the Badger Manufacturing Corporation, Milwaukee.

New Eco Universal Motor Handling Machine, the Western Manufacturing Co., Oskaloosa, Ia.

Champion "Minute" spark plug cleaner, the Champion Spark Plug Co., Toledo.

The "Beamolite," a new windshield spotlight and the New Front Apron for Ford cars, the Motor Specialties Co., Waltham, Mass.

"MP" cables, Pedrick piston rings and "MP" spark plugs, the Motor Parts Co., Philadelphia.

New V type Shaler Roadlighter, the C. A. Shaler Co., Waupun, Wis.

New Goodrich coil lock, the Goodrich-Lenhart Manufacturing Co., Hamburg, Pa.

New line of truck jacks, the National Standard Co., Niles, Mich.

The Davies-Young Soap Co., Dayton, O., will exhibit its automobile soap. Its display will include the Buckeye Cleanser auto soap, put up in seven different sized packages, and the "Whiz" hand soap. The K-D Lamp Co., Cincinnati, will display its entire line of automobile lamps. The General Asbestos & Rubber Co., Charleston, S. C., wil have an interesting display of the Garco asbestos automobile specialties, with specimens of its materials in the various stages of manufacture.

The Shurnuff Manufacturing Co., St. Louis, Mo., has arranged for an attractive display of the Shurnuff specialties. The Edgar C. Guthard Co., Chicago, will exhibit Billmont master wrenches, Billmont socket holders and Billmont sockets. The Marvell Accessories Manufacturing Co., Cleveland, will display a new number, in the way of a traffic signal, for attachment to all makes of cars, and also its other products.

The Hill Pump Valve Co., Chicago, will exhibit the Utility line of heaters, consisting of the Utility protected heater for all cars, the Utility front seat heater for the front seat compartment, and the Utility Jr., heater for Ford cars. The exhibit will also include the Utility Sure-Grip pedals, designed especially for Ford cars. The Utility line of wrenches and automatic tire pumps will also be included.

Other Exhibits.

The Beneke & Kropf Manufacturing Co., Chicago, will exhibit the Rayfield carburetor and thermostat. The Tuthill Spring Co., Chicago, will show a complete assortment of Titanic springs, together with a testing device that will demonstrate the mechanical advantages of the Titanic type of spring construction. The Stiles-Gilliland Manufacturing Co., St. Louis, Mo., will demonstrate the Stiles fender straightener, the Stiles adjustable explosion whistle and the Stiles Liberty siren. The Stiles-Gilliland exhibit will be in charge of J. C. Stiles, president, assisted by E. S. Carmack, representative.

The Brunner Manufacturing Co., Utica, N. Y., has been assigned three spaces on one of the side aisles, and it will display four or five of its standard machines, including two new models. The company plans to equip its booth in such a way as to contribute to the comfort of the visitors, and will probably confine its mechanical exhibit to the five machines and a few wall boards, displaying its line of parts and fittings. G. L. Brunner, general manager; H. S. Atherton, Kansas City district manager; A. B. Jenkins, Cincinnati district manager, and J. H. Meehan, sales manager, will be in attendance.

The Dayton Wire Wheel Co., Dayton, O., will exhibit its latest type wheel for Ford, Chevrolet 490 and Overland Four cars and the Dayton wire wheel carriers. A complete assortment of parts, such as are used in the manufacture of Dayton quick detachable wire wheels, and a nice display of airplane wire wheels will also be included.
